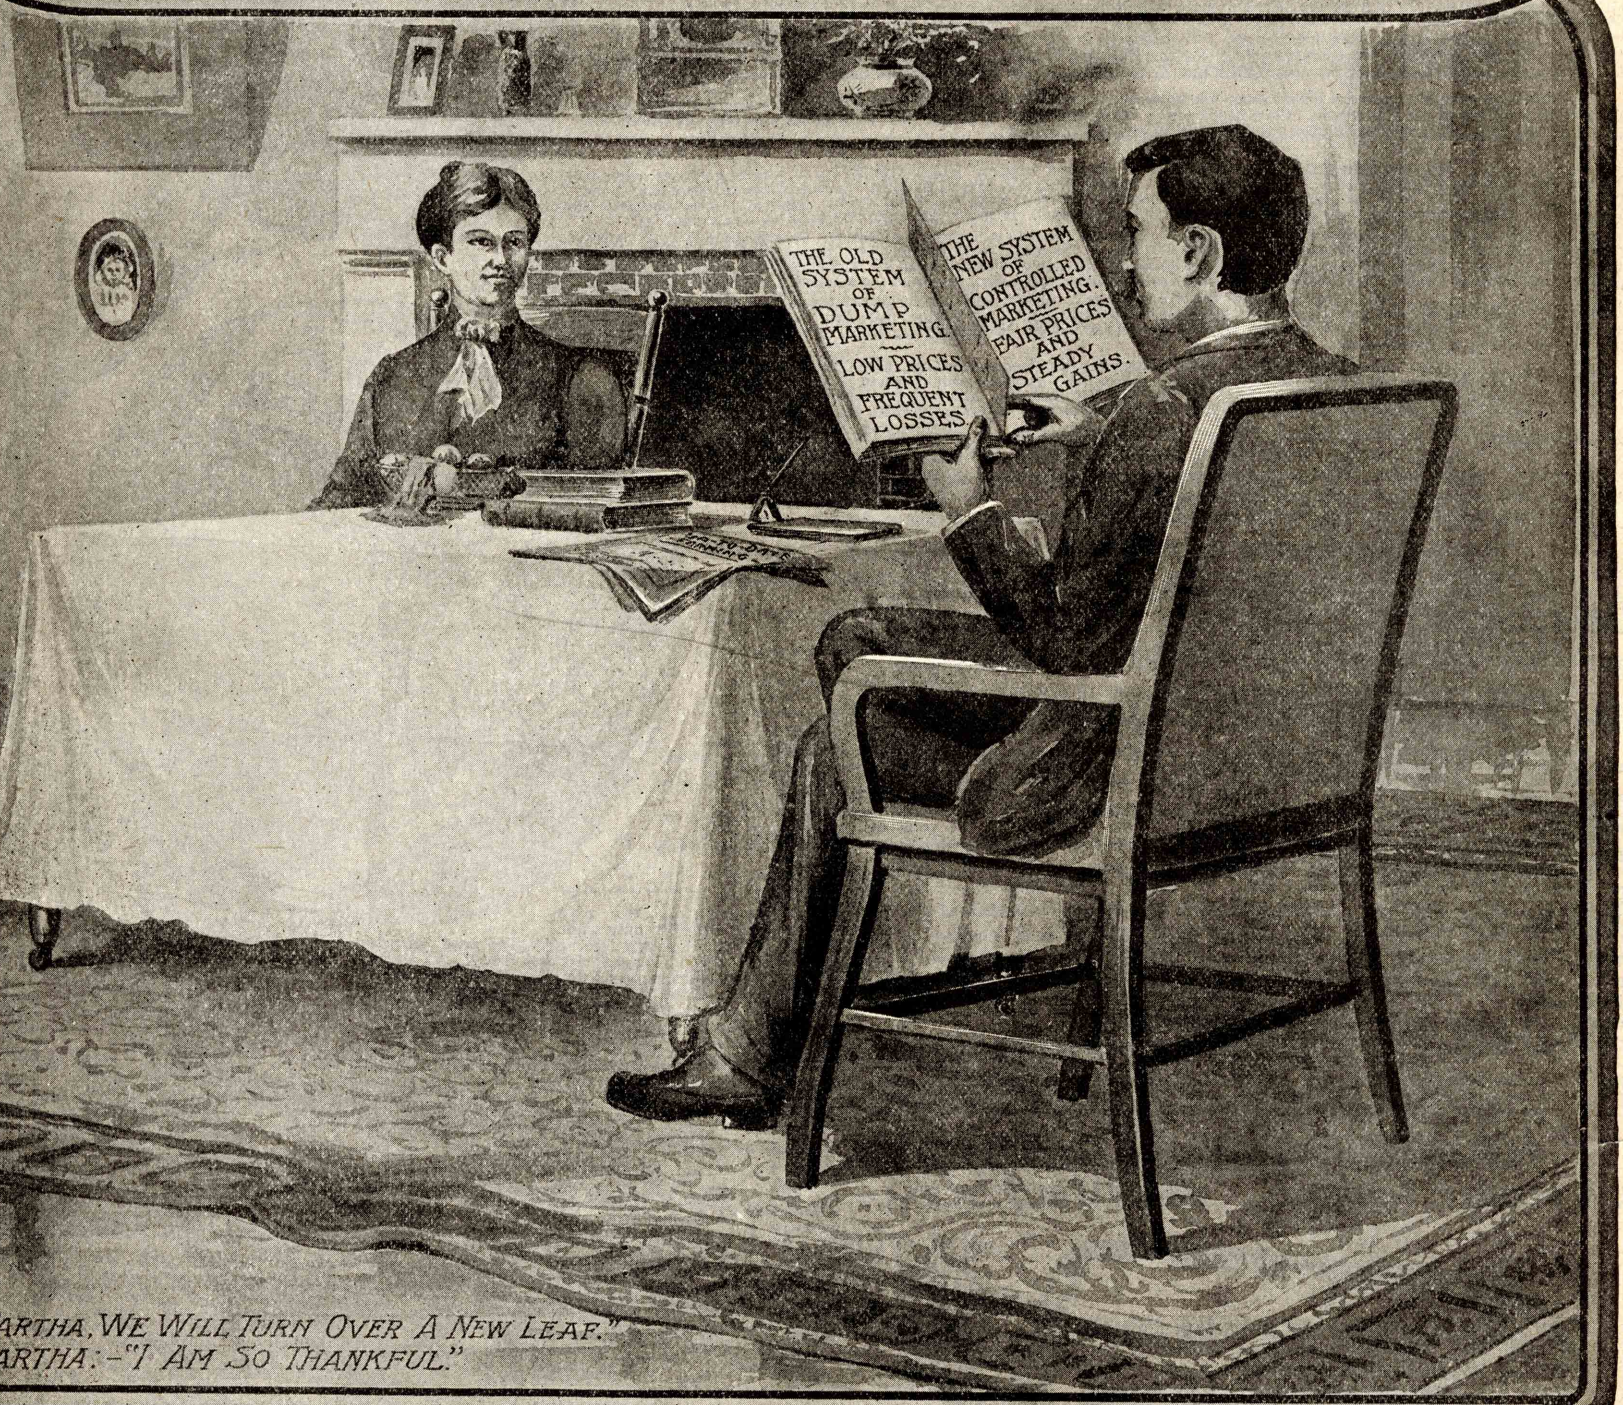
UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, JANUARY 1, 1905



"MARTHA, WE WILL TURN OVER A NEW LEAF."
MARTHA:—"I AM SO THANKFUL."

FOR THE
CO-OPERATING FARMERS OF AMERICA

EVERY FARMER in the U.S. should read

UP-TO-DATE FARMING

Because *IT* is bringing farmers to the Front. *IT* teaches farmers how to price their own crops and how to get a good price for every crop they grow. *IT* teaches you how you can put prices up and keep pace with everything you buy. *IT* has doubled the profits of many thousand farmers and can do as well for *every* farmer in the country. *IT* is the only paper in the country that gives a successful solution for all difficult farm problems. *IT* represents the best crop reporting system in the country. Its crop bulletins are issued promptly after each crop is made. Other estimates—including that of the Government—are not made final until farmers have disposed of the bulk of their crops. This is against the farmers' interests, and in favor of the speculators. *IT* sets a price on all crops when they belong to the farmers, not after they go into the elevators and warehouses that belong to another set of people. *IT* will kill gambling and speculating in farm products. *IT* teaches how to grow crops as well as any paper, and is the only one that helps to market them at good prices.

YOU will make a great deal more money if you read it. You will not make near so much money if you don't read it. UP-TO-DATE FARMING is *mainly* responsible for the farmers of the United States receiving $1,194,233,917 more for six crops sold under the new system taught by this paper than they received before for crops of the same size and kind. Wonderful, isn't it?

Our old readers understand all these things
New subscribers will soon understand and realize them

Your Hands Are Tied when you let the speculators price your crops, but when you price them yourself it is different. No matter how pleasant farming is now, it will take on new attractions when you get the price you ask for your own crops. This is what UP-TO-DATE FARMING teaches. Don't you want to enjoy the benefits?

There Will Be No Guessing when you are a subscriber to Up-to-Date Farming. Then the prices of your crops will be as stable as are the prices of plows, binders, interest on money, taxes, etc. You may need to wait a while now but the price comes.

There Are Many Other Reasons but we cannot give them here. Order this paper to your address for the next year and the truth of all we say in this advertisement will gradually come to you and make a new man or women of you as regards your understanding of agriculture.

Up-to-Date Farming is printed twice a month. It has nearly 150,000 subscribers already, but must have a *million or more.* If *all* farmers knew how valuable this paper can be to them, we would have a million subscribers in two weeks. We know farmers are just like any other class of people—they want opportunities to make money and U. -to-Date Farming makes the opportunities. It has done so for many thousands, and we have their letters stating this fact. It can do as well for *every* farmer.

The Subscription Price Is 50 Cents Each number will do you more real pratical good than a whole year's volume of any other paper, because it tells you the vital things about your business that other papers have not begun to print. These things are of the greatest importance to you and you *will not* get the best results from farming until you know them. You must read Up-to-Date Farming to understand it, appreciate it, enjoy it and profit by it. When you begin reading this paper the possibilities that lie around the farming millions will begin to dawn upon you.

We want you to send your order direct from this advertisement. For fear you will put it off we are going to offer you a valuable premium if you send promptly. Good seeds are as valuable as good teaching and both mean success, Mention this paper and send promptly and we will give you four seed novelties as follows:

1 Large Pkt. **Smith's Prolific Corn.** New hybrid. Greatest cropper. Yields over 100 bu. to acre as easily as common corn yields over 60 bu. Fine appearance. Yellow Dent, ears 10 to 14 in. long. Always 12 rowed. Grains ⅝ in. deep, ½ in. wide, nearly ¼ in. thick. Cob 1 in. diameter. Stalk 8 ft. high, 2 in. thick at base; blades 6 in. wide. Bears often 4 ears to stalk. This is a remarkable variety and one that every corn grower should procure at once. IT IS NOT OFFERED FOR SALE AT ANY PRICE.

1-2 lb. **Snow White Sensation Potato.** A new seeding, and one that will create a sensation. Season medium late. The skin is the whitest of all and the flesh is as white as fine flour. There is no yellow tinge in the flesh whatever. Oblong shape, large size. A most remarkable potato indeed, and will take the country by storm. It outyields Carman and Sir Walter Raleigh, while for handsome appearance and table qualities those varieties will not be wanted when **Snow White Sensation** comes on the market. This potato is not for sale **at any price**

1 Pkt. Cabbage **The Volga.** A new variety from Russia. It is remarkable for perfection of form and solidity of heads. Mr. Allen, the largest grower of cabbage seed in America, says, "Without exception the nearest approach to perfection of any variety we ever grew." It is a late variety and for winter it keeps better than any other. Every gardner will be delighted with this fine fall and winter cabbage.

1 Pkt. Peppers **Mongolian Giant.** Do you love to grow giant vegetables? There is a fascination in having the largest. Grow this pepper and you will have the fruit that will be the wonder and admiration of the entire neighborhood. There is no variety finer for filling with cabbage. The flesh is thick, meaty, solid and pleasant mild flavor. This is truly a mammoth vegetable and one of the greatest attractions for any garden. Bushes grow 1½ to 2 ft. high.

Remember *We don't charge a cent for seeds and potatoes. We offer them to guarantee your prompt subscription because we need it in carrying out our great undertaking. But you need Up-to-Date Farming even worse than we need your subscription. Don't lay this paper aside until you have sent the order.*

Old subscribers may also have this premium when renewing there subscription, if they ask for it.

READ SOME REPORTS ON THE 1904 SEED COLLECTION

If you miss any of our FREE SEED DISTRIBUTIONS you miss some good things. If any of our old subscribers did not get as good returns as here reported, try again as every article in the '05 collection is a gem.

EXPLANATION—The Premium potato was sent out under the temporary name of "Up-to-Date No. 1." But has been named and is being introduced this year as Everitt's Abundance.

Mr. Everitt:—I value your paper very much. Of the seeds you sent, the Yard Long Corn is just immense—the largest I ever saw. The Pumpkin and Melon are good and the Potato outyields all other kinds.
David A. Bolick, Bloomfield, Ia.

From the ⅛ lb. premium potatoes I planted 22 hills and raised 147 potatoes, weighing 73 lbs. I took second premium at the Flathead County Fair. I also took second premium on pumpkins from the seeds; first premium on White Wonder Melon and two first premiums on Yard Long Corn—one on best half bushel the other on 6 best stalks.
E. J. Cramer, Chautauqua, Mont.

From the ⅛ lb. Premium Potatoes I raised 45 lbs. I regard this as a large yield. The tubers are large, uniform and shapely. They are very valuable and I thank you for the start. E. McIntire, Worthington, W. Va.

From the ½ lb. of premium potatoes I dug 172, weighing 55 lbs. (over 100 lbs. to one.) The other seeds were extra good. W. J. Hylton, Wolverine, Va.

From the ½ lb. of premium potatoes I raised 99 tubers, weighing 48 lbs. I would not take the price of the paper for these potatoes. G. K. Arnly, Gamewell, N. C.

From the ½ lb. of premium potatoes I raised 53 lbs. of as nice, large, smooth potatoes as I ever saw. I am delighted with them. The Yard Long Corn is fine.
19 hills of the potatoes yielded 26 lbs. All other seeds a success. G. W, Millower. Watkins, N. Y.

This is the Offer: **FOR 50 CENTS we will send UP-TO-DATE FARMING twice a month for one year. Also four seed novelties as explained, and a due bill good for 25 cents' worth of packet seed, your selection.**

YOURS FREE **If you will show this offer to 4 of your Neighbors and get their orders we will send . . YOURS FREE**

That, is we will send five (5) for the price of 4, or you can keep 50 cents for the fifth order. ¶SUBSCRIBERS ALREADY PAID IN ADVANCE can have their subscription extended another year, OR WE WOULD LIKE if they will make a present of the paper to a friend not now a subscriber. In this way they can get the Free Seed Distribution and we get a new reader.

25c Due Bill We not only want your name but all of your neighbors'. The good that this paper can do is not for a few farmers but for all. Therefore, send us 10 or more addresses on a separate sheet and we will send **a due bill** good for 25 cents' worth of seeds (vegetable or flower) selected from the catalogue of a leading seed house (your choice.) Surely you will now come and help us to get the million subscribers.

100 Bu Per Acre

UP-TO-DATE FARMING

J. A. EVERITT, Publisher *INDIANAPOLIS, U. S. A.*

MAIL US THE GRAIN OF CORN

Pub. UP-TO-DATE FARMING, Indianapolis, Ind.

Dear Sir: Send me Up-to-Date Farming one year to the following address. You will also send the seed premium for prompt subscription as advertised in Jan. 1, UP-TO-DATE FARMING.

Name.....

P. O.....

County..... State.....

If you send the list of Names they must be on a sheet separate from order and we will send due bill.

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 227 West Washington Street

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | INDIANAPOLIS, JANUARY 1, 1905 | Number 1

UP-TO-DATE FARMING
PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher
JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR
Foreign Subscriptions $1.00 a Year.
Membership in The American Society of Equity, $1.00, including a year's subscription.
Three Month's Trial Subscriptions will be Accepted for 10 Cents.
ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizihg and sustaining organized effort for improved conditions. Look for the LABEL.

NATIONAL UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	**$ 1.20**
Corn, No. 2 " " " "	
Until January 1st, 1995,	**.50**
From Jan. 1 to Apr. 1, 1905,	**.55**
" April 1 to next crop	**.65**
Hay, No. 1 timothy, " per ton	**12.00**
Oats, No. 2 white, " per bushel	**.40**
Barley, No. 2 " per bushel	**.58**
Barley, No. 3 " per bushel	**.52**
Potatoes—Chicago, per bushel,	
Until January 1st, 1905,	**.55**
After January 1st, 1905,	**.65**
Tobacco, (Price on the farm or at the market town)	
Virginia, dark, average per cwt.	**$ 9.00**
" bright, " "	**12.00**
Kentucky, dark, " "	**8.00**
" burley, " "	**12.00**

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Beans, No. 1, Hand-picked, Detroit, per bu.	**2.00**
Clover Seed, No. 2, Toledo, per bushel	**$ 7.00**
Cotton, New York, per pound	**.12**
Broom Corn, Chicago, per ton	**$75.00 to $85.00**
Hogs, " per cwt.	**6.00 to 6.50**
Cattle, " per cwt.	**6.00 to 7.50**

The records of the American Society of Equity at the close of the year show just about double the efficiency of a year ago. Every worker should be encouraged. Is each doing all he can?

We are making history.

Shall it be defeat or victory?

Pardon the question, it must be victory.

Every effort farmers make to better their condition that fails, leaves them worse than it found them. This greatest of all efforts must not fail.

Farmers are not stupid; it is a libel to call them so; but their long submission to the speculative system of price making has led their exploiters to think them so.

The government's December 3d cotton report cost American cotton growers millions of dollars in forcing down the price of cotton.

It has been said that great opportunities come only once in a life-time. The farmers' great opportunity is now. No question can be as important to them as the making of prices on their products. That they can do it we have proven, and the world, though with great reluctance, now admits it. The farmer himself must stand to it and make it solid—a recognized feature of commerce.

The cotton and tobacco prevaricator—some folks use a shorter word—is very much in evidence in the cotton and tobacco growing sections. Some people think it is no harm to stretch the truth to make a trade, but the cotton and tobacco growers are under no obligation to "believe a lie that they may be—," what does the Scripture say? Let's put it this way: they are under no obligation to believe a lie and be cheated out of their labor

There are powerful influences at work to save to the cotton growers the profits that are justly due them. In December 1st issue of Up-to-Date we published a strong appeal by Hon. Harvie Jordan, of Georgia. In this issue we give a like appeal by Hon. Engene Williams, Judge Advocate General of Texas. With such able support the cotton growers should stand firm as the rock of ages.

Special crops are coming to the front. The wonderful activity among the cotton growers, the tobacco growers, and the bean growers, shows that they are powerfully in earnest. Won't it be a great convention when all the various crop interests are called together to take national action in their own behalf? The great political conventions will not be a circumstance.

We are proud of the gains that have been made for the doctrine of controlled marketing and farm price making. We are proud of the great things achieved by the American Society of Equity and Up-to-Date Farming. The experimental post has been grandly passed with flying colors. There is now a general demand for a perfecting of the organization and placing it upon as solid and permanent a basis as is known to human institutions. Every interest and the work done imperatively calls for this.

Mr. N. C. Crawley, State Organizer for Wisconsin, was a very welcome visitor at headquarters recently. His work in Wisconsin has been very successful, and his experiences are replete with important lessons. We are more than glad to personally meet that class of people; their presence and suggestions help every department of our work.

May and July future prices of corn are higher now than they were a year ago. If this means anything it may be taken to mean that the person who has corn to sell next summer and fall (1905) will get the full minimum price recommended by the A. S. of E., or more.

If it pushes you to pay, remember it will pay you to push so you can pay.

World wide markets! You'll have them until you keep a fair price on your products.

The farmers who market grain and cotton under the minmum price will be sorry before the next crops come.

Don't miss an opportunity to give your local paper items about the farmers' movement. If the opportunity don't come make it.

Do cotton growers appreciate what Up-to-Date Farming is doing for them? If they do we should have half of our million in the cotton States alone.

The great need is the very widest circulation of Up-to-Date Farming, so every farmer can learn of the plan to control marketing and make prices. Secure subscribers.

Many thousand subscriptions expire with this issue, and some that expired before have not been renewed. Please clean up the score and start in the new year with your subscription label showing advance payment.

We are advised by some of our readers to get after the beef trust. What's the use of going after them in print. You can not strike their vulnerable point until the farmers are organized and make their prices by controlled marketing. Do you take the hint?

The government, the bulls and the bears and "private sources" have all had their innings with the Argentine wheat crop. Yet the people most interested—farmers and consumers—don't know anything about the true or exact condition of that crop. Beautiful system, itsn't it?

We are still after the million. If we gain only 50,000 the next year, as we did the past, it will require eighteen years more. It is worth all the time it takes, but it will be worth immensely more if it takes less time. It can be done in 1905 if YOU will organize your neighborhood. Its up to YOU. What are you going to do about it?

Potato Is Named

To our thousands of readers who received the free seed distribution last year we announce that the name given the potato is Everitt's Abundance. This name was suggested by Philip Masson ,of Mercer, Pa. The potato was sent out under the temporary name of Up-to-Date No. 1.

In this issue we announce another seed distribution comprising four valuable novelties that should attract the attention of every subscriber and new reader. These premiums are given to influence the indifferent farmers to become subscribers so they may learn the great truths that this paper is teaching, and not because the twenty-four issues of Up-to-Date Farming is not worth the subscription price. There is absolutely no charge for the seeds. Every old subscriber, whether single or in clubs, direct or through agent, can have the seeds if they desire them.

Farmers' Business Exchange

We expect to start such a column in this paper in a near future number. It will bring the growers of surplus products in touch with the people who have a lack. It will enable persons to make their wants known so they attract the attention of others having a surplus.

This should be of great value to farmers. The cost will be light. Particulars will be sent on request.

Feb. 18. 1929.

TO WHOM BE THE CREDIT?

The Results Are More Important Than the Power that Achieved Them

Credit for dollar wheat is not given unanimously to the national administration, one farm paper claims that it did it. Isn't there danger of an over-production of such modesty?

We find the above paragraph in a prominent farm publication, one which is ably conducted, and one, too, which is usually not afraid to lead out in reform lines. It takes no act of the imagination to determine that Up-to-Date Farming is the paper referred to by our contemporary. We do not know that we ever made the claim alleged, but it has been made for us, and we have not hesitated to speak of the part we have played in the matter. We concede such a claim seems extravagant, and to the mere looker on as preposterous, but in these days all classes seem willing to give even the devil his due. A brief review of the situation cannot be harmful.

It is very evident that some influence is at work among the people that never was before; that something is affecting the markets as they were never affected before. In the face of the conceded large corn crop, commercial reports of the highest authority tell us that traders, who have been in the habit for years, of making large sales abroad to be shipped later, in advance of the purchase of the grain, relying upon their ability to purchase the grain at their price at time of shipment, are having to buy back their sales because they cannot purchase the corn to ship, not because there is a lack of corn, but because the farmers refuse to sell at the price. Such a thing was never known before.

It is also conceded that there is a large cotton crop, the latest government report putting the yield at more than twelve million bales; and yet the manipulators find it impossible to force the price down materially and hold it there. From a single report recently issued by a prominent member of the New York Cotton Exchange, A. Norden & Co., we make the following extracts:

South Carolina—Farmers holding extensively.

Georgia. Atlanta—The farmers are holding their cotton to a greater degree than we ever remember. Macon —This market is completely blocked, everything being held for ten cents.

Alabama. Montgomery—Planters are either holding their cotton at home or bringing it to the market centers and storing it—probably selling about one-third or one-half. Troy—Marketing has been free up to about the first of the month. Since then after cotton commenced to decline below ten cents, there has been a general holding back, and receipts all through this section. have been light. Thomasville—One-third of the amount ginned is being held by farmers.

Texas. Houston—In all my experience of twenty-six years in spot cotton I have never seen such an indisposition to sell spot cotton.

And so on. Our private advices are still more general and more emphatic than the above. The same is true of corn, of wheat, of oats, of potatoes, of beans, of tobacco—of all the leading market crops. It was seen and felt in the wheat market of 1903. In 1904 it appears, as we have said in all the prominent crops, to an extent that puzzles veteran traders, men who have been on 'Change all their business lives.

Is any one willing to say that this disposition to hold crops off the market until a satisfactory price is reached, is accidental, that it took hold upon the farmers without any reason for it, that it invaded the wheat and corn fields of the North, the cotton plantations of the South, the tobacco fields of Kentucky, Virginia, North Carolina and Tennessee, the bean fields of Michigan and New York, and the potato fields, all purely by accident at the same time, and simultaneously demanding the same price?

This state of things, this condition of the market, was never known before. It cannot be accidental—mere chance. There must be a cause for it. Similar crop conditions have prevailed before. Wheat light; corn abundant; cotton and potatoes large; tobacco, beans and hay moderate to large. These conditions are not anomalous. But that farmers are holding them for a specific price made by themselves, and getting it—this is the feature that is new, and that is puzzling the veteran traders. As we have said, there must be a cause for it, something at work that has not worked before, some influence that has not previously been exercised, some connection and understanding among the producing forces that has not before existed—some power behind it all that was never before exerted. Find this and you will find what led up to dollar wheat, and has so affected other prices, and demoralized the market manipulators. It is not a question of modesty; it is a question of fact, of history now—a question of importance to producers of all time and countries, because it shows what can be done, and demonstrates their power to secure prices that shall reward them for their toil.

In December, 1902, the American Society of Equity was organized based on equity in all the business relations of life. Its first great object was declared to be "to obtain profitable prices for all products of the farm, garden and orchard." Up-to-Date Farming, which had previously advocated this new and strange doctrine was made the official paper, and began a systematic campaign to build up the organization and secure the object. It taught unequivocally that the way to do it was by controlled marketing, to unitedly fix a price and to hold the products until the price was paid—advocated the precise action that it is now acknowledged has been taken to the discomfiture of old time market prophets and confident price manipulators.

It is not necessary to say, in the face of such recent history, that this paper was compelled to fight the first battle single handed and alone. Not another paper in all the country advocated it. On the contrary, many of them openly opposed it, others ridiculed it. The editor of one, more prominent than most of the others, confessed in a letter over his own signature, that, though he did not care to fight Everitt in the open, he would be glad to give him a thrust under the fifth rib. We speak thus not boastingly but simply for the truth of history, and for the encouragement of those farmers whose superior intelligence and firmness have proven the truth and won the victory—a victory greater in its results and benefits than any won on the field of battle.

But to the proofs. In May, 1903, wheat was selling below 70 cents a bushel. The editor of this paper, who is also president of the American Society of Equity, believed the price too low as compared with the cost of production and the general level of values. He hastily gathered all available statistics, both of production and consumption, which convinced him that for the crop of 1903, $1.00 per bushel would be no more than an equitable price and that every bushel that sold below that price failed to bring the producer what was justly his. May 25, 1903, he issued his famous Dollar-wheat bulletin, setting forth those facts and urging farmers to hold their grain for that price. Members of the Society at once accepted the bulletin in good faith, and acted upon the advice. Many other farmers who had read this paper did the same. But the agricultural press uniformly ridiculed the idea and discouraged such action, many of them unscrupulously attacking the personality of the advocates of the doctrine. The trade manipulators and gamblers in wheat prices of course fought it by every means their accumulated wealth and recklessness of truth enabled them to bring to bear.

But Up-to-Date Farming unflinchingly stood in the breach, and defended the right of the farmers to price their products, and urged the holding of the crops as the only means of accomplishing it. Shipments began to slacken, the "visible" was reduced, shorts commenced to cover, the price began to climb, and the dollar was reached long before the crop of 1904 was ready for the harvest.

The history of the crop of 1904 is a repetition of that of 1903. Long before the crop began to mature, the country was flooded with reports of tremendous yields, and the speculators began to bid low prices for future delivery of the grain. Many sales and purchases were made below 80 cents. This paper and the society it represents bided its time. We had means of information the speculators knew not of, and were advised of the gigantic plans that were laid for a great rake off at the farmers' expense. July 20th was issued the bulletin of the society declaring the equitable price in Chicago for the 1904 crop to be $1.20 per bushel, and announced a total yield far below any estimate that up to that time had been made. Since then the estimate of the society has been vindicated by the very highest authority, and the price of wheat, in spite of all the efforts and influences to pull it down, has stood well up toward and at the $1.20 mark and in the great milling centers it has gone beyond it.

We many well submit the cause to the decision of an intelligent and unbiased public. But, as we say in the heading to this article, the results are more important than the power that achieved them—important to a hardworking, poorly paid, but deserving class of people, who have long felt the injustice done them, but did not know their power to secure redress. Important to other producers, the growers of other crops, who have likewise borne the burdens of an ungrateful world, but who now see clearly the way of relief.

And the greatest victory of all is in the fact that we no longer stand alone. The doctrine of controlled marketing has taken deep seat not only in the minds of the producing people, but it is being taken up by powerful molders of public opinion, and its potency is conceded by its most interested opponents. Let us reiterate our appeal to the growers of all crops—stand by your products and secure your price and just profits by controlled marketing, by holding your crops until you get your price.

Farmers and Merchants

If there ever were two classes of people whose interests overlap they are the farmers and the local merchants. The merchants could not do business without the farmers, and the farmers would find it very inconvenient to get along without the merchants. That there are more or less hurtful prejudices between these two classes cannot be denied, whereas there ought to be between them the most cordial relations. The principal cause of the unfriendly feeling must be traced to the earlier attempts at farm organization. These early organizations felt, and not without reason, that farmers were compelled to pay too much for what they had to buy, and they directed their efforts toward bringing prices down. This, of course, antagonized the merchants and made them enemies of farm organizations. But this action the farmers themselves soon learned was a mistake, and their efforts are now directed toward improving the prices at which they sell. If they can get prices for their products fixed upon an equitable basis, they can well afford to pay like prices fixed by the merchant. To this proposition the merchants are not only friendly, but they are in hearty sympathy with it, because it is to their interest as well as to the farmer's. Let each one's prejudice against the other, therefore, be promptly dismissd, and all work together to put all business transactions on a steady and equitable basis.

GOVERNMENT CROP REPORTING

A Good Thing Done in a Bad Way

On the third day of December, 1904, the United States Department of Agriculture issued a statement of the cotton crop, estimating the yield for 1904 at 12,160,000 bales. Just at that time cotton growers and the speculative interests—not the milling interests—were engaged in a titanic struggle over the price of cotton, the speculators to put it down so as to make room for the largest possible bargain of profits ,and the growers to hold it for a fair and equitable price that might yield them a reasonable, we may say a modest, reward for their labor.

The result could not have been unforeseen. The government's estimate was larger than had been made by the most ravenous "bear," and, of course, the price dropped with a suddenness that demoralized the market, and put the bear side of speculation in complete mastery.

Not many of the outside world, and, in fact, few of the cotton growers themselves, realize what this means to the South. Immediately on the publication of the report the price of cotton dropped about fifty points, and ever since then the great staple has been struggling against the downward tide with but little show of success.

Taking the government estimate as correct, of which there is really no positive proof, as there have been cases where it was found necessary to revise its figures, 12,160,000 bales represents 6,080,000,000 pounds. A reduction of one cent a pound on this great crop means a loss to the cotton growers of more than $60,000,000, the result of one stroke of the pen on the part of the agents of the United States government! Officials should hesitate before performing an act fraught with such tremendous consequences.

Powerful influences in the South and elsewhere, as the readers of this paper know, are being exerted to save the southern farmers from this great loss, by urging them to keep the cotton off the depressed market. If the government estimate is correct or if it isn't, it cannot affect the cotton if the grower refuses to sell. If the crop were twice as much as reported, if the farmers refuse to put it on the market, the mills must exhaust their supplies the same as though their present stock represented every bale in existence; and then they will need more cotton and must have it, and they must pay a price that will get it—the price that has been set by the growers themselves. This is what we advise the growers to do, and if there really is a surplus, let it develop at the close of the season—at the beginning of the movement of next year's crop. There never yet has been a surplus, and we do not expect one, for a light crop is apt to follow a heavy one, but if there should be it is better to sacrifice the surplus than to squander the entire crop.

We do not antagonize the Department of Agriculture. We think it one of the greatest of the governmental departments, fraught with immeasurable possibilities for good. And we believe national crop reporting is a good thing, but it must be confessed that many of the reporters, being voluntary, are not reliable, and that others may be biased on this side or that. But upon the whole, government reports have proven as reliable as those of other governments, and more so than private reports.

But a good thing may be done in a bad way. This is not the first time a government report has seriously disturbed trade and caused heavy losses on one side or the other of the market. Such a result is unavoidable under the present system of reporting. The speculators on 'Change have learned to watch for these reports, and to base their bids upon them. From the time the seed goes into the ground the government begins to compile its reports, not based upon certainty, but upon the opinions and observations of its widely scattered reporters. The matter is too serious to justify guess work or probabilities. A crop is never certain, a yield is never known, until it is harvested and ready for the market. How much better would it be if the department would cut out all of its probability reports, and report only when the yield is assured and the crop safe. The condition or probability reports can benefit none but those who employ their time from year's end to years end in gambling upon the prices, and who care no more for the laborer in the fields than the hog cares for the tree whose acorns it devours. We respectfully call the attention of Secretary Wilson to these matters, and to the plan of the American Society of Equity.

MORE ABOUT BUILDING ROADS

The Congress of the United States convened December 5th, and the people may well keep an open eye on that august body of statesmen more or less.

There will be schemes and schemes, and plans and plans, and appropriations of money by the millions for this thing and that. Let us assume that our Senators and Representatives are honest as honesty is, and that they earnestly desire their acts shall redound to the good of the people and the honor of the nation. Still the people should follow them through all the mazes of legislation.

There are two questions at least that should particularly claim the attention of the farming population. One of these is the question of markets, of gambling on future prices. The other is the question of good country roads. The first farmers should urge the prohibition of. Many things will be suggested to prevent legislation against market gambling, but there are men in Congress powerful enough to overcome them and astute enough to find ways to accomplish the purpose.

The country roads proposition will meet different treatment. It will be supported by the financial institutions of the country, the bicycle factories and the automobile makers, and every good roads bill introduced will have a provision for local bonding for at least a portion of the cost. The latter provision is the one which will win for the measure the support of the money furnishing institutions, because it will create additional securities and open up avenues for additional spoliation. Automobile and bicycle makers will favor the measures because good roads are necessary to the extension of their business, and are, therefore, profitable to them, especially if they can secure the building of the roads at other peoples' expense. They will care little for the method of meeting the cost—their support will come as a simple business proposition, and is to be commended rather than condemned, for while good roads will specially benefit them, they will benefit other also.

Every good roads measure having coupled with it a local indebtedness feature of any kind, should meet the prompt condemnation of farmers, who should not hesitate to make that condemnation known.

Note the appropriations that have been made to improve rivers and harbors, and keep an eye on the bills for that purpose that will be before the congress now in session. Not one of those that have been enacted, and not one of those that will be up this winter pleading for enactment, has had or will have, a local appropriation, or indebtedness clause. What the government has decided to do for the rivers and harbors it has done—often work of public value, many times an absolute waste of money.

Now, we hold that good country roads are as important to the people and as conducive to the public wellfare, as are the rivers and harbors. We are not opposed to river and harbor improvement, but while the nation is improving the rivers and harbors, do a little road building also. There is nothing extravagant in this plea; there is nothing unreasonable in it; it is simply a plea for equity in dealing with the general interests of a common citizenship.

We advise farmers to write of this matter to their congressmen. Invariably oppose the local expenditure feature. Oppose the creation of official hordes to superintend the building of the roads. Advocate the issue of special treasury notes to meet the expenses, and that the building be done under the auspices of the army and its engineers.

These two latter clauses are what will touch off the grafters, and consign Up-to-Date Farming to all the asylums in the country, but they are sound and equitable, and in the interest of the masses of the people, on the side of freedom from debt and permanent prosperity.

Farmers and Laborers

A matter of encouragement for the farmers is the friendliness with which organized labor looks upon our efforts. If any of our members have prejudices against labor unions they should try at once to overcome them. Labor unions are composed of humans, only humans, and they have made mistakes just as farmers have, but the wage earners necessarily should, and must be, the farmers' strongest allies. They realize that if the farmers do not get fair prices for their products, they cannot employ labor, and the inability of the farmers to employ labor throws the entire horde of wage seekers to be provided for within the several lines of organized labor. On the other hand, the farmer must realize that the wage earner is his most universal customer, and constitutes his principal market; and if the wage earner gets fair pay he will not hesitate to pay fair prices for farm products. So the whole thing resolves itself into these two propositions: If the farmers employ labor at the market price and relieve the congestion in the labor centers; and, if the wage earner gets fair pay, he will buy all the more of the farmers' products at fair prices, and relieve the congested markets. Where is the fighting ground between these two great classes of people?

Irrigation in the Older States

An article which appeared not long since in Up-to-Date Farming in regard to irrigation inthe older states where crops may be grown watered alone by the rainfall, has attracted no little attention. Bulletin No. 148 of the office of experiment stations recently issued by the United States Department of Agriculture, takes up the subject and discusses it at length. It gives reports of many irrigation plants in this country similar to those we mentioned in Italy and elsewhere in Europe, all of which have been successful, and absolute insurance against drought.

The berry growers in the vicinity of Poughkeepsie, N. Y., have found that artificial watering guarantees a perfect stand, the rapid growth of newly set plants, the highest quality of product, and maximum crops.

The market gardens near New York City, on Long Island and in New Jersey, are watered by small plants consisting of pumps, storage tanks, and piping, and with results that the owners say pay large returns on the money invested. Some of these gardeners would abandon the business but for this assurance of artificial watering. It must be remembered that this is directly on the sea board, where the atmosphere is always humid. How much more profitable would it be in the interior where often the air becomes dry and the ground parched notwithstanding the rains upon which the farmers depend for their crops.

Striking testimony in favor of irrigation in the so-called humid regions is furnished by a comparison of crops from irrigated and unirrigated plats of strawberries, asparagus and onions at the Missouri agricultural experiment station. Not only were yields larger, but in the case of asparagus unirrigated rows were affected with rust while the irrigated plants were entirely free from the disease.

While the government is spending millions of money for the irrigation of arid regions, it is not asking too much that more thought and attention be given to like favors to the older states that may be just as greatly benefited, and may come before the nation with stronger appeals for consideration.

One of these fine days the speculators, farmers and millers will suddenly awaken to the fact that some big bulls have taken on an immense line of wheat at the low prices that have prevailed for a few weeks. Wheat under $1.20 is too low, and the wise bulls know it. The conditions for the past month have been ideal to accumulate a long line. watch for fireworks in the near future.

Premiums are given with this paper to attract new subscribers ,so they may become acquainted with the work it is doing. While we give premiums parties renewing may embrace them. Also so we will not be accused of being unfair. We deplore the whole premium system, but as long as it is indulged in by the papers generally we are almost compelled to resort to it also. We will welcome the time when papers must be taken for their intrinsic merit ,and it will be illegal to couple a premium offer with the subscription.

Cotton is about 10 CENTS A POUND lower than it was last year. We have often said that these violent fluctuations are against the interests of the farmers. They are also opposed to the entire business interests and welfare of the country. How long, Oh, how long, will the vicious system continue? Answer, until the farmers rise in their might and wrath and smite it off of the face of the earth.

How to Secure Profitable Prices

An Address Delivered by J. A. Everitt, President American Society of Equity, at Portland, Ind., Dec. 3, 1904

Mr. Chairman, Ladies and Gentlemen:

I am here at the request of some of your citizens. They asked me to come and tell the farmers of this rich agricultural county how to secure profitable prices for farm products. Is it not a little strange that you should send to me to come to tell you how to do this thing, or that you should wait until the year 1904 before you seek for instruction on this most important matter?

How can it be possible in this Twentieth Century that such an important class of people need to send so far to have a person come to tell them how to get profitable prices FOR WHAT ARE YOUR OWN AND WHAT OTHER PEOPLE ABSOLUTELY MUST HAVE. Surely this indicates that something is radically is wrong. Let us see!

I am not a public speaker. I can talk to you better in my office and through my paper. But I will do the best I can. I will try to talk to you in a way that will awaken you to a realization of your condition and if you don't like your condition you may learn from my talk how to change it. I have been accused of making people discontented. I plead guilty to the charge. I have never been contented myself, or I would not have developed my various enterprises until they are known all over the world. I can point to every business man and professional man in the country who has attained great success and say they were discontented, and because of discontent they forged onward and upward, achieving great success. Show me the most successful farmers and largest land owners in this part of Illinois and I will show you discontented people. Show me any man or boy who is content with his present condition and I will show you people who, if there were enough of them, would kill any town, any community and any nation. Therefore, I want it known that I will not be content until every farmer in the world learns how to get profitable prices for his crops. I preach discontent so those who are oppressed may throw off the yoke of bondage. I hope there is not a young man here who is not discontented with the old system of having a set of speculators, and gamblers price the crops you work so hard to produce, and if the present farmers will not rise to completely overthrow the vicious system, that they will, before they come into the active work of farming. I say blessed is discontent, because of it we reach our earthly goal and merit an entrance into heaven.

FARMERS' TROUBLES.

The greatest curse that ever afflicted this country of wonderful natural resources and almost limitless possibilities is the exploitation, by non-producing classes, of our greatest producing class—the farmers.

Notwithstanding the fact that all the agricultural products that have been produced in the past have been consumed, consequently should have always brought a fair price to the producers, because they were desired, we all know that farmers have made less progress toward individual wealth than any other class of people.

While this is a fact, and a deplorable one, it is no less astonishing that among all the institutions, public and private, ostensibly maintained for the benefit of farmers, not one has ever attempted to better the farmers' condition through steady and fair prices for his crops.

The appropriation by the National Government to the Department of Agricultural is over five million dollars annually, yet not one dollar of this has, to the best of my knowledge, been used DIRECTLY for the object of securing fair and equitable prices for farm crops. This feature appears to have not been in the minds of our public officers. Besides the general Government appropriation the individual States appropriate an aggregate of millions of dollars more, while many agricultural colleges and experiment stations are maintained by general and private contributions, and about three hundred papers and magazines are printed in the interest of agriculture.

Notwithstanding the enormous effort put forth for agriculture as explained, until two years ago the prices gradually were sinking to a lower level and only when providence came to the assistance of farmers by preventing them from growing large crops, could good prices be made and maintained. Any person who will go to the trouble to investigate statistics can easily see that whenever farmers grew large crops the prices were low and when the seasons were bad and they could only grow short crops the prices were good. Thus when they won in the crop they lost in the price, but when they won in the price they lost in the crop. This is true and if you have not been thinking about it in the past you better think about it now and in the future.

The pricing of farm crops has thus been ignored by all your institutions and supposed helpers, even to the extent that the subject of profitable prices never appears on your institute program. All this money, and equipment, and effort that I have referred to have been directed to raising larger crops, or better crops; yet, ever since the modern method of making prices on boards of trade has obtained, the larger the crops the lower has been the price, even to that terrible extent that some of the largest crops sold for LESS money than the smallest crops. This is true, as any person can easily learn for himself or herself, by referring to the United States Department of Agriculture records.

The annual report submitted by Secretary Wilson begins with the following introductory statement:

The development of the department toward doing all that should be done to help our people SECURE A GREATER YIELD FROM THE SOIL AND ENHANCE THE VALUE OF ITS PRODUCTS made the training of experts in the department a necessity."

From the foregoing introductory statement in said annual report of the secretary it will be seen that he considers the paramount duty of the United States Department of Agriculture is the securing of greater yields from the soil. Thus, the organization of farmers as represented by the Department of Agriculture is wholly based on the theory that greater yields from the soil enhance the value of its products. But is this so? Is this theory correct and sound? Every boy on the farm should know it is not. Yet all your institutions, your farm papers, your teachers and lecturers are goading you on to increase production and not one of them will tell you how to get a fair price for what you do produce. The demand is now, not for larger crops, but to get a fair price ALWAYS for such crops as you do raise.

So fierce has become the strife among farmers, led on by their teachers, to produce cheaply and abundantly, that they have stimulated the best inventive genius of the country to invent new and superior machines, to prepare more effective fertilizers, to originate new and more productive grain and vegetables, and to improve live stock so that they will grow faster and take on fat quicker.

Your wonderful plows, cultivators, binders, hay loaders and unloaders, side delivery rakes and improved stock, even the fertilizer you buy to increase productiveness, the books and papers you read to tell you how to grow larger crops and the lectures you hear, are powerless to better your financial condition. In fact they are harmful under the old conditions when you are putting forth every effort to increase production without the power to set the price. They help to defeat what should be the prime object and hope for every effort put forth, viz:—financial reward—because the larger the crops you grow the lower is the price. I defy you to show me any instance where the benefits resulting from the use of improved machinery, better cultivation and superior methods resulting in cheapening and increasing prdouction has not resulted in the lowering of the price of the product, thus benefiting the middlemen and consumers instead of the producers.

The demand from buyers, manipulators, manufacturers, and consumers, is for big crops and low prices. When your crops are large, whether because of a favorable season, good seed, or skillful management, the press of the country congratulate you on your success. Yet, they should know that big crops have been the farmers curse ever since the old system of marketing and the present system of price making on boards of trade, have been in existence. As the crop goes on to maturity without mishaps the price falls in the same or increasing ratio. You have seen it many times. More than fifty years ago a report to the British Board of Trade took the ground that, by keeping the price of cotton down American planters would be compelled to increase their production in order to make up for smaller price per pound or bale. And so it has been with every American farm crop.

The policy has been pursued on all sides with ruthless severity. The combined and co-operating influence of the vast buying, speculating, manufacturing and consuming interests of the world are against the growers of our agricultural products—the creators of the most desired, in fact the only absolutely essential products of the earth (besides air and water), our food and the material for our clothing.

So also railroads open up new territory so production will be increased and there will be more tonnage to haul, knowing full well that they will receive as much toll to carry a cheap bushel as a dear one. Even the United States Government has undertaken to bring the vast Western arid region under cultivation through the expenditure of fabulous wealth, so the production will be greater, so there will be more people in competition with you, so railroads will have more cheap farm products to haul, so they can pay greater dividends on watered stocks, so consumers may have the necessities of life cheaper and pay for luxuries dearly.

Farmers of Randolph County, how do you like the program? Are you satisfied with it? Is it not time that you have a head to your entire business to demand your rights and protect your interests? Or do you prefer to perpetuate the present system and by and by have a guardian sit over you?

There was a time when supply and demand were the factors that fixed the price of nearly all kinds of products. But that time has been past these many years. Lately organized non-producers and boards of trade fix or manipulate the price of every staple agricultural product, regardless of supply or demand, and regardless of the rights and welfare of producers or consumers. From year to year the crowd of middlemen, speculators and gamblers have been on the increase, because they recognize the grand opportunities of operating between the horde of unorganized producers on one side and an equal number of unorganized consumers on the other side. Where the carcasses are, there the vultures gather. Thus we see the phenomena in modern political economy of the distance between the producer and the consumer gradually lengthening and the price paid for a commodity and the selling price constantly widening. When the buyer, be he middleman, speculator, food trust, manufacturer, or consumer, sets the price he sets it as low as possible, so he can win as much profit as possible. It has always been so and always will be so. But when the seller sets the price he sets it to protect himself. This is what farmers must do—set their own price.

And why not? Somebody sets the price on every bushel or pound of stuff you produce. Let me ask you now, who has a better right than you have yourself? You produced the crops. You know what they represent in investment, and toil. You know what demands are on you for living, taxes, renewals, etc. Therefore, you should be the person to set the price or have it set to always return you a profit.

In every other line of human endeavor the maker or owner of a commodity sets his price on it. It is so with the manufacturer, the banker, the merchant, the professional man, and the laborer. The farmer cannot buy a machine, any groceries, or clothing; borrow money, or hire hands without he pays the price set by the other people, and it is agreed upon before the goods or services are delivered. You know this is true. But how has it been with farmers? They, with their wives and perhaps with their children, work hard all summer to produce the finest and most necessary product on earth, never knowing what wages they will be paid per hour or day or week or month, until finally, after months, their work is completed and another set of people take the crops off of their hands at prices fixed by themselves. The price paid for the crops represents the wages paid for all the hard labor, and it has been the poorest wages, in the past, drawn by any grade of workmen in the country. Is this not so?

So advantageous is this arrangement to the other people that it has been stated that the capitalists would have grabbed up the land long ago if it was not for the fact that the farmers work cheaper by the present arrangement than they could be hired to work under any other arrangement.

I want every farmer here to examine himself and see how much he has accomplished at farming and then consider that there is no certainty about your business in the future while the old system of marketing continues. A few years of good crops if the speculators are allowed to make the prices may bankrupt many of you. But, we need not take your cases. We will take the average farmers. Those who are responsible for the average yields of our crops as follows: Wheat, 12 bushels per acre; corn, 25 bushels; oats, 26 bushels, etc. The average farmer represents the masses. He represents the average of intelligence and natural endowment and in a movement such as this he must be put on a basis for opportunities so he can live like an American citizen should live. If this can be accomplished, you, who

(Continued on Page 17)

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

Introduction

One of the results of the Lynchburg convention was to make it possible to open this department in the official paper and place it in charge of a competent manager, C. Hayes Taylor, of Gillaspie, Va.

Mr. Taylor is not unknown to our older readers. He has written many valuable articles for Up-to-Date Farming, particularly during the period when the plan and objects of the A. S. of E. were being considered. He is thoroughly in accord with the society and all it stands for, and also has a practical knowledge of tobacco growing and marketing that fits him for the responsible task he has now assumed.

Mr. Taylor will divide his time, giving part of it to headquarters at Indianapolis and part in the field wherever necessary to learn conditions and promote the work, and he will also maintain an office at Bedford City, Va. Mail for this department may be sent to Indianapolis or Bedford City. We earnestly invite and urge the co-operation of all tobacco growers to work out the business end of their production, which can only be done through the plan we are following.

The tobacco growers are the most thoroughly organized in the A. S. of E. of any class of our farmers, and this department is the natural result of such development. Other important special industries, such as fruit, dairying, live stock, etc., will be treated the same way as soon as the logical time arrives.

EDITOR UP-TO-DATE FARMING.

The Tobacco Business

The men who use labor, soil and seed as capital, and with this capital put on the market merchantable tobacco, are the first element in the tobacco business. They compose the foundation upon which all the other parts of the business rest. Yet this foundation part of the business has been more under the control, in the matter of price and profit, of the men who are mere handlers of the product, than the men who spend their times, thought, land and labor in its production.

The price the farmer receives is not based either upon the cost of production or the cost to the consumer. It is hard to know just what does determine the price. We know that the cost of production does not, because the price often falls below that cost. We know that the price of the finished product does not, because one is regular and the other is irregular. We know that supply and demand does not, because the demand is uniform, the price of manufactured tobacco is uniform, but the price of the raw material is not uniform.

The tobacco planter, therefore, has reached a point where he must become a price maker or allow the welfare of himself and family to depend upon a class of men who, in a business way, are without heart and soul—the men who compose the corporations. Past experience has proven to our sorrow that oftentimes our work has been taken for nothing, even though the actual value of our productions would have been sufficient to give us a good living.

There is only one way in which we can remedy this evil and make the product of our labor support us, and that is to organize the tobacco planters into a business association, and place the pricing of the crop in the hands of the men who produce it.

We are now organizing for this purpose. Thousands of planters are members of some tobacco growers' association. But among them all there is none based on a plan so simple, plain and practical as the plan of the American Society of Equity. It is the purpose of the writer to make this plan known in all its details to all the tobacco planters of America. But we can not do so of course in one article; it will be the work of this department.

But it takes no evidence to prove that the price must be compelled. No buyer will pay more than he is compelled to pay. To show how this can be done is our present purpose. In this matter we are not traveling unknown paths, for this has been done in other lines of business since corporations and combinations have had an existence. We know what we are doing, because others have done the same thing in the same way.

At the Lynchburg convention a price of $9 around for Virginia tobacco, and $8 around for Kentucky tobacco was declared to be the minimum price below which dark tobacco should not be sold. The difference of $1 per hundred between the Virginia and Kentucky products was made on account of the difference in the quality of the tobacco and also in the cost of production. If we were perfectly organized every leaf of this grade of tobacco would stay in the barns until this price, or a better one, was paid. And does not every one know that this action would inevitably compel the price? Not at once, perhaps, for there will be rebellion in the ranks of the buyers; but they must have tobacco, and if the backbone of the farmers is as strong as that of their brothers of the labor unions the buyers must come to the farmers' terms.

"But who will sell first?" queries an objector. "Will not the first sellers supply the demand and leave the others with a crop on their hands?"

In the first place, there has never been an overproduction. All crops of all kinds have universally been consumed by the end of the season, or so nearly so that the traders and consumers have become anxious before the succeeding crop was ready for the market. The matter of the "sooners" getting the advantage is entirely proper to be considered, but I think it does not present a very serious problem, for in these days of quick mails and telephones distance does not cut much of a figure. Besides it must be borne in mind that in this contingency the farmers will be organized, and all but the "dumpers" co-operating together, and, therefore, they will largely sell together. It must also be remembered that the price set is the minimum (lowest), not the maximum (highest). When the bulk of the crop has gone into consumption, forced there as necesity took it at the price, is it not the most natural thing in the world for the price to advance after that? Has it not been the rule for the price of all commodities to advance after they had passed from the farmers' hands? The difference in this case would be that the growers who still held would get the advance instead of the manipulators who had bought low and stored for the advance.

This department will continue the discussion of these important matters. Meanwhile it is our desire that tobacco growers everywhere promptly ally themselves with this movement in order to save the farmers just profits on the crops of 1904.

Tobacco Notes

The farmers of Bedford county, Virginia, have marketed very little tobacco. The breaks in Bedford City have been very small. Prices have been about 25 per cent. in advance of last year's price, but the average prices obtained have not yet reached the minimum set by the Lynchburg convention.

Organizer Sherman addressed a mass meeting in Bedford City not long since. Organization grows in Bedford county. Local unions are increasing their attendance. Mr. C. Hayes Taylor is making the rounds of the county unions, encouraging and exhorting the members to stand by their guns.

The farmers of Amherst county are marketing their tobacco freely, and the average price hangs close about $9. Farmers at the Lynchburg and Danville markets are also well satisfied with prevailing prices. By controlling the marketing on the plans of the A. S. of E. they will always be satisfied.

"My tobacco will hang in my barn until it rots before I will place a pound on the market below the price that hundreds of our best farmers have declared to be fair to both buyer and seller," said a farmer to me not long ago. When every man with tobacco to sell has the same determination there can be but one result—the buyer must pay the farmers' price. How can it be otherwise? And no tobacco will rot, either.

Is there any reason why the farmer should not place the marketing of his produce upon a business basis? Is there any reason why we as tobacco farmers should not associate ourselves together, and through such association, establish a business-like system of putting our produce upon the market? Is there any reason why any individual farmer should not become a member of such association? Are there any objections to our society and its plan or purposes? If there are such we want them made known. We are most terribly in earnest in our fight against low, uncertain and unprofitable prices, and if we have any opponents let them come out in the open, where we may fight to the finish. Those who are not for us are against us. Where do YOU stand, brother farmer?

The conditions under which we are to market the tobacco crop of this year were created a year ago. The conditions under which our next year's crop must be sold are being created now. If we as farmers want to control the price, we must create the proper conditions. All tobacco planters are willing to create better conditions, but not all of them know how. Up-to-Date Farming is the only paper that tells how this may be done. With that paper in the hands of every tobacco growers the way will soon be made clear. Brother farmer, while we are preparing the plant beds and the fields for the net xcrop of tobacco, let us prepare for a profitable price. We want every county in the tobacco districts to send in reports as to the kind of tobacco grown, the amount now on hand, the amount which will be set next year, as well as the amount produced in 1904. Do not neglect this, for it is essential to your welfare. Before the next crop is housed every planter should be in possession of the facts, and should be firm in the determination to leave his next year's crop of tobacco hang in the barn until the buyer comes to offer him the price agreed upon by the planters everywhere.

Dark Tobacco Growers of Virginia to Become Members of the A. S. of E.

A called meeting of the Dark Tobacco Growers' Association of the State of Virginia was held in Farmville on December 2, 1904, in connection with the American Society of Equity. The object of this meeting was to consider the advisability of uniting with or co-operating with the American Society of Equity. A good attendance of members was present. Hon. W. B. Sherman, of Indiana, organizer of the A. S. of E., made an excellent speech, explaining the objects of the A. S. of E., and urged upon the farmers the importance of organization. His address was well received, and created much enthusiasm.

The following resolutions were unanimously adopted by the Dark Tobacco Growers' Association, and were concurred in by Mr. Sherman for the A. S. of E.:

1. That we have heard with much pleasure and profit the address of Mr. Sherman ,and do tender him our sincere thanks therefor.

2. That, while preserving our separate organization as the State Dark Tobacco Growers' Association of Virginia, we heartily endorse the aims and methods of the American Society of Equity, and agree most heartily to co-operate with them in the good work they are undertaking for the farmers.

3. In order thus to co-operate we recommend to all our members to subscribe for Up-to-Date Farming, and, on special terms offered, become members of the American Society of Equity, and thus gain the information necessary to intelligent co-operation.

4. That we endorse and adopt as our own the scale of minimum prices as fixed under the auspices of the A. S. of E. at Lynchburg, Va.

A motion was made and carried that the name of this association be changed to the Dark Tobacco Growers' Association of Virginia of the American Society of Equity But under the constitution of this association this resolution must go over to the next meeting. LEE W. MORTON,
Secretary Dark Tobacco Growers' Association of Virginia.

TOBACCO GROWERS' CONVENTION.

The tobacco growers of Ohio county, Ky., met in convention at Fordsville on Sept. 24. Roll call of delegates showed eleven different local unions represented. The crop report revealed the fact that the crop as compared with the 1903 crop would not be over 45 per cent. of a crop.

M. F. Sharp, of Alta, Ky., was elected as a delegate to the National Convention to be held at Lynchburg, Va., on Nov. 10 and 11. J. H. Loyd, of Aetnaville, was chosen as alternate. We had a large and enthusiastic gathering and many present reported having already received much benefit from the society.

J. G. WITHERS, Pres.
G. G. LANUM, Sec.

COUNTY UNION IN KENTUCKY.

Editor Up-to-Date Farming:

According to previous arrangement for a mass meeting to be held at Pleasant Hill Church, in Muhlenburg county, in the interest of the A. S. of E., and for the purpose of organizing a county union, we met promptly at 10 o'clock on the morning of November 24. The meeting was opened by singing, reading Scripture and prayer, Revs. Holman and Lewis officiating. There was a large representation of the different locals in the county. The effiecrs elected were: J. W. Divine, president; Harry Hardison and James Burney, first and second vice presidents; Henry C. Lewis, secretary, and E. L. Davenport, county lecturer.

E. L. Davenport, who was sent as a county delegate to the Lynchburg convention, made a report, which was satisfactory and unanimously approved. Recess for dinner was then taken, and the meeting retired to the grove, where from 1,500 to 2,000 people had already assembled, with provisions for all; a bountiful repast was served, and everybody seemed to enjoy the day and the dinner.

Promptly at 1:30 the audience again came together, the large house being crowded with ladies, the gentlemen taking their stand in front of the house with the speaker, Hon. H. B. Sherman, in the doorway. Mr. Sherman held the audience spellbound for an hour and a half, and when he had closed there was a rush to him to join the society, and well there might be, for when the farmer takes a good look at himself and realizes his condition at present, and knows what could have been long ago, is it not time he was beginning to do something to save himself and family from want. After receiving many members the meeting closed and the crowd dispersed, feeling that the day had been well spent. I for one feel that great good was done for the A. S. of E. All that we have to do is to stand for right, and right is ours.—R. H. Pearson, Temporary Secretary, Cisney, Ky.

HOLDING FOR THE PRICE.

Editor Up-to-Date Farming:

Farmers in this section are holding tobacco for better prices; they refuse to unlock their barns for the prices speculative interests are trying to force upon us. The sentiment is growing stronger every day for the A. S. of E. There is a call for another local union.—F. B. McCown, Hickmanville, Ky.

OHIO COUNTY, KY.

Editor Up-to-Date Farming:

A mass convention of the American Society of Equity met at Haynesville December 3. Seven locals representing 216 members, besides many not members, were present. Officers were elected as follows: R. S. Lanum, president, and G. G. Lanum, secretary.

In the afternoon several subjects were discussed. The action of the national convention at Lynchburg, Va., was unanimously approved, and all present said they and the people they represented would stand by the price of tobacco as fixed by that convention, and to secure solid county action it was agreed to meet in county union at Hartford at 10 o'clock Tuesday, January 10, 1905.—G. G. Lanum, Secretary.

TWO HUNDRED STRONG AT ANN ARBOR.

We clip the following from the Herald, Three Rivers, Mich.:

Under the auspices of the American Society of Equity, a Washtenaw county branch of the Michigan Bean Growers' Society was formed at Ann Arbor, 200 farmers affixing their names to the roll. George Winans, representing the National organization, did the organizing. Addressing the farmers, he said in part:

"The Society of Equity is the only organization of farmers which will bring them the result they are always hoping for, and that is to make farming a paying business. We have about 175,000 in the organization now and before spring cracks open there will be 75,000 in Michigan alone. We do not seek to control the law of supply and demand. Nature does that. But what we are going to do is to control the supply. We will get out reports all over the country and then advise them to hold for a certain price."

We Paid $100,000

For the American rights to Liquozone; and the British rights sold for a like sum. That is the highest price ever paid for similar rights on any scientific discovery

Yet We Will Buy a 50c Bottle and Give It to You to Try

We tell you this fact because it best indicates the value of Liquozone. Claims are easily made, but men of our class don't pay a price like that save for a product of very great worth to humanity.

Before making this purchase, we tested Liquozone for two years through physicians and hospitals in this country and others. We tried it in all kinds of germ diseases, in thousands of the most difficult cases obtainable. We saw it cure hundreds of sick ones with whom everything else had failed. And we saw many a patient brought back from the verge of the grave by it.

We proved, to the satisfaction of the best physicians, that in germ troubles Liquozone did what nothing else could accomplish. We proved it to be of more value to sick humanity than all the drugs in the world combined. Then we staked our fortunes and our reputations on it.

Every member of this Company uses Liquozone daily in his family to prevent sickness, and millions of others are learning to do likewise. Liquozone is now employed by hospitals everywhere, and by the physicians of nearly every nation.

What Liquozone Is

Liquozone is not a medicine. It is not made by compounding acids or drugs, nor is there any alcohol in it. Its virtues are derived solely from gas —largely oxygen gas—by a process requiring immense apparatus and 14 days' time. Each cubic inch of Liquozone requires the use of 1,250 cubic inches of the gas.

Liquozone is the result of a process, which, for more than 20 years, has been the constant subject of scientific and chemical research. The main result is to get into a liquid, and thus into the blood, a powerful, yet harmless, germicide. Another result is to create a vitalizing tonic with which no other known product can compare.

Acts Like Oxygen

The great value of Liquozone lies in the fact that it does what oxygen does. Oxygen is the vital part of air, the very source of vitality, the most essential element of life. It is the blood food, the nerve food, the scavenger of the blood. It is oxygen that turns the blue blood to red in the lungs; that eliminates the waste tissue and builds up the new. Too little oxygen always causes lack of vitality. An excess of it gives strength to every function of nature.

Oxygen is also a germicide. The reason is that germs are vegetables; and an excess of oxygen—the very life of an animal—is deadly to vegetal matter. Liquozone acts like oxygen. But it does more than oxygen, because it is stable. It carries its virtues into the blood to go wherever the blood goes. It is a remarkable tonic—the best thing in the world for you. Yet it is a germicide, so certain that we publish on every bottle an offer of $1,000 for a disease germ that it cannot kill.

The discoverer of Liquozone has solved the great problem of killing germs in the body without killing the tissues, too. And there is no other way. Any drug that kills germs is a poison, and it cannot be taken internally. Liquozone is the only way that any man knows to end the cause of any germ disease.

One Million Dollars

Have been spent by us to give Liquozone away. Our offer to buy the first bottle has been accepted by 1,800,000 people. And we have spent this vast sum to publish the offer and to fulfill it.

The result is that millions now use it. These people have told others about it, and the others told others. Your own neighborhood, wherever you are, is full of Liquozone users. And half the people you meet know some one whom Liquozone has cured.

We tested this product for two years, through physicians and hospitals, in this country and others, before we made the first bottle. We proved it in every kind of germ disease—in thousands of the most difficult cases obtainable. We cured with it every disease which was considered incurable. Then we paid $100,000 for the American rights; and the British rights have since brought a like sum. We tell you these facts because they indicate the great value of Liquozone.

Germ Diseases

These are the known germ diseases; all due to germs, or the poisons which germs create. These are the diseases to which medicine does not apply, for drugs cannot kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding Nature to overcome the germs. But those results are indirect and uncertain. They depend on the patient's condition. When drugs were prescribed for these troubles, nobody knew of germs. Now every good physician knows that they call for a germicide.

Liquozone alone can destroy the cause of these troubles. It goes wherever the blood goes. No germ can escape it, and we have found no disease germ which can resist it. Diseases which have resisted medicine for years yield at once to Liquozone, and it cures diseases which medicine never cures. In any stage of any disease in this list, the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anæmia	Leueorrhea
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Piles—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goitre—Gout	Varicocele
Gonorrhea—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer, accomplishing what no drugs can do.

One Full-Size Bottle Free

If you need Liquozone, and have never tried it, we ask you to send us the coupon below. We will then send you an order on a local druggist for a 50c bottle, and will pay the druggist ourselves for it.

We have already done this with 1,800,000 people, and it has cost us over one million dollars to announce and fulfill the offer. Don't you realize that a product must have wonderful merit when we spend $1,000,000 just to let the sick try it?

That is our only method of making Liquozone known. We publish no testimonials; we tell you of none it has cured; we use no physician's endorsement. We prefer to ask you to try it, at our expense. Then judge for yourself what it does.

If you have already used Liquozone, this offer, of course, does not apply to you. But if you have not used it—if you don't know its results—please send us this coupon to-day. Do that in justice to yourself. The acceptance of this offer places you under no obligations; and it will introduce to you a product better than anything else in the world for you.

Liquozone costs 50c and $1.

CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to The Liquozone Co. 458-464 Wabash Ave., Chicago.

My disease is .....

I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

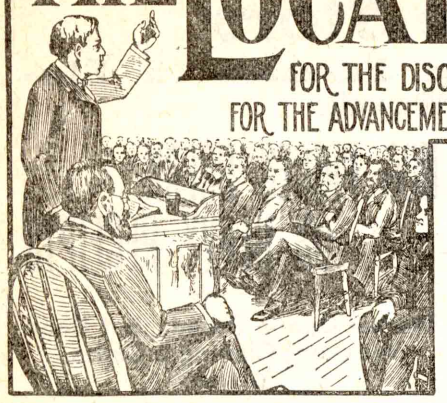
Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc. It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

NATIONAL UNION
UNION LABEL
AMERICAN FARMERS
THE AMERICAN SOCIETY OF EQUITY

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

The Annual Meeting

As is well known, there is no provision for direct representation at the annual meeting, as the officers are elected by direct vote of the members in their local unions, and transmitted by mail to the National Union. The vote cast was not large compared with our membership, but there was really no contest to call out a vote, as there were but two of the principal positions with more than one candidate in the field, but it shows life and activity. The increase of members is gratifying and shows very nearly one hundred thousand enrolled, and half as many more co-operating for our purposes, but not yet actually enrolled as members. From the ranks of these we have reason to expect rapid growth in the future. Revenues have not been large, and they have been carefully and economically applied, the expenses of organizers and the cost of publication and publicity being the principal items of expenditure.

Reports show steadfastness on the part of our members, and appreciation of the great work already accomplished. There is evidence of a lack of strength in the cotton belt ,and also in the extreme northwestern wheat region. The universal sentiment is that these points must be strengthened, and vigorous work is recommended in that direction.

There is quite a pervalent opinion that we have reached a point where our general system of organization may be profitably revised; that we have passed the preliminary stages; that we have demonstrated the feasability and practicability of the plans of the A. S. of E., having established and maintained prices where the commercial world declared we could not do so; that in this way we have actually conferred benefits even greater than was ever promised in the beginning of our work. Thus we have proven our right to exist as an organization, and to exist forever, or so long as agriculture has a wrong to be righted. Revision to secure absolute permanency is, therefore, demanded, and such revision is having earnest consideration. It is possible, if the certainty of a good representation may appear, that a special meeting may be called early in the season to consider these and other important questions.

Meanwhile, where three or more local unions exist in a county they are advised to organize county unions, so as to give better supervision to the work in hand ,and to more certainly provide for representation in all meetings and conventions, including national meetings that may be called by the society.

The officers elected are as follows:
President, J. A. Everitt.
Vice presidents, as per list below.
Secretary, M. W. Tubbs.
Treasurer, Andrew Smith.
National Organizer, H. B. Sherman.
General Counsel, Mark F. Turner.

Vice Presidents—
Alabama, John W. Green.
Arkansas, C. C. Simpson.
California, J. W. Bulfett.
Colorado, Jacob Gilstrak.
Florida, A. R Carhart.
Georgia, W. E. Johns.
Idaho, W. F. Ringer.
Illinois, C. O. Drayton.
Indiana, G. W. White.
Indian Territory, W. H. Winters.
Iowa, Don M. Leach.
Kansas, A S. Cook.
Kentucky, D. T. Hamill.
Louisiana, J. C. Williams.
Maryland, C. C. Willson.
Michigan, Milo E. Marsh.
Minnesota, W. C. Webber.
Mississippi, T. J. Walsh.
Missouri, C. E. Dothe.
Montana, M. H. Poole.
Nebraska, D. Phillips.
New Hampshire, W. E. Smallcon.
New Jersey, S. W. K. Sexton.
New York. A. T. White.
North Carolina. J. B. Lutz.
North Dakota, C. H. Olive.
Oklahomo, R. H. Molden.
Ohio, Chas. H. Newton.
Oregon, C. S. Hamond.
Pennsylvania, J. J. Erford.
South Carolina, J. L. Lee.
South Dakota, W. H. Engle.
Tennessee, A. L. Morris.
Texas, C. W. Bowman.
Virginia, C. Hayes Taylor.
Washington, Karl Meyers.
West Virginia, Riley Pritt.
Wisconsin, N. C. Crawley.
Wyoming, E. F. Hurdle.

THE LOCAL AT THE CROSSING

The plan of making a poll of the neighborhood is working well. The committee went about their work quietly. Nobody was asked impertinent questions, nobody's business or private opinions were pried into, nothing rude was done or thought of. Simply a list was made by those who knew the people, of their names and post office, and of their general sentiment toward the A. S. of E., and especially toward controlled marketing. And now the Local at the Crossing knows the sentiment of everybody in its jurisdiction. The president on calling the house to order, said:

"We are now working in the matter of organization like intelligent, progressive farmers. We have gone over our entire field and know every nook and corner of it. We know where the weeds grow and what kind, where the crop will be weakest and needs most strengthening, where the ground is inclined to bake and needs most frequent stirring. In short, with this list we are better equipped for good work than we ever were before."

Martin Webb—I am glad we have done what we have in making that list which puts us in touch with the people with whom we are immediately concerned, for I realize that there is a great amount of educational work before us. For instance, almost all our knowledge of the ways of the world and the effect of things in general comes from city papers, and I have noticed that every time the price of a farm product takes an upward turn a howl is made about how much more it will cost the working people to live, but when prices go down, nothing is said about its making cheaper living. When the A. S. of E. put the price of wheat at $1 a bushel in 1903, the papers were very much worried at how much it would increase the price of bread, but when the packing combine put the price of beef cattle and hogs so low as to involve the growers in serious losses, there was never a word as to its making steak and chops and and soup bones any cheaper for the eaters. In fact, there was nothing to say. These articles of food sell just as high when cattle and hogs are bought at three and four cents as when they cost six and seven. The trouble, the chasm, is between the producer and the eater, and whenever this chasm is bridged over with profits for the combines, the city papers never see it, but if a few gains for the producers are chucked in you hear a howl as quick as if you kick a mangy hound. The masses of the people, both in city and country, must be brought to see these things, so that they can put a proper estimate on the statements in the papers. This makes me feel that we have done a good thing in getting closer to our people by making the lists the president referred to.

Sam Gaddis—Did the price of bread go any higher when wheat went to a dollar a bushel?

Cal Miller—As you know my business (he is a stock shipper) often takes me to the city, and I eat at the hotels and restaurants. I got just as much bread at a meal after wheat went to a dollar as I did before, and the price of the meal was exactly the same. The difference came in a slight reduction—very slight—in the rake off between the wheat field and the table.

Sam Gaddis—Is is true that the price of steak and pork is not reduced when the price of live stock goes down?

Cal Miller—My experience with meat is the same that it is with bread. I get no bigger piece when I sell cattle and hogs at three and a half and four cents than when I sell them at six and seven, and I pay the same for the meal.

The President—I know these things to be true. When the farmer is pinched nobody squirms, but when he gets his head up a little everybody is ready to throw a chunk at it. And some farmers are ready to bump their own heads whenever the other fellows begin to throw. Such farmers are mighty sick people; let's give them some Up-to-Date doses. Our list will help us. By the way, has Bro. Denny a talk for us to-night? (The president is changing toward Denny.)

At once there were calls of "Denny!" "Denny!" "Wheat!" "Wheat!"

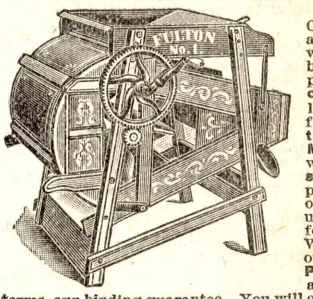
Denny was slower than usual, but he finally got himself unfolded, and after some hesitation drawled out:

"Wheat is worth $1.20, less shipping charges, and nobody but dumpers sell for less."

And down Jim sat. Not another word could we get out of him.

The President—Boys, I believe that is the best speech Denny ever made. A motion to adjourn is in order. And the meeting adjourned.

FANNING MILL OFFER.



OUR OFFER. Cut this ad. out andsend to us and we will send you by return mail, postpaid, a **special catalogue**, illustrating and fully describing **the best Fanning Mill made.** We will name you a **special offer** price, less than one-half the price usually charged for such mills. Cash prices—Wheat No. 2 red, $1.10¾ @ 1.13½; corn No. 2 yellow, 45½; oats No. 3 white, 29@30c.

(By Associated Press.)

Chicago, Dec. 14, 1904.—Decreased receipts in the Northwest was chiefly responsible for a cent advance in the price of May wheat here to-day. The close was almost at the highest point of the day. Corn is up ¼c. Oats show a gain of ⅛c. Provisions are 5c to 7½c higher.

The wheat market was firm from the start. Sentiment at the opening was influenced somewhat by an easier tone in foreign grain markets. All signs of bearishness, however, were quickly dispelled by a decided decrease in Northwestern receipts. Rumors of a continued light movement were partially confirmed through fairly active buying of wheat here by commission houses with Northwestern connections. The demand from that quarter started covering by shorts. Little selling pressure being apparent traders became more bullish as the session progressed.

The feature of trading in corn was the free selling of December holdings. A prominent long was one of the principal sellers. As a result of the liquidation December and May corn at one time sold at the same price. Future deliveries held firm throughout the entire session, there being a fair commission house demand. Local receipts were 301 cars, with one of contract grade.

Under the influence of a decrease in hogs receipts in the provision market ruled firm. Trading was rather quiet. May pork closed with a gain of 5c at $12.75. Lard was also up 5c at $7.12½. Ribs were 7½c higher at $6.75.

HOG PRICES BREAK ON HEAVY RECEIPTS

Market Opens Steady, but Soon Weakens Closing 5 Cents, Lower

TOP CATTLE SELL AT $7.40

Indianapolis, Dec. 14, 1904.—Yesterday's hog market was very uneven. A feeling of uncertainty existed at the opening owing to the fact that no advices were at hand from Chicago, but it soon became evident that there was a fair demand, and business then began at steady prices. It did not take the buyers long, however, to see that there was an ample supply, and as a result the market weakened. The bulk of the day's business was done at prices 5 cents lower than at the opening. Trading was active at the decline and a clearance was easily made. Sales ranged down from $4.65, but most of the business was done between $4.40 and $4.50. The close was quiet and easy.

CATTLE AT HIGH PRICES.

The top sales in the cattle market yesterday indicate that there is a strong demand at high prices for the best grades of cattle. The supply was liberal and the quality was better than usual of late. The demand was strong for fat steers, and prices had a stronger tendency. The top of the market was the highest for over two years.

Business was draggy on the half-fatted stuff and prices were no better than they have been for a week. Feeding stock moved very slowly, but prices were quoted steady. Only a partial clearance was made, the market closing quiet and steady.

ACTIVE SHEEP MARKET.

The sheep market continues strong. The demand yesterday was brisk from all sources, and as a result trading was active at prices steady to strong compared with those current the day before. The demand exceeded the supply. All sold. Closed quiet and firm.

Farmers, don't you have the key to the entire situation in your own hands. If you can control the marketing YOU CAN make the price. YOU CAN control the marketing if you get together on the right plan. THE RIGHT PLAN and the ONLY PLAN on earth is the plan of the American Society of Equity. We defy successful contradiction.

Read the above reports carefully, study them. "Receipts fall off and prices go up." Certainly. No power on earth can stand against the upward trend of prices if marketing is withheld. If marketing is CONTROLLED to correspond only with the demand equitable prices will prevail. Now look on the other side. "Hog prices break on heavy receipts." Just what may always be expected. Each farmer marketing without a knowledge of the demand nor of what his brother farmers are going to do. Read in the fine print. "It did not take the buyers long, however, to see that there was an ample supply, and as result the market weakened. A few hundred surplus hogs put the price on all. It has always been so, and will always be so until farmers and stockmen know the minimum price and sell only when they can get it. It is very simple, but 100,000 farmers can not do it. Several hundred thousand farmers can. If it is good for several hundred thousand it is good for all, hence what is to prevent all from joining in this great movement to be the power that makes prices on your own products.

Brother farmers, the time is here for you to do your duty, and your whole duty. It is due to yourself and to others in the same business. Your duty is to start the machine of price making in full running. It is built. All that is lacking is enough farmers, stockmen and fruit growers to man it. A MILLION PEOPLE ARE NEEDED TO RUN THE MACHINE PERFECT. This is not a very large number. THEY CAN EASILY BE OBTAINED if each present reader of Up-to-Date Farming will help a little. If you have helped before, do a little more now. If you have not helped by getting new recruits do so now. The field IS ripe, the harvest WILL BE GREAT if you will go forth to reap. Every farmer in the land NEEDS Up-to-Date Farming. It teaches them the truth about their business. Every farmer NEEDS the American Society of Equity. Through it they accomplish everything they need. Therefore every farmer will join this movement if they are properly approached.

You who understand the plan and objects we appeal to. We are more earnest now than ever before. Results are coming several times as fast as a year ago. But they are not coming fast enough. It shocks us to read reports like above in the daily papers, knowing how powerful the farmers can be, but yet how impotent they are. Life is uncertain. Some of us will die before this year rolls around, but each of us should resolve that we want to see the American Society of Equity with all that it means to American agriculture establish in every community in the land.

This work depends on the farmers themselves. You must not look to providence, nor your government, nor to any other class. It is a task for YOU. YOU must put your shoulder to the wheel and push. When you help yourself, then God will be pleased with you. Then your government will recognize you; then other classes will honor you.

In this number we call for 20,000 farmers to help organize the A. S. of E. in every community. We refer every reader to it. Let us have an overwhelming response to it.

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

We recall those days of singing
When we laid the corn fields by;
How we dreamed of fortunes coming,
And our hopes were running high.
We could see our hogs grow fatter
And our debts all put to rout—
There was joy in every household
When the corn was tasseling out.

There were busy days in hay field,
And then threshing from the shock.
Then we plowed the stubble under
Or else pastured it with stock.
Then how anxiously we waited,
And how earnestly we prayed
That at least in cool September
Jack Frost's ravages be stayed

We are thankful for the summer,
Which has given us our crops;
We are thankful for the autumn,
With its beautified tree tops;
We are thankfud for the turkey,
And the prospect of spare-rib;
But don't you know we're shoutin'
'Cause our corn is in the crib?
—Alson Secor.

A bright, happy and successful new year is our earnest prayer for all Our Up-to-Date People.

May the fields in 1905 not only yield crops, but profits also.

The crops of 1904 are made and gathered in. Don't fool them away.

Review the weak places of the fields and strengthen them with a load or two of barn-yard manure.

Review the weak places of your methods of farming, and strengthen them with carefully considered improvements.

You had time to read more or less all summer if you could have believed so. There is no reason why the farmer should be a slave, or live a slavish life. The only trade that God ordered ought to be the best one on earth. And it was until wicked men got between the farmer and God.

But you have plenty of time to read now; these long winter evenings. Don't neglect the opportunity. Read things that will make you wiser and better; that will give you broader views, deeper thoughts, a better understanding of the world, a higher notion of your own importance and power. The farmer ought to be the wisest as well as the most independent of men.

We wish that every one of Our Up-to-Date People owned his home, and had the supreme satisfaction of bringing up his children "beneath his own vine and fig tree." But it is no disgrace to be a tenant, provided you are a good one—doing the very best you can for yourself and family, and, at the same time, taking care of the interests of him whose lands you cultivate. There are tenants whose whole aim seems to be to get all they can off the premises and leave as little as possible for the owner. This class of tenants will always be tenants,, but they do not belong to Our Up-to-Date People, and we need not worry about them.

While on this subject we wish to say that a small home is better than no home. If agricultural independence survives the present fearful concentration of wealth and power the time will come when farm holdings will be much smaller than now, and ten to twenty acres will constitute desirable farms, and beautiful homes and good livings will be made on still fewer acres, possibly getting as low as the single acre. A sure profit from tilling the soil will work wonders, and transform the agricultural aspect of the whole country. It will lead to intensive farming and multiplied homes—not to patches, shacks and cabins, but to bright and comfortable homes and independence on small holdings. Hence we advise Our Up-to-Date People, especially young people, who have been following us through all these arguments and believe in the triumph of our contentions, to be on the watch for homes of their own, no matter how small they may be. Don't go heavily in debt, but get a home for yourself and little family, if you can. This is good advice.

Do you think of trying alfalfa in the spring? We do not blame you. It has been grown successfully almost everywhere, and a field of alfalfa of luxuriant growth is worth two such fields of almost any other crop. But there are some conditions absolutely necessary to success. It will not grow in acid soil. To determine whether your land is acid, get a bit of blue litmus paper, which can be procured at almost any drug store, bury it in the soil from three to six inches deep, and leave it there say for 24 hours. If, on taking it up, it has changed to pink in color, the ground is too acid to grow alfalfa, or clover, or any of the leguminous crops successfully. The remedy is a treatment of lime thoroughly worked in. Another necessary condition is alfalfa bacteria in the soil. These are not there naturally in the central States of the Union ,but they may be introduced by inoculation with soil where alfalfa has been successfully grown, or, on the authority of Dr. Moore, of the U. S. Department of Agriculture, by the bacteria cultures discovered and patented by him.

If there is a man on earth that needs brains, healthy, well-fed, active brains, it is the farmer. The following from Kimball's Dairy Farmer we consider quite to the point:

The brains of farmers need food as much or more than other people's. It is the reading, studying farmer that is forging ahead of his fellow men in these days of high-priced rents and land.

Some say, "I can't read—I get sleepy as soon as I sit down." That's true at first. Habit is a strong factor to consider. The cold, outdoor air is stimulating, and when a man settles down in a warm room he naturally gets sleepy. But that will pass away if he will pull off his coat and boots, and keep trying until the habit of study overcomes the habit of early retiring.

There is so much information abroad in the land that can be had for the asking, and so much at a very low price, that every farmer should avail himself of the opportunities of this golden age. There is no excuse for ignorance. A man may be poor through adverse circumstances, and he need not be ashamed of it—but the man, poor in mind, ignorant of his own particular laziness, is without a single excuse with which to hide his blushing face. "Haven't time to read" is the flimsiest excuse ever offered. The man who reads makes spare time, while it is the man who does not study his business who is always crowded by Old Man Time.

The Game They Are Playing

The A. S. of E. organization of the tobacco growers has developed peculiar opposition amongst the buyers. There seems to be a concerted effort to stampede the farmers. A buyer comes into a section of country and tells the farmers that the farmers in another section are not holding their tobacco for the prices fixed, that they have sold nearly all of their crops at prevailing prices, without regard to the prices fixed at Lynchburg. Another buyer goes into the other section with the same story of the section where the first buyer went.

This scheme of the tobacco buyers has established the fact that the difference between a traveling tobacco buyer and a tobacco liar is only in the spelling. This was revealed in Muhlenburg county, Ky., recently, and their conspiracy to fool the farmers into letting their tobacco go at the buyers' price was thoroughly exposed before several hundred farmers.

Don't let these fellows deceive you. Stand firm for your prices and you will get them. Spot the traveling tobacco liar and refuse to deal with him in any manner whatever. There are plenty of truthful men who will buy your tobacco, and who will be glad to aid you in securing a fair price. Let the "bear-story" buyers pass on and they may learn that truth is more powerful than falsehood, and that it will prevail. Don't allow them to fool you, and victory will be yours before you expect it. H. B. SHERMAN,
National Organizer, now in Virginia, but headed for North Carolina.

THE SMITH Great Western Endless Apron Manure Spreader

SPREADS all kinds of manure, straw stack bottoms and commercial fertilizer **regardless of their condition. Spreads as much in a day as 15 men can by hand.** Spreads the largest load in 2 to 4 minutes. Makes the same amount of manure go **three times** as far and produce **better results;** makes all manure fine and immediately available for plant food.

NON-BUNCHABLE RAKE forms a hopper, holds all hard chunks in contact with beater until thoroughly pulverized.

ENDLESS APRON is one continous apron, (not a ½ apron) **therefore always ready to load.** You don't have to drive a certain distance to pull it back into position after each load or wind it back by hand; **it is a great advantage in making long hauls.**

THERE IS NO GEARING it is always up out of the way of obstructions as it does not extend below axle. Spreads **evenly** from start to finish and cleans out perfectly clean.

HOOD AND END GATE keeps manure away from beater while loading; prevents choking of beater and throwing out a bunch when starting and acts as wind shield when spreading. **It has a graduating lever and can be regulated while in motion to spread thick or thin, 3 to 25 loads per acre.**

LIGHT DRAFT because the load is nearly equally balanced on front and rear axles. The team is as near the load as it can work. **Front and rear axles are the same length and wheels track;** beater shaft runs in **ball and socket bearings,** therefore no friction. Beater is 23 inches in diameter, **seat turns over** when loading. Machine turns in its own length.

SIMPLICITY There are only two levers on our machine. One which raises the hood, locks it and throws the machine in gear at the same time. It can then be thrown in and out of gear without lowering the hood. One lever which changes feed to spread thick or thin, making it so simple that a boy who can drive a team can handle it.

STRENGTH AND DURABILITY is one of the most important points to be considered in a manure spreader. **The Great Western** has a good, **strong, durable wheel. Extra strong** spoke and rim, **heavy steel tires.** Strong, well braced box with **heavy oak sill. Oak tongue, hickory** doubletrees, malleable castings, **gears and sprockets all keyed on. Galvanized** hood. Every part is made extra strong, regardless of cost. **It is made for the man who wants the best; made in four sizes, 30, 50, 70 and 100 bushel capacity.**

GUARANTEE Should any part break, wear out or get out of order within one year we replace free of charge. **Send for free catalogue,** showing latest improvements. It tells how to apply manure to secure best results.

Sharples Tubular SEPARATORS

Every Tubular Starts a Fortune

If you had a gold mine would you throw half the gold away? Properly managed dairies are surer than gold mines, yet many farmers throw half the gold away every day. The butter fat is the gold—worth twenty to thirty cents a pound. Gravity process skimmers — pans and cans — lose half the cream. Your dairy can't pay that way.

Like a Crowbar

Tubular Separators are regular crowbars — get right under the trouble—pry the mortgage off the farm. How? Gets all the cream—raises the quantity and quality of butter — starts a fortune for the owner. It's a modern separator. The picture shows. Write for catalogue F-136.

THE SHARPLES CO. CHICAGO, ILL. P. M. SHARPLES WEST CHESTER, PA

Fence Insurance

There *is* a fence backed by a *guarantee* —a fence that *insures* your satisfaction. That is

ELLWOOD FENCE

Heavy wire, light price. Cheaper than cheaper fence, for it lasts. Stands weather and strain and holds stock, looks neat and dresses the place. Made by the largest firm of fence makers in the world. its sales exceed those of all other fence makers combined. That assures you of the **responsibility** back of your guarantee—makes you safe on every rod you buy. What mesh and wire to order for any purpose is told in our **Free Booklet**, together with many valuable fence facts. Write for this book. A postal card will do.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

Good bye, Old Brindle, bony scrub,
The times demand a better breed.
You eat enough; but here's the rub,
You never pay for half your feed.
—Live Stock World.

Yes, the scrub must go.

It won't do to keep animals that don't pay their board.

But there is another side to this question. Those that pay for their board have a right to be boarded well.

Don't be afraid to raise colts. There is not a surplus of horses. But set your stakes for good ones.

Stock feeders have had a rather stormy road for some months. There is no proof of a surplus of stock, but there is proof of a surplus on the market. A plan for controlled marketing must be devised and carried out.

The cattle feeder must also be a hog feeder, and the hog feeder a cattle feeder. It takes the two together to save the wastes, and produce the profits.

What do you think of cold storage? If you buy a ham sandwich at a city resturant the ham may have been cooked two years, and spring chickens sometimes appear on the finest tables, that, had they been permitted to live, might have died of old age before reaching the table.

The Grout law, as it is called, put a tax of ten cents a pound on oleomargarine colored like butter, which, the manufacturers claim, has virtually destroyed the business. Which proves that oleo will not sell on its own merits, but, to be acceptable to the public, must play the hypocrite and parade in the uniform of honest butter. There is to be a strong effort before the present session of Congress to repeal the Grout law, or at least to reduce the tax so that the packers' product may be sold as the genuine product of the cow. Secretary Wilson says it can't be done and expects the cow to still do business at the old stand.

A law of 1886 taxed oleomargarine two cents a pound. Under this law the manufacturers of oleo paid an annual tax of $2,540,000. Under the Grout law of 1902, levying a tax of ten cents a pound on colored oleo, and one-quarter of a cent on uncolored, the total tax paid was only $254,000, $160,000 of that being on the colored article. In other words, under the old law, 127,000,000 pounds were manufactured annually, and under the new law there was manufactured and sold only 376,000 pounds of the uncolored and 1,600,000 pounds of the colored. From this it is clear that oleo will not sell unless it is dressed up like butter, and that there is a profit in it at 10 cents a pound below the market price. Cheap article certainly. Dairy men should be on the watch, and protect the people and the cow at the same time.

The livestock interest is aroused on the subject of the packing trust. Ranch and Range, of Denver, Colorado, speaking of the president's re-election, and referring in complimentary terms to his prosecution of the postal frauds, says:

"His next big undertaking is the dissolution of the packing trust, which is annually robbing the producers of millions of dollars. The investigation of this gigantic fraud has been in process for nearly a year, and the people are anxiously awaiting the report of the government investigators. The western stockmen hold the President in too high esteem to give the least credence to the report that their chief executor compromised their interests with the packing trust for the sake of securing his re-election."

"It is generally conceded among the most conservative cattle men," says Ranch and Range, "that the present is quite opportune to go into the cattle business. Cattle have reached the bottom, and as has been the case in former periods, the market will gradually grow better during the coming years until the top is reached. One reason for this is the fact that a large per cent. of the smaller cattlemen are growing discouraged and going out of the business. Another reason is the great falling off in the corn states of cattlemen who have hereto fore been regular feeders. While there is a marked falling off in the producers there is a corresponding increase in the consumer, and there is no other logical conclusion to be reached than that the price of cattle is bound to advance."

Sheep and Peas

All through the season of ruinously low cattle prices the sheep market has been steady to strong. And this is not peculiar to the past year, but has been so for several years. Of course this is resulting in increased attention to sheep raising. As a matter of interest to stock raisers everywhere, we copy the following from one of our Western exchanges:

The animosity on the part of the cattlemen towards the sheep industry is gradually dying out and a great many cattlemen are also engaging in the sheep industry. This is perhaps more noticeable in the San Luis valley, where stockmen run their cattle in the mountains during the summer, and during the fall and winter turn their attention to the fattening of lambs on field peas. There are a hundred and seventy-five thousand lambs being fattened in that section this fall, and the profits are very lucrative. A conservative estimate places the number of lambs that can be fattened off of one acre of field peas at 10, and the average profit on each lamb at $1. This would make a profit of $1,600 on a quarter section, but statistics and the experience of the feeders demonstrated that the profit off a quarter section of peas oftener reaches $2,000. This is the quickest and easiest money made. The sheep are purchased in the fall and are not kept on peas to exceed 100 days, when they are placed on the market. The cultivation of the peas requires very little work, as in most instances they are drilled without plowing the ground, and are given two irrigations, all of which work can be accomplished by one man in the short space of one month.

Endorses Crop Conventions

I have just gone through your paper of Oct. 1, the second copy I have seen, and I have read with interest your article on national crop conventions. Such a convention of any one of the staple products must of necessity result in great good to the producers of that article. Who then could tell what would be the outcome of a joint national convention of all the products? I hope you will continue to agitate the question until such conventions are held. Once the farmer realizes that he is a part and parcel of a great national federation whose aim is the betterment of his condition morally, physically and financially, he will be as enthusiastic in the support of the work of the convention as now is in that of his favorite political party.

When such conventions, composed of level-headed, common-sense people, meet and act, the influence will be felt from ocean to ocean, and from lake to gulf. There would be no need then for price making by the government, so ably discussed in the same issue of Up-to-Date Farming. The convention would resolve "that the price of cotton, or corn, or wheat, for the present crop year, is and ought to be such and such a figure," and, sure as a gun, that price would be "irrevocably fixed,' and that too, "without the consent of any other nation," or our own either, as to that.

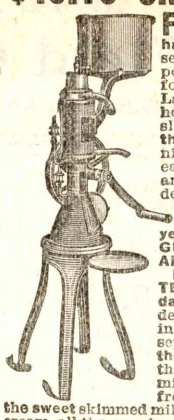
Then the States would hold grand ratification meetings, and do just like "the boys in the trenches," but for a grander, nobler purpose.

Let us have the convention. Agitate. You are doing a great work. Byron said, "A single drop of ink, falling like dew upon a thought, produces that which causes thousands, perhaps millions, to think." You are certainly causing thousands, and soon it will be millions, to think and to act.

I have but recently become a member of the A. S. of E., but I am heart and soul with the objects of the Society. Z. O. KING.

Philpot, Ky.

$43.75 CREAM SEPARATOR.



FOR $43.75 we furnish the highest grade hand cream separator made. A big separator with a capacity of 300 pounds or 140 quarts per hour, ample for any dairy of ten cows or less. Larger sizes of 400 or 500 pounds per hour capacity, for large dairies, only slightly higher in price. Guaranteed the closest skimmer, easiest running, strongest, most convenient, easiest cleaned, greatest capacity and least liable to get out of order of any cream separator made.

20-YEAR GUARANTEE. Every separator is covered by our 20-year written binding guarantee, GUARANTEEING EVERY PIECE AND PART OF THE MACHINE.

PROVEN BY COMPETITIVE TESTS, conceded by experts and dairy authorities everywhere, and declared by thousands of users to be in every way superior to any other separator made. Guaranteed to save the 25 per cent to 30 per cent cream that you now lose in the skimmed milk by the old style of skimming from the pan and besides you have the sweet skimmed milk for your calves; saves all the cream, all the sweet milk; makes more and better butter. With this separator you will get $10.00 to $20.00 per year more from every cow, you will get more income from seven cows than you are now getting from ten, and all with one-half the labor. Our $43.75 Separator is needed by every farmer, whether you milk two cows or ten. You will save the cost of the separator in a few months.

A BOY CAN HANDLE IT. So simple that anyone can operate it, no experience is necessary; if you have never seen a separator, no matter, any 15-year old boy can handle and run it, the ideal machine for boy, girl, woman or man to run, none of the complicated, hard to handle parts found in other machines. Combines all the good qualities of all other high grade separators with the defects of none.

30 DAYS' FREE TRIAL. We send our SEPARATOR TO ANY ADDRESS on 30 days' trial, to convince you it is THE BEST SEPARATOR MADE IN THE WORLD.

OUR FREE OFFER AND FREE CATALOGUE. Cut this ad out and send to us and we will send you, Free by return mail, postpaid, our Free Separator Catalogue with large illustrations (pictures), of all our separators, parts, etc., full description, special inside prices. UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

It's not so charming 'mong the poultry,
As when young chicks were running free;
But eggs at something 'bove a quarter
Are interesting to you and me.
—J. P. S.

What do you think of a farm without a hen-house?

Yes, there are some such, but they don't belong to Our Up-to-Date People.

Are you getting eggs? Remember the green grass and insects of last spring. The hens must have a diet as near like these as possible.

Jan. 1. Can you tell just what you made off your poultry last year? We told you some time ago we were going to ask this question Jan. 1. What would you think of the merchant or banker that didn't keep any account?

What are your plans for 1905 in the poultry yard? There is a great deal of room for improvement. For one thing, keep an account of every sale you make, and show the "old man" that you are helping to support the family. Your figures may get bigger than some of his, and I don't care if they do. You are entitled to credit for it.

Be sure that the fowls have fresh water in clean vessels at least twice daily. If slightly warmed it will be all the better. Ice and snow for drinking water are not much encouragement to egg production.

Fowls require more attention and more careful feeding during the winter months than during the summer, but if you can persuade them to "get busy" their product is worth more.

A life time experience with poultry on the farm has convinced us that much of the poultry profits are squandered by setting too many eggs. Decide about how many chicks you care to raise, how many you can do a full part by, that is, treat as they ought to be treated for the very best results, and then set eggs for that number, caring for the chicks after they are hatched in such a way as to raise the greatest possible per cent. of them. Entirely too many eggs are set for the number of chicks that reach maturity. It is far better to sell the eggs than to throw away dead chicks.

The turkey trade this season has given that fowl a boom ,no doubt. And it deserves it. There has been good money in turkeys for several years past. The turkey is not so difficult to raise Certain conditions are necessary during their earlier days—they cannot then stand cold dews and rains, but after they have passed the period of danger in this respect, they are entirely hardy, and require very little more attention; though they should always be fed some, and at regular times, to keep them gentle and to prevent their wandering too far from home.

There is not a surplus of geese in the country, and perhaps there never will be. The spring bed and the mattress have crowded the feather bed some, but feathers are still in steady demand at prices that do not vary a great deal. And the goose as an article of diet does not go begging—her steady price has more than doubled since the writer was a boy. There is no hardier fowl. There is quite a prejudice against a flock of geese in a pasture, but we doubt if it is well founded, especially if the pasture is large. It is in the small lot where there is not much picking any way that the goose has got her bad name. But she must not have access to the stock pond. We cannot excuse her bad habits there.

Ducks are everlasting eaters; they are always hungry, but they are great layers, and the young mature very rapidly and go into market at an early age, and usually at a fair price. Those who are prepared to raise them may find them very profitable.

If any of our readers think of using incubators next spring they may find what they want in our advertising columns. In writing to our advertisers, mention Up-to-Date Farming, and we guarantee that you will receive fair treatment.

Poultry In The Orchard

One of the best places to rear fowls is in orchards. Plenty of summer shade and an abundance of bugs and worms is always found in an orchard. Protection from driving rains and wind is also afforded and what better place can be found for a brood coop than under a fruit tree. Two uses of the land is also a consideration and the fertility added to the soil when run over by poultry is worth something. When the fruit needs attention the poultry crop is old enough to care for itself. A better combination is hard to find. Both occupations can be followed by one man and they easily give a healthy, useful life where one can "lay away a shillin'" for a rainy day.—Exchange.

The Michigan Fruit Belt

After three years in the harness as a worker on a fruit farm here near Benton Harbor I am prepared to say that the average farmer in the famous Michigan fruit belt is nothing less than a packhorse—a veritable slave to industrial conditions. He works so incessantly that he hardly looks up to take in the natural beauty of the landscape about him and rarely takes a day off for recreation, Sundays not excepted.

We consign our crops to the band of robbers on South Water street, Chicago, and do not realize enough from them on the average to live as every industrious American family is entitled to live. The result is that three out of every four farms in this (Berman) county is under mortgage, and this thing has been going on for years. There are a few sickly granges here, but they do little more for the farmers' financial condition than the average almanac.

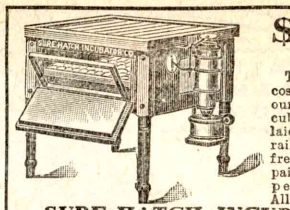
The farmer here has not evolved to the point where he can see that organization of his class is an actual necessity to-day because every other industrial class is organized. But he suffers on and is being deprived of nearly all the luxuries and many of the comforts of life. He goes without books and other social advantages, and this course is beginning to tell on the families of this fruit belt in the average intelligence displayed.

We pay monopoly prices for transportation, and for all our supplies, including fruit packages, and we receive only about one-half for our products what the consumer pays. In many cases this is not enough for decent livelihood.

Now, these are facts, however much the real estate men and the newspapers veneer them for the sake of appearance and profits.

We need a local of the A. S. of E. in every school district in Michigan. We need a meeting place where the farmers and their families can learn something of the economic courses of their impoverished conditions; where intelligent discussion would reveal the plain facts that the American farmer today is the victim of his own class ignorance and for this reason is the poorest paid worker in all the field of industry.

President Roosevelt stated the other day that he had only contempt for the coward—for the person who would not stand for his own rights. Now, is not the average farmer who disdains organization for the interest of his class, and who with his family suffers on account of avoidable conditions—I say is not such a worker, one who takes no intelligent stand for his own rights? HENRY E. ALLEN.



$10.00 FOR ALL

WHAT RESTORED DAN PATCH IN SIX WEEKS?

DAN PATCH GIVEN UP TO DIE.

OFFICE OF THE KANSAS CITY VETERINARY COLLEGE.
1330-36 EAST 5TH STREET.

ROBERT C. MOORE, D. V. S., President HENRY C. BABCOCK, M D., D.V.S., V-Prest.
BENJAMIN F. KNAPP, D. V. S., V-Prest. SESCO STEWART, M, D., D. V. M., Secy. & Treas., and Dean of Faculty.

M. W. SAVAGE, Minneapolis, Minn.

DEAR SIR:—I first saw your horse, Dan Patch, about 10:30 a. m., Sept. 13, 1904. He was suffering severe pain in the abdominal regions, caused by impection of the bowels probably caused by eating oat chaff. His pulse rate was 72 per minute and his temperature 103. The character of the pulse was weak. The conditions gradually grew worse during the afternoon until about 4 p. m. the pulse rate had reached more than 100 and his temperature was 105. The heart grew so feeble that the pulse could not be taken at the jaw and the rate could only be determined by listening to the heart beats. A cold perspiration covered the entire body much of the time and the pain was almost continuous. The visible mucous membranes were highly injected, which with the high temperature showed undoubted evidence of the inflamatory condition existing in the abdominal cavity. At this time owing to the inflamatory condition and the extreme weak heart, the prognosis was very unfavorable. From 4 to 6 p. m. I had little or no hope of his recovery. About 7 p. m. a slight improvement was noticeable and his condition gradually improved.

Very truly yours,
Veterinarians in attendance, R. C. MOORE, D. V. S.
R. C. MOORE, PRITCHARD & KNIESLEY.

HIS WONDERFUL RECOVERY.

In four days from the time he was given up to die by three high-class Veterinary Surgeons, we shipped Dan Patch from Topeka to our "International Stock Food Farm" at Savage, Minn., and commenced feeding him three times the usual quantity of "International Stock Food" and giving it to him four times per day. He recovered his strength very rapidly and in 3 weeks from the first day of his sickness he paced a mile at Springfield, Ill., in 2:04. This was in the face of a cold wind and over a track that was not in shape for extremely fast miles. Dan was shipped from Springfield to Memphis and in 6 weeks from the date of his sicknes he astonished the world by pacing a mile in 1:56 without a wind shield. "International Stock Food" is a remarkable vegetable preparation to give permanent strength to the entire system as well as being a great aid to digestion and assimilation. It is used and endorsed by a majority of the great trainers and is in constant use on most horse breeding farms.

Dan Patch has been fed "International Stock Food" every day since we bought him two years ago for $60,000. Since that time Dan has broken 7 world's records and has been extra strong and vigorous. Owing to his great constitutional strength he was able to withstand his severe sickness. You could not ask better proof of the superior merits of "International Stock Food" which you can feed at a cost of

3 FEEDS for ONE CENT.

MONROE SALISBURY REPORTS.

YONKERS, N. Y.
M. W. SAVAGE.

DEAR SIR:—I am sure that your "International Stock Food" helped me a great deal in keeping Consuella S. and Judge Green strong, both sired by your stallion Directum 2:05¼. I think Consuella S. can trot in 2:05 and Judge Green can beat her. Have you any Directum colts to sell or lease?

Very glad to hear that Dan Patch has entirely recovered.

Very truly yours,
MONROE SALISBURY.

"International Stock Food" is equally good for Stallions, Brood Mares, Colts, Race Horses, Work Horses, Carriage Horses, Show Horses and All Other Kinds of Stock. We feed it constantly to our Stallions, Dan Patch 1:56—Directum 2:05¼—Roy Wilkes 2:06½ and to all of our Brood Mares, Colts, etc. It Aids Digestion and Assimilation, Purifies the Blood, Stimulates and Strengthens the Entire System and Saves 3 Quarts of Oats Per Day in the feed of every horse. Write us for further information. All correspondence answered promptly.

Questions and Answers

LAUGHING PLANT.

To Up-to-Date Farming:

What is the "Laughing Plant?" Or is there such a thing? I heard some persons speaking of a plant they called by that name. C. M., Tolono, Ill.

We have little knowledge of such a plant; indeed, we doubt if there be such a one. It is said to grow in Arabia, and to possess qualities which provoke inordinate laughter and other peculiar symptoms of intoxication. The natives gather and dry the seeds, which they then reduce to a powder. A single dose of this powder is sufficient to cause the person taking it to burst out into the most boisterous laughter, to dance, shout, and do other ridiculous things. The paroxism lasts for about an hour, when the person manifests great exhaustion and disclaims all knowledge of what took place during the paroxism or period of intoxication.

IT IS A FACT.

To Up-to-Date Farming:

Is it really true that the American Society of Equity has succeeded in forcing the market to prices it has made, and has it thus actually benefited its members? J. L. T., Utica, N. Y.

The American Society of Equity has made prices on various farm products—prices invariably above the then prevailing market prices—and has told its members what to do in order to secure them. Afterwards the market has reached the prices so made. That members have profited by this price-making is conclusively proven by letters received at this office. For instance, M. J. Cox, Glenville, Ky., writes: "The farmers of our union and neighboring unions held their wheat for $1 a bushel and got it, while those who did not belong sold for 85 and 90 cents. The members made from $5 to $100 each by belonging to the A. S. of E." William Crawford, Valley Center, Kan., writes: "I held over 900 bushels of wheat from last year until this spring, and I made $240 above what I would have got at threshing time." R. R. Iley, Meridian, Texas, writes: "With an active membership of 25, we have saved during the past year $127." We could fill columns with such quotations.

NEWSPAPER IN INDIAN LANGUAGE.

To Up-to-Date Farming:

Are there any newspapers printed in the Indian language?

ANTIQUE, Roxbury, Mass.

We know of but one, the Cherokee Advocate, published at Tahlequah, Indian Territory. It is published by the Cherokee Nation as its official organ. One-half of it is printed in the Indian (Cherokee) language.

UP-TO-DATE AND A. S. OF E.

To Up-to-Date Farming:

Was Up-to-Date Farming established at the time the A. S. of E. was organized, and does it belong to the Society?

A. L., Guthrie, Okla.

No; the paper was founded by Mr. Everitt some three years before the Society was thought of, and its advocacy of the principles of controlled marketing and price-making by the farmers themselves, led to the formation of the Society. It was adopted as its official organ and medium of communication with its members, a position it fills, it is admitted, with untiring faithfulness, and with such ability that the central idea of controlled marketing previously unknown or ignored, is now being advocated and practiced in some form or other all over the country.

F. M. B. A. AND A. S. OF E.

Is the F. M. B. A. a part of the A. S. of E.? J. S., Centralia, Ill.

Not at all. The F. M. B. A. is the older of the two organizations, having seen its greatest strength in the early 90's. But, like the Alliance, it sought to bring relief to the farmers by the impossible method of reducing the cost of their supplies, which involved the pricing of other people's products. It, therefore, soon went into decay, but has since re-organized, and is doing very good work in lines taught it by the A. S. of E. As such this Society extends to it a welcome and helping hand, just as it does to all societies that make controlled marketing and equitable price-making their leading purpose.

Ladies: Why suffer with female diseases and piles? Package medicine sent f ee to every sufferer. Write Mrs. Cora B. Miller, Box 137, Kokomo, Ind.

This Potato Free

This **NEW POTATO** is just what everyone is looking for. Drouth and blight proof, and the earliest on record; nothing can equal it; best quality and smooth, while its yielding qualities are simply marvelous. We are raising stock to offer in 1906, but want to test it this year in every section of the country to make good our claims, and we offer **One Sample Potato** for testing **free** to anyone enclosing **10c.** to pay for postage and packing. It will be carefully packed from frost, and it is worth many dollars to those fortunate enough to get one.

Our New Seed Catalogue for 1905 is **free** and will be sent with every potato. If you enclose address of two families who buy seeds, we will include **Free Sample Great Corn Novelty** to be offered next year. Send to-day.

FAIRVIEW SEED FARM, Box 38, Rose Hill, N. Y.

A plant worth its weight in silver—Ginseng. Farmers everywhere are making money raising it.

Price, Circulars and Full Particulars Free on Request. One-third acre produced $15,000 worth.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

The orchard long has been a treasure,
Guarded by the friends of health,
And in a world of doubt and struggle,
Often points the road to wealth.
—J. P. S.

Walk through the orchard occasionally with your eyes open.

As we predicted early in the season, there is now talk of a scarcity of apples.

Isn't it queer how abundant everything is when the farmers own it, and how scarce it gets as soon as the farmers have sold out?

The way to get even with that proposition is to not sell out all at once—sell part at a time.

Don't manure nor cultivate the pear orchard, but keep it in a constant state of care and cleanliness. A thick sod is a good condition for it to be in. The "wise" people will not agree to this, but experience is the best teacher. It is easier to prevent blight than to cure it.

The farm that has no room for small fruits is like the farmer that has no time to read. The one has rust where the mind should be bright; the other is growing worthless weeds in many fertile spots.

Waiting until spring to clean up the garden gives the winds and frosts a splendid chance to plant some troublesome seeds.

Washing the orchard trees as high as you can reach with a strong solution of soap and water—"white" washing them with thin lye soap—is a great "restorer of youthful vigor."

We have several times urged the thinning out of the tops of the old apple trees. Don't neglect to do that, and paint the raw places left after cutting large limbs. Watch for the water sprouts, and take them out clean. They are heavy eaters, but they do not pay their board.

Make arrangements to spray next spring. We have been a little slow to urge spraying, but it had better be done. Combine with the neighbors and spray jointly. This is a good hint to local unions.

Yes, we are sure in favor of mulching the orchard trees. Keep the trunks clear for a few inches around them, and then the mulch does not increase the danger from mice, but it does increase the prospect for a crop of good fruit.

If you burn wood don't let any of the ashes go to waste. The peach trees will promptly respond to their influence if you scatter them around in reach of their roots.

Wheat growers in the Northwest are selling too freely. Wisdom travels an expensive road, but it finally "gets there."

Don't suffer another day with female disease or piles. Write me and get package medicine free, Mrs. Cora B. Miller, Box 137, Kokomo, Ind.

Grafting and Other Matters

W. A. Tittle, Whilthorne, Tenn., asks some questions, most of which apply to orchard culture, hence we answer them all here. They are as follows:

1. How to make home-made grape wine.

2. How to graft apple trees, and when?

3. How to manure fruit trees, and what kind of manure?

4. Which is the best kind of corn to plant, the large or small cob variety?

1. The writer has never made wine of any sort, nor has he ever used it in any way other than to merely taste it in church sacraments, hence he is not a very competent person to give instructions for making it. There are many works, however, that give this information, which our correspondent may easily obtain.

2. Grafting is generally done at the beginning of the season's growth, about the time we call "starting of the sap," though it may be successfully done later. There are so many kinds of grafting and so many different ways of doing it that our brief space does not justify entering into details. Any means of bringing the part to be attached in such connection with that which is to become the sustaining part, as to permit a ready flow of the sap from the one into the other and keep it there, and so as to prevent air and weather effects from disturbing the connection will be successful grafting. The method most employed by non-professionals is known as cleft grafting. Cut the stock at right angles and pare smooth, being careful not to injure the bark at or below the cut. Split to depth of two inches, and insert a wedge to hold the split open. Carefully insert one or two scions, made into a wedge at the lower end, so that the line between the wood and bark of the stock exactly fits the corresponding line of the scion. To be sure of securing this result, the scion may be inserted at a slight angle, so that these lines are sure to cross. Remove the opening wedge and the work is done. Now carefully wax the entire end of the stock covering every part of the wound, and fitting closely around the scions, so as to exclude both air and water. Make wax, by weight, resin four part, beeswax two parts, tallow one part; melt and thoroughly mix, and pour into cold water. Grease the hands and work as candy.

3. Barn yard manure is good for apple trees. Spread it under the trees as a mulch, but do not let it bank up around the trees. If forked in the effect will be more immediate.

4. The best corn is that which most certainly produces the greatest amount of sound grain. If the depth of grain and length of ear be equal, the large cob will hold the greater amount of grain, but it is generally later in maturing. The small cob varieties generally have small, short ears, and the large cob varieties generally have short grain. As in most other things, the golden mean is likely to be found the best—cobs neither too large nor too small.

As handy a little book as we have yet seen that costs nothing is "Fleming's Vest-Pocket Veterinary Advisor." It is of handy size to carry in the side pocket, contains 96 pages, is very substantially bound in leatherette, and treats 125 different subjects. While, of course, the primary object of the book is to advertise the Fleming remedies, this does not detract from its value, as its diagnosis of the diseases and ailments of stock are clear and comprehensive, and the treatments recommended are good. Every owner of livestock should have this handy and valuable little book, and they can get it free by writing for it to Fleming Bros., Chemists, 207 Union Stock Yards, Chicago, Ill., and saying you are a reader of Up-to-Date Farming.

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

Sing a song of seasons,
Something bright in all;
Sunshine Spring and Summer,
Fire in Winter 'n' Fall.

1905.

Be happy.

Life is too short to spend any part of it in worrying.

Three hundred and sixty-five days. Let's have a good, hearty laugh in each one of them.

The new year will bring us 52 Sundays--nearly two months of Sundays. Why, then there will be only about ten months for work this year. What are you worying about?

During 1905 the gentle rains will fall, the sun will shine, the dews will sparkle, the birds will sing, the bees will hum, the flowers will bloom—what is the matter with our being glad and cheerful and happy?

Health and happiness! You may have health without happiness, but you can't have happiness without health. Here is what it takes to make health—sunshine ,air, exercise, sleep, food, water, all at the proper time, and in proper proportion. Ask the doctor.

Don't eat too much meat. And I wouldn't have beans and potatoes at the same meal—too much starch. Cakes and pies are not best for some stomachs. Most people would be better nourished if they would eat about half as much as they are accustomed to eat. More people die of overeating than of starvation.

Reading must be made a part of the home happiness. The writer as a teacher for many years in country schools thought he could unmistakably pick out the boys and girls that came from reading families. The brightest minds will become rusted if they have no polish; the noblest souls will be dwarfed without mental food, the gentlest nature may degenerate into rudeness without something to refine it.

Are you acquainted with McClure's Magazine? The Christmas number was a good one. Each issue contains a fine amount of very nutritious mental food.

The young folks will have many a jolly evening at their disposal this winter. Did you ever try making velvet molasses candy? Here is how: Into a large kettle put one-half of a pint of good molasses, one pound and a half of sugar, one cupful of boiling water and three tablespoonsful of vinegar. Heat slowly, and when the mixture begins to boil add one-half of a teaspoonful of cream of tartar. Boil steadily until a little, when dropped into a cup of ice water, will harden crisply. As the candy nears the proper degree, stir almost constantly. When crisp, add one-half of a cupful of melted butter and one-quarter of a teaspoonful of baking soda. Boil for three minutes longer; then pour into shallow greased pans and let stand until cool enough to pull. Butter the hands thoroughly and pull until quite light colored. Draw out in ropes, cut into pieces and wrap each in waxed paper.

Some of Our Up-to-Date People worry because they think they can not make their white clothes look white enough. Put a tablespoonful of turpentine in the boiler when the clothes are boiling, and see how that will work. Or put a tablespoonful of coal oil in the water through which the clothes are to be rubbed before boiling.

Here is another little hint. If some of the furinture begins to look dingy, clean it very clean, leaving not a particle of dust on it; then rub thoroughly with a cloth "dampened" with linseed oil. Linseed oil is the common oil used by painters, and is very cheap.

We don't eat fruit enough, or, rather, we might eat more fruit and less of other things. Try this method of stewing prunes: Wash one pound of prunes in several waters, and let stand over night. Then simmer on the back of the stove until tender. Just before removing from the stove, add a large tablespoonful of sugar.

The pumpkin pie may not be as old as the pumpkin, but it is just about as old as civilization, and it is one thing that progress and invention can't outrun or turn down. Make one after this fashion and see if it isn't right up-to-date: To one cup of cooked strained pumpkin add one egg, three tablespoonsful molasses. one-half cup of sugar, a pinch of salt, one teaspoonful ginger or cinnamon, and one pint of milk. This will fill one pie on a large plate. Bake like a custard in rather a slow oven till a golden brown.

Try this way of cooking rice. Wash the rice thoroughly in two or three waters. Cook it in twice its bulk of water for twenty minutes. By this time the water should be boiled away. Remove the cover and set the vessel on the back of the stove for fifteen or twenty minutes. By that time the rice should have a "crawly" look; that is, each kernel should seem separated from the other, and not appear glutinous and murky. The secret is in allowing the steam to escape after the water has boiled away. In the South you seldom find rice cooked in any other way. Be careful not to let it scorch on the bottom.

Cream vs. Butter

One of the most helpful talks we ever heard at a farmers' institute was by a lady on the subject of "What to do and what not to do." Among other things she argued that much time and labor could be saved by churning only enough of the cream to make the family butter, and using the balance as cream. Health Culture sustains the argument in a well written article as follows:

"The very cream" of anything is an expression signifying "the best there is," yet few seem to appreciate the value of cream as an article of human diet, most people preferring to use milk fat in the form of butter. While good and properly made butter may fairly be conceded to be the best and most wholesome solid fat in use, it is quite inferior to cream in respect to both economy and health.

Many people who can not take cod-liver oil can take good fresh cream, enjoy it ,and thrive on it. In many run down and weak cases, where there is emaciation, cream is often very beneficial.

The superiority of cream over butter, or any other solid fat, consists, first, in its being not exactly in a liquid form, but in a condition allowing of great mobility between its particles, permitting the gastric juice to mix with it in the most perfect manner, and with whatever else the stomach contains, thereby facilitating digestion. Its behavior is quite different in this respect from that of butter and other pure fat. As soon as they become melted they grease over the other contents of the stomach, obstructing in a measure the contact of gastric juice, and hindering, rather than hastening, the progress of their digestion.

Cream is also superior to butter and other fats from its being intimately incorporated with albuminous or flesh-forming matter in a condition favorable for easy and perfect digestion, so that while it serves the purpose of all unctuous matter in developing animal heat and force, it rebuilds tissue, a very important consideration in the case of invalids.

It is a fact in the functions of the human stomach that neither fat alone nor albuminoids alone are digested by it as well as when the two are mingled together in certain proportions. It does not seem to cope with any kind of grease alone, and pure albuminoids it does not digest as well as that of animals in better condition, in whose muscles fat is mingled.

I cure female diseases and piles. I will send package medicine free to every sufferer. Write Mrs. Cora B. Miller, Box 137, Kokomo, Ind.

How to Obtain Profitable Prices

(Continued from Page 6.)

may be more favorably situated, or better endowed—who raise more than the average crops—must not complain at the money you make.

Besides the needs for a change as already enumerated there are many others. The old system of marketing is totally bad. It has been responsible for more misery, disappointment, breaking up of families, and financial loss than anything else outside of the drink habit.

While our government makes laws to regulate other evils, no laws are made against gambling in farm products. This gambling in the products of the farm and limitless exploitation of our farmers by the shrewdest and most unscrupulous classes of citizens is responsible for a whole catalogue of iniquities. Among them we mention child labor on the farm. Our foreign markets have been lost by low prices set by market manipulators. The boys and girls leave the farm because of insufficient reward. Laborers have deserted the farms because farmers cannot pay the market price for labor. And so I might bring up every ill that afflicts the farmers' business today and they are all the result of insufficient prices for his products. It also follows as truly as the needle of the compass always points to the north; as surely as the seasons follow each other and as day follows night, that, when farmers get fair prices always, all these troubles will disappear. Farmers will then come to the front to remain there. Their's will be the preferred profession and farming will be the best business in the country.

My friends, to bring about this desirable and happy consummation I am DEVOTING MY LIFE energies.

But how can farmers change these things?

And how will they be changed?

This is a great problem. It's solution has never been attempted before since crops were grown. You may think it is too stupendous for mortal men to undertake. You may think of the immense number of farmers and say, "Oh, it can't be done; they won't stick together; they won't co-operate," etc. But let me tell you, you are mistaken. You overestimate the magnitude of the undertaking. I am going to surprise you by telling you that it is a very simple problem and the very fact that there are millions of farmers is what makes it simple, easy and certain in results.

In the first place I want to remind you that you raise just one crop a year of each variety. One crop of corn, one crop of wheat, one crop of cotton, one crop of fruit, etc.

I also want you to understand that it takes the whole year to consume a crop of any variety. Is this not so?

In the past you have been in the habit of marketing the bulk of your crops soon after harvest. Because of this there have been great elevators, warehouses and cold storage houses built all over the country and in all large cities. These don't belong to you, but they belong to another set of people. Now you see, YOU produced the stuff, but THEY soon get possession of it. They knew you would let go of it; hence, they just built the storehouses and waited until you went to them and asked them what they would give you and they gave you just as little as possible. These men did not have the same interest in the crops that you should have. But the enormous accumulations in central markets have been used as clubs to beat down the prices of any more of the same crops whether on the farm or elsewhere. When the consumers wanted supplies they did not need to go to the farm for them, but they dealt with the warehouse men, while you kept feeding more crops in without any regularity or system.

As it requires the world a year to consume your crops what would be more reasonable than for you to require a year in which to market your crops? Who will pay as much for a year's supply if marketed in a month, as if dealt out over 12 months? Suppose a year's supply of coal had to be marketed in a month, could the seller maintain the price as well as if put on the market over 12 months? Suppose the Standard Oil Company with its enormous wealth found it necessary, or thought it was necessary, to market a year's supply of oil in a month, would the price be maintained? Or, if the clothing merchant closed out all his year's supply of clothing, including overcoats in August, would he get good, profitable prices for them? It is just as ridiculous, wasteful, and as damaging, if not criminal as regards your family, for farmers to sell the bulk of their crops in a few weeks or months.

The sellers haste makes the buyers opportunity. But by controlling the supply of any article until the season arrives when it is wanted—when the demand is ready for it and seeks it—then the seller can set his price and get it. This is all there is to your problem of marketing and price-making. Controlled marketing is the key. Controlled marketing will compel the price. Controlled marketing is everything. Controlled marketing will solve all your problems.

Keep your crops off the market until the demand seeks them at your price. Hold your crops until they are needed for consumption. Keep them out of elevators and warehouses and back on the farms. And why not? Somebody holds them until the demand for consumption comes. The world can't consume them all at once, but the world gets hungry three times a day for 365 days in a year. You may say, "Suppose the demand don't come?" or, "Suppose the demand won't pay my price?" Don't have any fear. It is bound to come. All the crops that are raised are needed, and have been for years. Also, the world will consume as much at a fair price as at an unfairly low price. The world cannot do without your crops. It don't need just part of them, but all of them and it will not be over-particular about the price, because it means life or death and comfort to people and domestic animals. The only thing is, if it can't get your crops at the buyer's price, it will pay your price.

Market a year's crop over a year. If the price is not right at the start, hold and you will get it. There are enough now educated to this plan that they represent a large part of every crop and these parts cannot be spared from consumption; hence, the price MUST come. When the organization is large enough the fair price will begin as soon as the first of any crop is ready for market. Now you may need to wait a while. It required eight months to raise the 1903 wheat crop from under 70 cents to $1 a bushel, but it required only two months to raise the 1904 wheat crop from $1 to $1.20.

Do you ask, "How will I know when to sell?" I reply, "When the buyers will pay your price." Your price will also be the price of every other Union farmer in the country. All you need to know is the price. But what is your price? The minimum price. And what is the minimum price? This is the lowest price at which any of the crop should be sold and is a profitable price. You will get the minimum price from the farmers' headquarters and through the official paper.

This makes it necessary to explain the plan of co-operation to control marketing and make prices.

(Continued in next issue.)

Mrs. Cora B. Miller, Box 137, Kokomo, Ind., sends free to every sufferer a package medicine that cures female diseases and piles.

SIMPSON-EDDYSTONE PRINTS

The standard calicoes of America for more than half a century. Your grandmother used Simpson Prints. They were good then because the character of the manufacturer was stamped on the materials and entered into their making. To-day they are better than ever before—the old-time high ideals have been maintained and Eddystone improved art and machinery have raised the standard of Simpson prints still higher

Ask your dealer for Simpson-Eddystone Prints.

In Blacks, Black-and-Whites, Light Indigo-Blues, and Silver-Greys; Shepherd Plaid effects and a large variety of new and beautiful designs.

Thousands of dealers sell them.

Sole Makers, Eddystone Manufacturing Co., Philadelphia

Anvil 1 Hardy.) a Steel Forge 17x24, 11 in. Ball Bearing Fan, ABSOLUTELY FREE. Strongest Best and Cheapest Tools made. We pay freight and ship on approval. Write for catalogue. Address, C. R. HARPER MFG. CO., Box 716, Marshalltown, Iowa.

The $50,000,000 World's Fair

The Louisiana Purchase Exposition, St. Louis 1904.

The most wonderful the world ever saw, purchased by the Chicago House Wrecking Company. The dismantling of this exposition is the most gigantic undertaking of modern days. Millions of dollars of material for sale by us at prices that mean an enormous saving to purchasers. Now is the time to put into execution your long contemplated improvements. Buy quick because the prices we offer this material at will sell it as fast as we can make delivery.

100,000,000 Feet of Well Seasoned Lumber.

The time to buy lumber is today. Prices are advancing. Within the next 60 days you will see a decided increase in the market prices on lumber. Do not wait until the prices go down. They never will. Even though you do not happen to need any lumber today, it will pay you to purchase it now and store it for future use. It will prove to be a better investment than money in the bank. Its value will double in a year's time. The finest grades of lumber were used in the construction of this grand Exposition. The quality of the interior as well as the exterior material could not have been better and was purchased at the time with a view to strength, durability and finish. We are offering for sale everything needed in the construction and furnishing of a building for any purpose. Studding, joists, planking, dressed and matched flooring, sheathing, timbers, in fact every variety of lumber for any purpose.

Send Us Your Lumber Bill for Our Estimate.
You can save from 30 to 50 per cent if you buy at once.

This is your opportunity to build or improve your home or barn. In fact it is the chance of a life-time to get lumber below regular prices. If you are intending to build, be sure and take advantage of this offer which can only last for a limited time. We are selling material for houses, barns, warehouses, churches, halls, elevators, tool sheds, granaries and cribs, stores, school houses—in fact any kind of a building. If your County Fair buildings or race track need improvements, now is the time to order the needed supplies. Among the enormous stock we have just what you want.

Millions of Dollars Worth of Other Material for Sale.

Besides lumber, we have for sale at prices below the original cost, all kinds of SASH, DOORS, STEEL AND FELT ROOFING, PIPE, HARDWARE, MACHINERY, HOUSEHOLD GOODS, FURNITURE, RUBBER HOSE, ROOFING GLASS, WIRE AND FENCING, ELECTRICAL APPARATUS, FENCE POSTS, FIRE FIGHTING APPARATUS, STRUCTURAL IRON, PLUMBING MATERIAL, FLAGS AND POLES, ROPE, TOOLS of all kinds, TURNSTILES, STATUES, RAILING, MOULDING, IRON RODS, CONDUCTOR PIPE, EAVE TROUGHS, OFFICE FIXTURES, OPERA CHAIRS, SETTEES, and thousands of other articles,

Ask for Our Special World's Fair Catalog No. 204.

We purchased and dismantled the World's Fair, Chicago, 1893, the Trans-Mississippi Exposition, Omaha, 1899, the Pan-American Exposition, Buffalo, 1901, the World's Fair, St. Louis, 1904.
We have but little time to dismantle the St. Lou s World's Fair with its millions of dollars of materials and furnishings used in its construction. Quick delivery to those that purchase now Address St. Louis Office

LETTER FROM DAVID DOBETTER

Number 48

Near Williamport, Ind., Dec. 15, 1904.

Dear Mr. Everitt—We had a jolly time husking out the corn this year. To begin with ,the crop was splendid—never had a better one. Reports from some parts of the west show that the crop was not quite up to the standard, but here with us everything seemed to work for a fine yield. I think our farm is very favorably located for growing most anything. It lies in such a warm corner of the State, sheltered from the hard winds and tempered by the water close by. And then, we took a great deal of pains to have a good crop. I have made up my mind that nothing pays better than care in the growing of all kinds of crops. Corn, especially, will go to the bad the quickest of anything if it is not kept clean as a whistle, and everybody that has had anything to do with our corn this year has seemed to be in honor bound to do his very best. I give a great deal of credit to Tom. If he had been one of my own brothers he could not have worked more faithfully. And then, at vacation time the boys kept things hustling, so that very few weeds poked up their heads. We have found out that deep cultivation is not what we want for corn. Run a light cultivator through it often, cutting a shallow furrow, was our motto, and it did the business all right.

But I started to tell you about the husking. Everybody had a hand in that. We pushed the work along as fast as we could when the weather was good, and the final windup came at Thanksgiving time. We planned it so that we could have a good big flooring on the big barn floor at that time. The children all came home from school to eat turkey and be present at the roundup of the corn. I hope the boys and Mary never will get to a point where they will not want to come home at these holiday seasons. I believe it would break our hearts if they were like so many children, glad to turn their backs on the old place, never to come back again. Wife and I have talked about this a great deal. I remember that she said once. It tells the whole story.

'David, I think the reason so many boys and girls do not like to get back to the old home is because there is no real home to go to. A house and four walls does not make home. There must be something else. Good, kind hearts and loving words make home. The welcome is more than the splendid mansion and the rich victuals. I hope we will always be able to make a home for our children!"

And so do I. Well, we invited the widow and her children up. Little Sweetheart was there, and she was the happiest of us all, I guess. Dear little Sweetheart! It was a blessed day for us all when she came to Four Leaf Clover farm! Just a waif, and alone in the world. God seemed to have left her to wander along all by herself, and yet it does seem as if he must have had a kindly watch over her when He sent her to us. Surely I am a better man for having her here with us. And so are all the rest of us better.

How the big ears of corn did fly that last evening as we husked by the light of the lanterns hanging on hooks over the barn floor! Ben beats all lthe huskers I ever saw. You might think being away at school so he might lose some of his muscle, but he works every day, he tells us, and that keeps him strong. I think that is better than football myself. But John has to get his exercise in the gymnasium and in outdoor walks. The two had a race that night. The rest of us just stood by and watched while they were going it. They kept it up for half an hour just as tight as they could work. There was a steady stream of ears, as you might say, from their hands to the big baskets. We laughed and cheered them on, and the boys worked till the sweat ran down their faces. They were as solemn as deacons. Not a smile out of them. It would have done you good to have watched them. It kept the rest of us busy getting the shocks of corn down to them and emptying the baskets. In the half hour they husked ten bushels of ears, and Ben rounded his last bushel up so that we concluded that he had done a little better than John; but there was not enough difference to put in tea. It was a splendid spurt.

After we had cleared up the floor, bound up the stalks and carried out the last bushel to the granary, we sat there with the moonlight streaming in at the big barn doors and sang and told stories till the old clock at the house told the hour of midnight. The boys had a good many yarns to tell about the days at school. I am glad they have never been into anything really bad. Some of the pranks they play have a considerable snap to them, but nothing mean nor underhanded. And that is all right. Young folks must have some way of working off steam. If anything makes me sick it is a dead and alive boy or girl. Snap is what counts in this world. No snap, no life worth while.

And we wound up by singing that dear old song that we all love so well,

"Praise God from whom all blessings flow;
Praise Him all creatures here below."

And we sang it as if we meant it, too. What does it say? "All blessings." Not some of them; not now and then one, but all blessings come from Him; and I wish the world realized this more than it does. It would be a better world if we did believe that and lived up to it. There were some moist eyes when at last we shoved the doors together and went in to bed. I am not ashamed to say that mine were among them. I waited till all the rest had gone in, and then I stood out there in the light of the moon and looked around. It was so noce and bright everywhere that I could see all over the farm. I stood there alone and looked out at the big fields, so clean and gray. They have all given up their corn and hay and grain to help make the world a little happier. Then I looked at the big barn and the new granary and the comfortable house, and thought to myself: "If ever a man had need for thanksgiving it is me, David Dobetter! So much has been done for me! And I am thankful. It was simply a mercy of God that I ever came to start up in the world and do anything worth while. And there is yet so much to do! Life is a big thing, Mr. Everitt—bigger than most of us realize. Now and then on some such occasion as this it comes over a man, but generally we do not appreciate what it means to live in such a great world and be a citizen of a country like ours. Too many times we are satisfied to just squeeze along from year to year. If we get enough to live on ourselves we think we are pretty lucky, but that is not living. Living is making the world better, and we have got to do that if we ever really live.

The children have gone up stairs now. I hear Ben and John singing an old snatch of a song. Mary and mother are still talking together. I guess mother is getting an etxra quilt for the youngsters. It is rather chilly these evenings. and they have been sweating some. Mother takes good care of her boys and Mary. And so I go into the house myself. There is a big lump in my throat someway. And in my heart there is a great song of thankfulness. I can't tell you any more about it. You know how it is yourself! So good night. Your sincere friend,

DAVID DOBETTER.

The wheat visible Dec. 10 was 37,108,000, an increase of 308,000; of corn it was 48,558,000, an increase of 1,384,000; of oats it was 24,201,000, a decrease of 296,000; of rye it was 1,993,,000, a decrease of 25,000; of barley it was 5,743,000, a decrease of 784,000. Whenever an increase of the visible is shown, too much of that article is being put upon the market—more than consumption requires, and lower prices are invited.

I will send package medicine free, if you suffer with female diseases or piles. Write Mrs. Cora B. Miller, Box 137, Kokomo, Ind.

DO THIS NOW

And I Will Give You a Pair of my Handsome

Gold Spectacles

Just send me five names of spectacle wearers and I will do this:—First, I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test), I will mail you a

perfect-fitting five dollar family set of Spectacles for only $1, which will include a pair of my handsome Rolled Gold Spectacles, absolutely free of charge. This set will last a family a lifetime. I have never sold this family set for less than $5 and you could not buy spectacles anywhere near as good as these, even for $10 a ***pair.*** I am really charging you nothing for them now, as the dollar I will ask you to send with your test is only to help pay for this announcement. This very remarkable but honest offer (to send a five dollar set of spectacles for only $1) is open to everyone (my old customers also), but only for a short time, as I am just doing this to prove to every spectacle wearer in the world the following two very important facts: *First*, that my Perfect Home Eye Tester is positively accurate and reliable and with it you will be able to give your own eyes a perfect test in your own home and thereby I fit you with absolutely perfect fitting spectacles ***by mail,*** which could not be improved on even if you had undergone a personal examination in any occulist's office, at a cost of $10 or more. *Second*, and most important of all, that on account of my latest improvements, my spectacles have become known the world over as the "Dr. Haux Famous Perfect Vision Reading and Sewing Spectacles" and they are now greatly superior to all others on the market. With them you will be able to thread the finest needle and read the smallest print, day and night, with perfect ease and comfort, just as you did in your younger days, and this, even if your eyes are so very weak now that you cannot read the largest print in this paper. In fact the large number of physicians who have for years and years used and recommended my spectacles to their weak-eyed patients will tell you that they are the most perfect fitting, clearest and best in the world today, and I will give you your dollar back and let you keep the five dollar set of spectacles also, if ***you yourself*** don't find them to be the finest, clearest and best you have ever bought anywhere at any price. I can only send one set to a family at this price, and this only for a short time, so write me ***right now*** for my free Perfect Home Eye Tester, and address my company as follows:—

DR. HAUX SPECTACLE CO.,
Haux Building, ST. LOUIS, MO.

I WANT AGENTS ALSO And any man or woman (also storekeepers), without any previous experience whatever, can fit the weakest eyes with my Perfect Home Eye Tester. which is so simple that any one can work it and easily earn from $25 to $100 weekly selling my famous spectacles, either in their own homes, travelling or in stores. My agents need no license anywhere as I furnish the necessary documents with the Agent's Outfit.

NOTE:—The above is the largest mail spectacle house in the United States and perfectly reliable.

UP-TO-DATE WRITERS

CONVENTION AT LITTLE ROCK.

There will be a convention of all the local unions of the American Society of Equity at Little Rock, Ark., January 26, 1905, for the purpose of considering equitable prices on all products of the farm ,orchard and garden, and to discuss ways and means for a more thorough organization of the State, and other matters that may come before the convention. Each local union is requested to send one or more representatives, and all farm organizations, and farmers, that are interested in the above objects, are cordially invited to attend and participate therein, so we can have concert of action along the line.

T. C. HARDCASTLE, Pres.
JUAN FREEMAN,
State Organizer.

THE GOOD ROADS QUESTION.

Editor Up-to-Date Farming:

I like your article on roads in a recent issue of this paper. We tax-payers don't want any bonded debt for roads or anything else. The farmers, or rural people, have to pay all of the public expense—it all finally runs back to the clodhopper. We don't want the Brownlow bill at all.—Henry Hoover, Coytee, Tenn.

WHEAT AND COTTON.

Editor Up-to-Date Farming:

We have been a little on the drag here, but nowthe people are beginning to take an interest, and are saying something has got to be done, and they are going to demand it. That is what we have been wanting them to see for some time. Equitable price is what we want. We don't want $1.20 wheat and 8 cent cotton, but we want $1.20 wheat and 12 cent cotton. We can't grow cotton at a low price and be able to meet the wheat growers at their price. As Southern people we desire to become a band of brethren with the wheat growers on a basis of equity. Help us all you can through Up-to-Date.—R. H. Meadows, Satillo, Tenn.

GAINED BY HOLDING GRAIN.

Editor Up-to-Date Farming:

Some time ago I told you how much I made holding my wheat. I will now tell you about my corn, 1903 crop. I held 1903 bushels until August 1, 1904, when I sold at an average of 47 cents per bushel, realizing $592.20 Those that sold at husking time got about 33 cents per bushel, which, for the same amount of corn, would be $415.80, a difference of $176.40 in favor of controlled marketing, which would build a fair corn crib.—Wm. Crawford, Valley Center, Kansas.

WOULDN'T BE WITHOUT IT.

Editor Up-to-Date Farming:

Speaking about benefits, I can say I have been benefited by reading Up-to-Date Farming intellectually, morally and financially. It is the best educational paper I have ever read, and I would not be without it for many times its cost.—A. S. Morrow, Wallaceburg, Ark.

NOT TOO INTELLIGENT.

Editor Up-to-Date Farming:

Some people are not so intelligent as they should be, else they would never help their enemies talk their own business down. Did you ever know a business man go out on the street and publish that his goods are not worth anything? He has sense enough to know that nobody cares for his misfortunes, so he talks his business up and makes a profit. But some farmers are stupid enough to think aloud that they are getting bit in paying a dollar a year to have their business made the best business in the world. The sooner such people get off the earth the better it will be for the rest of us. The men that kind of farmers think admire them are laughing at them all the time.—F. B. McCown, Kirkmansville, Kentucky.

GIVES A. S. OF E. CREDIT.

Editor Up-to-Date Farming:

I of course give all the credit for our good prices to the A. S. of E. There are buyers among us daily for almost all kinds of grain. The large distillery of Rohr, McHenry & Sons have had a man on the road ever since July 1 trying to buy rye. They are offering the highest price paid since the war, I believe, and are not able to get enough to keep them running. They are even trying to contract with the farmers to raise rye instead of wheat; they guarantee 65 cents and whatever the price may be above that. I think the A. S. of E. has done much toward our good times, and I am going to do all I can for it.—W. G. Creveling, Asbury, Pa.

YES, AND AGAIN YES.

Editor Up-to-Date Farming:

You wish to know whether I have been benefited by reading Up-to-Date and belonging to the A. S. of E. I say yes, and again yes—more than any other paper I ever read, and I have read a great many different agricultural papers in my time. Computing them all together as one, they have not given me the benefit I have received from your paper the two years or little over that I have been reading it. I highly prize the paper, and always anxiously await its coming.—J. J. Erford, Carlisle, Pa.

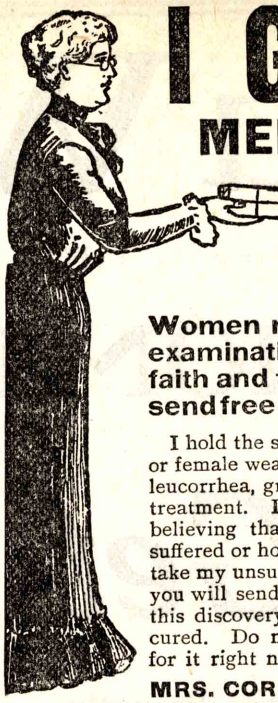
GOD'S GRACE.

Editor Up-to-Date Farming:

I am glad to know that the A. S. of E. is spreading, for if there is anything American farmers need it is a goodly portion of God's grace in their hearts, and then a whole farm load of equity. If there ever was a time when farmers ought to wake up I think it is now. When a man is on the Lord's side he is all right, and when men have divine right on their side they are certain to win. If people would they could almost have heaven here on earth. Oh, that equity might float in the air as a contagion until all should catch it.—A. L. Davis, Antler, Mo.

CREDIT TO UP-TO-DATE.

I feel grateful to you for the information we get through the paper, and we are glad to know that farmers are so generally standing for equitable prices. We are holding our cotton for 10 cents, and we learn that in Georgia they are holding for 12. Up-to-Date deserves the credit for this great stand. The boys that belong to the coal miners' union are joining with us, and they know what it means.—Reece White, Russelville, Ark.



I GIVE AWAY
MEDICINE TO WOMEN.

A Wonderful Medical Discovery that Cures Women of Female Diseases and Piles as if by Magic, Sent FREE.

Women no longer need submit to embarrassing examinations and big doctor bills. To show good faith and to prove to you that I can cure you I will send free a package of my remedy to every sufferer

I hold the secret of a discovery which positively cures women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhea, granulation, ulceration, etc., are very readily cured by my treatment. I now offer this priceless secret to the women of America, believing that it will effect a cure, no matter how long you have suffered or how many doctors have failed. I do not ask any sufferer to take my unsupported word for this, although it is as true as gospel. If you will send me your name and address, I will send you a package of this discovery absolutely free, which will show you that you can be cured. Do not suffer another day but just sit down and write me for it right now.

MRS. CORA B. MILLER, - - Box 137, KOKOMO, IND.

VARICOCELE

Richardson Sanitarium where thousands have been cured.

Associate Pelvic and Reflex Nervous Diseases Cured by a Painless Safe Method

Let me explain the theories, methods and special features of my Sanitarium practice in its application to your case. I have no home treatment scheme, nothing to sell you.

After you know what I do, you will understand why men travel across the continent to see me. Tell me your symptoms and troubles so that I can give you trustworthy professional advice and information.

My interesting and instructive books are free to the man describing his case and enclosing 10c to pay sealed postage.

Write to me before you lay this paper aside. You may not see this announcement again. I do not advertise very much because my cured patients send me their friends and my Sanitarium is full nearly all the time.

Now is your opportunity; write while my address is before you.

D. D. Richardson, M. D., 123 Michigan Avenue, Special Carrier 206 Chicago

A Big Package "Salt of Life" Free to the Sick

Send for it today
Send for it today

This is not a drug, nor a medicine, nothing made by human hands, but a direct gift from God to kill disease and lengthen human life. This salt is a wonderful substance discovered in the mountains of Virginia. The world stands astonished by its marvelous curative powers. It is the essence left by the evaporation of the waters of Virginia's famous Seven Iron Alum Springs—a positive panacea for all human ills. You can now drink from this Fountain of Life, **FREE.** No matter how sick or old you may be, what the disease is, it cures. Doctors may pronounce you incurable, but Salt of Life dumbfounds them with surprise. Even when everything else has failed you this marvelous natural remedy will cure and restore you to perfect health. Salt of Life conquers all disease be it internal, external, chronic, malignant, infectious or death-dealing, invigorates and strengthens; purifies the blood, adds bone and muscle and prolongs the life-giving elements. It brings all the joys of life and **it costs nothing to find this out, for we will send you a big package so you may test it free, if you will only send us your name and address. SALT OF LIFE CO., U11 Governor St., Richmond, Va.**

THE ENTIRE AGRICULTURAL POPULATION OF THE COUNTRY TO BE DIRECTED TO MAKING PRICES

The A. S. of E. Proves that Farmers Have Been Powerful in Shaping Prices the Past Year==The Effort Now is for Complete Organization in Every Community

In this issue of Up-to-Date Farming we print an article headed, "To Whom Be the Credit," and another, "The Market Reports Tell the Story," that we commend to the careful reading of every farmer into whose hands this paper can be placed. We urge each regular reader to pass his copy along and have it read by as many people as possible. This movement is largely a campaign of education, hence anything that will educate the people is valuable.

We feel that the beginning of 1905 marks an epoch in American agriculture. It seems to us at headquarters that the people most vitally interested—the farmers—will rise up en mass to establish the American Society of Equity in every community in the land, make its workings absolutely reliable and its power irresistible.

The society is primarily for the farmer's benefit, but every person doing a legitimate business will also share in its benefits. On the farmer we must mainly depend for its complete triumph, but any person loving fair play and equity in the distribution of rewards is appealed to to help the movement along.

We now want 20.000 WORKERS, we want the man, woman or boy or girl who will see that a local union of the A. S. of E. is organized in his or her community. We want the person who will organize a township or a county or large territory. We want the old wheel horses and organizers in former farmers' societies, the Grange, Alliance, F. M. B. A., etc. (They make the most successful organizers). And we want the professional speakers and organizers who can sway the multitudes and organize or educate in a wholesale way.

The A. S. of E. will pay reasonable compensation to workers. It will pay for good services equal to the compensation given in other lines of effort. It opens up permanent positions for 20,000 people to engage in an honorable and profitable business. The A. S. of E. realizes that to establish itself and keep the machine running smoothly there must be representatives in counties, districts and States. The development has now reached a point where it is imperative that these be selected. Therefore this call, no matter what your vocation, if you think you have the ability to fill the requirements, let us have your application. If you are not situated so you can give all your time to the work, then let us have your application and we will be glad to have your help in a small way.

In making application tell us plainly what you want to do. Any person can do some good if he or she is willing. We send such plain instructions that any ten or more farmers can organize a local union among themselves. We will send printed addresses that will be the guide for any large meeting (one is begun in this paper.) In short, tell us that you are willing to help and we will show the way and insure success.

No farmer, merchant or manufacturer can overestimate the value of this movement to ALL the people, hence we again appeal to every reader to help all he or she can. A letter will bring full particulars and instructions. Address

THE AMERICAN SOCIETY OF EQUITY,
Indianapolis, Ind.

If You Want Cash

FOR YOUR

FARM, HOME OR BUSINESS

I Can Get It

No Matter Where the Property is Located or What it is Worth

IF I DID not have the ability and facilities to sell your property, I certainly could not afford to pay for this advertisement. This "ad." (like all my other "ads.") is practically sure to place on my list a number of new properties, and I am just as sure to sell these properties, and make enough money in commissions to pay for the cost of the "ad." and make a good profit besides. That is why I have the largest real estate business in the world today.

Why not put your property among the number that will be sold as a result of this "ad ?"

I will not only be able to sell it—some time—but will be able to sell it quickly. I am a specialist in quick sales. I have the most complete and up-to-date equipment in the world. I have branch offices throughout the country, and a field force of over 3000 men to find buyers.

I do not handle any of the lines usually carried by the ordinary real estate agents. I do not make any money through renting, conveyancing, mortgages, insurance, etc. I MUST SELL real estate—and lots of it— or go out of business. I can assure you I am not going out of business. On the contrary, I expect to find, at the close of the year, 1905, that I have sold twice as many properties as I did in 1904, but it will be first necessary for me to "list" more properties. I want to list YOURS and SELL it. It does'nt matter whether you have a farm, a house without land, or a business; it does'nt matter what it is worth, or where it is located. If you will fill out the blank letter of inquiry below and mail it to me today, I will tell you how and why I can quickly convert the property into cash, and will give you my complete plan (free) and terms for handling it. The information I will give you will be of great value to you, even if you should decide not to sell. You had better write today before you forget it.

If you want to buy any kind of a

FARM, HOUSE OR BUSINESS

in any part of the country, tell me your requirements. I will guarantee to fill them promptly and satisfactorily.

W. M. OSTRANDER

406 North American Bldg., Philadelphia.

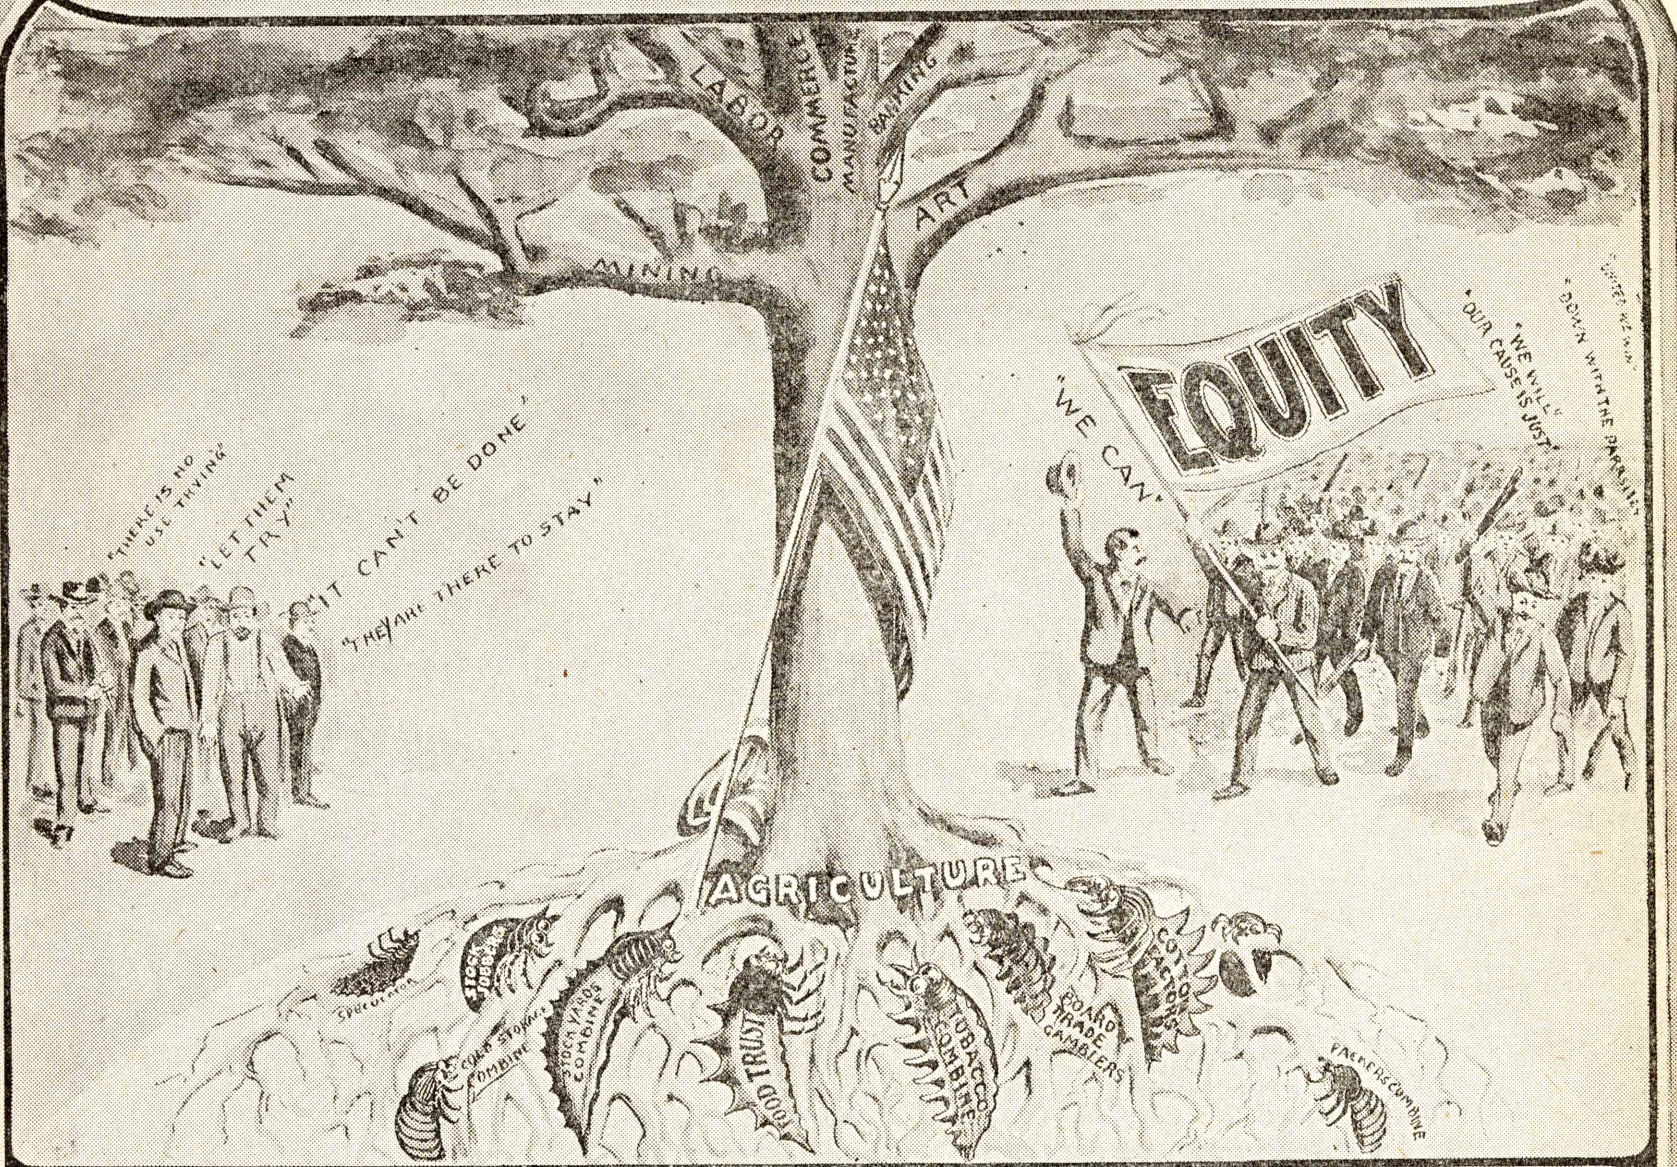
UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

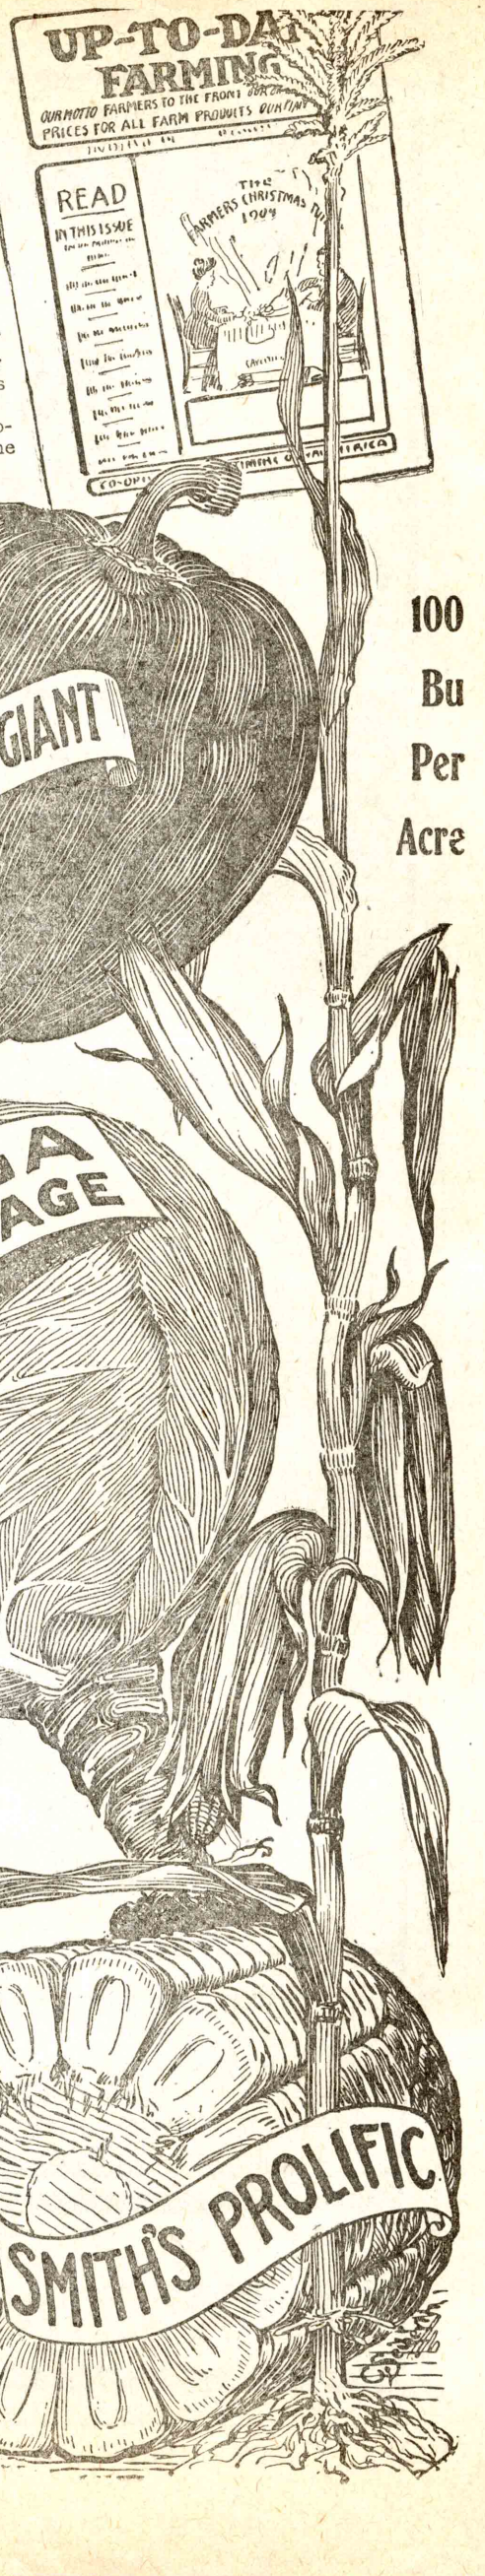
INDIANAPOLIS, INDIANA, JAN. 15, 1905



Imagine a ponderous tree with its roots in the earth and rearing its branches high above. About its trunk and over its topmost branches floats the stars and stripes of our country. Its many wide spreading branches represent our many industries and its many roots spreading through the fertile soil represent agriculture. Fastened to each of its life giving roots is a parasite sucking the life blood of the tree of American industries. On one side is a host of wavering, undecided people, waving aloft the purple banner with a pitiful lament, "It Can't Be Done." On the other side is the hosts of co-operating farmers with the banner "Equity" and war cry, "We can," marching with determination and an irresistable power on the brood of parasites. Thus will the tree of American industries and American institutions be saved.

FOR THE CO-OPERATING FARMERS OF AMERICA

EVERY FARMER in the U.S. should read
UP-TO-DATE FARMING



Because *IT* is bringing farmers to the Front. *IT* teaches farmers how to price their own crops and how to get a good price for every crop they grow. *IT* teaches you how you can put prices up and keep pace with everything you buy. *IT* has doubled the profits of many thousand farmers and can do as well for *every* farmer in the country. *IT* is the only paper in the country that gives a successful solution for all difficult farm problems. *IT* represents the best crop reporting system in the country. Its crop bulletins are issued promptly after each crop is made. Other estimates—including that of the Government—are not made final until farmers have disposed of the bulk of their crops. This is against the farmers' interests, and in favor of the speculators. *IT* sets a price on all crops when they belong to the farmers not after they go into the elevators and warehouses that belong to another set of people. *IT* will kill gambling and speculating in farm products. *IT* teaches how to grow crops as well as any paper, and is the only one that helps to market them at good prices.

YOU will make a great deal more money if you read it. You will not make near so much money if you don't read it. UP-TO-DATE FARMING is *mainly* responsible for the farmers of the United States receiving $1,194,233,917 more for six crops sold under the new system taught by this paper than they received before for crops of the same size and kind. Wonderful, isn't it?

Our old readers understand all these things
New subscribers will soon understand and realize them

Your Hands Are Tied when you let the speculators price your crops, but when you price them yourself it is different. No matter how pleasant farming is now, it will take on new attractions when you get the price you ask for your own crops. This is what UP-TO-DATE FARMING teaches. Don't you want to enjoy the benefits?

There Will Be No Guessing when you are a subscriber to Up-to-Date Farming. Then the prices of your crops will be as stable as are the prices of plows, binders, interest on money, taxes, etc. You may need to wait a while now but the price comes.

There Are Many Other Reasons but we cannot give them here. Order this paper to your address for the next year and the truth of all we say in this advertisement will gradually come to you and make a new man or women of you as regards your understanding of agriculture.

Up-to-Date Farming is printed twice a month. It has nearly 150,000 subscribers already, but must have a *million or more.* If *all* farmers knew how valuable this paper can be to them, we would have a million subscribers in two weeks. We know farmers are just like any other class of people—they want opportunities to make money and Up-to-Date Farming makes the opportunities. It has done so for many thousands, and we have their letters stating this fact. It can do as well for *every* farmer.

The Subscription Price Is 50 Cents Each number will do you more real pratical good than a whole year's volume of any other paper, because it tells you the vital things about your business that other papers have not begun to print. These things are of the greatest importance to you and you *will not* get the best results from farming until you know them. You must read Up-to-Date Farming to understand it, appreciate it, enjoy it and profit by it. When you begin reading this paper the possibilities that lie around the farming millions will begin to dawn upon you.

We want you to send your order direct from this advertisement. For fear you will put it off we are going to offer you a valuable premium if you send promptly. Good seeds are as valuable as good teaching and both mean success, Mention this paper and send promptly and we will give you four seed novelties as follows:

1 Large Pkt. **Smith's Prolific Corn.** New hybrid. Greatest cropper. Yields over 100 bu. to acre as easily as common corn yields over 60 bu. Fine appearance. Yellow Dent, ears 10 to 14 in. long. Always 12 rowed. Grains ⅝ in. deep, ⅜ in. wide, nearly ¼ in. thick. Cob 1 in. diameter. Stalk 8 ft. high, 2 in. thick at base; blades 6 in. wide. Bears often 4 ears to stalk. This is a remarkable variety and one that every corn grower should procure at once. IT IS NOT OFFERED FOR SALE AT ANY PRICE.

1-2 lb. **Snow White Sensation Potato.** A new seeding, and one that will create a sensation. Season medium late. The skin is the whitest of all and the flesh is as white as fine flour. There is no yellow tinge in the flesh whatever. Oblong shape, large size. A most remarkable potato indeed, and will take the country by storm. It outyields Carman and Sir Walter Raleigh, while for handsome appearance and table qualities those varieties will not be wanted when **Snow White Sensation** comes on the market. This potato is not for sale **at any price**

1 Pkt. Cabbage **The Volga.** A new variety from Russia. It is remarkable for perfection of form and solidity of heads. Mr. Allen, the largest grower of cabbage seed in America, says, "Without exception the nearest approach to perfection of any variety we ever grew." It is a late variety and for winter it keeps better than any other. Every gardner will be delighted with this fine fall and winter cabbage.

1 Pkt. Peppers **Mongolian Giant.** Do you love to grow giant vegetables? There is a fascination in having the largest. Grow this pepper and you will have the fruit that will be the wonder and admiration of the entire neighborhood. There is no variety finer for filling with cabbage. The flesh is thick, meaty, solid and pleasant mild flavor. This is truly a mammoth vegetable and one of the greatest attractions for any garden. Bushes grow 1½ to 2 ft. high,

Remember *We don't charge a cent for seeds and potatoes. We offer them to guarantee your prompt subscription because we need it in carrying out our great undertaking. But you need Up-to-Date Farming even worse than we need your subscription. Don't lay this paper aside until you have sent the order.*

Old subscribers may also have this premium when renewing there subscription, if they ask for it.

READ SOME REPORTS ON THE 1904 SEED COLLECTION

If you miss any of our FREE SEED DISTRIBUTIONS you miss some good things. If any of our old subscribers did not get as good returns as here reported, try again as every article in the '05 collection is a gem.

EXPLANATION—The Premium potato was sent out under the temporary name of "Up-to-Date No. 1." But has been named and is being introduced this year as Everitt's Abundance.

Mr. Everitt:—I value your paper very much. Of the seeds you sent, the Yard Long Corn is just immense—the largest I ever saw. The Pumpkin and Melon are good and the Potato outyields all other kinds.
David A. Bolick, Bloomfield, Ia.

From the ½ lb. premium potatoes I planted 22 hills and raised 147 potatoes, weighing 73 lbs. I took second premium at the Flathead County Fair. I also took second premium on pumpkins from the seeds; first premium on White Wonder Melon and two first premiums on Yard Long Corn—one on best half bushel the other on 6 best stalks.
E. J. Cramer, Chautauqua, Mont.

From the ½ lb. Premium Potatoes I raised 45 lbs. I regard this as a large yield. The tubers are large, uniform and shapely. They are very valuable and I thank you for the start. E. McIntire, Worthington, W. Va.

From the ½ lb. of premium potatoes I dug 172, weighing 55 lbs. (over 100 lbs. to one.) The other seeds were extra good. W. J. Hylton, Wolverine, Va.

From the ½ lb. of premium potatoes I raised 99 tubers, weighing 48 lbs. I would not take the price of the paper for these potatoes. G. K. Arnly, Gamewell, N. C.

From the ½ lb. of premium potatoes I raised 53 lbs. of as nice, large, smooth potatoes as I ever saw. I am delighted with them. The Yard Long Corn is fine.

19 hills of the potatoes yielded 26 lbs. All other seeds a success. G. W, Millower. Watkins, N. Y.

This is the Offer: FOR 50 CENTS we will send UP-TO-DATE FARMING twice a month for one year. Also four seed novelties as explained, and a due bill good for 25 cents' worth of packet seed, your selection.

YOURS FREE If you will show this offer to 4 of your Neighbors and get their orders we will send . . **YOURS FREE**

That, is we will send five (5) for the price of 4, or you can keep 50 cents for the fifth order. ¶SUBSCRIBERS ALREADY PAID IN ADVANCE can have their subscription extended another year, OR WE WOULD LIKE if they will make a present of the paper to a friend not now a subscriber. In this way they can get the Free Seed Distribution and we get a new reader.

25c Due Bill We not only want your name but all of your neighbors'. The good that this paper can do is not for a few farmers but for all. Therefore, send us 10 or more addresses on a separate sheet with your order and we will send **a due bill** good for 25 cents' worth of seeds (vegetable or flower) selected from the catalogue of a leading seed house (your choice.) Surely you will now come and help us to get the million subscribers.

100 Bu Per Acre

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizihg and sustaining organized effort for improved conditions. Look for the LABEL.

NATIONAL UNION UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	**$ 1.20**
Corn, No. 2 " " " "	
Until January 1st, 1905,	.50
From Jan. 1 to Apr. 1, 1905,	.55
" April 1 to next crop	.65
Hay, No. 1 timothy, " per ton	**12.00**
Oats, No. 2 white, " per bushel	**.40**
Barley, No. 2 " per bushel	**.58**
Barley, No. 3 " per bushel	**.52**
Potatoes—Chicago, per bushel,	
Until January 1st, 1905,	.55
After January 1st, 1905,	.65
Tobacco, (Price on the farm or at the market town)	
Virginia, dark, average per cwt.	**$ 9.00**
" bright, " "	12.00
Kentucky, dark, " "	**8.00**
" burley, " "	12.00

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Beans, No. 1, Hand-picked, Detroit, per bu.	**2.00**
Clover Seed, No. 2, Toledo, per bushel	**$ 7.00**
Cotton, New York, per pound	**.12**
Broom Corn, Chicago, per ton	**$75.00 to $85.00**
Hogs, " per cwt.	**6.00 to 6.50**
Cattle, " per cwt.	**6.00 to 7.50**

SUBSCRIBE now. RENEW now. Up-to-Date Farming will be a power in 1905.

In 1905 farmers will come to the front, never more to be put in the rear.

Are you a dumper?

A dumper will never prosper.

Enough of each crop is now controlled to guarantee the price for all who hold.

The world cannot do without those parts of the crops represented by the holders for the minimum prices. Therefore the prices will be realized.

A year lies before us. "What shall the harvest be?" Keep the old year's lessons, and strive for increased and increasing victories.

The A. S. of E. grew enough new wood in 1904 to keep it vigorous and healthy. A stalwart youth it starts in 1905 to do and conquer.

Controlled marketing is the fire under the farmer's boilers. They must keep the fire burning if they hope to keep up steam to make their business successful.

Holders, take courage. You are now so numerous and represent such a large portion of each crop that the world cannot do without it. Hence the minimum price will be realized.

Twelve-cent (12c) cotton has come to be catchwords for advertisers, as dollar ($1.00) wheat was last year. It's bound to win when the idea becomes so universally attractive and popular.

A certain leaf in this paper is worth $6.00 in cash. It is worth looking for. Don't lose or destroy this paper until you have secured that page.

The farmer that can live through the winter without comparing his opportunities with those of other people, is as little use to progress as a clod of dirt to the kitchen fire.

Agitation. With those who have things all their own way that is not a popular word. They want to be let alone. Agitation awakens thought and uncovers things. That is what they don't want.

The person who is entirely satisfied—contented—is like the stump of a tree rooted in the ground. All that is good about him has been cut away, and he will never get higher than he is now, nor find a better place.

In '03 and '04 many poets wrote verses on dollar wheat. We printed many in Up-to-Date Farming and started them out through the press of the country. Where are the poets who can write of 12c cotton in verse? We will sing the price up if it can't be done otherwise.

There are still some narrow gauge societies, that believe the different classes should be herded together and forced off in little lots to themselves. Such people are worse than the 17-year locusts, for they burst their shells in seventeen years. Narrow gauge people never do.

Secretary of Agriculture Wilson figured it out recently that the farmers could pay the National debt with this year's crop and then have a nice balance left. In view of what his department did to the cotton growers it looks as though he thought they would do it, and he did not want them to.

'Equity in all the business relations of life!" That is what the A. S. of E. demands. It is what the Bible teaches. "Do unto others as ye would that they should do unto you." It is what the world needs. It is what good men in all the walks of life encourage. The organized farmers may bring it about.

The price of the new third edition, "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents, and a coupon. See coupons in this paper.

Hold Cotton for 12c

Have you sent your renewal of subscription? If you are not a member of the A. S. of E. make the remittance, $1.00, and become a full member. You will value the members' manual, badge, etc., and besides your money will help us to carry the work forward for other members. Don't put off your renewal any longer.

Great ideas are born only once in a great while. The idea of farmers making their own prices is a great one, and it will revolutionize the business world. The A. S. of E., the embodiment of that idea, with a perfect form of organization, like other solid and permanent organizations, will move the human race forward more rapidly than it has ever moved before.

It is reported that the Pennsylvania Railroad Company will spend $30,000,000 for a new passenger station in Chicago. Has anybody heard of the farmers going to spend any such a sum to prevent them from being robbed in the price of their products in Chicago? Who have the greater interests at stake in Chicago, the Pennsylvania R. R. or the farmers?

Tom Jones, general dealer, bought some apples last fall, and about half of them rotted before he had sold them. Loss to Tom? No; he increased his price on the remainder, and on other things, and still came out ahead. Jim Smith, farmer, put up some potatoes, and about half of them rotted. Loss to Jim? Yes; he had no way to make it up. Jim Smith, farmer, has nothing to do with making prices; he takes what somebody else offers, and 'pockets' his losses. We are glad Tom Jones can make up his losses, but ought not Jim Smith have a chance to do so too?

MERELY A SUGGESTION.

We suggest that the Post Office Department put a stop to the crop-guessing contests carried on by the Department of Agriculture. Such action will result in immensely more good to the masses than to stop the guessing contests carried on by various newspapers.

HARD PUT FOR IDEAS.

Standing first in the editorial column of one of our farm exchanges is the following:

We would give a good premium for a new and original question in agriculture. Have you got one about you?

Our trouble is to find space to print the great questions in agriculture with answers to them. Instead of the list being exhausted the fountain flows stronger now than ever before and the stream seems to be inexhaustible. Unless the readers of that paper are as stupid as the editor we think they could deluge him with new and original (to him) questions and secure the premium.

Arkansas State Convention

All local unions of the American Society of Equity are to meet in convention at Little Rock, Ark., Jan. 26, 1905.

The object of this convention is to discuss ways and means for a thorough organization of the State; also to consider prices of all farm products as produced in the State.

Each local union is urged to send delegates and all farmers not members are likewise urged to attend.

All deputy presidents in the State are requested to meet State Organizer, Juan Freeman at the State House in Little Rock at 10 o'clock, Jan. 25th, to discuss plans for future work. Every D. P. should make an extra effort to be there.

LATER.—Above date has been changed to Feb. 2.

"To H—— With 'Em"

This, according to the New Orleans Item, was the laconic expression of a prominent member of the New Orleans Cotton Exchange when informed that the Southern planters were organizing to hold cotton for an equitable price, and to compel such price, even though they had to curtail production.

Such an expression, of course, is both meaningless and harmless (to all but the utterers), but it shows the character of men who, all these years have accumulated wealth at the expense of honest toil, themselves rendering no equivalent either in money or service. After thus milking a willing cow dry, he turns and kicks her.

We very much mistake the temper of the Southern people if they do not suffer a little present inconveinence, if necessary, in holding their staple off the market and thus secure their own just reward, and at the same time administer a fitting rebuke to such men as quoted above.

Reprisals on Farmers' Trust

The following dispatch was printed in the Philadelphia Record.

Pottstown, Pa., Dec. 17.—Owing to the combination among farmers by which they have raised the prices of poultry, farm produce and other commodities, the highest they have been for 25 years, indignation meetings are being held at various points.

Farmers have neverbeen compelled to pay a license in Pottsville, but council will now tax them.

It will be interesting to note who will come out ahead in the race of taxing (putting up prices), when both sides are on equal footing. The farmers who have the stuff the other people live on, or the people who live on the taxes the farmers pay? We will bet on the farmers.

When farmers get their machine of profitable price-making in complete running order they will have need for millions of farm laborers at the market price. The solution of the farm labor problem through fair prices for farm products, means more for laborers than anything else that ever occurred. Organized labor can well afford to look for the union farmers' label on food products.

Business Exchange

In this issue we open a new department in Up-to-Date Farming, that ought to be very popular with our readers. It is headed as above. Look for it.

If you have a surplus of anything try the Business Exchange to find a purchaser. If you want to buy anything seek for it through the Business Exchange. Why should not this department have a wonderful effect in bringing supply and demand together and equalizing values in various parts of the country? It will have, when worked out, as we hope, in a reasonable time.

It will not do any good if you don't use it. If used liberally its value should be incalculable.

It is refreshing to note with what display of importance some other papers and farmers' societies herald the discovery of the idea of controlled marketing as a factor in making prices, as their own. They know we have been preaching the plan for two years, but they want to stand before the people as "the discoverers."

Coming to Their Senses

Many farmers have stopped their subscriptions to farm papers because of their opposition to the plan of controlled marketing and price-making as taught by Up-to-Date Farming. One of these and a member of the A. S. of E. residing in Iowa, sends us a letter from a publisher and accompanies it with the statement that "some editors seem to be coming to their senses." He calls our attention to one paragraph in particular, as follows:

There is little encouragement to grow better crops and better live stock if the railroads, the speculators and beef trust are to absorb the lion's share of the profit. Events of supreme importance to the farmers will occur during the next year, etc.

One year ago this paper was one of the most pronounced in opposing the plan of the A. S. of E., and openly advised its readers to strive for larger crops and better crops, and depend on Providence to work out their problem of prices. Our member closes his letter as follows:

"But he seems to want me back, and I have answered him that I was still for equity and profitable prices for all farm products. That I am as firm now, and more so than a year ago, and if he will take up the same fight I am willing to subscribe again."

They're laying for you and will catch you if you don't control your crops.

A Little Explanatory

On account of false ideas held by some people, I deem it wise to make a few explanations at this time.

The seed business, under the name of J. A. Everitt, seedsman; the publishing business under the name of J. A. Everitt, publisher, and the American Society of Equity are all separate and distinct concerns.

The seed business was established twenty-four years ago and for twelve years has been an incorporated concern, of which J. A. Everitt has been the president. The various departments are in charge of competent men in their lines.

The publishing business was begun in 1898 and is chiefly concerned in publishing Up-to-Date Farming—this paper. Up-to-Date Farming is the official organ of the American Society of Equity. As each of these enterprises require a great amount of publicity they do sometimes help each other. Particularly, we never want to lose a good opportunity to place the A. S. of E. before the people, which accounts for the fact that it uses a page in J. A. Everitt Seedsman's catalogue, with a circulation of a half a million copies. An equal amount of publicity—and that would result in as many members—could not be obtained elsewhere short of many hundreds of dollars.

We believe no fair-minded person will censure us for embracing such good opportunities to promote the society, and we want to assure all that the society has never been used to promote the seed business

The Third Power Bond

What promises to be a great and successful move toward securing the million members for the American Society of Equity, is inaugurated in this number. On two pages elsewhere is an offer of the great book, "The Third Power," on most surprising terms. The very fact that the terms on which this work is offered does not pay the expense of the book, postage and handling, should attract and merit the acceptance of every reader of Up-to-Date Farming. That the author and publisher of the book is willing and even anxious to put a large number out on these terms should enlist the hearty good-will and co-operation of every reader, so that his fondest hope—that the farmers of America will come to the front—may be realized. More than this, the opportunity for every person who has the least bit of ambition to make a nice sum of money, coupled with the other reasons, should make this the most popular offer of the year. We advise a careful examination.

Any person who receives a copy of Up-to-Date containing the bond can use a coupon and get the book for only 25 cents. But see full particulars in the offer itself. For originality and uniqueness it probably has not been equaled heretofore, and it should sweep the country. If it does, agriculture in America will be revolutionized and every other legitimate business will be benefited.

Think of it, a 320-page book, cloth-bound, for 25 cents, postpaid. It is a book worth more to farmers than any college education they can obtain.

No Faith in Congress

We have been asked why we do not have more to say about the Pure Food bill, regulation of trusts, the Good Roads bill, enlarged power of the Interstate Commerce Commission and other public matters that Congress is supposed to deal with for the public's benefit.

We reply: We have very little faith in the farmers getting anything for their benefit if it is against the interests of the class that stands between the producers and the consumers. What is the use of increasing the power of the Interstate Commerce Commission when they don't use the power they have for the good of the people? All these spasms of virtue are likely to end in wind. The people will be appeased because there was a show of doing something, but failed.

But why are efforts for the good of the masses so often abortive? Could they be if your representatives are really honest and sincere? If Congress is a great power, the greatest power, as it should be, what power is there that is greater, that prevents the passage of good laws and the enforcement of the same?

It is the power of organized capital, corporations, speculators and grafters, and they are stronger than Congress, hence stronger than our government. Who dare deny it?

But we look ahead with hope for the future. The time is coming when there will be a stronger power than all these, a power that does not aspire to be stronger than the government of this country, but which will compel a strong, pure government. A power that will see to it that the money power and the specially favored classes do not dictate the laws and regulate their enforcement or non-enforcement. This will be the farmer power. It will be the power of the representatives of one industry—the greatest industry of all. The power of the greatest class of our people, and will be an irresistible power, when exerted for equity for all.

Hasten the rise of the farmer power, the third power.

The A. S. of E. and Business

The American Society of Equity has more of a business air about it than any rural society which has preceded it. This comes of the fact that it recognizes the mistakes of past organizations, not only of the farmers but of other classes, and has wisely avoided them. The great mistake of former societies was their narrowness of construction and class purposes. The society that is to suceeed and bring improved conditions to the masses of mankind, must take the whole world, the entire race, with its multiplicity and endless variety of interests, into account. That which serves to benefit a class only has rivals, if not opponents, in all other classes, and cannot do the great work a broad world requires.

Fortunately the founders of the A. S. of E. had this in view in the very conception of this society, and laid its foundation in EQUITY—equal rights to not only "life, liberty and the pursuit of happiness," but equal opportunities for honest efforts, and an equitable share in the results of those efforts. This does not mean for the farmers only, but for the farmers and everybody else—equity in all the relations of life. Who could ask more? Who could be content with less?

It is not to be wondered at, though, that farmers, even members of this society, show prejudices against other classes. This is the aftermath of the teachings of their earlier efforts at organization, when men's minds were not so broad perhaps as they are now, when, smarting under their class grievances, they looked upon everybody but themselves as a contributor to their wrongs, and held all as enemies.

People see things differently now. They understand that the wrongs suffered by the classes, including the farmers, of course are not necessarily class wrongs, but society wrongs, and that society must be aroused to redress them. The building up of a class only, though it be no less than the great agricultural class, still leaves the classes struggling against each other, and the world suffering society wrongs.

The highest type of progressive citzenship, therefore, will overcome all its prejudices, welcome harmony among all classes, and line up for "equity in all the business relations of life."

How Others See It

Elsewhere in this paper we discuss the business atmosphere in which the A. S. of E. moves, and the necessity for broad-gauge men and societies to do the work that the world needs shall be done. To show that outsiders recognize the A. S. of E. as that kind of a society, we quote in full the following from the Inquirer, Owensboro, Ky.:

The convention held by the county organization of the American Society of Equity at the courthouse Saturday was different from any meeting of the kind ever held here. It was in the hands of conservative, common sense farmers. There were few expressions in any of the debates or addresses that were not filled with sound

Join Your Society Now

Any person who has money to support the Department of Agriculture which costs millions of dollars; or State Experiment Stations and Colleges, which cost hundreds of thousands of dollars; or hundreds of old-line farm papers to which other hundreds of thousands of dollars are paid, can afford to appropriate one dollar to join the A. S. of E., which represents and teaches the only plan that will ever be successful in increasing your profits and justify the expenditures made as above.

One million farmers paying $1.00 each to the A. S. of E. will build it and will accomplish what all the millions appropriated each year for many years failed to accomplish. Will you pay the price to realize the benefits, or will you go on squandering your money without hope of definite returns?

sense and strong reason ,and the wild and abusive talk that was formerly common in such gatherings was totally absent. The reason for this difference was well expressed by Mr. Sherman, the organizer of the society, who said that all the former organizations were formed for regulationg everybody else's business, while this organziation was to enable and to cause the farmers to attend to their own business. If the society succeeds in its objects it will have to cling to that principle more and more closely.

The object of the organization is to enable farmers to obtain fair prices for the products of their labor. So far as this object is concerned there is no man in the country who will not wish them Godspeed. It is, of course, idle to make any calculations based on a complete realization of their hopes, but if any good shall be accomplished it will be worth all the effort will cost. For instance, the price of tobacco was fixed at 8 cents per pound. This price is not so unreasonable as might be supposed when we reflect that the price last year was less than 5 cents. With the exception of a small section of the Burley country, the crop is nowhere more than 60 per cent. of that of 1903, and the quality is generally much better. There is, therefore, good ground for fixing the price at 8 cents. It is not to be supposed that all tobacco will bring this price, nor is it right that it should, say the farmers, for there is some of the crop that is not worth it, but the average crop is worth that figure, in view of the size and quality of the crop and the condition of the markets of the world.

The tendency of the American Society of Equity is to cause the farmers to hold their products for the markets, and herein is the secret that will bring success. Heretofore the farmers have sold their wheat in July, rushing it to market all in a pile. Then they spend the rest of the year in abusing the men who "put up the price after it had passed out of the farmers' hands." Who would not have done the same thing? It has been the same way with tobacco. In 1903 the Inquirer called attention to the state of the market early in the season, implored the farmers to hold for better prices. A large number of them did so, and received nearly twice as much for their crops as they would if they had sold early. This course can be pursued without the intervention of any society or organization, but it can, of course, be done better and more certainly through an organization. To this extent, at least, we endorse the efforts of the American Society of Equity, and wish it success. The members should beware, however, of allowing irresponsible and chimarical men to obtain control of it, and they should not expect too much from it. Disorganization and reaction will follow in the one case and disappointment in the other.

A 320-page, cloth bound book, price $1.00, and 10c extra for postage, all for 25 cents, postpaid. See coupons in this paper.

Source of Crop Reports

While we are always inclined to give the government crop reports due credence, it is an unfortunate fact that it gets its information, aside from the voluntary reporters, from the buying side rather than from the selling side of the market.

For instance, in the December Crop Reporter, which is the official publication, in speaking of the tobacco situation, it quotes from the Western Tobacco Journal and the Louisville Leaf Tobacco Exchange, both of which, of course, represent the buying side. In the matter of cotton the New York Commercial and Financial Chronicle, a representative of the buyer side, is quoted. And so on.

This does not necessarily mean that the reports are not correct, but it does mean that they are very liable to have a leaning to the buyer side. The buying interest makes that side its special study, a keen desire, inherent in most of us, to get the better bargain, makes them see that side more clearly than the other. They are, therefore, not competent to sit as jurors in the case of Buyer versus Seller. Reports made up from these sources are bound to have the same leaning.

And we are not finding fault with the government. It seeks its information from what are understood to be standard authorities. The seller side is but poorly equipped as an information furnisher and it is not to b ewondered at that it does not find itself quoted.

This is a difficulty the government must contend with, not only in crop reporting, but in all other investigations in which the masses of the people are concerned. Congress may appoint a committee to study any phase of rural life. The committee is composed of congressmen, good, wise and honest people, let us say. They go to the scene of investigation. Whom do they see? The business and professional men of the towns, of the railroad towns, it is safe to say. If they call any one in from the country it is some one who has made himself heard in politics, religion or some of the professions, one who long since stepped above the average inhabitant, and who, most likely, feels his position. From opinions of such people and information thus derived, the reports are made up—the "common people" have been neither seen nor heard.

Regarding the so-called laboring people, the wage-earners, it is, of late years, somewhat different. If a question concerning their interests is to be investigated, the committee goes to the officers of the unions. These officers are a part of the class concerned, and are themselves posted as to the conditons down to and below the average. They know whom to call in and consult to get at the root of the matter, and the committee may make up its report from actual knowledge of the subject in hand obtained directly from the true source of information.

This is the direct result of organization, and it should constitute an unmistakable finger-board pointing the farmer to the course for him to pursue—to strengthen his positon by organization, and thus provide a means of giving the government, no mater in what relation, true information direct from himself and not only his class, but from those in his conditon in life.

Getting back to the subject of crop reporting, we are aware that a source of information is voluntary crop reporters scattered all over the country, but they are only individuals, acting in an individual capacity, forming their opinions without consultation and often with but little effort to get information. Many whom we have known personally did not realize the importance of the work expected of them, or of the results to which it might contribute.

Our conclusion, therefore, is this: Let us sustain and encourage the Department of Agriculture in all its good efforts, but let us insist that its reports be made at times when actual facts may be known, and not at times when questionable accuracy may result disastrously to the agricultural interests of the country, as in the case of the December cotton report.

Meanwhile, let the farmers get in position by organization and education, to make themselves heard direct from the farm. And the time to speak, is all the time, in protest against the customs, rules and laws that are against their interests.

The price of the new third edition, "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents and a coupon. See coupons in this paper.

SUBSCRIBE now. RENEW now. Up-to-Date Farming will be a power in 1905.

In 1905 farmers will come to the front, never more to be put in the rear.

Call for County Conventions

In all the counties in all the States enumerated below a call has been and is hereby issued for a convention of The American Society of Equity for the purpose of organizing county unions.

The conventions will assemble at the times and places as below stated.

All local unions in said counties are ordered to send delegates. Each secretary of a local union, all deputy presidents, vice-presidents and State organizers have been instructed in detail and are working for the success of these meetings.

Important matters will be attended to outside of the prime purpose of the conventions. Every agricultural industry as they affect the farmers in the various counties can be considered and action taken looking to the solidification of interests and the building up of the A. S. of E. This is the only society with a plan to cope with all the farmers' problems. Hence this new step taken, in the interest of its extension and permanency, should be hailed with enthusiasm by every grower of grain, cattle, hogs, cotton, potatoes, beans, fruit, vegetables, tobacco, poultry, etc. The conditions affecting some of our crops demand heroic treatment which can only be given through the united force of the interested producers. Let the conventions be largely attended.

Conventions have been called only for the counties in the list below on the dates given. The meetings are expected to begin at 10 a. m. and continue until their business is completed, even into the night or the next day if necessary.

Arkansas—Ashley Co., at Peaberry, Jan. 18; Johnson Co., at Cline, Jan. 19; Little River Co., at Winthrop, Jan. 20; Logan Co., at Chismville, Jan. 21; Pope Co., at Dover, Jan. 24; Yell Co., at Steve, Jan. 26.

Indian Territory—Cherokee Co., at White Oak, Jan. 21; Choctaw Co., at Wister, Jan. 28.

Iowa—Appannose Co., at Centerville, Jan. 18; Boone Co., at Boone, Jan. 21; Cass Co., at Cumberland, Jan. 28.

Illinois—Bond Co., at Hookdale Jan. 21.; Perry Co., at Pinckneyville, Jan. 21; Clinton Co., at Buxton, Jan. 28; St. Clair Co., at O'Fallon, Jan. 25; Franklin Co., at Benton, Jan. 18; Vermilion Co., at Alvin, Jan. 28; Madison Co., at St. Jacob, Jan. 24; Wabash Co., at Mt. Carmel, Jan. 28; Marion Co., at Salem, Jan. 26; White Co., at Carmi, Jan. 21; Massac Co., at New Columbia, Jan. 27; Williamson Co., at Marion, Jan. 25.

Indiana—Daviess Co., at Montgomery, Jan. 21; Harrison Co., at Cedarwood, Jan. 26; Dubois Co., at Huntingburg, Jan. 24; Warrick Co., at Degonia Springs, Jan. 28.

Kansas—Labette Co., at Bartlett, Jan. 21.

Kentucky—Breckenridge Co., at Bewleyville, Jan. 18; Caldwell Co., at Scottsburg, Jan. 19; Christian Co., at Fairview, Jan. 20; Daviess Co., at Panther, Jan. 21; Graves Co., at Farmington, Jan. 23; Hancock Co., at Hawesvile, Jan. 28; Henderson Co., at Corydon, Jan. 28; Marshal Co., at Benton, Jan. 21; McLean Co., at Sacramento, Jan. 24; Meade Co., at Guston, Jan. 25; Muhlenburg Co., at Depoy, Jan. 26; Ohio Co., at Palo, Jan. 27; Todd Co., at Elkton, Jan. 21; Union Co., at Boxville, Jan. 28;; Webster Co., at Dixon, Jan. 21.

Michigan—Chippewa Co., at Barbean, Jan. 21; Livingston Co., at Fowlerville, Jan. 28; Osceola Co., at Sears, Jan. 20; Shiawassee Co., at Morrice, Jan. 26; Saginaw Co., at Swan Creek, Jan. 24; Sanilac Co., at Juhl, Jan. 28.

Mississippi—Amite Co., at Bewelcome, Jan. 21.

Missouri—Franklin Co., at Spring Bluff, Jan. 21; Green Co., at Springfield, Jan. 28; Osage Co., at Loose Creek, Jan. 28.

Nebraska—Buffalo Co., at Poole Siding, Jan. 21.

New York—Schuyler Co., at Reynoldsvile, Jan. 21; Seneca Co., at Hayt's Corners, Jan. 28; Tompkins Co., at Jacksonvile, Jan. 26.

North Dakota—Benson Co., at Fillmore, Jan. 18; McHenry Co., at Berwick, Jan. 20; Pierce Co., at Reno, Jan. 21; Ramsey Co., at Devil's Lake, Jan. 28; Towner Co., at Arndt, Jan. 26; Ward Co., at Donnybrook, Jan. 24.

Oklahoma—Blaine Co., at Hitchcock, Jan. 21; Canadian Co., at El Reno, Jan. 20; Custer Co., at Arapaho, Jan. 23; Day Co., at Reason, Jan. 25; Dewey Co., at Lenora, Jan. 28; Kingfisher Co.. at Dover, Jan. 21; Rogers Mills Co., at Berlin, Jan. 28; Woods Co., at Augusta, Jan. 26; Woodward Co., at Greenwood, Jan. 28.

Tennessee—Decator Co., at Decaturville, Jan. 21; Montgomery Co., at Ringgold, Jan. 28.

Texas—Bosque Co., at Morgan, Jan. 21; Coleman Co., at Santa Anna, Jan. 28.

Virginia—Bedford Co., at Bedford City, Jan. 21; Brunswick Co., at Sturgeonville, Jan. 28; Campbell Co., at Gladys, Jan. 28.

Washington—Spokane Co., at Spokane, Jan. 28.

West Virginia—Clay Co., at Clay, Jan. 21.

Wisconsin—Sank Co., at Baraboo, Jan. 21.

The National Union will now accept applications from local unions from other counties desiring to organize county unions, and furnish necessary supplies, report blanks and instructions. Every county should have a county union of The American Society of Equity. Let every member remember the places and dates of the above county conventions for this county and assist in making them each red-letter days in the cause of equity.

A 320-page, cloth bound book, price $1.00, and 10c extra for postage, all for 25 cents, postpaid. See coupons in this paper.

A Desire (?) for Co-operation

From the Michigan Farmer we quote the following:

If there is a desire for co-operation among the farmers of Michigan, and especially among those who are following a special line, why not co-operate on the larger deals instead of the smaller; in the marketing of their special products and especially those of a perishable nature, as well as in the buying of supplies in which they can apply the co-operative principle with an even chance of success.

Surely the world do move. But is there a doubt in the mind of the Michigan editor as to "a desire for co-operation among the farmers of Michigan?" The farmers of that State have always indicated an unusual desire to organize and co-operate. It is one of the foremost States in organization.

Can the Farmer Go to School Again?

Yes, he can read "The Third Power" book and he will receive a better education about farming than he can get in any agricultural college at a cost of some hundreds of dollars.

Any person who reads "The Third Power" will have a better understanding of agriculture than they ever had before, and will see possibilities in farming that they never saw before.

THIRD EDITION ENLARGED, 320 PAGES. Price, $1.00.

Special offer—A coupon and 25 cents gets the book. See elsewhere in this paper.

How to Secure Profitable Prices

An Address Delivered by J. A. Everitt, President American Society of Equity, at Portland, Ind., Dec. 3, 1904

(Continued from January 1st Number. The back number may be had for 5 cents, or we will send the address in booklet form at two copies for a cent.)

There is only one practical plan under heaven for farmers to do these things, and it is represented by the AMERICAN SOCIETY OF EQUITY. The plan would work just as well if called by any other name, or without a name, if that was desired. But the name is a good one, because farmers only want equity, and this name is a constant notice that when they are powerful through co-operation they will give equity.

The A. S. of E. is incorporated and has headquarters at Indianapolis, Indiana. It has no capital stock to sell. In fact it has nothing to sell. It is an educational society. It is educating every farmer the new way to market and when they are all educated it will keep on running forever without any more expense than just enough to get the advice to each member. Cheap enough, isn't it? But it has made individual farmers hundreds up to a thousand or more dollars every year they belonged to it and has been responsible for the farmers of the United States receiving $1,194,233,917 more for six crops last marketed or in process of marketing than they ever received for crops of the same kind and of the same size. Farmers, think of this. The A. S. of E. don't aspire to sell capital stock to farmers or to have a large capital stock. It don't need it; but it is going to put money in the hands of farmers. They will have the capital and then they can do everything they want to do. At present a small fee is charged of $1, which secures the official paper and furnishes funds to carry the movement to all farmers in the land.

The minimum price is made by a board of directors or may be made by national conventions, as was the case with tobacco at Lynchburg, Va., this month. Members are not bound to sell at the minimum price nor to hold for it. They may take more if the market goes above the minimum price. This price is made only once a year on any crop; hence, you will never more need those pesky market reports, which change several times a day. When farmers are largely organized on this plan the prices of wheat, corn, oats, cotton, hogs, cattle, eggs, etc., will be as steady and as certain as the prices of plows, binders, cultivators, interest on money, are now. No frequent fluctuations, no blind guessing, no buying or selling of futures, no gambling or speculating.

The minimum price, crop reports, and all advice will be sent from headquarters to farmers and members everywhere through an official newspaper. Thus all farmers will have the same price and advice about the same crops at the same time. All may be influenced the same way and all can act as a unit.

As there are millions of farmers you naturally fear that they cannot work together to control marketing and compel the price. Therefore, I will try to show you how it will work.

You know that a single individual is weak. A single railroad president could not do much in the way of making and maintaining rates on all the roads, but five railroad presidents make rates for practically all the railroads in the country, and maintain them. A single laborer is weak and could do little toward setting the price for his labor, but a great many of them organized and now they have fixed the price and they maintain it. They have set the price so high that farmers cannot afford to pay it, and that's the reason you have your farm labor problem. A single farmer is weak and is powerless to make prices on his crops, but a million farmers all speaking through a central head, all having the same advice, all influenced by the same impulse, and all acting for their self-interests, will be irresistible. I will qualify this, and will say that all don't need to act together, when it comes to marketing crops and making prices. The world consumes an immense amount of supplies each day, hence an immense number can market every day. Also the market is very sensitive to conditions and you have seen it advance on account of damage to a crop that represented only a small percent of the whole crop. Now, farmers holding crops will produce the same temporary condition as a short crop, and a million farmers in a movement to control marketing and make prices will represent much more than a small percent of the crop. Hence, if a great many of these million farmers would be stubborn and work against their own interests, the desired results would still be accomplished. We might say that in working out this plan where crops are controlled on the farms no crop will appear larger than what comes on the market at any time.

An individual is weak. The larger the class to which that individual belongs, the weaker he is. The agricultural class is the largest class; hence, the individual farmer is the weakest person when standing all alone. But when the farmers are organized and co-operating, they will be the greatest union and the most powerful body on earth. Then the unit, or individual farmer, will be as strong to accomplish any object for his good as the combined strength of the millions of units.

If there were only a thousand farmers, I might despair of organizing them to accomplish any definite results, because a few stubborn farmers might disrupt the whole organization or prevent co-operation. But with the millions of farmers there will always be enough to do the reasonable, fair and equitable things recommended, and there will never be enough of the stubborn and contrary element to prevent definite results. For this reason I say the great number of farmers, which is sometimes considered the element of weakness, is the element of greatest strength in a farmer's movement to make prices.

OTHER FEATURES OF THE PLAN.

To carry out this plan there is a central body called the National Union. The society has the usual officers and the affairs of the society are regulated by a board of directors, comprising seven members or more. The society makes a specialty of securing crop reports on every crop from its members. The minimum price is based on the yield of any crop and the known consumption of the crop. It will be higher in years of short crops than in years of large crops, and always a profitable price. Farmers anywhere can join the National Union, and all members belong to the National Union. An individual farmer, no matter where he lives, can co-operate and receive benefits as long as he can be reached by the U. S. mails. Besides the National Unions, there are local Unions all over the country. It is expected to have them in each school district. There are no county or state organizations. All the work is done directly from headquarters with the individual member and with the local unions.

The prices are based on the leading or central market. Thus, grain prices are based on Chicago, cotton on New York, beans on Detroit, clover-seed on Toledo, etc. The farmers' price will be the central market price less freight and a fair commission to the buyer or shipper. In places where no surplus for shipping is produced, the farmers' price may equal the central market price or exceed it, depending on the local conditions. Usually the farther east the farmers live the higher should be the prices. Thus, in New York City, prices should be higher than in Chicago; and in Pennsylvania higher than in Illinois.

The minimum prices are announced by bulletins in the official paper. All members get them at the same time. The list of minimum prices is published constantly in the paper.

Members, as I have said, are not required to enter any obligations to sell at the minimum price nor hold for it. They have as much liberty and latitude when members of the society as before. The whole proposition is based on self-interest. I believe people can, and will, co-operate to do things that are to their interest to do, without any binding agreement. Also in this plan, those who do not belong and do not get the official paper, cannot make as much profit from their crops as those who do belong. This has been demonstrated many times already. This plan is based on financial benefits and to suspend its workings or kill it, will be a great financial loss to every member. Hence, no agreement or bond is necessary, but the members will see that it is perpetual, so it will continue to give benefits forever.

RIGHT TO MAKE PRICES.

In every community there are some people who are opposed to an organization by farmers for the object of making prices, on the ground that it would be a trust. Now, I want to appeal to those people to understand this matter. They must admit that somebody makes prices on everything they have to sell. Also they must admit that oftentimes the price is too low for them, and when it reaches the consumer, it is too high. Under such conditions will it be wrong to step in and make a fair price for yourself and by co-operation guarantee a fair price to the consumer? Certainly not. It is your legal right; it is also a moral right—"the laborer is worthy of his hire." Also, if you think you, who created the property, have no right to price it, how can you delegate this right to a lot of non-producers, speculators, gamblers, food trusts, cotton factories, malt syndicates, etc.? But this is not a trust, because each individual absolutely controls his own product and is a free agent. The National Union does not name an arbitrary price on any thing, but recommends an equitable price and then depends on the common sense of farmers to ask and hold for this price. Thus, the whole plan is simple and its working must be reliable, although automatic, because farmers can live within themselves and do without the other peoples' goods a long time. But the other people cannot do without the farmers' goods long. They must get some every day, and must have all every year. Considering the great number of farmers now co-operating on this plan, they absolutely will bring the demand to the agreed price before the last of the season if they cannot force it there at the first.

SOME OF THE RESULTS.

The future of American agriculture, and I may say of industrial America, depends on the price farmers obtain for their products.

Good prices will insure good farming, increased average yields and guarantee sufficient production to keep pace with the rapidly increasing consumption. Good prices for our farm products will insure a market for your surplus in every country that is unable to produce an abundance for its own needs. But low prices will mean poor, slovenly farming, hard work, a desire to put out all creation to make both ends meet and occasionally bankruptcy for farmers, as has occurred in the past. Keep your prices low and your products will be shut out of every foreign market, because farmers in those countries will be reduced to pauperism if they must compete with you. Good prices always mean everything for farmers and through them the country merchants will prosper, and in turn the city jobbers. Rural America will be transformed. Country towns will enjoy such prosperity as not dreamed of before and cities will take on a degree and quality of prosperity as cannot come through any other source. In short, good prices always for farm crops will guarantee continuous prosperity to all industries and all classes.

Politicians, political economists, and farm papers may contrast your condition with farmers in some other countries. They tell you that you should be thankful that your condition is so much better. But they don't understand the matter. They should know that you are responsible for the miserable condition of the farmers in other surplus-producing countries. America has been the greatest surplus-producing and exporting nation. Therefore, she has been responsible for the world prices more than any other country, and every other exporting country must come to her standard. With your almost boundless territory, fertile, virgin soil, hard working farmers, numerous teachers to tell you how to increase crops, and wonderful machinery, you did excel the foreigners on their old worn-out soil that needed expensive fertilizers on small areas, high-priced land, and primitive tools. Prices made by boards of trade that kept body and soul together for you in this country and in some cases allowed you to lay up a hundred or two a year, did not allow them to do so well. Hence, while your condition has been favorably contrasted, yet you have nothing to brag of. In fact, are you not ashamed of yourselves that you set such a pace for your brother farmers in foreign countries. Your cheap products put in competition with theirs injured them more than the low prices did you, and those farmers will hail with delight anything that will put American farm products on a permanently higher basis. Then your surplus, if you have any, will be welcomed by every densely populated country in Europe.

Farmers want this thing to come to pass. When they understand the plan they are enthusiastic in its support and are anxious to have it put in operation throughout the country. They will change the old system to the new because it is to their interest to do so. Show me a man or set of men who will not do those things that are to their interests. The farmers of America are ready to make the change now. They have been ready before, but were waiting for the right plan. They are anxious to change to a system that will multiply their resources, increase their profits, and elevate themselves socially. Instead of farming being a mere struggle for existence, it will be a life of comfort, and of rewards unsurpassed in any other vocation. Then the farmer will have as large and as certain an income as has the banker, the merchant and the manufacturer, the investment and the effort put forth being considered.

There is nothing visionary, nothing harmful, in this program, but everything for the good of honest people and legitimate business. Keep our farmers prosperous and the nation prospers, but let agriculture in this country languish because of unprofitable prices, and panics and hard times are inevitable.

The success of the farmers' movement for good prices will solve every farm problem. Then the boys will want to remain on the farm and others will want to go to the farm. The labor problem will be solved because farmers can pay the market price for labor. Farmers then can make good roads and undertake and carry out any other improvements they want. Much of the land is now run down by hard cropping and the money returns are not enough to buy fertilizer to renew the fertility. Then, however, these farms can be built up again and intensive farming. which will soon be nec essary to meet the requirements of a rapidly increasing population, will result. Irrigation in old States will be one of the natural results of steady good prices.

At present farmers get very little from their government, because they can not make themselves felt. When organized on this plan they will speak as a mighty union that represents the bulk of the wealth, products, and nearly half the population of the country. Then they will be heard, and their demands will be quickly acted upon. Then they can have post currency, parcels post, the extension of the rural mail service, equitable taxation, pure and honest government, etc. Also if the minimum price does not kill gambling in farm products, they will only need to whisper to the element dominant in politics, that they want this done and gambling will stop.

With profitable prices secured, if the farmers need a national telephone or telegraph system, as I predict they will, it can easily be constructed. By their power and ability to co-operate in obtaining whatever would benefit themselves, and the consumers, farmers can then see that their products are delivered to the consumers in the most direct way and with the least possible tax. Then the greatest consumption will result and the maximum markets be secured.

As regards financial benefits, who can compute them? A slight advance on any crop makes an enormous aggregate sum. While profitable prices on all crops means many hundreds of millions of dollars better than unprofitable prices, as have frequently prevailed in the past. With profitable prices assured, every farm will increase in value from 25 to 100 per cent. because of its increased earning capacity. The National Union will be powerful in securing for the farmers what they need from the national government, while the local unions will exercise a power and force for local improvements and the direction of local affairs never before possible.

Such are some of the results that must come if farmers do one simple thing, viz.: Control their market and let their crops go on the market during a year to meet a steady demand for a year instead of dumping them in uncertain quantities and at uncertain times to overwhelm the demand. Simple and easy to do. There is scarcely a farmer in the country who can not help to do this. In thousands of replies to the question sent out in July, "Can you hold your wheat till December, if necessary to get your price?" 94 per cent. said they could. It is about the same way with all other crops. Please examine yourself ,and is it not so? The rule should be: "If the price is not right when your crop is ready, hold it all if you can. If you can not hold all, hold what you can, and if you can not hold any, then sell." Everyone who holds makes a better market possible for those who cannot hold. When you can get your price sell all the market will take, but stop the minute it won't take more, and if you have a load of produce in town, haul it home.

A little help by each one; a determination like that displayed by the cotton growers in Texas who hauled 1,500 bales of cotton to town and hauled it home again because they could not get their price, will bring the world to your feet, or people will go hungry and will not be clothed and domestic animals will perish.

My friends, I have shown you the necessity of doing something. I have told you what the something is and how to do it. If what I have said has sunk down deep into your hearts, and will in the future be reflected in your actions this part of Illinois will come to the front never more to return to the old, bad, vicious system that keeps millions in semi-impoverishment and makes a few immensely rich.

And now in conclusion I will read from the "Third Power Book," a book I wrote in 1903, and which has been recommended by others as entitled to a place next to the Bible in every home.

* * *

Let justice reign o'er our mighty land;
Let our hearts with triumph fill;
Let all awake ere 'tis too late,
And every foe we'll still.
In unity we'll conquer all—
O, may the day be near
When with God and right we will
reign as might,
With conscience bright and clear!

Oh, why should we, on whom life depends,
Be trampled in the dust?
While others gain, we writhe in pain,
For want of right and just.
If one and all would for duty strive,
Then sorrow soon would end;
We supreme would reign and our
rights we'd gain—
On no one we'd depend.

It may be said that the struggle to which the farmers is invited is one for emancipation. What is sought is as little government regulation as possible and the widest possible opportunity for each one to work out his own destiny. The removal of obstacles rather than the imposition of new restrictions is the end sought. Undoubtedly men who prey on others must be restrained, but even this restraining will be in the interest of general liberty. That man is not free who does not get a fair reward for his own toil undiminished by tax for the benefit of his fellow citizens. So the vice of our present system is, that it is not based on liberty. And the farmers are those from whom liberty is withheld. So it all comes to a question of freedom. In doing away with the present abuses we are attacking not simply commercial and industrial unfairness and oppression, but tyranny. It is not insisted that any man shall have less than he is entitled to, but that all men shall have all that they are entitled to. Liberty, then, is the great aim of the American Society of Equity.

There can be no real justice where there is not liberty. For justice is by its very nature something that is due to a man; a debt owing to him; something to which he is entitled. When it is given or conceded to him as a favor or privilege coming from a benevolent despot, it is not really justice at all. Justice is not a thing to be granted, but one to be demanded. So when the American people came to frame their new and free government under the constitution they declared that one of their purposes was to "establish justice." They knew that a government could not be free unless it was just, or just unless it was free. And they were right. Surely this is a good precedent —one to which every American citizen should bow in reverence. But the appeal is not to one people, but to all people. The greatest merit of the plan is that it does not antagonize any government, people or class. It seeks the co-operation of all governments, and all classes, no matter what their forms and creeds are, without exception, based on the idea that the good and prosperity of the subject or the citizen must be their chief consideration.

If the rulers of the earth believe this, and they all profess to do so, they will find a valuable and useful ally in the American Society of Equity. All that is asked is that the men who feed the world should themselves be decently fed. Even in the most absolute monarchies it is of the first importance that the people should be happy, contented and prosperous. And that government is wise which exerts itself to the utmost to secure that result. When this can be achieved without cost or peril to the government, it would seem as though no objection could be raised even by the most aboslute ruler to any plan that appeared likely to bring the result to pass. What is wanted is a permanent remedy, and the true remedy is one which demands peace and equity. The late Lord Tennyson wrote his vision of what the earth was one day to be:

"Robed in universal harvest, up to
either pole she smiles,
Universal ocean softly washing all her
warless isles."

That is the ideal. Abundance for all, general content, the greatest productiveness, justice, honest pay for honest toil, and universal peace—these are the things that the American Society of Equity would have the world enjoy.

This society is not American, except as it is domiciled in America. It is world-wide, and there is not a toiler in the world who will not be benefited by it. What has been said to, and of, American farmers applies to all farmers, and this organization is meant for all farmers. It all comes to the Scriptural doctrine that the laborer is worthy of his hire. To withhold his hire from him, or any part of it, is to weaken all government and to impair the foundations on which society must rest. While to insure him his just reward is to strengthen the social order and to build anew the foundations of the political structures of the world.

Years before it came to pass, Arthur Young, traveling in France, predicted the great revolution that took place in that country more than a hundred years ago. He based his proprecy simply on the fact that the people were being robbed by the church and the nobility, and robbed to such an extent that they did not have enough left to live on. We are wiser in our generation, in that we do not push our spoilation to such an extreme point. But we want, not simply to avoid revolution, but to make all the people happy. The question is, not how much we can safely take from them, but how much we can safely give them. And when we are asked to give them only what is already theirs, in equity, with the assurance that by doing so we shall make them happy, shall we hesitate?

Peace, happiness, truth, justice, order, the death of anarchy, firmly established governments, the reign of law, contentment and satisfaction, together with real and widely diffused prosperity, and to crown it all a real federation of the nations, through the people on whom all depend—the farmers—surely these are things worth striving for. St. Paul said: "Who planeth a vineyard and eateth not of the fruit thereof? Or who feedeth a flock and eateth not of the milk of the flock?" And the psalmist wrote to his people in their captivity: "For thou shalt eat the labors of thine hands; O well is thee and happy shalt thou be." We seek the fulfillment of these prophecies. There is not a human being in the world, and not a government in the world, that will not be better because of the triumph of the Third Power through the American Society of Equity.

Immediately after completing this address you should send for The Third Power book. 320 pages, cloth bound, 25c and a coupon. See elsewhere in this paper.

Hold Cotton for 12c

Proof of Victory

There could be no stronger proof that the farmers are masters of the market situation, no more powerful vindication of the contention of the A. S. of E., and no greater certainty that the Society is following its teaching, than the following which we clip from the market page of the Indianapolis Star of Oct. 28:

Live stock men and grain men are commenting on the fact that farmers are not getting so panicky under declining prices that they are letting go of their supplies regardless of market conditions. In both of these lines of trade it is a sort of axiom that "the farmer sells on a declining market and holds on a rising market." This rule does not seem to hold good under existing conditions.

Week before last the price of hogs broke 50 cents and every one in the trade figured that the movement from farmers' hands would become so great that further reductions in prices would follow immediately. The next week, however, there was a decrease in the movement and the market developed a stronger tendency.

Last week the price of wagon wheat in Indianapolis was $1.20 a bushel. The movement became free, millers gaining the idea that that figure was the one for which the farmers had been holding. The market broke this week, and while the movement from middlemen's hands is still free, it is claimed that the farmers are again tightening their hold on their stores.

Two reasons are assigned for this fact. In the first place the farmers of the State never were in better shape, financially, to hold their supplies until the market price was to their liking. In the second place it is contended that the agitations by the farm organization that promulgates the idea that all of the markets of the country are directly under the control of the farmers—that it is in their power to "control prices by controlling marketing"—is having some effect.

A 320 page, cloth bound book, price $1.00, and 10 cents extra for postage, all for 25 cents, postpaid. See coupons in this paper.

YOU CAN RAISE ALFALFA

with the

"Vest Pocket Fertilizer"

—and—

NEVER HAVE AN UNPRODUCTIVE FIELD

It has been demonstrated that alfalfa, the great hay and forage crop of the West, can be grown almost anywhere, but the soil must be inoculated with alfalfa bacteria. These bacteria are absent from the soil of the great middle agricultural region of the United States, but Dr. George T. Moore, of the United States Department of Agriculture, has discovered a process by which the soil may easily be inoculated with the bacteria, and the inoculation has resulted in the most luxuriant growths of alfalfa, where it would not grow at all before.

The Department of Agriculture has had the process patented to prevent a monopoly being maintained by other parties. Under the provision of the patent we are permitted to manufacture these cultures, and we hereby offer them as premiums to subscribers to Up-to-Date Farming.

It is very simple and easily applied, and enough to inoculate an acre may be carried in the vest pocket, hence the name some one has applied to it, "Vest Pocket Fertilizer."

Get a neighbor to join with you and send us $1 (50 cents each) for a year's subscription to UP-TO-DATE FARMING for each of you. We will send each of you by mail postpaid and absolutely free, with full instructions for using and applying the same, enough of the culture to inoculate on acre. For each additional acre you want to inoculate send another subscription. The subscription may be for either new subscribers or renewals, but we prefer that at least one of them should be new.

The cultures we shall send are carefully prepared by us after the original formula patented by the Department of Agriculture.

Now is the time to get the free benefit of the most wonderful discovery ever made in the interest of agriculture. When farmers can raise such crops as alfalfa and other self-fertilizers, they need never have an unproductive field. Send at once while the cultures are obtainable. If we were to offer them for sale they would be at 50 cents or more each acre, hence you realize the liberality of this offer, and you can afford to pay for some subscriptions for your friends. If you sow alfalfa without inoculating the soil it is almost certain to be a failure. But if inoculated it is as certain to be a great success. Order from this advertisement. You can keep them until need for use. Address
UP TO-DATE FARMING, Indianapolis, Ind.

We Paid $100,000

For the American Rights to Liquozone, and the British rights sold for a like sum
That is the highest price ever paid for similar rights on any scientific discovery

Yet We Will Buy a 50c Bottle and Give it to You to Try

We tell you this fact because it best indicates the value of Liquozone. Claims are easily made, but men of our class don't pay a price like that save for a product of very great worth to humanity.

Before making this purchase, we tested Liquozone for two years through physicians and hospitals in this country and others. We tried it in all kinds of germ diseases, in thousands of the most difficult cases obtainable. We saw it cure hundreds of sick ones with whom everything else had failed. And we saw many a patient brought back from the verge of the grave by it.

We proved, to the satisfaction of the best physicians, that in germ troubles Liquozone did what nothing else could accomplish. We proved it to be of more value to sick humanity than all the drugs in the world combined. Then we staked our fortunes and our reputations on it.

Every member of this Company uses Liquozone daily in his family to prevent sickness, and millions of others are learning to do likewise. Liquozone is now employed by hospitals everywhere, and by the physicians of nearly every nation.

What Liquozone Is

Liquozone is not a medicine. It is not made by compounding acids or drugs, nor is there any alcohol in it. Its virtues are derived solely from gas —largely oxygen gas—by a process requiring immense apparatus and 14 days' time. Each cubic inch of Liquozone requires the use of 1,250 cubic inches of the gas.

Liquozone is the result of a process, which, for more than 20 years, has been the constant subject of scientific and chemical research. The main result is to get into a liquid, and thus into the blood, a powerful, yet harmless, germicide. Another result is to create a vitalizing tonic with which no other known product can compare.

Acts Like Oxygen

The great value of Liquozone lies in the fact that it does what oxygen does. Oxygen is the vital part of air, the very source of vitality, the most essential element of life. It is the blood food, the nerve food, the scavenger of the blood. It is oxygen that turns the blue blood to red in the lungs; that eliminates the waste tissue and builds up the new. Too little oxygen always causes lack of vitality. An excess of it gives strength to every function of nature.

Oxygen is also a germicide. The reason is that germs are vegetables; and an excess of oxygen—the very life of an animal—is deadly to vegetal matter. Liquozone acts like oxygen. But it does more than oxygen, because it is stable. It carries its virtues into the blood to go wherever the blood goes. It is a remarkable tonic—the best thing in the world for you. Yet it is a germicide, so certain that we publish on every bottle an offer of $1,000 for a disease germ that it cannot kill.

The discoverer of Liquozone has solved the great problem of killing germs in the body without killing the tissues, too. And there is no other way. Any drug that kills germs is a poison, and it cannot be taken internally. Liquozone is the only way that any man knows to end the cause of any germ disease.

One Million Dollars

Have been spent by us to give Liquozone away. Our offer to buy the first bottle has been accepted by 1,800,000 people. And we have spent this vast sum to publish the offer and to fulfill it.

The result is that millions now use it. These people have told others about it, and the others told others. Your own neighborhood, wherever you are, is full of Liquozone users. And half the people you meet know some one whom Liquozone has cured.

We tested this product for two years, through physicians and hospitals, in this country and others, before we made the first bottle. We proved it in every kind of germ disease—in thousands of the most difficult cases obtainable. We cured with it every disease which was considered incurable. Then we paid $100,000 for the American rights; and the British rights have since brought a like sum. We tell you these facts because they indicate the great value of Liquozone.

Germ Diseases

These are the known germ diseases; all due to germs, or the poisons which germs create. These are the diseases to which medicine does not apply, for drugs cannot kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding Nature to overcome the germs. But those results are indirect and uncertain. They depend on the patient's condition. When drugs were prescribed for these troubles, nobody knew of germs. Now every good physician knows that they call for a germicide.

Liquozone alone can destroy the cause of these troubles. It goes wherever the blood goes. No germ can escape it, and we have found no disease germ which can resist it. Diseases which have resisted medicine for years yield at once to Liquozone, and it cures diseases which medicine never cures. In any stage of any disease in this list, the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anæmia	Leucorrhea
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Piles—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goitre—Gout	Varicocele
Gonorrhea—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer, accomplishing what no drugs can do.

One Full-Size Bottle Free

If you need Liquozone, and have never tried it, we ask you to send us the coupon below. We will then send you an order on a local druggist for a 50c bottle, and will pay the druggist ourselves for it.

We have already done this with 1,800,000 people, and it has cost us over one million dollars to announce and fulfill the offer. Don't you realize that a product must have wonderful merit when we spend $1,000,000 just to let the sick try it?

That is our only method of making Liquozone known. We publish no testimonials; we tell you of none it has cured; we use no physician's endorsement. We prefer to ask you to try it, at our expense. Then judge for yourself what it does.

If you have already used Liquozone, this offer, of course, does not apply to you. But if you have not used it—if you don't know its results—please send us this coupon to-day. Do that in justice to yourself. The acceptance of this offer places you under no obligations; and it will introduce to you a product better than anything else in the world for you.

Liquozone costs 50c and $1.

CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to The Liquozone Co. 458-464 Wabash Ave., Chicago.

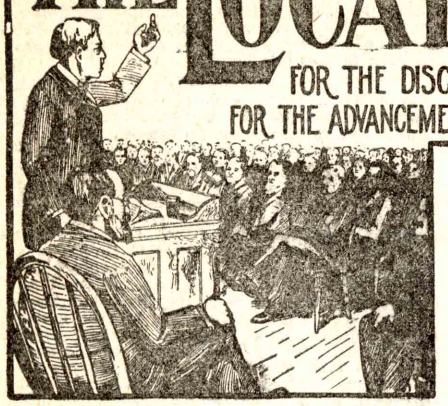
Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc. It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

NATIONAL UNION LABEL AMERICAN FARMERS — THE AMERICAN SOCIETY OF EQUITY

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

An Appeal

Every time we appeal to Our Up-to-Date People to help the cause we are all so earnestly working for, by increasing our circulation, they rally nobly to the call, but we can not be satisfied until the world is indoctrinated with the truths we are teaching. Hence we are still urging our friends to help to get Up-to-Date Farming into other hands. The good effects of our teaching are apparent wherever we have had a hearing, and those more reluctant to admit it than all others are now forced to acknowledge that our work has borne, and is still bearing fruit. Let us get the ear of the masses in all this great country. Let us number Our Up-to-Date People by the million where we now count them only by the hundred thousand, and we guarantee results that will satisfy the farmers and surprise the world. Get us annual subscribers where it is possible, trials where that is the best that can be done, and also encourage every possible increase of membership.

START RIGHT,

You have tried shipping direct. Farmers' Elevators and Capital Stock Concerns.

You have tried buying cheaper, and to regulate every business on earth but your own.

They have all failed, and the reason why is easy to see, if you have half horse sense.

Now .try to regulate your own business in its vital part, viz., the financial end.

Instead of trying to regulate and control other people's business, control your own.

Control your marketing to meet the demand and you won't need to do another thing.

Then you will make the price and no power on earth can prevent.

All you need, to do this, is the A. S. of E., and all the A. S. of E. needs is you.

THE LOCAL AT THE CROSSING

On taking the chair the president said he noticed there was getting to be considerable talk about reducing the acreage of leading crops, so as to curtail production in order to secure profitable prices. He did not think any such course necessary, but this, he said, was a good time to discuss it, and he did not know any better subject we could take for this meeting's talk.

Joe Riley—If a reduction of acreage and a curtailment of production is the only way for farmers to secure profitable prices, then the agricultural colleges should all close their doors, and the old line farm papers should suspend publication, for the burden of all their teaching is to raise more and more. They seem to entirely ignore the fact so often proven that the more the farmers produce the less profitable it is to them, on account of the certain reduction of price under the old system.

Charles Lambert—Yes, the farmers have had a great deal of very bad instruction—instruction which, if followed to its conclusion, would be ruin to them and no benefit to the world. Still I do not believe reduction of acreage is necessary in any of our leading crops, because no permanent surplus has ever yet been produced. When the remains of a previous crop pile up on the advance delivery of the incoming crop, after every man, woman, child and beast has been fully satisfied, then it will be time to talk of over-production, and to seriously discuss a reduced acreage. This has never occurred, and there is little prospect that it will occur.

George Bowers—Mr. President, I endorse all that reasoning as sound, and there is still another view to take of that subjejct, and one that is fraught with danger if the plan of crop reduction as a means of securing better prices were adopted. With all of our best efforts on our largest acreages, we often fail to produce enough to supply the world's needs. No fault of ours, but on account of the temporary bad conditions which we can not control. In following the reduced acreage theory, should one of these unfavorable seasons come, the world might find itself hungry and illy clad—compelled to pay excessive prices for necessities, the rich absorbing the scant supply and the poor suffering. We could not forsee this result until too late to remedy it. All that could be done would be to await the result of another crop. In the face of such possibilities I could not advocate the plan of decreased acreage. Besides, there is no necessity for it. As has been said, under the most favorable conditions and the untiringly increased yield instruction, we have never produced too much. It is not the quantity we have raised that has made us trouble, but the way we have sold it. If we follow the teachings of Up-to-Date and keep solid the A. S. of E., marketing our products only as they are needed, we may have large quantities to sell and get a fair price for it, while at the same time we may abundantly supply the world with no danger of a hunger-producing shortage, and no danger of prices that will make scant the food or clothing of the poor. But if a surplus should come it may be held against the short crops that are sure also to come, and thus it will prove a blessing to both producers and consumers. Let us rather think about ways and means to hold a possible surplus than to curtail acreage and possibly produce a famine.

Jim Denny—I like short rows. Little fields suit me better than big ones. I'd rather gather one load of corn than two. I don't make so many crooks in a short furrow as I do in a long one. When I work in a small field it don't take so long to get to the shade at the other end. There is not so much replanting to do. And you don't have to carry so many bundles in a small wheat field, nor set up so many shocks. You don't have to go so far when the dinner bell rings. I believe I am in favor of reducing the acreage. And I don't care if they make smaller acres. There's lots of ground in an acre, if it's weedy and a hot day.

And Jim folded himself up, and looked around to see what he had done. Nobody seemed to care. Sue Lambert and Bill Smith, contrary to all rule, sat on the same bench, and looked solemn. I quit writing. Several other speeches were made, but I didn't take them down. It wasn't long till the meeting adjourned. I don't see that Bill Smith is any advantage to the Local at the Crossing.

Prize Local Union Program--$5.00 Went to Michigan

On December 1st we made an offer to pay five dollars for the best program for a local union meeting submitted during December.

Several programs were submitted and from the lot the one sent by Ira W. Bennett, President of Lee Local Union No. 1 ,of Kibbie P. O., Mich., was selected as entitled to the prize.

In submitting the program Mr. Bennett said: The "Lee Local No. 1," though an infant is a "hummer." We have held four meetings since organizing. We have the house full every time and take in new members nearly every meeting. * * * The cause is moving along grandly, with every wheel greased and farmers are climbing in to the band wagon.

Part of the program follows:

1st. Meeting called to order and the regular order of business was followed about one-third through.

2d. Address by chairman of our committee on program, Mr. Isadore Beau, age 21 years. From his splendid address we quote the following:

* * * "What do farmers expect to accomplish unorganized? What will be some of the results if two-thirds of the farmers in the various States were organized? Our official paper tells us that the first thing the farmers must do is to organize and then they can do anything they want to do.

By reading papers I find that the South has sustained greater loss than any other section of the country on account of lack of organization in the cotton belt. The grain growers are better organized, and the tobacco growers are better organized, and they have something to say about price. In fact, the minimum prices set by our society become the market prices. If not at once, they do before the year is past, because such a large portion of every crop is held for the price that the world can not do without it. The cotton growers, and potato growers, and bean growers, and the growers of every farm crop can organize just as well as the grain and tobacco growers. * * *

You may say that the farmers can not organize and will not support a society. I believe the statement, if made, would be

Are Your Hands Tied

because you cannot advance in your present occupation? Do you desire to qualify to earn a good salary through the I. C. S.? You can become a Show-Card Writer, Advertisement Writer, Newspaper Illustrator, Mechanical Draughtsman, Architectural Draughtsman, Surveyor, Stenographer or Book-keeper. If you can read and write and will study in your spare time as we direct, **we guarantee to qualify you for a good-paying position.** Write for "*1001 Stories of Success*," stating what you want to become.

INTERNATIONAL CORRES, SCHOOLS,

false. Have farmers organized? They have, as you well know. Have they supported anything? Who supports the Department of Agriculture at Washington if not the farmers? Look to the capitol of Michigan. There is the agricultural school and experiment station. Do the farmers not support them? And the same in each State in the Union. Don't farmers support the farmers' institutes? Don't they support a few hundred farm papers? They support all these and have done so for many years. Yet they have not increased his yields one pound per acre nor increased his profits one cent. More than this, they can not under the old conditions. But if the farmers will complete the American Society of Equity it will make all these other institutions worth while. * * *

* * * You all know how to raise stuff. But the vital part is the last step in the whole transaction—the marketing. How will you market? You must feed the market, let me say, like a cow or a horse. You don't dump a whole year's supply to them at once, but you supply enough to meet their wants each day. Your time to sell is when the market will pay your price. If crops were controlled by this rule there would be no evidence of overproduction and no glutted market. * * *

3d. The address was followed by some recitations by children.

4th. The second and third of the regular order of business.

5th. The "Borrowing Neighbor," by Max Adler, was read by a little girl, Miss Girtie Porter. We print it as follows:

"BORROWING NEIGHBORS."

"I'm going to move," said Mr. Butterwich. "I can't stand those Thompsons next door. They are the awfulest people to borrow things that I ever saw. Coffee and butter and sugar and flour I don't mind so much, although when a woman borrows high-priced sugar and Java coffee, and sends back sand and chickory, a man naturally feels bilious and mean. But they've borrowed pretty near everything in the house. First its one thing and then its another, from morning till night, right straight along.

Now, there's the poker. A poker is a piece of machinery that you would think anybody might go around and buy, or, if they couldn't afford it, they might use a fence paling to shake up the fire. But Mrs. Thompson seems to hanker after our poker; she borrowed it fifteen or twenty times a day, and last Saturday she sent for it thirty-four times. She pays a boy two dollars a week to run over and borrow the poker; and she's used it so much that it is all bent up like a corkscrew.

Now the chairs, for instance. She asks us to lend our chairs three times a day at every meal, and she borrows the rocking chair every time she wants to put the baby to sleep.

A couple of times she sent over for our sofa, and when the boy came with it he said Mrs. Thompson was mad as thunder and kept growling around the house all day because there were no castors on it. Last Monday she borrowed our washing boiler, and we had to put off our washing till Tuesday. She did her preserving in it. The consequence was all our clothes were full of preserved peaches. I've got on an underskirt now that I'm mighty doubtful if I'll get it off. it stuck to me so tight.

Every now and then she has company, and she borrows our hired girl and all the parlor furniture; once because I would not carry the piano over for her and take down the chandelier, she told our girl that there were rumors about that I was a reformed pirate.

Perfectly scandalous! They think nothing of sending over after a couple of bedsteads or the entry carpet, and the other day Thompson says to me:

"Butterwick, does your pump log pull up easy?" And when I said I thought it did, he said:

"Well, I would like to borrow it for a few days till I can get one, for mine is all rotted away."

The only wonder to me is that he didn't try to borrow the well along with it.

And then on Tuesday Mr. Thompson sent that boy over to know if Mrs. Butterwick wouldn't lend him our front door. He said their's was away being painted, and he was afraid the baby would catch cold. When I asked what he supposed we were going to do to keep comfortable without any front, he said Mrs. Thompson reckoned we might tack up a bed quilt or something, and when I refused the boy said Mrs. Thompson told him if I wouldn't send over the front door to ask Mrs. Butterwick to lend her a pair of striped stockings and a horsehair bustle, and to borrow the coal scuttle till Monday.

What in the name of Moses she is going to do with a bustle and coal scuttle I can't perceive.

But they're the most extraordinary! Last Fourth of July the boy came over and told Mrs Butterwick that Mrs. Thompson would be much obliged if she'd lend her the twins a few minutes. Said Mrs. Thompson wanted 'em to suck off a new bottle top because it made the baby sick to taste fresh India rubber. Cheeky, wasn't it? But that's her way. She don't mind it any more!

Why, I've known her to take off Johnny's pants when he's been playing over there with the children and send him home barelegged to tell his mother that she borrowed them for a pattern. And on Thompson's birthday she said her house was so small for a party that if we'd lend her ours we might come late in the evening and dance with the company if we wouldn't let on that we lived there.

Yes, sir; I'm going to move. I'd rather live next to a lunatic asylum and have the lunatics pouring red hot shot across the fence every hour of the day. Indeed I would.—Max Adler

6th. More recitations, including "The World Is Want to Say It Can't Be Done," which was learned and recited by one of our boys, Mr. Ben Teachout, and singing.

7th. Order of business was finished.

8th. "A Fragment," by Ira W. Bennett, President, as follows:

A FRAGMENT.

(Supposed to be written in the year 2904. It is an extract from a history of the ancient people who lived on earth in the year 1904.)

And it came to pass in those days that the earth was very fruitful ,and there were many tillers of the soil and keepers of flocks and heards.

And great cities were builded in the land, even the ancient cities of New York and Chicago, which remain to this very day. And in the cities there abideth great multitudes of people who sow not, neither did they reap, and behold the farmer man feedeth them all. And it came to pass that those who abideth in the cities did consider themselves vastly superior to them that abideth in the country, and they did mock, and make of the farmer a great joke, and names did they call them in derision—jays and hayseeds. Yea, verily, even mossbacks called they them. But behold the farmer man was very meek and long suffering ,and he heedith them not.

Then did certain wise men of the cities lay their heads together and commune secretly among themselves ,and thus sayeth they the one unto the other: "Go to, I pray thee, do not the multitudes in the cities have to eat of the products of the soil? Surely all that goeth in at their mouths cometh first out of the ground. Behold what an opportunity to make a "great boodle."

Therefore I pray thee let us put all our moneys together and buy all that there is in the land. Yea, even all the wheat and corn, all the potatoes and pomgranates and figs, and everything which thereof the people are wont to eat, and when we shall have gotten it all together in our great warehouses we will double the price, and great will be the profit thereon. And behold we will send false prophets throughout the length and breadth of the land, and they shall say unto the farmer, "Behold the land is full of corn and wheat and potatoes, and all products of the soil are abundant, and thou canst not sell that which thou hast raised unless thou sellest very cheap and quickly."

And thus they did, as the wise men had spoken even so did they. They sent their false prophets throughout the length and breadth of the land, and they did speak unto the farmer those things which the wise men had told unto them. And behold the farmer man was sorely discouraged.

Then came the wise men to buy. And behold the farmer runeth to meet him, and selleth all that he hath. Yea, very cheaply doth he seli, for the words of the false prophets still ringeth in his ears, and his heart forgeteth them not.

Thus did the wise men buy, very cheaply, all that which was good to eat in the land. And they builded great warehouses to hold high carnival. Yea, verily did they consume the midnight oil to lengthen out the day of great rejoicing, and they did hug themselves for joy. A great feast had they, and they did drink wine and smoke 50 cent cigars and make merry. Yea, even whisky did they drink, and they did say the one unto the other, "Behold, what a soft snap the mossbacks be." Selah.

Then did they double the price on all that which they had stored, and it came to pass that the people in the cities were ahunger, and they did go unto the wise men who had the great warehouses and did say unto them, "Behold, our wives and our children cry for bread, and we have not whereof to feed them. We pray thee, therefore, to sell us from that which thou hast."

Then did the wise man wink his eye and say unto them, "Behold, we have but little and there is no more in the land, if we sell to thee that which we have, behold, our own children will want; therefore we must double the price yet again." Then did the people bring loads of sheckles to the wise men, even sheckles of silver and sheckles of gold brought they and threw them down at the feet of the wise men. And behold their warehouses were emptied quickly and great loads of sheckles had they, even mountains high.

And behold many generations passeth away, and the farmer waxeth poor, while the wise men waxeth rich from the sweat of the farmer man's brow.

Then doeth the farmer hump himself and hustle. Yea verily, even deeper doth he plow the ground and his wife and children goeth forth with him to labor in the fields from daylight even unto dark did they work like cattle. Yea, verily, even as mules worked they to raise more crops that they may thus have more money with which to pay their mortgages. Then doth the wise men in the cities smile a large smile. Yea from one ear even unto the other smileth he. And he winketh the other eye and sayeth the one unto the other, behold, what good cattle to work for us the mossbacks be. Surely he raiseth twice as much this year as he did last. Therefore, we will pay him one-half as much per bushel, and even so did they.

And now, behold, there arose a great man in the east to deliver the farmer out of bondage. Yea, verily, as Moses delivered the children of Israel out of the hands of the Egyptians, even so did this great man deliver the farmer out of the hands of his enemies. And the name of this great man was Everitt. Even J. A. Everitt was he named, and he abideth in the ancient city of Indianapolis. And he did publish a great newspaper for the good of the farmer man. Behond, 24 pages had this great paper, and four columns were there to each page, and the name of this paper did he call Up-to-Date Farming. And much ink did he use. Yea, verily, even tons of ink did Everitt use, and great carloads of paper. And he did write with a mighty hand, and behold he telleth all the secrets of the wise men, and how that they were robbing the farmer of the just reward for all his labor. And he did devise a plan whereby the farmer fixeth a just and equitable price for all that which he hath to sell, and selleth for no less, and behold, it giveth the wise man a black eye.—Selah.

And Everitt did send his papers broadcast throughout the length and breadth of the land, even to the habitations of every farmer man went this great paper; and the farmer men began to read the things therein; and, behold, their eyes were opened, and they did say, one unto the other, "Behold, what manner of thing is this which the wise men have done unto us?"

And it came to pass that great multitudes of farmers began to assemble together throughout the land, and they did say the one unto the other, "Hast thou read the great paper, Up-to-Date Farming? And hast thou noted therein Everitt's great plan of the A. S. of E.?" Go to, I pray thee, let us hold our products for the equitable price, for, behold, as we have been selling heretofore the wise men getteth all the dough, and what getteth the farmer? Yea, verily, the farmer man getteth it in the neck.—Selah.

And it came to pass that the farmers holdeth their crops for the minimum price. Yea, even all the products of the soil holdeth he, and of his flocks and herds selleth he not one hoof.

And it came to pass when the wise men again goeth forth to buy cheaply they sojourneth wearily by the wayside, for, behold, the farmer man puteth his finger to his nose and selleth him not. Then did the wise men rave and tear their hair. Yea, verily, they did howl and kick with a great noise, but it availeth them naught. And in time the great warehouses of the wise men became empty and the people did clamor for food. Then did the farmers throughout the land fix their just and equitable price on all that which he hath to sell, and he sendeth to market each day just so much thereof as bringeth his price, and no more. And, behold, before another harvest time cometh all that he hath is sold at his own price, and he reapeth a rich reward for all his labor. And, behold, the wise man still drinketh his whisky, but the wine and 50-cent cigars cutteth he out.

Verily, verily, I say unto ye, the farmer man was no chump.—Selah.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

OUR GUARANTEE of advertisers as found on third page does not apply to this department. Many people who will advertise here are not rated in the regular commercial directories and it would be impracticable to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

Agents Wanted for our famous C. & F. Wonder Knives. $1.25 each. Dozen, $11.00 prepaid. Cooner & Fortune Co., Indianapolis, Ind.

Ayshire Cattle of the best breeding. Also Chester White pigs. Prices reasonable. F. Tschudy & Sons, Monroe, Wis.

Best Cooking range costs $10.00 to $20.00 less from me than from others. Clapp's Ideal Steel Range is sold on monthly payments or for cash. Chester D. Clapp, 204 Lynn St., Toledo, O.

Blizzard Storm Fronts protect from the wind, snow and rain. Adjustable to any buggy, with celluloid light 12x20 inches, price $4.00. Agents wanted. Vehicle Apron & Hood Co., 265 N. 4th St., Columbus, O.

Bran and other feed in car lots quoted delivered your station. Ship your grain and save dealer's excessive profits. Cooper Commission Company, Minneapolis.

Broom Corn seed wanted. We want to buy some genuine pure Oklahoma Dwarf Broom Corn Seed for planting. J. A. Everitt, Seedsman, Indianapolis, Ind.

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

Where green and promise dwelt last summer,
Brown and sadness reign to-day;
But ere 'tis long the breath of springtime
Will chase the somber hues away.
'Tis thus in life's peculiar mazes,
The sun oft hides his smiling face,
But quickly fly the lowering shadows,
And cheerful sunlight takes their place.
—J. P. S.

There's time to read.

Experience is a slow as well as a dear school.

The man that learns only by experience never graduates.

But the man that tries to imitate everybody else, thinking he is getting the benefit of other people's experience, lives in the mazes of a jungle.

Judgment, common sense, mother wit, thoughtful discrimination—I don't care what you call it—that is the post which holds the finger-board that points to success.

Whether your fields are large or small, contain many acres or few, they call for judgment in the management, and reading and study helps the judgment.

It is a mighty good plan to not go in debt for machinery, unless you know you have use enough for it to make it pay for itself. Uncle Threadbare once had a ten-acre field of wheat, the best he ever raised. He was so elated he rushed to town and bought a binder to cut it with. That machine is not paid for yet, and he would have been better off today had that field of wheat gone to waste. But Neighbor Thrift, who already had a machine, would have cut it for him for less than one year's interest on the cost of the machine, which is now rotted down. But the note he gave when he bought it shows no sign of decay.

We would not be at all surprised if the next cotton crop shows a reduced acreage. Farmers must protect themselves in some way.

Speaking of field crops, it is surprising that the schools and institutes, in face of all the proofs, continue to urge increased yields without a word about the price. It is nice to raise 200 bushels of grain instead of 100 bushels, or two bales of cotton instead of one bale, but if the growers get as much for the 100 bushels as for the 200 bushels, or for the one bale of cotton as for the two bales, why should he raise the double quantity? It does not benefit the consumers, for the price to them is seldom reduced.

Here are some good rules for farmers to observe next spring: Don't plant until your ground is thoroughly prepared and ready for the seed; don't plant any but good seed; don't try to grow any crop on land that you know will not produce that crop; make adaptability and probable productiveness your guide in determining the crops the different fields shall grow.

Abandoned Farms in the East

Farmers of the great agricultural States west of New York and Pennsylvania can scarcely understand what is meant by abandoned farms in the East, and it takes strong proof to convince them that there are farms that have actually been abandoned by their owners—farms on which families once grew up and prospered, but which are now left tenantless, turned over to the bats and moles, and in which there is no longer life, hope or expectation.

But there are just such farms, or perhaps it would be better to say, tracts of land that once were farms. C. S. Plumb, of the Ohio State University, writing to the Rural New-Yorker, says:

"The writer is very familiar with a large region in western Massachusetts, where year after year the abandoned farm area has grown in size. Each year farm buildings are closed up and left tenantless. I can ride over a long drive up hill and down full of sadness in the deserted homes. This past summer I spent some time in Connecticut, part of it in localities where farm land is for sale at your own price. Even the Connecticut agricultural college is located in the abandoned farm region."

Right here we may very well close the quotation. There are abandoned farms, farms that the owners have left tenantless because they could no longer make a living upon them, could not find any one willing to occupy them on any terms as a tenant, and could not find a purchaser for them at any price. And "the Connecticut Agricultural College is located in the abandoned farm region." In other words, in spite of the teaching of the Connecticut Agricultural College, the farms amid which it is located have been abadoned by their owners for the reasons above given. In what have the teachings of that college differed from the teachings of other agricultural colleges? Can it be that the teachings of these institutions of learning lead toward the abandonment of agriculture rather than to its promotion and elevation? We speak reverently and seriously. These institutions all bend their energies to the teaching of increased yields. Everything must be sacrificed to increased production, and yet as we have time and again shown in this paper, they have failed to materially and permanently increase the average yield of any crops. If they had, as we have also often shown, increased production does not always mean increased profits but generally the reverse.

The agricultural schools and sources of farm institutions must revise their curriculum. They must teach profitable farming rather than what they call successful farming. Price and marketing are of more importance than yield and production and the agricultural colleges and farm papers and institutions must teach it so. When they do that and secure profitable farming, there will be no more abandoned farms. No farm was ever abandoned that was profitable to its owner and occupant and never will be.

Sharples Tubular SEPARATORS

Tubulars Find Gold in Milk

Good butter is worth 20 to 30 cents a pound. Butter is worth only one cent a pound as stock food, yet farmers using gravity skimmers—pans and cans that leave half the cream in the milk—feed that half the cream to stock, then wonder why dairying don't pay. Can't find gold without digging. Can't make dairying pay big profits without getting all the cream.

TUBULARS
Dig Right Down

to the paying level—squeeze the last drop of cream out of milk—make dairying pay. Tubulars are the only modern separators. The picture shows them. Write for catalogue G-136.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

The pig in a sty,
And the cow in a stall,
The colt in a stable—
Good roof over all.
The barn full of feed,
And pure water close by—
These are conditions
That winter defy.

—J. P. S.

We are in favor of profitable farming, and that includes profitable stock-raising.

Look well to your boarders this winter. Better turn off those that don't pay their board. You may afford to credit such as will pay next summer.

Don't drag young stock through the winter. Feed for gains and profits. Keep everything growing.

Pay special attention to the weanling colt. This is its first and hardest winter. It is no counterfeiter, but it will coin you some dollars if you furnish it with the material.

The stockraiser that hasn't time to read is attending a slow and doubtful school.

On the old-time country farm a cow was a cow, and she was generally a scrub. But it is different now. The cow to stand well in society must make a record. Her calves must be extra good, or her daily gift of milk and butter must establish her right to live.

There are three things that, in these days of new ideas and progress, even the farmer may steer clear of—the scrub, the scab and the dumper.

The livestock industry during the fiscal year 1904, furnished export material amounting to $223,023,060, which was an increase of $12,000,000 over the previous year. These exports may be divided as follows: Animals exported, $48,000,000; meat and meat products, including oleo oil, oleomargarine and lard compounds, $174,000,000; dairy products, $6,000,000; hides, skins, glue, grease, etc., $5,000,000. Now, if we could only know how much the producers get for this two hundred million dollars worth of exports!

The cattle exports from this country during the fiscal year 1904, as shown by the inspection records, was 764,496 head of cattle and 474,850 head of sheep.

Our 1904 exports of beef were 47,138,044 pounds more than in 1903, of mutton 2,016,924 less than in 1903, and of pork 21,319,830 pounds more than in 1903. What keeps the price of cattle and hogs so low?

Does investigation investigate? This question is being asked quite generally now, and mostly in connection with the investigation of packing houses or beef trusts, and Commissioner Garfield's report is being awaited with no little interest. Whatever may be said, the public knows that the methods of the so-called beef trust is bad. That the packing houses arbitrarily make the prices of live stock, that they combine to prevent competition, and that they as arbitrarily make prices on the finished product, either by themselves direct, or through their creatures, the people verily believe, and they are relying upon the agents of the national government to sift these matters fine.

From the East our imports of live stock are mostly for breeding purposes, and of these horses largely predominate. We had last year from Great Britain 1,523 horses, from Germany 204, from Belgium 651, and 47 from other countries. Of other stock we received at New York, the principal port, 266 cattle, 128 sheep and 123 hogs. From Meico we had 12,088 cattle, 701 sheep and 314 horses. These Mexican cattle were brought over as feeders, and came in competition with our native beef stock.

The cheese output of the United States for the last year, according to Secretary of Agriculture Wilson, amounted to about 300,000,000 pounds, worth approximately $30,000,000. Mr. Wilson thinks the cheese making industry is on a much better basis, more scientific than ever before.

Corn fodder, if bright and well cured is a very good winter feed for horses, and may save many dollars' worth of more costly hay. It may be very successfully fed whole, that is, whole stalks in long mangers. The horses will eat the blades and clean the stalks entirely clean. The stalks may then be thrown into the lot to add to the manure supply. But, until well rotted they are troublesome to handle in this way.

The Butter Won't Come

We could always make good butter, but the last few months we have an awful trouble. We put the cream into the churn and so it remains almost the whole day; then it begins to form into small crumbs, and that is as far as we can get it. Can you tell us what makes it so?—Frank A. Jones, Lynnport, Pa.

Such cases are frequent, but yours must be worse than usual. Different causes produce similar troubles. Aunt Eliza says without hesitation: "It is in the feed!" Are the cows having feed different from what you have formerly given them? Musty hay or bad feed of any kind is likely to produce such results. Do they have sufficient salt? Failure to salt the cows often makes the butter slow to gather. Churning with the cream too cold also causes it to foam and refuse to make butter. Not knowing all the conditions can not be certain of the cause, nor can we suggest a remedy. Determine the cause, and that will point to the remedy. We suspect it is the feed.

Don't suffer another day with female disease or piles. Write me and get package medicine free, Mrs. Cora B. Miller, Box 137, Kokomo, Ind.

WHY SO SURE? FINE POULTRY

It's made on the right plan, it works right. A Grand Sixty Days Offer

To help secure the million members to the A. S. of E. I will for the next 60 days furnish the readers of Up-to-Date Farming my beautiful printed Family Records at less than half price, and send you Up-to-Date Farming for one year. Or what would be better, if you are already a subscriber, send it to some friend who is not at present a reader, and let it do missionary work. The records are 11x14 inches, artistic in design, neatly printed, and when framed make an ornament fit for any parlor. I print and send as many Records as there are members of the family. Send me a copy of your family record, giving names, county and state, where born, married or died with age at death. Write names and dates very plain, using ink and pen. REMEMBER you get a printed record for each member of your family and a free year's subscription to Up-to-Date Farming, all for one dollar and a half ($1.50). Your home printer would charge you for the same work several dollars. If you care for the Free Seed Distribution that Up-to-Date Farming offers it will be included also. This offer applies to renewals too. Send records and money in registered letter to Onyx, Ark., or P. O. money order, made payable at Rover, Ark. Direct all letters to

DR. H. B. AKINS
Onyx, Yell County, Arkansas

FARMERS!
FOR 25 CENTS

Silver, and names and addresses of ten farmers, I will send the "BEDFORD BREEZE" and Farmers' Free Exchange one year on trial. The BREEZE tells plain facts in a plain way. It tells what a northern farmer thinks of southern farms and farming. It teaches good house-keeping, good farming, good health, good politics, good religion and good business for farmers. It boldly exposes illegal speculation, rotten politics, and public thieving. It will tell more farm news than any other paper. It is an able advocate of the American Society of Equity, and farm organization. Every member should read it. Every farmer wants the Free Advertising Exchange, which will tell what farmers have to sell or trade, and want to buy, hire, rent or exchange. "A good paper," say all who have read it. Write to-day to C. **Hayes Taylor, Editor, Bedford City, Va.**

FREE GOLD WATCH

Our watches are CORRECT in SIZE, have 14kt. SOLID GOLD LAID CASES, SUPERBLY ENGRAVED ON BOTH SIDES, AMERICAN MOVEMENT, fully warranted to keep correct time; equal in appearance to SOLID GOLD WATCH, GUARANTEED 25 YEARS. We give it ABSOLUTELY FREE to boys and girls or anyone selling 20 pieces of our assorted designs im. GOLD JEWELRY at 10c each. Send your address and we will send Jewelry postpaid; when sold send us $2.00 and we will POSITIVELY SEND you the watch EXACTLY AS DESCRIBED by return mail. For quick work we give GOLD FINISHED CHAIN. Mention whether you want LADIES' or GENT'S STYLE.

LIPPERT JEWEL CO., Dept. C38 CHICAGO

UP-TO-DATE POULTRY

Production and Marketing

In the poultry yard be ever sure,
Prevention easier is than cure.

Are you getting winter eggs?

What arrangements did you fail to make that you had intended to make?

Did you ever try an incubator? Each year sees more of them in use.

Set your stakes, your hens, we mean, for very early pullets. No matter what variety you raise, the early pullets are the ones to depend upon for winter eggs.

What variety do you raise, anyway? common scrubs? Well, innoculate them pretty thoroughly with Leghorn blood and you will have about as good layers as anybody.

The old standard barred Plymouth Rock holds its own in popular estimation, and it is hard to beat on the farm.

The White Wyandotte is growing in popularity, and was well represented at the great St. Louis show.

Keep plenty of dry trash in the poultry house for the fowls to scratch in in bad weather. Sprinkle shelled corn or other grain among it once in awhile, to stimulate activity.

One of the weakest spots in the farm management of poultry is watering the fowls in winter. Fowls suffer more for water in winter than in summer, because they are worse neglected. Ice and snow are poor dependence. See that they have clean, fresh water twice a day in frozen weather.

If you want winter eggs, don't neglect the dust bath and gravel in the poultry house. Nor broken shells, or some other form of lime.

If you think of making any changes in your poultry next spring, you can't beat the Leghorns if you want layers.

Dampness or excessive moisture in the poultry house is bad—a sure condition for breeding disease. Keep the house dry and clean.

Gapes in Poultry

This is one of the strangest of animal diseases. It is caused by a double worm, or what may be called a double worm, finding a lodgment in the windpipe of the young chick. When we say it is a double worm, we mean that it is always found in pairs, the thing itself seeming to be a single worm divided into two unequal parts, the shorter part being the male and the longer part the female. The female is always full of very minute eggs. The worm is provided with a dislike head with which it adheres to the walls of the windpipe on the plan of a sucker, and is very difficult to dislodge. The symptoms, the constant gaping of the infected chick, are too well known to need any reference.

Being located in the windpipe, the worm is very difficult to reach with remedies, and prevention must be the thing aimed at. As we have said, the female part of the worm is full of eggs. When one of these is dislodged by the constant gaping and sneezing of the fowl, which sometimes happens, or when a chick dies and is permitted to remain in the poultry yard, these eggs become mixed with the surface ground where the chicks are fed, or adhere to grass blades or other vegetation, or are consumed by earthworms or other insects, which are afterwards eaten by the chicks—no matter how the eggs find lodgment in another chick, another case of gapes is sure.

The treatment is to try to clear the premises of the infection. All chicks that die of gapes should be burned, or taken entirely out of reach of the poultry, and the run thoroughly treated with lime. It is well to keep lime scattered about the run throughout the season, especially very early before the gapes appear.

Free to every sufferer, a package of medicine that cures all female diseases and piles. Write Mrs. Cora B. Miller, Box 137, Kokomo, Ind.

HENS WILL LAY EGGS THAT PAY

Lots of them if you mix a little Prussian Poultry Food in the Feed. It will make hens lay and keep them laying. It is a great egg and flesh producer, also a certain cure for Cholera, Roup, etc.

Your **PRUSSIAN POULTRY FOOD** is simply immense. I fed it the last year to my flock of 350 and not a single case of disease of any kind happened to them.—A. C. Meyers, Mt. Morris, Ill.

Price 25 and 50 cts. package; by mail 40 and 75 cts.; Pails, $3.50 Keep your poultry FREE from vermin by using Prussian Lice Powder or Prussian Lice Killer (Liquid). If your dealer don't have it write us. We will send you our Poultry Book Free. **PRUSSIAN REMEDY CO., St. Paul, Minn.**

THE $50,000,000 WORLD'S FAIR ST. LOUIS, 1904

BOUGHT BY THE CHICAGO HOUSE WRECKING CO.

Millions of dollars' worth of material will be placed on the market for quick sale by us at prices that will mean an enormous saving to purchasers. Now is your opportunity to put into excution your long contemplated improvements.

100,000,000 Feet High Grade Lumber For Sale

The time to buy lumber is today. Even if you do not need any today, it will pay you to purchase it now and store it for future use. It's better than money in the bank. Buy quick, because the price at which we will offer this material is bound to sell it as fast as we can make delivery. The finest grades of lumber were used in the construction of this Grand Exposition. We have everything needed in the construction and furnishing of a building for any purpose.

Send Us Your Lumber Bill For Our Estimate

You Can Save From 30 to 50 Per Cent If You Buy At Once

This is your opportunity to build or improve your Home, Barn, Warehouse, Church, Elevator, Tool Shed, Granary and Crib, Store, School House, and in fact any kind of a building.

Millions of Dollars' Worth of Other Material For Sale

Besides Lumber, we offer at low prices Sash, Doors, Steel and Felt Roofing, Pipe, Hardware, Machinery, Household Goods and Furniture of every kind, Roofing Glass, Fencing, Fence Posts, Electrical Material, Plumbing and thousands of other items.

ASK FOR OUR SPECIAL CATALOGUE NO. 204

We purchased and dismantled all the Exposition of modern days. Write us today.

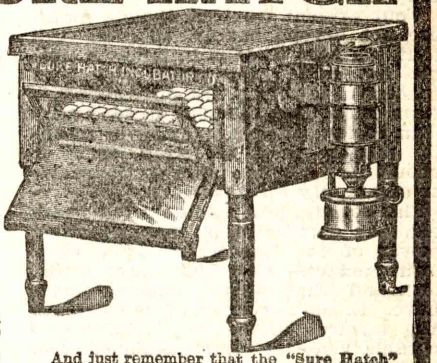
HOME OF THE SURE HATCH

Clay Center's Claim to Fame Rests on the "SURE HATCH" Incubators and Brooders



60,000 IN USE AND SALES INCREASING ENORMOUSLY

When you send to Clay Center, Neb. for an incubator or brooder, be sure and specify the "Sure Hatch" and get the best.

The "Sure Hatch" is the incubator that gave to Clay Center its claim to fame. It has passed through the stage of experimentation and is today a pronounced success. Why pay your good hard money for an untried incubator and waste time with an imperfect experiment, when you can get a "Sure Hatch" for the same price, that will not disappoint you? The "Sure Hatch" experience is paid for. You don't have to help pay for experimenting with uncertainties when you get a "Sure Hatch."

It takes time and money to build up a record like the "Sure Hatch" record.

Sixty thousand machines in successful operation in all parts of the world, attest their superiority and make it certain that you take no chances when you invest in a "Sure Hatch"

We take chances on the success of every "Sure Hatch" that goes out. How? By giving the purchaser a 60 days' free trial, during which he can take off two hatches to thoroughly test the machine.

And just remember that the "Sure Hatch" Guarantee protects you for five years. It is worth something to know and to feel that money cannot buy more in the incubator line than what is furnished for the price in the "Sure Hatch." All we ask for our 120-Egg Machine, with freight charges prepaid to your station is $10.00. We can ship promptly.

Among the strong points of the "Sure Hatch" are: Its heater—live, hot air all around it; cold air can't get to it; saves oil and trouble; other incubators have coolers and waste oil. Built of California redwood, that will not warp, crack, shrink or swell; patented copper heating system and tested patent regulator; full asbestos lined.

A good incubator is a money-maker from the word "go." Place your order for one now. There is but one "Sure Hatch." It is made at Clay Center, Neb. Our eastern office is at Indianapolis. Free Catalogue and Poultry Book now ready. Send at once. Address the nearest office.

Sure Hatch Incubator Co., Box 285 Clay Center, Neb. Box 1285, Indianapolis, Ind.

HOW FARMERS OF THE SOUTH MAY SOLVE THE COTTON PRICE PROBLEM

The Society that Secures Profitable Prices for Grain in the North Promises Relief

J. A. Everitt, Indianapolis, Ind., Founder of the American Society of Equity, and Its President, Gives Advice as Follows:

The following appeal and plan has been sent to many newspapers, farmers, merchants and bankers of the South. The plan meets the needs of cotton growers better than any other plan yet proposed:

The American Society of Equity, a national farmers' society for every crop, with headquarters at Indianapolis, Ind., sends words of cheer to cotton planters.

Your present troubles, though great, are not beyond speedy solution. All that you need to do is to follow a simple automatic plan which has been successful in raising the prices of other farm crops. It is the plan of the American Society of Equity, and will speedily put the price of cotton where it should be for a fair profit to the grower and equity to consumers.

This society, although only two years old, has demonstrated the irresistible power of the farmers to price their own products—what they have made, own and what others absolutely must have. In the two years of its existence the farmers of the North have won notable victories over combined and organized dealers, speculators and gamblers on boards of trades. Particularly was this the case with wheat, which had been the farmers least profitable crop for many years. On the plan of the A. S. of E. the price of the 1903 crop was elevated from under 70 cents to over $1.00, and remained there. The speculators set the price of the 1904 crop at 80 cents, but the A. S. of E. set it at $1.20, and won before the harvests were over. This society went into the tobacco States when the prices were down to a starvation basis, and in less than a year the price has been doubled. The A. S. of E. held a national convention for tobacco growers, and set prices upon a basis that gives dignity and profit to the industry and the tobacco trust, the most arrogant and soulless corporation in the country is absolutely at the mercy of the growers who have the tobacco that the trust must have before it can do a dollar's worth of business.

All through the North farmers have realized higher prices on all crops because of the A. S. of E. than they ever did before for crops of an equal size. We mention these things so the cotton growers may have confidence that their great problem will be solved quickly if they really want it solved.

The American Society of Equity is for every farm crop. Our claim is that through it every farm problem can be solved. Let us see how the cotton growers' problem will be worked out.

The first object of the society is to secure a profitable price for every farm crop. This will be accomplished through controlled marketing. The only thing farmers need to know is the minimum price (or lowest price) below which they should not sell any thing. Then marketing is controlled. All don't need to hold, but when the price is not right, then all should hold who can.

The price of the 1904 crop of cotton was set by this society in October at 12 cents a pound, for middling cotton, on the basis of the New York market. The crop was also estimated to be 11,200,000 bales.

On the basis of 12 cents at New York this means 10 cents to 11 cents at interior points after allowing freight and a fair commission for handling. This is the way the farm price on all crops is calculated by the plan of the A. S. of E.

It is claimed that there was a surplus of cotton grown in 1904. I don't believe the recent reports are correct. But let us assume that they are correct, so much the better for the growers. The time is past when great crops are great national calamities. The A. S. of E. teaches a different doctrine. It teaches farmers that they are entitled to a fair price for every crop, whether a small one or a bumper one; that farmers are entitled to their wages just the same as other laborers, and more than this, it tells them how to get their wages. If the biggest report the government, ginners and speculators have sent out is correct, I heartily congratulate the farmers on their success. In the A. S. of E. the farmers farm for dollars, and its plan insures them profitable prices for every crop. This should be the case, for as much cotton will be consumed at a fair price as at an unfairly low price. The fair price can be secured if growers will keep it out of the hands of speculaltors.

Is there a real surplus? If there is more cotton than can be consumed, then no person would pay one cent a pound for the surplus part. Is this not true? But on the basis of a supposed surplus they are willing to pay 6 or 7 cents for it. Do they pay this to destroy it? No; they buy it to hold it. Will it help the farmers' price to let the surplus go into warehouses? No. As long as there is a large supply of cotton in warehouses it will be used as a club to beat the farmers' price down, whether of this crop or of future crops. Therefore, be careful and do not let the speculators get hold of your cotton at a low price. Far better if there is a surplus that the farmers hold it themselves. How will they?

Let us assume that the cotton crop is 13,200,000 bales. Twenty-five per cent. (one-fourth) of this is 3,300,000 bales. Deduct this and we have 75 per cent. (three-fourths) of the crop, equal to 10,000,000 bales. Now who will deny that a 10,000,000 bale crop will sell for 10 cents a pound? Less than a year ago the price was 17 cents a pound in New York on the basis of a ten million bale crop.

It is proposed to make your marketable crop ten million bales, and offer this to the world at 10 cents a pound on the farm or 12 cents in New York. But you ,ask, what will we do with the 3,300,000 bales? Let us see:

In the first place, I don't believe there is this much surplus, but we will take the other people's word for it, and we will find out who is correct in a way they never dreamed of. I will tell you the A. S. of E.'s plan in such cases as this.

Withdraw 25 per cent. of your cotton from the market. Set it aside and forget that you have it. If it is a real surplus, as the buyers will have you believe, it is not worth anything. If you persist in dumping it on the reluctant demand, it will bring you less than nothing. Let me prove this assertion.

You admit that a ten million bale crop is worth 10 cents a pound, while a thirteen million bale crop is worth 6 cents a pound. Three bales at 10 cents will bring $150, but four bales at 6 cents will bring you $120. Don't you see that you pay a penalty of $30 for marketing that one bale? Who will be so foolish? If you have four bales put one aside. If eight bales, put two aside, etc. On the balance, set your price at 10 cents on the farm, 12 cents in New York, and don't let a pound get away from you for less. On the balance, one-fourth, which appears to be worth less than nothing, set a price of one cent per pound higher, and don't sell a pound of it at the rate set on the three-fourths. In this way it will be sure to not come in competition with the normal supply, and besides, if the dear buyers get so hungry for cotton that they will pay 11 cents in the country and 13 cents in New York, you will know that the awful surplus did not exist. As three bales will bring you much more than four, what good reason can there be for anybody to reject this plan?

If you are in debt, go and tell your creditor about this plan, and what you want to do. Tell him that the great American Society of Equity is coming to the relief of the cotton growers, and that cotton will sell at a better price than formerly in a very short time. Tell him that every cotton grower in American will get the same advice, which is a fact, and that enough will follow this sensible advice to compel the buyers to pay the price to get enough cotton.

Fellow-farmers, you grow stuff that is handled by the shrewdest classes of people in the world. I do not blame you for not being able to cope with them single-handed, but in this society that has never failed to give the results promised, you can always enter the game of marketing, knowing that you hold the winning cards.

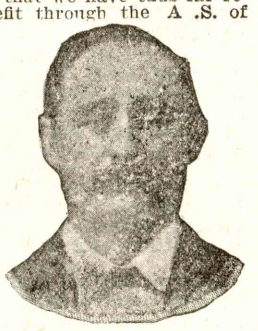
The advice so freely given lately to reduce the acreage next season is bad or premature. I appeal to you to not attempt it, but put out the usual crop. If there is a surplus of 25 per cent. you can hold it over. If you reduce the acreage 25 per cent., and there comes a bad season, the crop will be very short and there will be suffering among many million people in this and foreign countries. I think the best thing farmers can do when there is a large yield of any staple crop is to hold part over against the short years that are sure to come. Take any series of several years, and there has not been an actual surplus. All legitimate interest must approve of the plan to hold surpluses, if any, on the farms, thus insuring a uniformity of supplies and values that can not be realized by any other plan.

The American Society of Equity is ready to extend its good offices to the cotton growers. The only question for them to decide is, will you accept the service? Do you want a profitable price for your cotton, and will you do the very reasonable things required?

A Good Word for Cotton Growers

Editor Up-to-Date Farming:

I desire to say that we have thus far received much benefit through the A .S. of E., and if we stand the pressure now brought to bear upon us, we shall come out all right with our cotton. I am aware that the speculators are combined to beat our prices down, but we have the cotton in our possession, and they can't deliver it at their pit and gambling price unless we sell it at that price.



T. J. WOODARD

Don't let the twelve-million-bale lie scare you. Stand by your guns, and hold until there is nothing to hold to, if necessary.

We are now with our cotton precisely where the wheat growers were with their wheat at this time last year, and they held out and gained the victory in February. If we stand as they did, we shall gain the victory in a shorter time.

If we don't get a profitable price, let us meet and agree not to plant any cotton next year and make the present crop last the consumers two years, and see how they will like that and what will they pay? Then if speculative interests continue as bearish as now, let's spin and weave our clothes at home.

Cotton is now below the cost of production. We can't raise it at such a price. Quit the business or get pay for it should be our resolve.

At the time I am writing only a little more than four million bales have gone into the market, and those who have sold received a better price for our holding. Of the amount sold only 608,000 bales have been bought by our own spinners. The balance has gone to foreign countries. This vast amount of export is unprecedented. Never before did foreign manufacturers buy so much this early in the season.

It is estimated that 12,000,000 bales will be needed for normal consumption. Don't get scared about foreign cotton growing. All the cry about overproduction and foreign competition is a snare and a delusion.

We farmers think we are poor, but Secretary Wilson makes our products this year worth more than the output of the gold mines, national banks, railroads and everything else combined. We are the wealth producers. Stay with them. Stay with 'em.

T. J. WOODARD.

Clarksville, Ark.

Cotton Tales

If you can get more for three-quarters of the cotton crop than the whole will bring, can you afford to keep the other fourth?

The bulls can do nothing, the bears nothing, the mills nothing, without real cotton. THE MAN WHO HOLDS THE COTTON CAN MAKE THE PRICE.

Will you allow a set of people who have no cotton and must have some to confiscate what you have? Say, no sir! and stick to it.

Up-to-Date Farming predicts that prices of cotton will soon recover. The buyers will find farmers are different people now to what they were even two years ago.

Suppose we admit that there was more cotton raised than the country will consume in a year, which we do not, is that a reason why it must be sold at a loss?

The consumption of cotton goods is increasing, as is the consumption of other agricultural products. This calls for increased production, and there is not an overproduction in last year's crop.

Cotton prices are more than 10 cents under the high price for the last crop. A year ago cotton was selling freely at 12 cents.

"A string of wagons containing 200 bales of cotton passed through Brownwood (Texas) the other day—not to the cotton yards, but from the cotton yards back home, because the owners could not get their price. (Exchange.)

But some people will buy it at 5 cents, or 6 cents, or 7 cents, because they know the time will come when consumers must have it. Can farmers make money faster than to hold 7 cent cotton twelve months for 12?

Millions are scantily clothed. Let prosperity continue over the country so the consumption of farm products, particularly cotton, will be kept to its maximum. To reduce the price of cotton below a profitable basis will be like a two-edged sword, cutting both the producer and consumer.

If there was more cotton raised than will be used in a year, won't somebody hold the surplus over until next season? If they won't then why will they pay anything for the surplus? If there is an unusable surplus it is not worth anything, and would not bring 1 cent a pound.

Place a price of 12 cents on three-quarters of your crop on basis of New York market. Hold the other one-quarter for 13 cents. When the demand will pay 13 cents you will know that your reserved one-quarter is not encroaching on the first three-quarters. You'll sell it in a year if growers will co-operate on this plan.

From all over the South reports come of the most dogged determination by farmers to not sell cotton at present prices. This is similar to the condition in the North after the 1903 wheat crop. You know the farmers won dollar wheat, and we know the cotton growers will win their price. No power on earth can stand against the farmers when they determine on a price for their crops.

Thomas E. Watson, who is a cotton raiser as well as politician, has this advice for his brother planters:

"Don't sell at bale of cotton at present prices.

"The present slump has been brought about by a huge combination among the bears, and the crop reports of the government.

"Suppose a 12,000,000 bale crop has been grown. Does it justify the vast difference in prices between April and December, 1904?

"An increase of 10 per cent. in crop should not cause a drop of 50 per cent. in price.

"We had a short crop. It made a deficiency that must be filled. We have just now raised the crop to make up this deficiency, and not a surplus."

"Every other product has gone up and stayed up—meat, corn, wheat, flour, dry goods. Everything has gone up. Mules are high, horses are high, labor is high, taxes are higher, real estate is high. Why should such a necessary article as cotton sell at ruinous prices amidst all this list? Because the farmers do not combine and contend for their rights.

"No matter how much cotton you grew, it will do the mills no good as long as you hold it. Keep the cotton and you are masters of the situation.

"Make up your minds not to sell until next summer. Stop selling.

"The farmers of the South are the worst robbed class on earth. * * * Yet the cotton grower's misfortune this year, if reports are correct, was his good fortune in having a good season. Must his good fortune bring misfortune?'"

"Farmers of the South! Let us fight these raiders who have broken the market. Let us go up against them as we went up against the jute bagging trust in 1889. We won the fight. We can win in this. If we make the stand now the beneficial results of our victory will be felt for the next ten years. COTTON IS WORTH 12 CENTS. Let us have it or hold the staple until this time next year."

There was a rousing mass meeting of cotton growers held at Santa Anna, Texas. Our reporter, Welton Winn, says in part:

"It was decided to sell no cotton for less than 10 cents, and if necessary to reduce the acereage next year 50 per cent. It was clearly shown where the cotton growers are at. Last year, with ten million bales, they received $500,000,000. Now we do not recommend public warehousing except as a last resort. Each individual grower should control his own crop until the demand will pay his price.

Hold Cotton for 12c

FORWARD MARCH

A Million Strong

Is there any power on earth that can stand against the united force of one million farmers asking for equity in price of what is their own and which other people absolutely must have?

* * * *

It is with mingled feelings of pride, at what has been accomplished, and responsibility for what remains to be done in the farmers' movement for controled marketing and price making, that I enter the year 1905.

I intend to continue the battle for the farmers' freedom from the bad conditions that have surrounded their business until every enemy capitulates and every serious farm problem is solved.

As the founder of the only movement that can elevate agriculture on a level with the best of other business and bring farmers to the front, I realize the magnitude of the task before me and my co-workers of the National Union.

While the entire press of the country and institutions maintained in the interest of agriculture, are looking to the government for relief through regulation of trusts and corporations and greater power to the interstate commerce commission, we realize that farmers must depend on themselves.

If farmers have depended on the government these many years and their troubles grew worse, how can they expect relief from that source now?

But we will educate and organize the farmers until they are the greatest union on earth, as they are already the most numerous and richest class.

This can be done if they will read the only work ever prepared to educate them as to what agriculture in America ought to be and can be.

I refer to "The Third Power" book.

* * * *

One year ago, when I published this book I dedicated it to "THE LARGEST CLASS, THE MOST DEPENDENT CLASS, THE HARDEST WORKING CLASS, THE POOREST PAID CLASS OF PEOPLE IN THE WORLD—THE FARMERS." And now I rededicate it to them by offering it on terms that should insure an unprecedented sale.

Through "The Third Power" I am prepared to hurl such a scathing fire of facts and truths in the enemy's camp, and hold out such hope to farmers, as the world never knew before.

Soon the voice of a million farmers will be raised as one voice against robbing commission men; unfair weighers and measures; unscrupulous mixers and adulterators; speculators, manipulators and gamblers in farm products.

This war against organized exploiters of producers and consumers will bring all their great and powerful machinery "dead" against us, but we will have with us the farmers who are fighting for a living, fair wages and a profit equal to any other line of business.

GRAIN GROWERS, STOCKMEN, FRUITMEN, COTTON PLANTERS, POULTRYMEN, GARDENERS, TRUCKERS, TOBACCO GROWERS, SUGAR BEET RAISERS, and all classes of farmers use the weapon I provide on this sheet and fire twenty-four shots for education in controlled marketing and profitable prices.

All that is necessary to bring farmers to the front, elevate agriculture above every other industry and make farming the preferred profession, is a new education.

Everything is made clear in the book, 'The Third Power." It now enters on its third edition. It has been enlarged from 275 pages to 320 pages. The apendix contains much new and valuable matter. The price remains

The American Society of Equity

Indianapolis, Ind.

6.00

THIRD POWER BOND

For a Million United Farmers

THIS BOND is worth Six (6) Dollars cash in gold or its equivalent subject to the conditions printed below.

Each of the Coupons attached is worth Seventy-five (75) Cents as payment on a cloth bound copy of the the third Edition of The Third Power book containing 320 pages. The person who possesses this bond is authorized to sell the Coupons at a special price of **Twenty-five (25) Cents** each and retain all the money. The amount will be Six Dollars (6.00) if all are sold. Or if not convenient to sell all of them, sell what you can. Or if preferred, they may be given away.

We are determined to place a copy of **The Third Power** book in every farmer's home in the United States and Canada. All that we ask you to do is to fire 24 shots for better conditions on the farm by placing these 24 Coupons with good people and urging them to use them.

Don't lose this bond, don't transfer it, don't give it away. It is worth **Six Dollars**, which we are willing to pay you for services rendered. Keep it in your pocket. You can sell a coupon or several of them almost anywhere and any time.

the same, $1.00, postage 10c extra, but see the special offer.

If I can get the people to read this book I know the work will be done. I appeal to every farmer and friend of farmers to help me to get the book into the hands of the people so they may be educated anew.

The education they have received through farm papers, farmers' institutes and institutions was in the interts of politicans, speculators, railroads and food trusts. "The Third Power" proves this statement and I defy successful contradiction.

When they read my book they will have a new understanding of agriculture and they will see possibilities in farming that they never saw before.

I will lose money selling a 320-page book on these terms and paying the postage. I figured on making some sacrifices when starting in this work and I am prepared to make them.

I have sacrificed much in time and money in the past and will sacrifice much more, knowing that it will be returned by a thankful people if they will only read "The Third Power,' and become new men and women in their understanding of agriculture.

I WILL GUARANTE CERTAINTY OF PRICES AND PROFITABLE PRICES FOR ALL FARM PRODUCTS IF ONE MILLION PEOPLE WILL READ "THE THIRD POWER" BOOK.

This means about 40,000 people firing 24 shots each. The gun, already loaded, is on this sheet, and more will be provided on request.

Two objects should inspire you. One is the money you make. The other is the good you will do yourself and your brother farmers.

Send one of the coupons and 25c for a book at once to show in your canvass.

Hundreds of people can made from $2.00 to $6.00 a day. Send for all the bonds you can use. Start at once, while your field in unworked.

Merchants, manufacturers, bankers, professional men and all honest middle men want farmers to prosper and will help them to the front if they want to come.

They should read my book, so they will be prepared to meet the new conditions when farmers come to the front. Fire some shots at them.

Remember, "The Third Power" will do the work, but the people must read it, the people must be educated anew. I guarantee "The Third Power" is worth more to any farmer or his children than a full term at an agricultural college while the old conditions prevail.

WILL YOU HELP TO GET IT BEFORE THE PEOPLE?

J. A. EVERITT,

WHAT IS THE THIRD POWER?

Read What They Say About It.

"It is an earnest argument for a higher appreciation of the dignity of agriculture as a vocation. * * * It aims to give agriculture its proper place among the noblest of industries and enable farmers, by co-operation, to secure rights and benefits to which they are justly entitled."—Journal, Indianapolis.

"It shows an existing need of combination among farmers and outlines a plan which will lift farming to the same level with capital and organized labor; or make them the third power in the world. * * * A million farmers may dictate their own prices. * * * The arguments are presented in a convincing manner, and all needed information is given."—Mahin's Magazine, Chicago.

"It shows that the farmers should organize not for political, but for business reason. The assertions are not made modestly but bodly, and in language simple and strong."—The Advertiser, Newark, N. J.

"It emphasizes the power which lies in the hands of the farmer to-day, outlines the opportunities for him to place himself and his business in the highest position to which he is entitled ,and also aid in giving a suitable recognition to agriculture as the third power."—Detroit Tribune, Detroit, Mich.

"The ideas that farmers should organize to protect and foster their interests are set forth and elaborated with great detail, and the effort is made to show that it would be perfectly practicable for the farmers to meet organizatien with organization, and so to become practical masters of the situation." * * * Indianapolis News.

"It is apparently published in the interest of the American Society of Equity, though not in a narrow sense. It is a general plea for justice to the producer for what is important for man's material welfare."—Brooklyn Times.

"It is a book of interest to farmers all over the country. * * * Its key note is co-operation is the life of trade. Its aims to arouse agriculturists to turn over a new leaf. * * * It is clearly, sanely and concisely written."—Buffalo Evening News.

"It is the most ambitious effort yet made as well as the most complete to show the benefits that will flow to farmers through organization. It is written with a thorough understanding of the subject in hand. The author has evidently thoroughly studied the subject in all its phases. * * * In the space allotted for a review it would be impossible to set out even briefly the line of arguments followed, but we can say, without overstepping proper limitations, that the book is one that every farmer can read with profit."—Indianapolis Sentinel.

"The present discouraging conditions (of agriculture) are forcefully discussed; the benefits of industrial co-operation are clearly and logically presented, and the opportunity is given every farmer to throw off the rusty shackles of sluggishness and indifference, and assist in promoting one of the greatest and best movements of the age. The attention of every person in the country interested in agriculture should be directed to this work."—Albany (N. Y.) Times.

"It is issued as a protest of or for the farmers against the domination of non-producing classes in pricing farm products. * * * It urges upon farmers the value of combination as a solution of the serious problems that affect farming. It reveals an extensive acquaintance with agricultural conditions, and urges upon the farmers the necessity of early and united action for their own benefit."—Seattle Times.

"It will doubtless have its effect in wakening the tillers of the soil to their possibilities."—Evening Telegram, Philadelphia, Pa.

"It is written for the furtherance of the interests of the farmer. *and contains a solution for all the serious problems that affect farming.* * * * Every American farmer should read the book."—Tribune, Oakland, Cal.

"The autbor is evidently a sincere man and an active champion of the best interests of farmers. The book can be read with profit by those who are seriously considering the economic questions of the day."—Cleveland Leader.

"It ought to do much toward stirring up our American farmers to a sense of their power and resp sibility as citizens of a republic and conservators of our liberties."—Louisville Times.

"It is a very forcible book, brimful of sound and comprehensive arguments as to why farmers should band together in a powerful organization, which should be able to dictate the prices for their products, instead of, as now, being under the domination of non-producing classes. The author is a strenuous worker in the interest of farmers, and this forceful book undoubtedly will awaken a great deal of interest among them on this topic."—Mail Order Journal, Chicago.

"It is an interesting volume, devoted to propoganda work in the cause of agricultural co-operation. * * * The author shows how far some farmers have gone along this road of co-operation, and what they propose to do to make themselves a united and important power in the industrial life of the country."—Albany (N. Y.) Argus.

"There is nothing altruistic and very little that is visionary about the author of "The Third Power," although largely in the nature of special pleading it is so clearly written, and its logic is apparently so sound ,that it is a surprisingly interesting work, even if one does not happen to be a member of the class to whom it is primarily addressed." — Philadelphia (Pa.) Record.

A bond worth $6.00 in gold (or its equivalent in cash) will be sent to the person who sends in this coupon with 25c for a THIRD POWER book.

This Coupon when accompanied by Twenty-five Cents (25c) will be accepted in full payment for one, one dollar ($1.00) copy of the great book The Third Power.

The third edition, revised and enlarged, 320 pages, cloth bound. Sent by mail postpaid, for this coupon and 25 cents.

This book should be read by every person--especially farmers.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

The branches bare defy the power
Of Winter's rushing storms,
But in the buds so death-like now,
Sleep Autumn's luscious forms.
—J. P. S.

The orchard generally receives very little attention during the winter, but it should not be wholly neglected. Keen eyes and good judgment will find many little things to do to encourage best results next summer and fall.

In your plans for spring setting of new trees, be certain of your trees—this is the first important consideration—then be sure that you are putting them in a suitable place. For surest results I like a northern or northeastern slope. protected if possible from the early morning sun.

Clover in a young peach orchard it is thought induces too rapid a growth, and prevents the maturity of wood, making the trees too tender, but clover is excellent in an old apple orchard.

The Hitching Method

The "Hitchings" method of orchard culture, as it is called, has excited very wide attention, because it has shown results which have not been equaled by ordinary methods, not even by the improved methods of the most advanced scientists. The Rural New Yorker thus tells how it is

Mr. Hitchings does not plow or cultivate his orchards. His soil is naturally strong, and is well adapted to fruit growing. The trees are planted in sod, and are kept "mulched"—that is, a covering of manure, straw, grass or whatever is available is avaible is put around them. As the grass in the orchard grows it is cut with a mowing machine and left to decay on the ground. It is not cured and taken out as hay. Manure, straw or other organic material is hauled in and spread over the surface of the ground. The object of this is to add organic matter to the soil and prevent the evaporation of moisture. The thick covering of grass and weeds on the surface keeps the soil cool and moist, giving an ideal condition for apple roots. The constant supply of humus or organic matter in the soil holds moisture, while its slow decay aids somewhat in making the fertility in the soil available. Under this system there is no loss of fertility except that removed in the crop of apples. The trees grown on this plan are peculiar in shape. They do not as a rule make as much wood growth as the cultivated trees, and the limbs appear to sprawl out instead of growing erect. But little pruning is done under this system—simply cutting out branches which tend to interfere with others. This "mulch method" must not be confused with ordinary "sod culture," where the grass is cut in the orchard and hauled out for hay, or where hogs or sheep are pastured. The advantages of this mulch method are evident. One man can care for a large number of trees. It is well suited to rough and steep hillside which makes excellent location for apples, but can not be cultivated at reasonable expense. The fruit grown in this way is firm and of high color—of better keeping quality usually than that from cultivated orchards. The chief objection is the danger from fire when the mulch is dry, though this is not serious at the season when such fires are most likely to occur.

Chaff and Some Golden Grains

Geo. H. Phillips says: "I believe conditions in wheat will soon be very bullish."

* * *

We adivse holders of wheat to not sell for a cent under their price. They are sure to get it.

* * *

Oats are looking up.

* * *

Corn is higher than a year ago. You know what the price was before the new crop came. History will repeat itself.

* * *

Let us repeat: "There is so much of each crop controlled now for the minimum price that the price must come, because the world can not do without that portion."

* * *

Encouraged by good prices for wheat, farmers have marketed much more freely than a year ago, yet the crop was much shorter. We believe the quantity of wheat in farmers' hands is not half as much as a year ago.

* * *

The time is coming near for fireworks in the wheat market

* * *

Manitoba wheat price 95 cents, when Chicago price is $1.17. A difference of 22 cents.

When farmers are better organized they can see to grading of their grain. On account of dishonest grading they are cheated out of immense sums.

* * *

Much comment is made on the light export of wheat, and frequently we read the advice that farmers should put the price down to allow export. Let us ask if it is the design to rob our own people of wheat bread by selling what we need at home to the foreigners?

* * *

Don't take complete stock in the enormous corn yield. There is a big crop, and it is well, because the country needs more than ever before. There is much inferior cron also. which reduces the feeding value and really reduces the size of the crop on a feeding basis. Big crops are often a large part wind.

* * *

Stocks of wheat are very low in the many important milling centers, and receipts are light. Just think of two cars of wheat coming to Indianapolis in a week and a supply in store of only 250,000 bushels. This clearly indicates that farmers are not selling, although the price is only a few cents under the minimum.

* * *

To Congress: You better not tinker with the tariff on wheat. The Canadian Northwest can raise wheat cheaper than the farmers of the United States. The tariff just about evens up conditions, and both sets of farmers ought to be satisfied. Besides, if the tariff was removed, what would happen? Would our price go down or would Canadian prices go up? We believe the Canadian price would go up to meet our price. Better let it alone.

* * *

The proposition to grind Canadian wheat in bond and throw the bi-product on our markets can not be entertained. This country can grow enough feed stuffs.

* * *

"The protesting, short-sighted American wheat growers will best serve their interests by opening their eyes to the advantage of the establishment of the United States as the great flour milling center of the world, manufacturing the finest flour in the world for all the world to eat If free wheat will contribute to that end, by all means let us have free wheat."—New York Sun.

The farmers of the United States have passed through one long period of an immense new territory developing—our great West and Northwest. They are now in a position where they can safely calculate on the demand needing the supply, and they will not tamely submit to having attached on to their producing area another immense field capable of great development. The interest of ten million farmers will not be lost sight of in the desire to look after the interests of a few thousand millers. No sir. not after the education farmers have had in 1903 and 1904.

* * *

Remember our prediction made soon after the wheat harvest as follows:

"Wheat farmers will market liberally because the price they can get—$1.00 and more—is better than they ever received before. This will soon drain the country of the short wheat crop and make very high prices later in the season."

We believe our prediction of high prices is on the eve of fulfilment.

* * *

At last the tariff on wheat is of some benefit to the farmers and some other classes think it a hardship to them. Note how much agitation there is to have it removed. It makes a difference whose foot the shoe pinches. The tariff will remain on wheat.

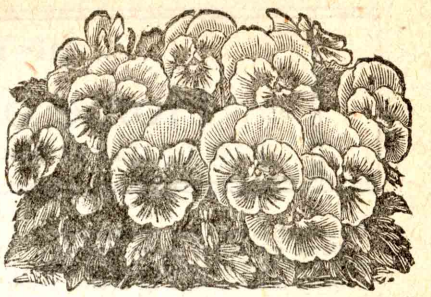
* * *

The size of the crops would be the least concern to farmers if they were thoroughly organized instead of the greatest concern when unorganized.

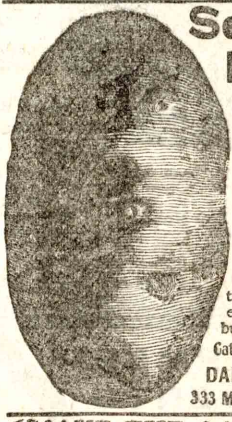
Traders Feel Effects

Goodall's Farmer: Recent effects of slow marketing have been seen in December corn on the Chicago Board of Trade, in the repurchase of cargoes in Europe by American exporters who sold for delivery in January and February, and in the extravagant prices that are being realized for the few cars of corn that are daily available in the various markets of the country.

This year's corn, barely dry enough to shell, and not sufficiently dry to be given a grading in any market, sold within 2 cents as high as the "cornered" December delivery. No. 4 corn, just within the grade specifications, sold nearly 8 cents above December top "corner" price of yesterday. Ordinary No. 3 corn sold in New England at 73 cents a bushel and in New York at 71 cents.



Did you ever see 5 straight or circular rows of Pansies side by side, each a different color? If so, you know that the effect is charming. Did you ever see Childs' Giant Pansies, marvels in beauty and true to color? If not, you have not seen the best.
As a Trial Offer we will for 10 cts. mail 5 Pkts. Giant **Pansies, Snow White, Coal Black, Cardinal Red, Pure Yellow, Azure Blue;** also Five Pkts. **New Giant Sweet Peas** for **10 cts.,** White, Pink, Scarlet, Blue, Yellow; also Five Pkts. new early flowering **Carnation Pinks** for **10 cts.,** Scarlet, White, Pink, Red and Striped—
or All 15 Pkts. for 25 cts.
Our Catalogue for 1905—Greatest Book of Flower and Vegetable Seeds, Bulbs, Plants and New Fruits. 148 pages, 500 illustrations, many plates—will be **mailed Free.** Scores of Great Novelties.
JOHN LEWIS CHILDS, Floral Park, N.Y.



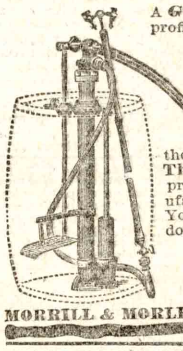
Seed Potatoes
The famous "D & B Line" of Northern Grown Seeds leads in earliness, yield, vitality. Nothing better. Buy direct from growers and save money.
For 25 cents (stamps or silver) we will mail our handsome 128 page 1905 farm and garden seed catalog and one pound of our wonderful new white potato, **Early Bird.** Best and earliest grown. Average yield 350 bu. Sold only with catalog.
Catalog alone, free. Write today.
DARLING & BEAHAN,
333 Michigan St., PETOSKEY, MICH.

MAKE THE GARDEN PAY
Do you get the best possible crops from your garden? Do you not think you could be helped by reading good articles written by experienced men?
The Fruit-Grower, St. Joseph, Mo.
is a paper devoted solely to fruit culture, with a garden department every month. It is "the handsomest farm paper in America," 24 to 64 pages monthly. Besides its regular garden department, in March it will issue a special gardening number, which is one of four special issues for the first months of 1905: "Anniversary number," "Spraying," "Gardening," "Small Fruits." If you have a garden, or grow fruit, you need *The Fruit-Grower.* 50c a year or send 25c and names of ten farmers who grow fruit and secure a year's subscription, including the four special numbers, any one of which is worth a year's subscription. Your money back if this is not so.
The Fruit-Grower Co.
1511 S. 7th, St. Joseph, Mo.

The Codlin Moth which annually destroys $11,000,000 worth of fruit.

Hardie Spray Pumps
should be used by every fruit grower. They save their cost in a single season and outlast any spray pump made.
Hardie Spray Pumps are made from the very best and most durable materials. No complicated mechanism, no parts to wear out, rust or become clogged, and "they work so easy".
Our Book on Spraying, tells about every insect pest and disease which attacks fruit trees and gives all the best and latest formulas for preventing their ravages. It also gives the secret of how the successful fruit grower makes big money. Just ask for it on a postal. It's absolutely free.
HOOK-HARDIE CO. 110 Mechanic St. Hudson, Mich.

Get the Best



A ***Good*** Spray Pump earns big profits and lasts for years.
THE ECLIPSE
is a good pump. As practical fruit growers we were using the common sprayers in our own orchards—found their defects and then invented **The Eclipse.** Its success practically forced us into manufacturing on a large scale. You take no chances. We have done all the experimenting.
Large fully illustrated Catalogue and Treatise on Spraying—FREE.
MORRILL & MORLEY, Benton Harbor, Mich.

—THE—
Deming Knapsack Sprayer
leads everything of its kind. 5 gal. copper tank, brass pump, bronze ball valves, mechanical agitator. Easily carried. Pump right or left hand. Knapsack and Bucket Sprayer combined. We make 20 styles sprayers. Write for Catalog.
THE DEMING CO., Salem, O.
Henion & Hubbell, West'n Agts., Chicago.

1905 VALENTINES in Lace, Gold and Silver. An elegant lot for 12c. 400 Valentines, Verses and beautiful LOVE TOKENS 25c. 50 Beauties or 150 Comic 50c. 12 Our Finest (in boxes) $2.00. We pay postage. Address,
Royal Valentine Co., Montowese, Conn.

Before Christmas our young people anticipated much merriment and many jolly moments. This was looking ahead. How many of them now look back and see deeds they are sorry for? We hope not many, but there are doutless some. Do not brood over them. Benefit by the lesson, and cure the pain by better deeds.

Here is something for the young people; it beats popcorn balls or "cracker jack:" One cupful white sugar, two small tablespoonfuls of butter, four of water. Boil till thick, then stir into it three quarts of popped corn, mix well, stir until it cools, and pour onto glazed paper or a buttered dish.

And here is how to make cocoanut creams: Cook together until it threads, three teacupfuls of granulated sugar and teacupful of water; when done remove from fire and immediately stir in the well-beaten whites of two eggs; beat till nearly cool, then add a pint of grated cocoanut, stir well and pour into buttered pans. Cut into squares or strips. May be given any flavor desired.

Delicate nut creams may be made thus: Boil together without stirring, until it threads, two cups of granulater sugar and half cupful of water, flavor with teaspoonful of any of the extracts; remove from fire and beat until white; add teacupful of any nut meats, pour into buttered dish and cut into squares.,

The following is given as an easy recipe for real old-fashioned sponge cake. Beat five egg yelks till very light, add one cup granulated sugar and continue to beat until the mixture is a pale straw color; stir in little by little and very light one cup of sifted flour and five egg whites stiff and dry, add one tablespoon of lemon juice and bake.

Here is another sponge cake: Four eggs, beat the yelks and whites separately, one cup of flour, one scant cup of sugar, two teaspoons cold water, one teaspoon cream tartar, half teaspoon soda; add the whites beaten stiff the last thing. Flavor to taste and bake in moderate oven.

Mary accidentally tore a slit in one of her gloves. She buttonhole-stitched around the tear, and then buttonhole-stitched the edges together. The mend was something not to be a bit ashamed of.

If the babe gets choked by something going the "wrong way," that is, getting into the windpipe, lay it across the knee, face down, and make sudden pressures on the back, as if to suddenly expel air from something. That is exactly what you are doing, suddenly expelling the air from the lungs, which is almost sure to expel the obstruction. If choked in the esophagus or swallow this action will be ineffective. In that case the obstruction must be got up or down in some other way. The latter is not so dangerous as the former, as that kind of choking seldom entirely stops the breathing.

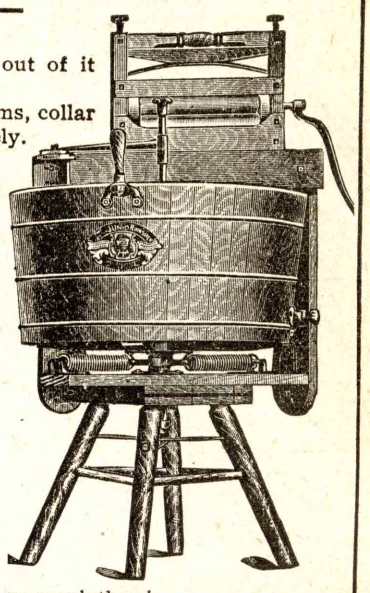
In 1905 farmers will come to the front, never more to be put in the rear.

SUBSCRIBE now. RENEW now. Up to-Date Farming will be a power in 1905.

The price of the new third edition "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents. See coupons in this paper.

Have you sent your renewal of subscription? If you are not a member of the A. S. of E. make the remittance, $1.00, and become a full member. You will value the members manual badge, etc., and besides your money will help us to carry the work forward for other members. Don't put off your renewal any longer.

How the Washboard wears out Clothes.



TAKE a new shirt. Soil it well!
Then soap it, and rub the stains out of it on a Washboard.

Do this six times. Then look at the hems, collar and cuff edges, and the button holes, closely.

You'll find them all badly frayed, ripped, thinned,—worn out more than from three months' hard steady use.

Half the life of the garment gone,—eaten up by the Washboard.

Shirt cost a dollar, say,—washboard takes 50¢ of wear out of it,—you get what's left.

Why don't you cut out the washboard? Use a "Water Witch" instead.

This is a new wrinkle. It drives the water through the clothes like a force pump. It takes out all the stains, in half the time, without wearing a single thread, or cracking a button.

No rubbing, scrubbing, wearing, nor tearing, the clothes against a hard metal Washboard. That costs twice as much for hard work, and wears out twice as many clothes in a year.

Try the "Water Witch" for four washings!

'Won't cost you a cent to try it either. You write to me for a "Water Witch" and I'll send it to you without a cent of deposit, or a cent of risk on your part.

I'll pay the freight too, so that you may test my offer entirely at my expense. Use it a month, free of charge.

If you like it then, you may keep it.

If you don't like it, send it back to me, at my expense.

If you keep it you pay for it out of the Work and the Wear it saves you,—at, say, 50 cents a week. Remember it washes clothes in half the time they can be Washed by hand, it does this by simply driving soapy water swiftly through their threads.

It works like a spinning top and runs as easy as a Sewing Machine.

A child of 10 can wash with it as well as a strong woman. You may prove this for yourself, and at my expense I'll send the "Water Witch" free for a month anywhere so you can prove this without risk.

I'll take it back then, if you think you can get along without it. And I'll pay the freight both ways out of my own pocket.

How could I make a cent out of that deal, if the "Water Witch" wouldn't actually wash clothes in half the time, with half the wear, and do all that I say it will?

Write me today for particulars. If you say so I'll send on the machine for a month, so that you can be using it in a week or ten days.

200,000 People are now using our "Water Witch" Washers. Write today to me, thus—R. F. Bieber, 403 Henry Street, Binghamton, New York.

SIMPSON-EDDYSTONE PRINTS

SIMPSON EDDYSTONE

The standard calicoes of America for more than half a century. Your grandmother used Simpson Prints. They were good then because the character of the manufacturer was stamped on the materials and entered into their making. To-day they are better than ever before—the old-time high ideals have been maintained and Eddystone improved art and machinery have raised the standard of Simpson prints still higher

Ask your dealer for Simpson-Eddystone Prints.

In Blacks, Black-and-Whites, Light Indigo-Blues, and Silver-Greys; Shepherd Plaid effects and a large variety of new and beautiful designs.

Thousands of dealers sell them.

Sole Makers, Eddystone Manufacturing Co., Philadelphia

Bone Spavin

Know it by the lump and the limp—a hard, bony growth on the inner side of the hock joint, usually low down and a little forward of the center of the leg—a quick hitch with the sound leg, and a stiff movement of the lame leg, bearing the weight on the toe, most noticeable in starting.

New cases, old and bad cases, the very worst cases, cases where firing has failed, are cured by

Fleming's Spavin and Ringbone Paste

Guaranteed to cure the lameness for good—may or may not take off the lump. Easily used by anybody, and a single 45-minute application usually does the work—occasionally two required. Write for **Free Horse Book** before ordering. It gives all the particulars, and tells you what to do for other kinds of blemishes,

FLEMING BROS., Chemists, 207 Union Stock Yards, Chicago, Ill.

PILES Sufferers read "Temple of Life" 24 pages about death, danger of operation How to avoid by home cure. Book free. Write full particulars.

For Farmers Only

For a limited time we make farmers this exceptional offer: We will send a monthly magazine one year, **12 Virginia Dewberry plants, One Virginia Creeper, One Virginia Honeysuckle, and One Scotch Brome,** all for **50 cents.** The magazine will be one of special interest to farmers, containing all the farm news, and will give the opinions of prominent farmers on all topics pertaining to agriculture. The dewberry plants are of the genuine Virginia variety, hardy, and will bear immense quantities of large, luscious berries. The creeper and the honeysuckle are ornamental vines, evergreen, of rapid and extensive growth. The Scotch Brome is an evergreen plant, introduced into Virginia from Scotland by Thomas Jefferson. Those who reply to this advertisement before March 1st, will receive in addition to the above, a handsome portfolio of Virginia Mountain Scenery. Every farmer wants the paper, every farmers wife wants the plants, and every farmers family will enjoy the pictures. Remit by money order to

RUPTURE

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated upon. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you. Write today. **Capt. W. A. Collings Box 316, Watertown, N. Y.**

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No woman need any longer dread the pains of child-birth or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also, how to cure sterility. Do not delay but write today.

FREE TRUSS I have a truss that's cured hundreds of ruptures. It's safe, sure and easy as an old stocking. No elastic or steel band around the body or between the legs. Holds any rupture. To introduce it every sufferer who answers this ad. can get one free. The U. S. Gov. has granted me a patent. ALEX. SPEIRS, 765 Main St., Westbrook, Maine.

Spraying Pays

Readers of Up-to-Date Farming are coming more and more every year to recognize the value of spraying, not only for fruits, but for vegetables, melons, tobacco and other crops. If one has the right solution any sprayer is better than none at all, but when one considers that the cheapest lasts only a little time and costs almost as much as the best sprayer, it will be seen that there is no ecenomy in buying sprayers of doubtful quality. Some of the best and most complete lines of sprayers are advertised elsewhere in this issue. We can reccomend these firms to our readers in the highest terms. If interested in the subject, as every farmer ought to be, please write for their catalogues, which will be gladly sent if you mention where you saw their ad.

"Great Crops of Strawberries and How to Grow Them," is the title of a book written by the R. M. Kellogg Co., of Three Rivers, Mich.

It is conceded by the highest authority as being the best book ever written on growing fancy strawberries.

Every detail of strawberry growing is made so plain that those who follow the directions of the book are bound to succeed. It contains nothing but common sense and the results of actual experience in berry growing. It will be sent free to all readers of Up-to-Date Farming, who will send their address to the publishers. See the picture of the big berry on another page and read the free offer.

The great Chicago mail-order house of Sears, Roebeck & Co., have let the contract for building a model town for their great business. The cost will be $3,000,000. The main building will be the largest of its kind in the world—seven stories high, with a floor space of 2,000,000 square feet. The land covers a tract half a mile long and 400 feet wide. All railway tracks will be elevated thirteen feet.

This is another example of the fact that "merit will win." We are pleased to know of this rapid progress. Thousands of our friends have bought from this great firm. If you have never had their enormous catalogue, quoting lowest wholesale price on everything you eat, wear and use, send for it now. Mention that you are a reader of Up-to-Date Farming and it will be sent to you. Do this for your own good

---

An advertiser received quite an interesting letter from Mr. J. W. Younger, cashier of the Salem Loan and Trust Company, of Salem, Va. It was sent to Cooner & Fortune Co., of Indianapolis, who sell C. and F. wonder knives (nine tools in one). Mr. Younger wrote: "If your knife will take and hold as good an edge as Up-to-Date Farming it will do." We thank Mr. Younger for his good words. After examining the C. and F. knife we don't think Mr. Younger will be disappointed. Every farmer needs one of these tools.

* * *

In the November 15 issue of Up-to-Date Farming appeared a full-page advertisement of a very useful article. It was the Blizzard Adjustable Storm Front. Every person who has a buggy needs one of these storm fronts. If you did not read the advertisement look up the December 15 number and refer to the last page. Write the Vehicle Apron and Hood Co., 265 North Fourth street, Columbus, O., for full particulars and catalogue. Do it to-day—you're interested

The Folding Sawing Machine Co., 16 S. Clinton St., Chicago, claim to have a saw with which nine cords of wood may be cut in 10 hours, and they propose to send a free catalog to any of our readers who will write for it, and mention Up-to-Date Farming.

* * *

"Water, water everywhere and not a drop to drink." The Loomis Machine Co., of Tiffin, Ohio, say this is not the way with those who use their Clipper Well Drill. Write to them about it, and refer them to Up-to-Date Farming.

* * *

J. U. Foote Foundry Co., Fredericktown, Ohio, want agents for a handy little machine called "Mend-a-Rip." A picture of it may be seen in our advertising columns.

THE WORLD'S FAIR SOLD FOR CASH

We often hear of gigantic deals in the transfer of personal property, but none have reached in volume the sale recently consumated, wherein the Chicago House Wrecking Co. bought for cash the entire property of the Louisiana Purchase Exposition which cost to erect over $50,000,000. Such an enormous transaction almost staggers belief, that a company, single-handed and alone had the financial ability to purchase a property which is a world unto itself. The Chicago House Wrecking Co. is the largest corporation of its kind in the world, and among the large Expositions it has dismantled, we recall the World's Columbian Exposition at Chicago in 1893; the Trans-Mississippi Exposition at Omaha in 1899; the Pan-American Exposition at Buffalo, in 1901, and now they surpass all previous investments and achievements by purchasing the entire personal property of the greatest exposition ever known in the history of the world. You who visited the World's Fair and admired its beautiful architecture and its varied attractions, can best understand the magnitude of this purchase, for all those magnificent buildings were included in the purchase made by the Chicago House Wrecking Co. The sale did not include the large buildings alone, but the trees, the shrubs and the plants, and the thousands of things as personal property incidental to a great exposition—a hundred million feet of lumber, enormous quantities of household furniture, building supplies of all kinds—all have passed into the possession of this company. It is not a "house wrecking company," but rather a preserving company, originated and intended to preserve and perpetuate property which, otherwise, would go to destruction and waste. We commend this company to our subscribers as being thoroughly reliable and as a company financially able to carry out all its promises. Write for this special catalogue No. 204. They have been in business for many years and their reputation is of the highest character. It will require more than 1,000 men to dismantle the fair and from 10,000 to 15,000 cars to ship the material. They certainly offer merchandise that is a revelation in the way of economical buying.

DO THIS NOW

And I Will Give You a Pair of my Handsome

Gold Spectacles

Just send me five names of spectacle wearers and I will do this:—First, I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test), I will mail you a

perfect-fitting five dollar family set of Spectacles for only $1, which will include a pair of my handsome Rolled Gold Spectacles, absolutely free of charge. This set will last a family a lifetime. I have never sold this family set for less than $5 and you could not buy spectacles anywhere near as good as these, even for $10 a *pair.* I am really charging you nothing for them now, as the dollar I will ask you to send with your test is only to help pay for this announcement. This very remarkable but honest offer (to send a five dollar set of spectacles for only $1) is open to everyone (my old customers also), but only for a short time, as I am just doing this to prove to every spectacle wearer in the world the following two very important facts: *First,* that my Perfect Home Eye Tester is positively accurate and reliable and with it you will be able to give your own eyes a perfect test in your own home and thereby I fit you with absolutely perfect fitting spectacles *by mail,* which could not be improved on even if you had undergone a personal examination in any occulist's office, at a cost of $10 or more. *Second,* and most important of all, that on account of my latest improvements, my spectacles have become known the world over as the "Dr. Haux Famous Perfect Vision Reading and Sewing Spectacles" and they are now greatly superior to all others on the market. With them you will be able to thread the finest needle and read the smallest print, day and night, with perfect ease and comfort, just as you did in your younger days, and this, even if your eyes are so very weak now that you cannot read the largest print in this paper. In fact the large number of physicians who have for years and years used and recommended my spectacles to their weak-eyed patients will tell you that they are the most perfect fitting, clearest and best in the world today, and I will give you your dollar back and let you keep the five dollar set of spectacles also, if *you yourself* don't find them to be the finest, clearest and best you have ever bought anywhere at any price. I can only send one set to a family at this price, and this only for a short time, so write me *right now* for my free Perfect Home Eye Tester, and address my company as follows:—

DR. HAUX SPECTACLE CO.,
Haux Building, ST. LOUIS, MO.

I WANT AGENTS ALSO And any man or woman (also storekeepers), without any previous experience whatever, can fit the weakest eyes with my Perfect Home Eye Tester, which is so simple that any one can work it and easily earn from $25 to $100 weekly selling my famous spectacles, either in their own homes, travelling or in stores. My agents need no license anywhere as I furnish the necessary documents with the Agent's Outfit.

NOTE:—The above is the largest mail spectacle house in the United States and perfectly reliable.

VARICOCELE

Associate Pelvic and Reflex Nervous Diseases Cured by a Painless Safe Method

Richardson Sanitarium where thousands have been cured.

Let me explain the theories, methods and special features of my Sanitarium practice in its application to your case. I have no home treatment scheme, nothing to sell you.

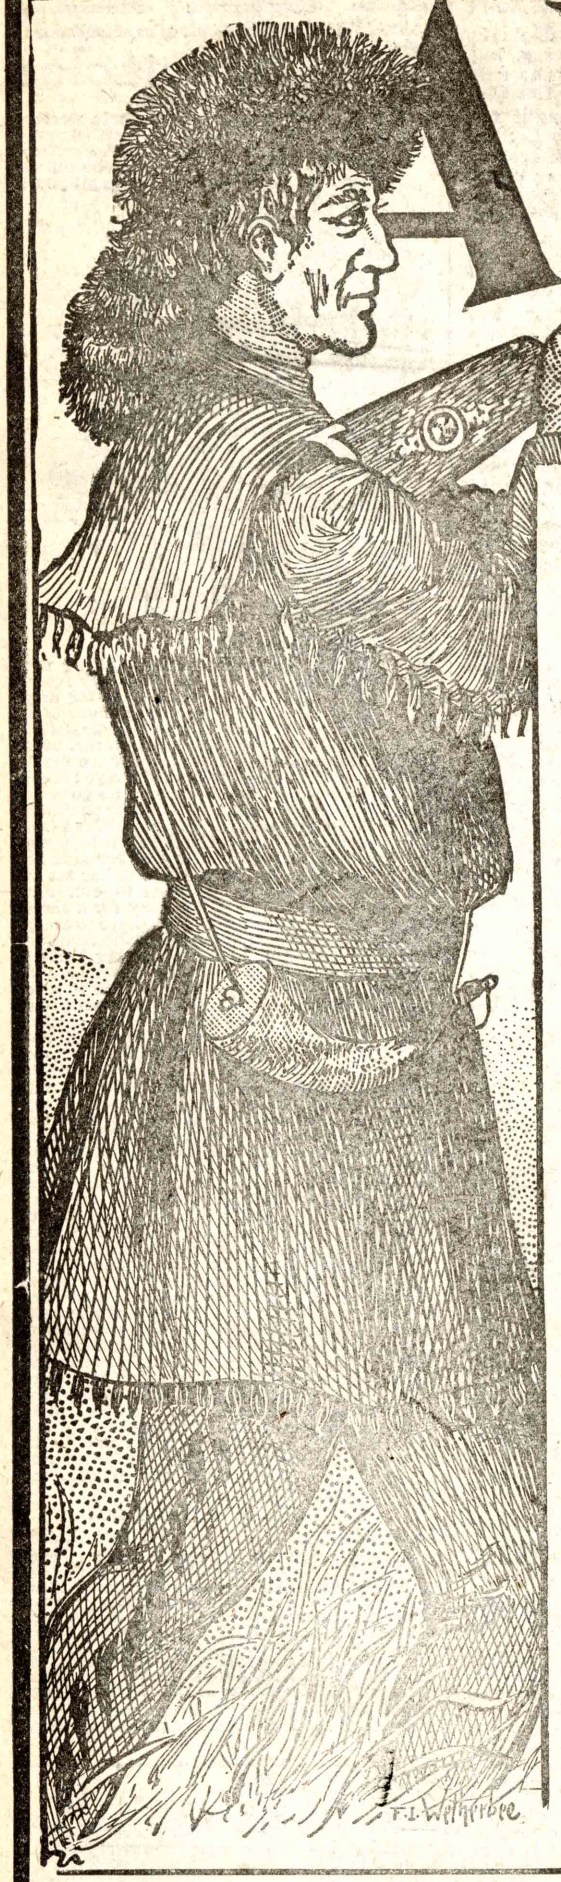
After you know what I do, you will understand why men travel across the continent to see me. Tell me your symptoms and troubles so that I can give you trustworthy professional advice and information.

My interesting and instructive books are free to the man describing his case and enclosing 10c to pay sealed postage.

Write to me before you lay this paper aside. You may not see this announcement again. I do not advertise very much because my cured patients send me their friends and my Sanitarium is full nearly all the time. Now is your opportunity; write while my address is before you.

D. D. Richardson, M. D., 123 Michigan Avenue, Special Carrier 206 Chicago

ARE YOU HUNTING



for health? Have you been BEATING ABOUT THE BUSH, first trying one course and then another, following the lead of others no wiser than you, only to find that the game will not come within your range.

THE PLACE to HUNT FOR rabbits is where rabbits are know to exist, the place to HUNT for health is where HEALTH IS KNOWN TO BE FOUND!

It is beating up the woods where NO QUARRY LURKS to hunt for health in a bottle of alcohol and sarsaparilla, or a package of senna and straw; it is only following the track and trail or hundreds of disappointed, tired and footsore hunters, many of whom have fallen by the wayside.

Let their experience, AS WELL AS THE EXPERIENCE OF SUCCESSFUL HUNTERS GUIDE YOU! Those who have hunted for health AND FOUND IT, are competent to tell WHERE IT CAN BE FOUND. Thousands of satisfied hunters say the ROAD LEADS TO VITÆ-ORE, that the hunter of health, searching amid its subtle curative, healing and restorative properties, will not be disappointed.

If you have been using other treatments without the results that were promised and that you anticipated, THROW THEM AWAY and begin with this natural medicinal ORE!

YOU ARE TO BE THE JUDGE!

SENT ON 30 DAYS TRIAL
BY MAIL, POSTPAID

Read This Special Offer!

WE WILL SEND to every sick and ailing person who writes us, mentioning UP-TO-DATE FARMING, a full-sized **One Dollar** package of **VITÆ-ORE** by mail, **post paid**, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and dopes of quacks or good doctors or patent medicines he or she has ever used. **Read** this over again carefully, and understand that **we ask pay only when it has done you good and not before.** We take all the risk; you have nothing to loose. If it does not benefit you, you pay us nothing. **Vitæ-Ore** is a natural, hard, adamantine rock-like substance—mineral—ore—mined from the ground like gold and silver and requires about twenty years for oxidization. It contains free iron, free sulphur and magnesium, and one package will equal in medicinal strength and curative value 800 gallons of the most powerful, efficacious mineral water drunk fresh at the springs. It is a geological discovery to which there is nothing added or taken from. It is the marvel of the century for curing such diseases as **Rheumatism, Bright's Disease, Blood Poisoning, Heart Trouble, Dropsy, Catarrh and Throat Affections, Liver, Kidney and Bladder Ailments, Stomach and Female Disorders, La Grippe, Malarial Fever, Nervous Prostration and General Debility**, as thousands testify, and as no one, answering this, writing for a package will deny after using. **Vitæ-Ore** has cured more chronic, obstinate, pronounced incurable cases than any other known medicine, combination of medicines or doctor's prescriptions which it is possible to procure.

VITÆ-ORE will do the same for you as it has for hundreds of readers of UP-TO-DATE FARMING, if you will give it a trial. **Send for a $1 package at our risk.** You have nothing to lose but the stamp to answer this announcement. **We want no one's money whom Vitæ-Ore cannot benefit.** You are to be the judge. Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try **Vitæ-Ore** on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. **We mean just what we say** in this announcement, and will do just as we agree. Write today for a package at our risk and expense, giving your age and ailments, and mention UP-TO-DATE FARMING so that we may know that you are entitled to this liberal offer.

From Earth's Veins to Your Veins

Suffered 25 Years with Rheumatism Diabetes and Indigestion—Vitae-Ore Effected the Cure

For twenty-five years I suffered from Rheumatism, Indigestion and Diabetes, to such an extent that my case was considered incurable. I began using Vitæ-Ore and after a steady and careful use of same, I am cured of my Rheumatism and Indigestion and am greatly improved in Diabetes. I prize Vitæ-Ore more than any remedy I have ever taken and shall never be without it. I recommend it most heartily to suffering humanity everywhere. MRS. GEORGE R. BUCK, 1210 N. East St., Bloomington, Ill.

A HEARTY TRIO
Cures the Entire Ward Family of Serious Ailments

My entire family has great reason to be thankful to Vitæ-Ore, as it is to this remedy that we owe our state of good health during the past few years. It has indeed worked wonders for all of us. When we first learned of it, six years ago, my mother was sorely afflicted with a disorder of the stomach and bowels, which had been troubling her for over twelve years and at that time very severly. Her doctor bill during a short time had amounted to $50.00, with little or no evidences of improvement. Vitæ-Ore was specifically recommended for this trouble, and we had mother give it a thorough trial. It gave her immediate benefit, the relief being almost from the first dose, and it was only a short time before we could report her entire cure. It has been permanent as there has been no return of the trouble.

Father was also afflicted with kidney trouble, pronounced by the physician Bright's Disease, and although at first skeptical, he naturally gave it a trial upon seeing what it was accomplishing for my mother. The result was the same as in her case and he now has no symptoms of his old malady. I personally had been troubled off and on with rheumatism and kidney trouble and my condition at the time we first learned of Vitæ-Ore was causing me a great deal of uneasiness, as I feared it would become chronic, and I used it continuously for three months time, with the same wonderful results. We are indeed a hearty trio, all now enjoying the best of health, and we owe it all to the remarkable powers of Vitæ-Ore. Many of our friends and neighbors, learning of what it has accomplished for us, have used it for similar ailments and I know of many cures as satisfactory as ours have been.

O. H. WARD, Newcastle, Pa.

It will do the same for you

THE LORD HATH CREATED MEDICINES OUT OF THE EARTH AND HE THAT IS WISE WILL NOT ABHOR THEM—ECCL. XXXVIII, 4

MIDDLE-AGED AND ELDERLY PEOPLE SHOULD USE IT

As old age approaches the necessity for such a tonic as **Vitæ-Ore** becomes each year more and more manifest. As is generally known, all through life there is a slow, steady accumulation of calcareous deposits in the system, making the transition from the soft, gelatinous condition of infancy to the hard, osseous condition of old age. These calcareous deposits naturally interfere with the functions of the **vital organs**, and when they become excessive and resist expulsion, result in the dryness and stiffness of old age. In early life these deposits are thrown off, but age has not the power to do so unless assisted by some outside stimulant. **Vitæ-Ore**, apart from its powerful disease curing, health-restoring action is just the **ideal stimulant** for middle-aged, elderly people, in that it enters the blood, dissolves the hard calcareous matter, and almost entirely eradicates the ossific deposits so much dreaded by old people. **It enriches the blood** with the necessary hematinic properties, drives all foreign matter from the circulation and prolongs vigor and activity in both men and women to a ripe old age.

NOT A PENNY UNLESS BENEFITED

☞**This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS**

THEO. NOEL COMPANY, Up-to-Date Dept., Vitae-Ore Bldg., CHICAGO, ILL.

UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, FEB. 1, 1905

IT TAKES TWO, TO MAKE A BARGAIN

It takes two to make a bargain. This is an old saying and has been true with people in every industry but farming ever since barter and trade have been in vogue. It has been only two years since farmers began to learn that they could be factors in making prices on their own products. They are learning their lesson rapidly, much to their advantage and confusion to the speculative buyers. Who can have any doubt of the power of farmers who create and first own the things that all other classes absolutely must have. Suppose the farmers would agree to not sell any cotton for less than 10 cents a pound, do you believe the buyers would refuse to pay it? All that is necessary is organization and enough growers to understand the plan.

FOR THE
CO-OPERATING FARMERS OF AMERICA

HAVE YOU SENT YOUR RENEWAL?

If you have not wont you please do it now? UP-TO-DATE is going to be a greater power in 1905 than ever before. Don't you see that it is getting better and stronger every issue. It has been the greatest in farm journalism for more than two years. Cannot you say, as does the Editor of The Farmers Journal as follows:

"We scarcely find a sentence in UP-TO-DATE FARMING but what is so true, so forcible, so convincing and so directly to the point that we want to copy it all in to **The Journal** so that our readers may profit by it."

Also we copy from a farm exchange as follows:

"We are anxious for our readers to read Up-to-Date Farming, Its gospel is the gospel of salvation for the agricultural interests as sure as you live."

Can it be possible that you farmers who have read this paper for the past year fail to recognize the Magnitude and Value of the work we are doing? We say no. You surely are not blind and dead to your own interest. We wont believe it. Therefore we now look for your renewal of subscription at once.

NEW SUBSCBIBERS ARE ALSO EARNESTLY SOLICITED. IF YOU CAN TAKE ONLY ONE PAPER IT SHOULD BE THIS ONE. IF YOU CAN TAKE SEVERAL THIS SHOULD BE THE CHIEF ONE.

Your Hands Are Tied when you let the speculators price your crops, but when you price them yourself it is different. No matter how pleasant farming is now, it will take on new attractions when you get the price you ask for your own crops. This is what UP-TO-DATE FARMING teaches. Don't you want to enjoy the benefits?

There Will Be No Guessing when you are a subscriber to Up-to-Date Farming. Then the prices of your crops will be as stable as are the prices of plows, binders, interest on money, taxes, etc. You may need to wait a while now but the price comes.

There Are Many Other Reasons but we cannot give them here. Order this paper to your address for the next year and the truth of all we say in this advertisement will gradually come to you and make a new man or women of you as regards your understanding of agriculture.

Up-to-Date Farming is printed twice a month. It has nearly 150,000 subscribers already, but must have a *million or more.* If *all* farmers knew how valuable this paper can be to them, we would have a million subscribers in two weeks. We know farmers are just like any other class of people—they want opportunities to make money and Up-to-Date Farming makes the opportunities. It has done so for many thousands, and we have their letters stating this fact. It can do as well for *every* farmer.

The Subscription Price Is 50 Cents Each number will do you more real pratical good than a whole year's volume of any other paper, because it tells you the vital things about your business that other papers have not begun to print. These things are of the greatest importance to you and you *will not* get the best results from farming until you know them. You must read Up-to-Date Farming to understand it, appreciate it, enjoy it and profit by it. When you begin reading this paper the possibilities that lie around the farming millions will begin to dawn upon you.

We want you to send your order direct from this advertisement. For fear you will put it off we are going to offer you a valuable premium if you send promptly. Good seeds are as valuable as good teaching and both mean success, Mention this paper and send promptly and we will give you four seed novelties as follows:

1 Large Pkt. **Smith's Prolific Corn.** New hybrid. Greatest cropper. Yields over 100 bu. to acre as easily as common corn yields over 60 bu. Fine appearance. Yellow Dent, ears 10 to 14 in. long. Always 12 rowed. Grains ⅝ in. deep, ½ in. wide, nearly ¼ in. thick. Cob 1 in. diameter. Stalk 8 ft. high, 2 in. thick at base; blades 6 in, wide. Bears often 4 ears to stalk. This is a remarkable variety and one that every corn grower should procure at once. IT IS NOT OFFERED FOR SALE AT ANY PRICE.

1-2 lb. **Snow White Sensation Potato.** A new seeding, and one that will create a sensation. Season medium late. The skin is the whitest of all and the flesh is as white as fine flour. There is no yellow tinge in the flesh whatever. Oblong shape, large size. A most remarkable potato indeed, and will take the country by storm. It outyields Carman and Sir Walter Raleigh, while for handsome appearance and table qualities those varieties will not be wanted when **Snow White Sensation** comes on the market. This potato is not for sale **at any price**

1 Pkt. Cabbage **The Volga.** A new variety from Russia. It is remarkable for perfection of form and solidity of heads. Mr. Allen, the largest grower of cabbage seed in America, says, "Without exception the nearest approach to perfection of any variety we ever grew." It is a late variety and for winter it keeps better than any other. Every gardner will be delighted with this fine fall and winter cabbage.

1 Pkt. Peppers **Mongolian Giant.** Do you love to grow giant vegetables? There is a fascination in having the largest. Grow this pepper and you will have the fruit that will be the wonder and admiration of the entire neighborhood. There is no variety finer for filling with cabbage. The flesh is thick, meaty, solid and pleasant mild flavor. This is truly a mammoth vegetable and one of the greatest attractions for any garden. Bushes grow 1½ to 2 ft. high,

Remember *We don't charge a cent for seeds and potatoes. We offer them to guarantee your prompt subscription because we need it in carrying out our great undertaking. But you need Up-to-Date Farming even worse than we need your subscription. Don't lay this paper aside until you have sent the order*

Old subscribers may also have this premium when renewing their subscription, if they ask for it.

READ SOME REPORTS ON THE 1904 SEED COLLECTION

If you miss any of our FREE SEED DISTRIBUTIONS you miss some good things. If any of our old subscribers did not get as good returns as here reported, try again as every article in the '05 collection is a gem.

EXPLANATION—The Premium potato was sent out under the temporary name of "Up-to-Date No. 1." But has been named and is being introduced this year as Everitt's Abundance.

Mr. Everitt:—I value your paper very much. Of the seeds you sent, the Yard Long Corn is just immense—the largest I ever saw. The Pumpkin and Melon are good and the Potato out yields all other kinds.
David A. Bolick, Bloomfield, Ia.

From the ⅛ lb. premium potatoes I planted 22 hills and raised 147 potatoes, weighing 73 lbs. I took second premium at the Flathead County Fair. I also took second premium on pumpkins from the seeds; first premium on White Wonder Melon and two first premiums on Yard Long Corn—one on best half bushel the other on 6 best stalks.
E. J. Cramer, Chautauqua, Mont.

From the ⅛ lb. Premium Potatoes I raised 45 lbs. I regard this as a large yield. The tubers are large, uniform and shapely. They are very valuable and I thank you for the start.
E. McIntire, Worthington, W. Va.

From the ⅛ lb. of premium potatoes I dug 172, weighing 55 lbs. (over 100 lbs. to one.) The other seeds were extra good.
W. J. Hylton, Wolverine, Va.

From the ⅛ lb. of premium potatoes I raised 99 tubers, weighing 48 lbs. I would not take the price of the paper for these potatoes.
G. K. Arnly, Gamewell, N. C.

From the ⅛ lb. of premium potatoes I raised 53 lbs. of as nice, large, smooth potatoes as I ever saw. I am delighted with them. The Yard Long Corn is fine.
19 hills of the potatoes yielded 26 lbs. All other seeds a success.
G. W, Millower. Watkins, N. Y.

This is the Offer: **FOR 50 CENTS we will send UP-TO-DATE FARMING twice a month for one year. Also four seed novelties as explained, and a due bill good for 25 cents' worth of packet seed, your selection.**

YOURS FREE If you will show this offer to 4 of your Neighbors and get their orders we will send . . **YOURS FREE**

That, is we will send five (5) for the price of 4, or you can keep 50 cents for the fifth order. ¶SUBSCRIBERS ALREADY PAID IN ADVANCE can have their subscription extended another year, OR WE WOULD LIKE if they will make a present of the paper to a friend not now a subscriber. In this way they can get the Free Seed Distribution and we get a new reader.

25c Due Bill We not only want your name but all of your neighbors'. The good that this paper can do is not for a few farmers but for all. Therefore, send us 10 or more addresses on a separate sheet with your order and we will send **a due bill** good for 25 cents' worth of seeds (vegetable or fl wer) selected from the catalogue of a leading seed house (your choice.) Surely you will now come and help us to get the million subscribers.

UP-TO-DATE FARMING

J. A. EVERITT, Publisher *INDIANAPOLIS, U. S. A.*

MAIL US THE GRAIN OF CORN

Pub. UP-TO-DATE FARMING, Indianapolis, Ind.

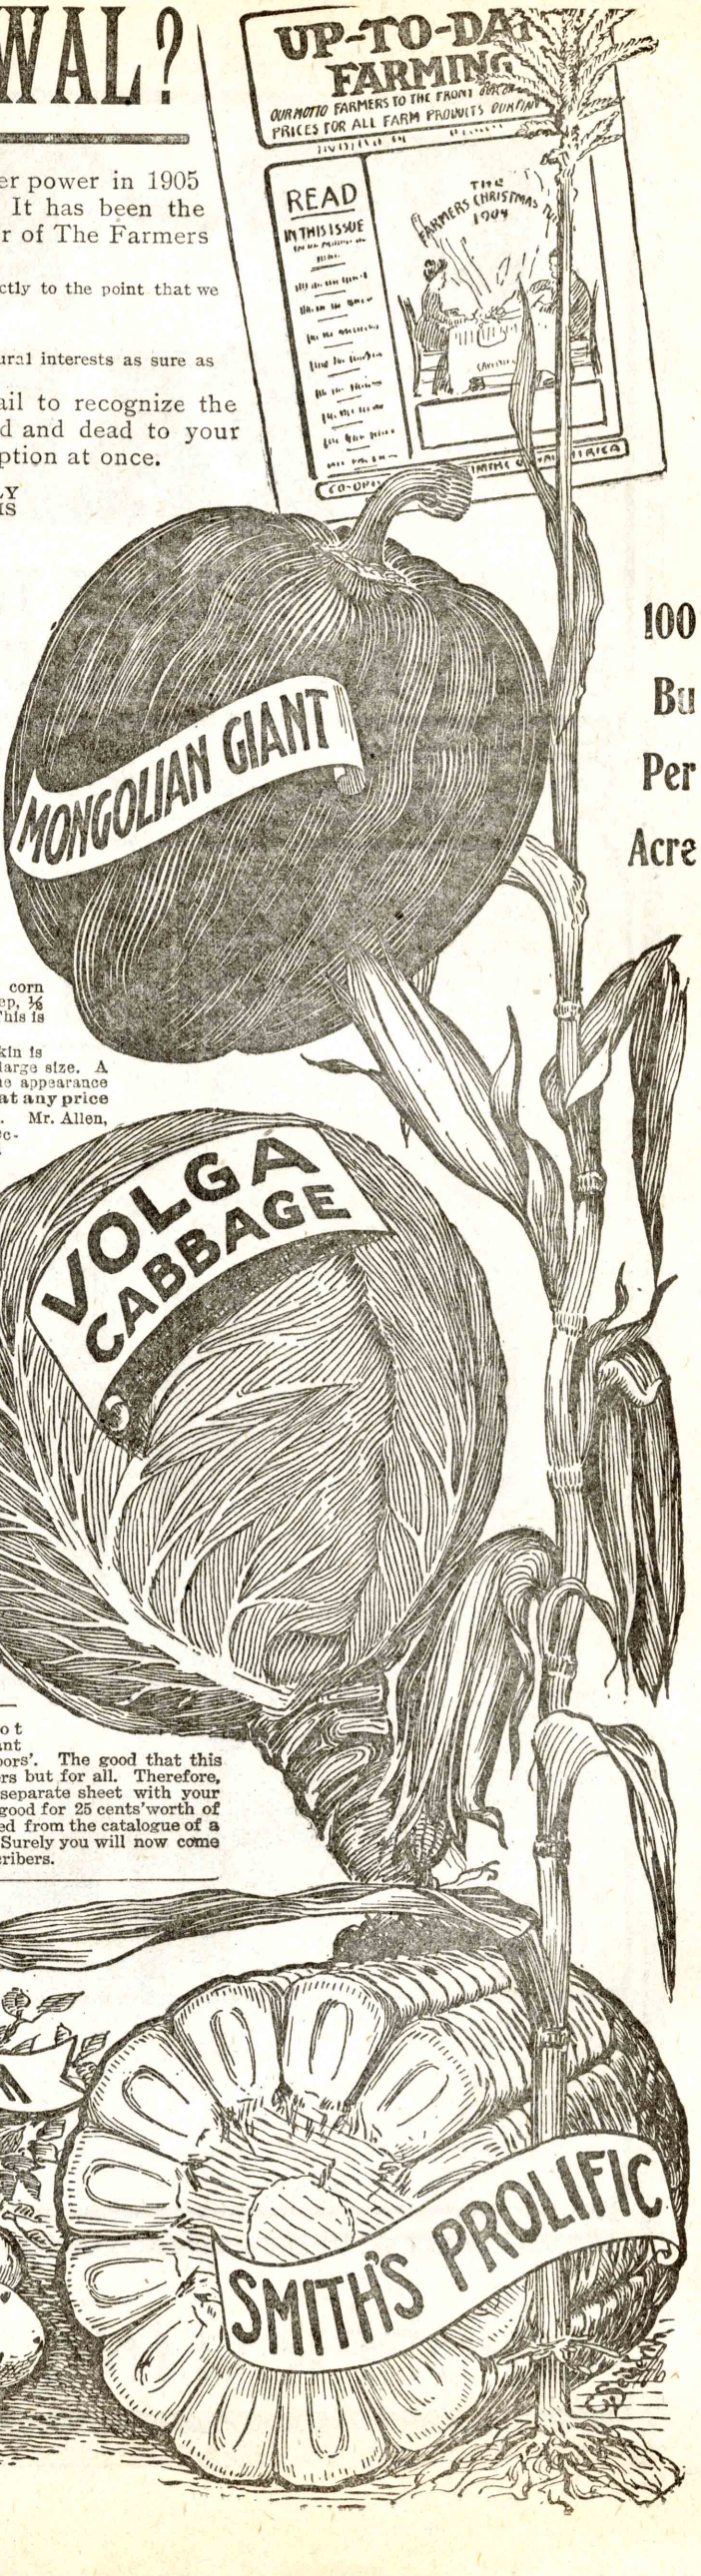
Dear Sir: Send me UP-TO-DATE Farming one year to the following address. You will also send the seed premium for prompt subscription as advertised in Feb. 1, 1905, UP-TO-DATE FARMING.

Name.....

P. O.....

County..... .....State.....

If you send the list of Names they must be on a sheet separate from order and we will send due bill.



Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 227 West Washington Street

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII — INDIANAPOLIS, FEBRUARY 1, 1905 — **Number 3**

UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher

JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR

Foreign Subscriptions $1.00 a Year.

Membership in The American Society of Equity, $1.00, including a year's subscription.

Three Month's Trial Subscriptions will be Accepted for 10 Cents.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞ Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee tbat they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write.

ALLIED PRINTING TRADES UNION LABEL COUNCIL 18 INDIANAPOLIS

The solution of the Farmers Labor Problems that will come through profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the LABEL.

NATIONAL UNION LABEL — AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	-	**$ 1.20**
Corn, No. 2 " " " "		
Until January 1st, 1905,	-	**.50**
From Jan. 1 to Apr. 1, 1905,		**.55**
" April 1 to next crop	-	**.65**
Hay, No. 1 timothy, " per ton	- -	**12.00**
Oats, No. 2 white, " per bushel	-	**.40**
Barley, No. 2 " per bushel	-	**.58**
Barley, No. 3 " per bushel	-	**.52**
Potatoes—Chicago, per bushel,		
Until January 1st, 1905,	-	**.55**
After January 1st, 1905,	-	**.65**
Tobacco, (Price on the farm or at the market town)		
Virginia, dark, average per cwt.	-	**$ 9.00**
" bright, " "	-	**12.00**
Kentucky, dark, " "	-	**8.00**
" burley, " "	-	**12.00**

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and l cation.

Beans, No. 1, Hand-picked, Detroit, per bu.		**2.00**
Clover Seed, No. 2, Toledo, per bushel	-	**$ 7.00**
Cotton, New York, per pound	-	**.12**
Broom Corn, Chicago, per ton	-	**$75.00 to $85.00**
Hogs, " per cwt.	-	**6.00 to 6.50**
Cattle, " per cwt.	-	**6.00 to 7.50**

SUBSCRIBE now. RENEW now. Up-to-Date Farming will be a power in 1905.

In 1905 farmers will come to the front, never more to be put in the rear.

1904 proved that we are on the right track.

1905 must extend the line to the Union Depot.

Then the train of controlled marketing, freighted with equitable prices, may have a safe and sure ingress and egress.

Farmers learned more that was to their real interest during 1904 than they had previously learned in five hundred years. That year was a high school year. Let's make 1905 a college year. The bell is ringing, the term is open, and the school is rapidly filling up. "Book—k—k—s."

When any one tells you that supply and demand makes the prices of farm products, ask if supply and demand makes the prices of dry goods and groceries, hats, caps, boots, shoes and machinery. If the fool killer don't attend to his duty better, we are in favor of declaring the office vacant.

Supply and demand, so far as farm products are concerned, can change only with the seasons. It cannot change from day to day. But prices do. Watch the markets. Under the old system, prices may be up when you start to market, and down by the time you get there.

A recent issue of a Tennessee farm paper that seems to have been published for thirty-five years, had several pages devoted to patent medicines, but not a word on the cotton situation now ofsuch acute interest to the Southern people. Queer things are found among the farmers' teachers.

He who leads out in new lines for the general good meets a varied experience. Many who have perception to understand the work and soul to appreciate it, take it up and with cheering words of encouragement and approval, urge it to success. These are the stars that help to shine away the darkness of the night. Others who are being labored for with the same unselfish devotion, sneer and snarl and misrepresent, and deride and mock, without either knowledge or conscience. These are the owls that hoot at the stars from the shadows in which they hide. All progress has its clogs, as every sweet its bitter.

Why do some who oppose the A. S. of E. and the greatwork it is accomplishing, favor the grange, and urge farmers to ally themselves with that organization? As the pioneer in farm organization, the grange deserves a monument as enduring as the necessity for farm products, but the grange is conservative. It is slow to meet the conditions that now confront the people, conditions that did not exist when its foundations were laid. So far as these modern conditions and problems and evils are concerned the grange is harmless. Perhaps that is why it is favored in certain quarters where the A. S. of E. is opposed.

The man is either a fool or a knave, possibly both, who, being well informed, contends that a movement to price products on the farm is a farmers' trust. Those products are priced somewhere, and by somebody. Is it any less a trust for buyers, speculators, to combine and price them than for the producers, the owners, to price them, even though they must combine or co-operate to do so? When wagon makers put a price on wagons, is that a trust? They do it. When toothpick makers put a price on toothpicks, is that a trust? They do it. Everybody puts a price on what he makes or produces but the farmer. That poor cuss must let Supply and Demand price HIS things, and the 'supply and demand" that does the pricing is the most Godless set of knaves that ever lied honest men out of their sweat and labor. Let the fellows that say farmers should not price their stuff put that in their pipes and smoke it.

A 320-page, cloth bound book, price $1.00, and 10c extra for postage, all for 25 cents, postpaid. See coupons in this paper.

Here's Supply and Demand

"Wheat traders have promise of increased activity and larger public interest in the markets, as powerful leaders are fighting for control of the pit and the prices.' This was the display head to an article recently published in a neighboring Indiana paper. Control of the pit. CONTROL OF THE PRICES. So we have at last found out who Supply and Demand is. "Powerful Leaders." These are the fellows that are fighting for control of the prices. Farmers must not try to control prices; they are a trust if they do. Supply and demand controls prices. "Great leaders are fighting for control of the prices!" Poor farmers, upon what miserable husks are ye fed!

It is a mistake to burn cotton. Hold it over if the world doesn't need it. Who can tell what next season may bring forth? A large crop is most generally followed by a small one. But we believe it will all be needed before another boll opens. Put it away and keep it—sell when you are given your price.

Each to His Business

As the result of farmers' stores assuming to do the business that legitimately belongs to others, a prominent business man reports the following from Rockwell, Iowa:

"There are five empty business houses and fifteen empty dwelling houses here, due to the farmers' co-operative society, and a clothing firm has recently been closed out of business because they could not compete with the farmers' prices.

Now whoever heard of any town being similarly afflicted because of the A. S. of E. On the contrary thousands of towns have wonderfully increased in prosperity on account of better prices through the A. S. of E.

Holding Crops Has Steadied Prices

The speculators may rave, the unthinking may sneer, and the skeptical may doubt, but holding crops, imperfectly as it has been done so far, has steadied prices in spite of the powerful influences that have been exerted to unsettle and depress them. The cotton situation affords the very best example and most indisputable proof. The influences that have operated this year, had they been brought to bear any previous year, would have absolutely ruined the cotton market and, with it, the cotton planters. On this subject, the Fort Worth Record, a very conservative publication, says:

"There is not the slightest doubt in any reflecting mind that the resolution of the cotton growers to hold a part of their crop and to reduce acreage next year has steadied prices and prevented a greater decline.

"If the entire crop had been offered immediately upon the announcement of the bureau's estimate of a million-bale surplus, cotton would unquestionably have fallen to 5 cents or less. The reason it does not advance to 8 or 9 cents now is the skepticism of the spinners and speculators as to the South's ability and patience to hold.

"It was only the prompt and well-nigh unanimons action of farmers, merchants and bankers that prevented a panic, and these same farmers, merchants and bankers cannot only hold prices at the present level, but materially advance them by a continuance of judicious action."

This phenomenon, which appears in such a marked degree in the matter of cotton, manifests itself in all other crops. Market manipulators never before found their task so difficult, and we have not a doubt that a very few years will see the farmers complete masters of their business, handling their products the same as other people handle theirs, a situation which will remove uncertainty from both seller and buyer, and immeasurably improve the condition of both producer and consumer, which means all human kind.

The price of the new third edition, "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents and a coupon. See coupons in this paper.

The Farmer Must Bear the Burden

"Lost trade cannot be gotten back until the American farmer sells his wheat cheap enough to permit the American miller to undersell."

The above declaration is attributed to Secretary Shaw of the United States Treasury, in an interview with a delegation of millers that called upon him to discuss the rulings of the Department concerning the tariff on Canadian wheat. We can scarcely believe that the Secretary was correctly reported, though a similar sentiment was expressed some time ago by Mr. Bradley, Secretary of the Millers' Association, the absurdity of which was discussed in these columns at the time, and which was repudiated by one of the leadng milling journals, that went so far as to intimate that Mr. Bradley did not always talk with business prudence. Since he is reinforced, however, by the Secretary of the Treasury, it is fair to assume that this is the real sentiment of the large milling companies, including their allies, who seem to be in very high official station.

There are questions connected with this matter which Secretary Shaw has surely not considered. In the first place, how cheap must American wheat sell in order "to permit the American miller to undersell?" To undersell whom? The country millers or the foreign millers? The course of the great combines in various lines toward the smaller country enterprises in the same lines justify us in assuming that the country mills may be meant, but we take it for granted that the Secretary meant foreign mills, indeed other declarations in the same statement point to the foreign mills.

How cheap American farmers must sell their wheat "to permit the American miller to undersell," depends upon other things as well as upon the price of wheat. How much margin does the American miller want between the price of flour and the price of wheat? This margin is entirely arbitrary, and is fixed by the miller. It may be that, with a fair and reasonable margin, the price of wheat is already low enough "to permit the American miller to under sell." Has Secretary Shaw duly considered this matter, and does he realize that every time the power of the milling combine enables them to add to their margin of profit, or to increase their salaries and expenses, under his proposition the price of American wheat must be put down to that extent "to permit the American miller to undersell?"

Again. How much margin do the elevator people want for holding the wheat between the farmer and the miller? The price at which American wheat must sell "to permit the American miller to undersell" depends upon that also. Has Secretary Shaw determined that this margin is entirely reasonable, and that the only place to make the reduction to meet the condition quoted is in the price paid the farmer for the wheat? Is the farmer the only one that is getting excessive profits, and therefore the only one to stand a cut in order "to permit the American miller to undersell?" If Mr. Shaw is correctly quoted, this is the effect of his assumpton. Has he fully considered it? We will not refer to the manipulations on 'Change, all of which affect the margin between the farmer and the miller, for these are so glaring, so transparent, so dastardly, that the Secretary of the Treasury could not have failed to consider them. But do the millers not know that if they would get the wheat direct from the farmers, free from speculation, they might pay fair and reasonable transportation charges, pay a price higher even than the farmers now get, fully maintain their own profits, and yet "be permitted to undersell?" We believe they could.

But there is another side to this question which Mr. Shaw has surely not considered. The American wheat raiser is a substantial part of the American citizenry, entitled to no more consideration, perhaps, than any other class of our citizens, but certainly to as much. The farmers raise wheat for a living—to support themselves and families, and meet the necessary expenses of life, with its comforts and luxuries if they be permitter to enjoy them. Their wages, their remuneration, their savings, if they have any, depend upon the price of wheat, the wheat that they sell. To sell they must have a market. If they have more than they can sell at home, they must seek a market for it elsewhere. If they hold it at a price at which foreign markets will not take it and they have a surplus whose conversion into cash is necessary to their profits, then they must make their prices conform to what the foreign markets will pay. Whether they should take this course depends entirely upon the amount of their surplus. We are arguing from a profit standpoint, and that is what governs the commercial transactions of the world.

Suppose the farmers had six hundred million bushels of wheat, and he could find a market at home for only three hundred million bushels. For this he gets $1.20 per bushel, or three hundred sixty million dollars. But he has left on his hands, three hundred million bushels which he cannot sell at all, because the foreign market will not take it at his price, but it would take it at 90 cents per bushel. If he reduce the price to 90 cents to get into the foreign markets, his home price must be 90 cents also, and his crop will then bring him $540,000,000, which is $180,000,000 in favor of reducing the price, assuming, which we do only for argument's sake, that the three hundred million bushels surplus was, at the higher price, left on his hands absolutely worthless.

But, suppose the American wheat growers had a crop of five hundred million bushels, and there was a ready demand at home for four hundred fifty million bushels at $1.20 per bushel, or $540,000,000. But this leaves him fifty million bushels which he must sell abroad if at all, and which he cannot do without reducing the price to 90 cents to conform to the foreign market. Bear in mind that the price put upon what is shipped abroad must govern the price of that sold at home. The farmer cannot have a high price for home folks and a low price for foreigners. Some manufacturers do that, but the farmers cannot. If he sell abroad he must sell his whole crop at the foreign price, and at that rate his crop brings him only $450,000,000, a loss of $90,000,000, which is the price he pays to get to sell fifty million bushels of wheat in foreign markets, just twice as much as he gets for the exported wheat.

The above is a fair illustration of the wheat situation in America today. We have very little surplus, if any, the home price asked is not at all excessive, it is scarcely up to the general level of values, and it is being paid without oppression or a murmur, and yet the Secretary of the Treasury of the United States declares that, to regain a lost export trade, lost for lack of a surplus rather than for lack of foreign demand, the American farmer must sell his wheat "cheap enough to permit the American miller to undersell," and thus sacrifice millions of dollars that are his by right.

We wish to notice one other feature of this remarkable proposition. The object is "to permit the American miller to undersell" some other miller. If this came from our great trusts, which have shown themselves both merciless and unscrupulous, we should perhaps not notice it, but coming from one of the most important official stations of the Republic, are we to understand that the spirit of commercialism, of cut-throat policies, of the destruction of competiton and opposition and the completion of monopoly, not only in this country but the world, permeates our most important ruling stations, and that American wheat growers are asked to sacrifice $90,000,000 to enable a single combine in this country to undersell other institutions of their class? Besides, if this contingency were met, would not the foreign mills at once seek a means of meeting the cut, and the American growers would be again called upon to sell their wheat "cheap enough to permit the American miller to undersell."

It may be argued that the millers have vast capital invested in the mills, and that, if they cannot get cheaper wheat, the mills must close down and the investments become idle. We do not admit that, for the present price of wheat is not excessive, but if it were true, we reply that millions of farmers have all they possess, not only their fortunes but their livings, invested in farms and farm appliances, and, unless they can get a remunerative price for their products, they must go into bankruptcy and the country must go with them.

Reduction of Acreage

The cotton planters of the South are driven almost to desperation by the efforts, through beggarly prices, to rob them of their toil-produced crop of cotton, efforts so powerfully aided by reports from the United States Department of Agriculture. We shall not at this time discuss the correctness, reasonableness or justice of those reports, further than to say that Congressman Livingston, of Georgia, in a strictly respectful and congressional way, asked for the information upon which the reports were based, and that the congressional majority promptly turned him down by tabling his request. We may say also that we have private letters whose writers say that gins are credited in the ginners' reports with baling cotton, which, to their personal knowledge, have not ginned a bale for many years.

Be this as it may, the planters are confronted by a situation which they consider well-nigh desperate, and unusual action is being taken. In many places planters have actually burned cotton which they had been taught to believe surplus.

As we have elsewhere said, we regret this. We do not think it at all necessary. In fact, we do not think it wise. We believe it will turn out that there is no surplus, and that every bale of it will be required before the crop of 1905 is ready for use, and at a fair price, at the price the planters are now asking for it, PROVIDED IT BE MARKETED ONLY AS CONSUMPTION NEEDS IT.

But suppose there is a surplus. At the very most it cannot be large. Take the most extravagant report, and the crop of 1904 is not so very greatly in excess of crops that have been used. The crop of 1904 entered a market unusually bare, and an unusual amount was eagerly sought and taken on the first offer. And this initial demand is not yet satisfied, as is proven by the stubbornness with which the price refuses to yield. At other times, in the face of present reports, cotton would, by this time, have been an unsalable drug on the market, yet today the price holds well up toward the average price of years.

But, we repeat, suppose there is a surplus, who can tell what there may be next crop? Suppose there should be even a partial failure; suppose along toward the middle of the season there should be an indicated light crop, every bale that now seems "too much," would be eagerly taken at the price. Put it away and keep it. Let the world know that it is not for sale, until what is on the market is taken at the equitable price, a price which the most unscrupulous "bears" admit is not extortionate.

Another movement is receiving quite an impetus in the South—a movement to reduce the acreage for the crop of 1905. President Murray, of the F. E. and C. U., is out in a strong card urging the reduction of the area at least 25 per cent, as are also many prominent papers. While we are glad to see the cotton growers thus awake to their interests, and showing this faith in their abilty to control not only the price but the crop, just as everybody else has a right to control the work of his hands, we doubt if a reduction of the acreage, at least under present conditions, is either necessary or the best thing to do. The uncertainty of the coming crop must be taken into account. Should the acreage be reduced a fourth, as proposed, and then should the crop prove a marked failure, as it has done sometimes in the past, the shortage could not be discovered in time to remedy it. While increased prices might bring the planters reasonable reward, the planters would fail in their duty to supply the world with a needed commodity. Equity requires that the world's interests be guarded as well as those of the individual or class, and we think it eminently better to have a surplus of any necessary commodity than to not have enough, or even to run the risk of not having enough.

If reducing the acreage were the only way to secure an equitable price, we would say reduce the acreage and let the world take the consequences. But it is not. It is not even the best way. If people could only understand it, a large crop does not mean low prices; it is large marketing, excessive marketing, that means low prices. Suppose there were in the world a billion bales of cotton, but not a bale of it was for sale below a certain price, we care not what that price might be, every mill would stop when the supply on hand was exhausted, or pay the price. There is no law of "eminent domain" for cotton or any other farm product. If land be needed for the public good, a jury may price it and society may pay for it and take it. Not so with products. There is a law of necessity, however, which justifies the taking of them even without price, but that is the law of force, which begins only where reason ends, and that contingency is too remote to invite consideration.

Our concusion, therefore, is this: Don't destroy the cotton you have; sell it only when you are offered the price, and waht is not taken put away for future emergencies. Feel no special concern about the acreage of the next crop. Put in no more than you can handle well, but expect profits from controlled marketing rather than from controlled production. You can control the marketing; you can't positively control the production.

The price of the new third edition, "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents and a coupon. See coupons in this paper.

The Farmers' Greatest Enemy

Mr. E. S. Taylor, of Bailey, Indian Territory, sends us a clipping from the Southern Mercury, of Dallas, Tex., bearing the above caption.

The "greatest enemy," according to the Mercury, is the International Harvester Company, and it offers the following in proof of its declaration:

The purpose of this gigantic implement trust is to prevent the sale of farm implements except those of its own manufacture. This action is the culmination of a series of steps which have been taken since the International Harvester Company, otherwise known as the Farm Machinery Trust, was promoted by J. P. Morgan & Co. some three years ago.

Until the formation of the harvester trust, the farmers were benefited by the keen competition between the implment manufacturing companies, but now all this is being changed ,and the situation confronts the farmers and the country dealers of either accepting the terms imposed by the trust or making an effort to combine and fight.

* * *

This gigantic farm machinery trust was formed by a combination of the Deering Harvester Company, the Plano Manufacturing Company, the Warder Bushnell & Glessner Company, the Milwaukee Harvester Company and the well known McCormick Company, of Chicago. These were capitalized under the auspices of J. P. Morgan & Co. at $120,000,000. A New Jersey charter was taken in the name of the International Harvester Company.

There was one Western and three Eastern concerns that refused to enter the trust, and one of these concerns had a large amount of paper from different farmers discounted by the banks.

Through its ramification and banking connections the Farm Machinery Trust obtained control of this paper, indorsed by its principal competitors, and insisted on immediate payment, and as a result the independent concern had the choice of going into a receiver's hands or of selling out to the trust. Although perfectly solvent and having almost $2,000,000 of assets more than its liabilities, it could not raise the cash required to pay all its floating debt at once, and so was forced to accede to the trust proposition and sell out. Two smaller competitors were then easily bought out.

Then having put itself in the position where it was the only concern in the United States which manufactured all kinds of farm implements, the International Harvester Company prepared a contract which, if accepted by the implement dealers and store keepers, will drive every other implement manufacturer out of business and will give the International Harvester Company a monopol yof the hundreds of millions of dollars spent on farm machinery and implements used throughout the United States.

This 1905 contract which every dealer and store keeper must sign or not be allowed to handle any of the trust's goods, provides that if the dealer is in any way interested in the sale of other implements than those manufactured by the International Harvester Company, either directly or indirectly, he shall pay to the International Harvester Company liquidated damages in the amount stated in the contract. This sweeping provision applies in case of the employes, agents or partners, or any one acting for the dealers, sells or handles implements manufactured by any one outside the trust.

In order to avoid the Sherman anti-trust law and prevent prosecution for a combination in restraint of trade, the International Harvester Company of New Jersey does not itself deal directly with the retail trade. There has been incorporated in Wisconsin a corporation with $1 000,000 capital known as the International Harvester Company of America. This Wisconsin company buys the product of the New Jersey company. The New Jersey company does not do business throughout the United States, and the Wisconsin does. The Wisconsin company, so far as appears, has no visible assets. The factories, plants and the manufactured product are owned by the New Jersey company. It is by this shift that the trust seeks to avoid prosecution or legal responsibility for these monopolistic contracts.

This trust also controls the binding twine, of which millions of dollars worth are annually used in harvesters and binders. When the independent twine manufacturers who had sold their products for 1903 to the trust, tried to sell their twine in 1904 to the independent dealers ,they found that the trust had already forced the independent dealers to sign the trust's contract and the independent twine manufacturers could find no market for their product, even at a lower price. This blow drove out of business many independent twine manufacturers.

The independent implement manufacturers have another grievance besides the monopolistic contract which the trust forces the retailer to sign. Their other trouble is their difficulty in getting steel. One of the promoters of the International Harvester Company is E. H. Gray, chairman of the Executive Committee of the Steel Trust. Though his connection with both the Farm Machinery Trust and the Steel Trust each work in with the other.

We give the above on the authority of the paper quoted. It shows a bad conditon of things certainly, but it simply illustrates the methods and purposes of the great combine. That is what they were organized for, and the Harvester Company does not stand alone. Unless something be done to counteract their power, it seems to us the dullest ought to be able to understand what the future has in store for the country and its people. Everything that can be forced to carry with it a profit, all the necessaries and utilities, will be monopolized, and the public be made serfs, not of the government, but of powers stronger than the government. As we have before said in these columns, the only reason why the land is not bought up and farming monopolized, is because, under the system that has prevailed, farmers work cheaper for themselves than they could be hired to work for any one else, and there is more profit in exploiting the food and clothing supplies after they are produced than there is in monopolizing the production.

Mr. Taylor expresses confidence in the ability of Up-to-Date Farming to suggest a means of successfully combatting these great evils. The task thus given us is not a light one. If it were these giant manipulators of concentrated wealth would never have been permitted to attain their present gigantic proportions. It seems that law cannot control them, because there are too many ways to evade legal provisons, as is shown by the methods of the Harvester Company recited above. The courts will not do it, because too many technicalities intervene. The building up of counter combines or trusts, as has frequently been tried, cannot do it, because it is impossible to make them strong enough and if they could be, the only result would be a battle of giants, and no mater which should finally conquer, the public would be left in the toils of the survivor, grown more rapacious because of its struggle.

The only solution we can see until political parties and law-making bodies and courts are differently constituted, is in the conservative, cool-headed, but determined organization of the source of supply. Were the seven million farmers of the United States organized so as to act as a unit, or as an approximate unit, on all important questions, especialy on the question of pricing the supplies of food and raiment, they, and not the financial combinations, would be the supreme power, and could force every other combination to terms.

In this connection we will again refer to the power and independence of the farmers when organized. Then it will matter little to them how much prices of machines and other things they buy are put up, because they can easily advance the prices on their own goods to meet them. What matters it, then, whether a binder costs $150 or $500? The farmers have goods that the other people cannot get along without and when it comes to a contest as to who must hold the bag it wil not be the farmers. We make this illustration ,purely to show the power the first owners of the products of the land can wield, but do not intimate that it will ever be necessary to ask more than a moderate price for these products.

Also again, we will say that the organization of the farmers will force a pure and strong government which will deal equitable, but firmly, with giant trusts and corporations, in the interests of the masses. All this is explained in "The Third Power" book. This book clearly points out the remedy that Mr. Taylor seeks.

The Meat Stock Situation

Secretary Wilson's report explodes the overproduction theory so far as the meat stocks are concerned, as it does also the idea that supply and demand regulates prices under the system of monopoly control. The Secretary says: "Cattle declined in number and appreciably in value, as did sheep and hogs." Nobody has pretended that there has been any decline in demand, as there could not be with a constantly increasing population, and a prosperity, as is claimed, which enables people to satisfy their hunger. Hence a reduction of supply and of price at the same time is entirely inconsistent with the old theory, and shows that prices are now fixed by some influence that has a power superor to demand, and that robs supply of what justly belongs to it according to this much promulgated law.

The Secretary himself sees it that way, for elsewhere in his report he emphatically declares:

"The cattle growers have not had their full share of prosperity. They are not getting fair prices when we compare what they obtain for the cattle with the cost of meats to the consumer. There is something radically wrong somewhere, and a readjustment is due."

This fact appearing so clearly "upon the face of the returns," and stated so positively by the highest official authority, is there a farmer on earth who will still harp upon the idea which prevailed in the far different days of our fathers and declare to his own undoing and that of his class, that supply and demand regulates prices, and that farmers themselves can have nothing to do with it? And since this bad condition of arbitrary price making is so clearly seen in high official circles, is not the government, the Executive, the Congress and the Courts, wise enough to devise a means, and strong enough to enforce them, to protect its producing people from the arbitrary spoilation of the non-producing? If the consumers got the benefit of what is thus taken from the producers there might be a semblance of plausibility in the excuse that what one class loses another class gains, but that is not true, because finished meats are as high, or higher, as when stock-raisers were getting a more remunerative price.

Destruction of Surplus

A correspondent writing from Woodbine, Pa., asks if it would not be well to not only destroy the surplus cotton, but a little tobacco, corn, hay, potatoes, and other crops, and thus teach the speculative world a lesson.

We are not a destructionist. We do not yet believe there is a surplus of any good thing that God has given nor will we believe it until an excessive portion of one crop remains over after the following crop is ready for use. Then will be time enough to discuss ways of disposing of the "left over" product.

The trouble is not, and never has been, with excessive production, but with unwise and unbusinesslike marketing. If we have not half a supply of any product, and rush it all on the market in a week, the market would be glutted and the price depressed, just as we have seen it hundreds of times.

On the other hand, though we might have a double supply of any commodity, twice as much as could possibly be used, if we did not put any more on the market at any one time than was needed for present consumption, and that would be taken at the reasonable price, the price would be maintained. The surplus, if not on the market could not affect it.

Is it still not believed that this could be done, that the farmers cannot hold their stuff? Ask Secretary Wilson if the farmers are able to do such a thing, and then for an answer, consult his report and the Carpenter interview, in both of which he makes the American farmers the richest people on earth. The only thing in the way is the doubting disposition of the farmer himself, his lack of confidence in his own ability, his belittling of his own importance, his under estimation of his power.

One More Unfortunate

We feel almost as keenly as the victims every effort in the name of relief for the farmers that proves a failure, and the worst failures of all are those which take money from people for a specific purpose, and fail to accomplish that purpose. This is why we have so unreservedly warned farmers not to invest in stock companies. It is out of their line. They must depend upon some one else to handle their money in working out the purpose if it ever be worked out, which, we are sorry to say, is very seldom done. Even now, while we write, the old, old story is going the rounds of the press of trouble in one of these associations. It is the Farmers' Mutual Co-Operative Association of Kensett, Iowa. This was an association which was to handle the live stock of its patrons and save them from the extortions of the packers' combine. About four hundred farmers went into it. We do not know how much money was subscribed, nor how much was collected; but, according to the papers, the stockholders have brought suit against some of the officers for $26,000 alleged to have been misapplied.

Why should farmers furnish money under any pretext to buy for them what is already theirs? If their stuff, or any portion of it, must be converted into money in advance of a sale, seek some other avenue. We never recommend to borrow where it can be avoided, but it is better to borrow and retain your products as security, than to furnish money to some one else to buy it from you, and this is all joint-stock companies amount to, and it is all they can amount to.

We cannot see success for the farmer in trying to fight concentrated capital with concentrated capital. The odds in skill, methods and opportunities are against him. The enemy is within the fort, with better means of defense than the farmer can possibly have of attack.

Besides no such procedure is necessary. The nature of the farmer's business has furnished him the most effective weapons possible. The thing in controversy is his own. Each year he has it all in his undisputed, and undisputable, possession. And what is more, he can live without selling it. The other fellow cannot live without buying it. What further argument is necessary?

Can the Farmer Go to School Again?

Yes, he can read "The Third Power" book and he will receive a better education about farming than he can get in any agricultural college at a cost of some hundreds of dollars.

Any person who reads "The Third Power" will have a better understanding of agriculture than they ever had before, and will see possibilities in farming that they never saw before.

A NORTHERN FARMER ON THE COTTON SITUATION

A Proposition

Editor Up-to-Date Farming:

I learn from the papers that the cotton raisers of the South have commenced to burn their cotton. I am not surprised that they resort to desperate measures to accomplish desired ends. They have no doubt raised an enormous crop, but that is no reason why the rest of the world does not owe them a living. To the speculators in Wall Street that is a matter of no concern, but to the rest of the industrial world it is a matter of the greatest moment.

The worst elements of the human nature have been appealed to to build up a commercial system that is a curse to humanity. Now that the better parts of our nature are being invoked through the plans of the A. S. of E., teaching that each member of the society take as much interest in every other member as he takes in himself, it would seem that we may in truth solve the problem of equity in all the business transactions of life.

This is evidenced by the fact that the merchants and bankers of the South are taking an interest in the welfare of the planters. They have suggested the taking of a million bales of cotton, and holding it off the market in order to secure to the planters a living price for what remains. This will relieve the situation to a great extent, because it will enable the planter to obtain ready money to carry him along without selling for awhile. But with such an enormous crop in sight, and many of the farms plastered with mortgages, and, most important of all, the planters not yet well enough organized to act together, it will be a tremendous struggle.

Let me suggest a remedy that I believe will not only drive the speculators into a hole, where they will remain for a long time, but will secure from the manufacturers in America a price that will pay for production. It is not a new idea. Many lines of manufacture have employed it for several years to maintain an arbitrarily high price, fixed by themselves, on their goods at home. They have shipped their surplus to Europe and sold it to foreigners for one-third less money than they sold the same articles for to Americans. Let the bankers ship, say three million bales, direct to Europe and sell it for what they can get. This will take that much out of the reach of speculators, and the consumers will have to take the remainder of the crop at a reasonable price—the price the producers fix upon it.

As a Minnesota farmer, I am interested in the cotton planters of the South. When they are getting an equitable price for their cotton, they are the best customers northern farmers have. They are large consumers of at least one of the chief products of Minnesota farms—pork in its different salted forms. When the cotton planters are not prosperous, their purchasing power is reduced so as to make a great difference in the incomes of the farmers of the North-West. W. G. SCOTT,
President Olmstead Co., Minn., Union A. S. of E.

COMMENT.—We are very sure the cotton planters will appreciate Mr. Scott's letter, and we believe he but expresses the feeling of the farmers of the North toward the planters of the South, especially of those who belong to the unions. There is one condition, however, which would interfere with the effective working of the proposed plan. Europe is the cotton planter's legitimate and principal market. About two-thirds of the crop must be marketed there. Throwing three million bales on that market, therefore, would simply be supplying that much of the regular demand, and to the same extent depress the home market. This condition does not exist in the case of manufacturers who maintain their high prices at home by unloading their excess upon foreign markets at reduced proces, for they thus create markets that are not already their dependence. If, however, this cotton as suggested could be put on the foreign market direct without paying toll to speculators and storers, the foreign mills could get it cheaper than they now do and yet pay the planters higher prices than they have ever asked. We hope Mr. Scott's letter will call out much thought along this line. —Editor Up-to-Date Farming.

Short Stocks Call for Cotton

It is evident that there is to be more than a usual demand for cotton. Stocks of cotton goods are reported low all over the world, and these must be replenished with this year's crop. We quote from the American Cotton Manufacturer:

Curtailment of production has been world-wide and long sustained, and although the old shirt may be patched here and there, it is certain that actual consumption has not fallen off in anything like the proportion of contracted output. The difference is manifest in lessened stocks of goods from the shelf of the petty retailer to the warehouse of the wholesaler.

Mills in this country and England have stopped enough to make a big difference in the quantity of goods turned out. It is safe to say that 90 per cent. of English mills have worked only 75 per cent. of the usual time for six months, and as their normal takings for that time would be some 1,600,000 bales, they have lessened their actual consumption by 500,000 bales. Continental mills have probably taken 250,000 bales less than normal, and our own factories about 250,000 bales less.

This lessened output of a million bales must be almost altogether made up during the coming season. Even if a record-breaking crop is grown the price will not be low. The demand for goods will be a big one and a season of abnormal activity among the mills will in all probability maintain prices at what we have in the past few years become accustomed to consider high levels.

Good Work Among the Tobacco People

Editor Up-to-Date Farming:

This letter is from a tobacco growing section of Kentucky. We make our surplus or spending money raising dark tobacco. McLean County is one of the eleven counties composing the stemming and dark type. The statistics of 1902 show that these eleven counties produced nearly 27 per cent. of all the tobacco produced in Kentucky, and over 42 per cent. of all the dark tobacco produced in Kentucky, and Kentucky produced in 1903 nearly 33 per cent. of all the tobacco produced in the United States. So, you see Kentucky is famous as a tobacco producing State, and this is famous as a tobacco growing section of Kentucky. Yet the farmers here have made little or no money because of the low price received for their product.

The bulk of tobacco in this section brought the producer in 1903 less than an average of three cents a pound, and one curious feature about the price is that when good tobacco was selling on the local market at an average of two and a half cents a pound some of the manufactured article actually advanced in price from half a cent to a cent and a half.

But thanks to the A. S. of E., we don't do that way any more. About twelve months ago the first union of the A. S. of E. was formed in this county. It was a new thing to the farmers, and they could hardly realize how a plan to secure profitable prices for farm products could be so simple and yet be effective; but when they became familiar with its teachings they joined hands with President Everitt's plan of co-operation.

To say the farmers are practically organized in this section, and are holding their tobacco for the price set by the Lynchburg convention is but telling the truth, and 75 per cent. of the farmers here who are not members are co-operating with us. We want them to become members, and of course they should. I wish I could get every local union to realize the benefit of missionary work. I will explain what I mean by that. Each month we appoint a committee to make appointments and advertise meetings. Many times these meetings are attended by but few people; but you can plant seed that will swell and sprout and grow and yield fruit. Recently the writer filled such an appointment, and found but six present, but he planted the seed and was soon called back to organize there. Before the writer went into those localities tobacco was selling for 6, 4 and 2. Since then I have not heard of a pound being sold.

Each farmer has a duty to perform in this great battle to secure profitable prices for farm products. Let us go to work, or, rather, stay at work, and not be so fearful we may do something for nothing. Get subscribers for Up-to-Date Farming; it will do the rest. No farmer, however poor, ever made a better investment than when he subscribed for Up-to-Date. I will not attempt to speak of the great good the paper has done for the "man with the hoe" for I feel that my pen is entirely too weak to do it justice.

M. J. COX.

Glenville, Ky.

A Hard Blow

From Bradstreet's Review we take the following:

"New Orleans, December 6.—For the last eighteen months this entire country, which depends on cotton for its source of wealth, has been a lavish purchaser of high-grade goods of all sorts. The producers of this section expected to obtain 10 cents for their present cotton crop. The crop was expensive, costing practically 7 cents to market, leaving 3 cents per pound for the net profit. This 3 cents of net profit, scattered through the cotton country, was the sum upon which the dry goods men depended for their winter and early spring trade, their late spring, summer and early autumn business having been paid for from the 7 cents spent by the farmer in caring for himself while raising and marketing the crop Now this 3 cents has disappeared for all the cotton remaining, and only about 1½ cents exists of it for the cotton which has already been soild."

Since the above date even the small margin of profit mentioned has disappeared in the slumping price. This has been the hardest blow ever delt the Southern farmers and merchants, but they will recover from it as soon as they come out of their dazed condition.

Rising to the Emergency

The farmers, merchants and bankers of Meridian, Texas, met in mass meeting and passed the following resolutions affecting cotton:

1st. Resolved, That we hold our cotton until we get a minimum price of 10 cents per pound on a basis of middling,, it being understood that this resolution shall not be binding upon any one who must sell sooner at a smaller price, but we urgently request that all make a strenuous effort to hold.

2d. We further recommend that all farmers reduce the acreage to be planted in cotton in the year 1905 at least 20 per cent. less than was planted in the year of 1904. We earnestly request that every one, business men and farmers, abide so for as possible with the above resolution.

We wish to tender our thanks to the bankers and business men of the State for their liberal offers to help the farmers tide over in view of the decline in the price of cotton.

These resolutions were unanmously adopted. J. D. HANNA, Chairman.
L. A. LOMAX, Secretary.

No More Dumping

With twelve million bales the speculators want to give us only $390,000,000. There is only one way to look at this. If the buyers want ten million bales at 10 cents a pound we will let them have it, and then we will have two million bales left which will be worth a good price as soon as we have a short crop. Our old system of dumping all was the speculator's opportunity, but since the A. S. of E. has come in the field with Up-to-Date Farming to teach a new and better method, farmers are coming to conduct their business on different lines. At the close of the meeting a call was made for members and renewals for Up-to-Date. The call met with a hearty response, and many good things were said for our great official paper.

A mass meeting at Abilene, Texas, passed the following resolution:

"Resolved, That we agree to curtail our cotton acreage 25 per cent. for 1905. We also agree to hold the remainder of this present crop for 10 cents a pound."

Many resolutions are passed to reduce the acreage of cotton this year. We think they are unwise. Control the marketing; compel a fair price; then if any is left, hold it over in anticipation of unfavorable weather and a short crop.

The farmers and merchants of Clay county met at Ft. James, Texas, and burned cotton to reduce the supposed surplus. A large crowd paraded the streets The object is to show that these farmers are all and to make sacrifices for the benefit of all and to compel a fair price. (Associated Press.)

Think of it! A 320 page book, cloth bound, for 25 cents, postpaid. It is a book worth more to farmers than any college education they can obtain.

Resolutions

Resolutions adopted by the Dark Tobacco Growers' Association of Locket District, Prince Edward County, Va., on December 24, 1904:

Resolved, 1st—That we will sell our tobacco at the barn or by sample.

2nd—We pledge ourselves to stand by the action of theLynchburg convention in pricing our tobacco at a minimum average of nine dollars.

3rd—That an Executive Committee be appointed in each district to assist any farmer in pricing his tobacco whenever in his opinion the minimum price as fixed above is too high.

Signed—

W. L. Clark, S. H. Bondurant, R. B. Walthall, J. T. Morrissett, G. F. Bruce, J. L. Weaver, J. W. Wilson, Geo. Frank, J. E. Garrett, Stanley S. Price, J. A. Bondurant, A. C. Ellington, B. S. Walton, J. T. Mahan, Booker Adkins, B. Schmidt, E. T. Bondurant, Henry Brandon, John Brandau, W. D. Mahan, J. E. Smith, G. W. Smith, B. G. Bass, J. T. Cark, D. J. Weaver, W. L. Vaughan, W. N. Price, L. B. Walthall, C. F. Schmidt, Colin Stokes, Jno. C. Hamlett.

Governor Taft, of the Philippine Islands, has recommended that tobacco grown in the islands be admitted into the United States duty free. Governor Taft is a good fellow, but we don't like his ideas on the tobacco business. Consumers would not get tobacco any cheaper than they do now, for they are willing to pay present prices, and we may rest assured that the manufacturers are not going to make a lower price. Our planters would be brought in direct competition with hundreds of thousands of acres of fertile lands, specially adapted to tobacco, where tobacco will be grown by Filipinos and sold at about one and one-half cents per pound. Why Governor Taft desires to take a good living away from good American citizens in order to give capitalists a chance to make fortunes out of Philippine tobacco, and give the illiterate Filipinos a few extra cents, we do not know, unless the capitalists offer him a bonus to help them out. This is really a grave danger that threatens the American tobacco grower. Every planter who desires to see the tobacco industry of America become and remain a profitable one, should write at once to his Congressman, telling him that he has no desire to be placed upon an equal footing with the Filipino farmers, nor to give up his industry for the benefit of soulless corporations.

There's something funny about it. I mean this overproduction foolishness. I can remember when I was a youngster, and it was not so long ago, either, that very few were the people who smoked or chewed tobacco. It was an unusual sight to see a boy using tobacco. Now we see it in use everywhere by almost every man. Statistics show that production has not materially increased during the past thirty years; that our exports to foreign countries have increased but little; that the value of exported tobacco remains about the same as it was years ago. Now what in the name of common sense do buyers mean by telling us we are raising too much? We are using more, shipping more, and producing only about the same. The fact is, the trusts are making the prices to suit themselves. They will pay your price when you have one. You have never made a price yet. Make your price—make it high enough to get something out of it, and make the trusts pay it. I know you can do it and you know it, too, if you think.

Mr. John Adams, of Bourbon county, Kentucky, told a newspaper man that the prices of tobacco and wheat have been so unsatisfactory that the farmers of that county are going to grow less of them, and more of poultry and vegetables. What's the use? Next year tobacco and wheat may be high and poultry and vegetables cheap.

The Agricultural Department in Washington is trying to learn the farmer something. There are to be established twenty-five cotton farms in Louisiana, which will be farmed by Louisiana farmers, under the supervision of an expert cotton planter, Col. John Edger, who has raised nearly forty crops of cotton very successfully. A good idea. Then teach the planter how to market his cotton, so that he will be sure of a fair price.

CORRESPONDENCE

Uncle Sam Appeals to Subscribers to Renew

Dear Editor:

I am earnestly interested in the great farmers' organization now being mobilized throughout America. The movement is attracting attention everywhere, and especially are the gamblers and speculators on the boards of trade directing their attention and efforts to destroy the movement among the farmers for profitable prices for farm products. The plan of the A. S. of E. can not be shaken by any combination of gamblers, and I am sorry the farmers of the cotton States are not already thoroughly organized on Mr. Everitt's plan, and educated to the system of controlled marketing.

Where the A. S. of E. has planted its banners the farmers are coming to the front, and it will ultimately take this plan to emancipate the cotton farmers of the South.

I have circulated over 1,000 copies of Up-to-Date, and sent in over 500 subscribers as a result and of my lectures, and it has awakened more farmers to independent and intelligent action than any line of thought ever before taught the farmers. I sometimes think if we could only get two million farmers of the South to read Up-to-Date the victory would be won, and the farmers would occupy the most distinctive place in society.

In conclusion, I want to ask the readers to whom I have sent Up-to-Date to renew their subscriptions, and send others and help to swell the lists much larger. Let us rally to Up-to-Date. It is the only paper that brings the farmers to the front.

SAM J. HAMPTON.

Durant, Ind. Ter.

MAKES FARMS MORE VALUABLE

Farm Life Happier

Editor of Up-to-Date Farming.

You want to know how much higher we value our farms since the A. S. of E. has influenced for better prices of farm products. This is a hard problem, which probably no two will answer alike. If we had the same desire to sell (which is hardly possible), we should feel that our farms were worth more on account of the profit thus resulting from higher prices. But in proportion as we feel that said society shall influence for future permanent better prices, in that higher degree do we think more of our farms, not only as profitable investments, but also as homes which we will be enabled to beautify and make attractive and comfortable on account of ability to purchase the many things we need for the purpose, as well as to lessen our labors, giving us more leisure and enjoyment. Farm life and work is placed upon a higher plane, and will be gradually elevated, not only in our estimation, but also in that of all others ,and more demand will be thus created for farms and homes in the country. So we may say, if the A. S. of E. shall fully succeed in its high aims even for better prices only, that farm lands must advance in price in greater per cent. than the advances in prices of farm products, for if we were making a living heretofore, the extra price will be clear profit. And even if profit is at the root of all evil, it is what we are all after. As any force can be used for good as well as evil, we expect and believe that farm profit will make more for good than evil. When farmers are prosperous, all others may be, because farmers buy more, employ more, and make manufacturers employ more and pay better wages. If it results in constant employment for all, then markets will be permanently good and panics cease.

You have certainly struck the right plan, because it so directly inflates the farmer's pocketbook with little or no expense to him. All he has to have is Up-to-Date Farming, and all he needs to do is to follow its advice.

B. D. SHAW.

Waterford, Ohio.

It Smells Like $3.00 a Bushel

Editor Up-to-Date Farming:

One year ago or more the price of wheat was fixed by the board of trade at 65 cents. rye 48 cents, hogs 4 cents, and nearly everything else in proportion. The A. S. of E. put a price of $1 for wheat, and Up-to-Date urged that and corresponding prices for other things. Many farmers held for that price and got it. Had not Up-to-Date stepped in, everything would have moved on in the old way. The benefit I derived through Up-to-Date is on rye, $70. I had no wheat to sell, but the price went from 70 cents to $1.16, a difference of 46 cents a bushel; corn 52 instead of 35, a difference of 17 cents a bushel. I will gain on that this year about $60. For hogs we got 6 cents a pound instead of 4 cents. My gain on them this year will be about $70. This I firmly believe has been brought about by Up-to-Date. It is a wonder to me that a farmer can refrain from patronizing such a paper, when it presents to him the opportunity to earn so many dollars on stuff he raises.

Though outsiders are a little jealous, they keep an eye on Up-to-Date people. They feel and know that something extraordinary has taken place, and they do not want to be behind in securing the benefit.

A few days ago one of my neighbors came to my place just as we came in with a load of potatoes.

"I see you have made a pit in the orchard for some of your potatoes," said he.

"Yes," said I, "the cellar is not quite roomy enough to store them all in."

"Are you not going to sell any now?" he asked.

"Not at the present price," I answered. "What did you do with your potatoes?"

"I stored them away," said he.

"Aren't you going to sell now?" I asked.

"No," said he. "I heard you say some time ago the outlook was for a better price by and by."

"What do you think of Up-to-Date Farming?" I asked. "You have been reading it three months."

"Oh, it's a good paper."

"Aren't you going to renew?" I asked again

"Oh, I don't know. A good many think when the first hard frost comes the paper will go with it."

"No, sir," said I. "The paper is firmly built on solid rock. It advocates the right principle, and all earth can't move it or put it aside. Mr. Storme, you farmers are too suspicious. You hardly know what you want, and when a good thing is laid right at your door. you turn aside and go off in the woods, and I don't care if you stumble and break your necks. You deserve it."

Let me give Our Up-to-Date People a little story. It is an actual circumstance that occurred about seventy years ago in Armstrong and Clarion counties, Pennsylvania. The valley of Redbank, a stream that separates the two counties, was settled by the Doverspikes, the Smiths, the Hohneys, the Millers, the Guyers, the Houpts, etc., from New Bethelehem. These people owned large estates of rich bottom land, and had good success raising wheat. About six years later many people came in, taking up land or buying homes around them. Land was very cheap and mostly belonged to the Holland Company.

These newcomers needed wheat, and they were told of the farmers in the valley of the Redbank, who had wheat to sell. The farmers in the valley were also informed of the new settlements. Among the new comers was a Mr. Kunselman, who started to the valley to buy wheat. I have heard him tell it many a time. The first man he struck was Mr. Mohney, who took him to the granary to see the wheat.

"What is the price of your wheat?" asked Mr. Kunselman.

Thrusting him arm in and bringing out a handful, he smelt of it, saying: "That smells like $3 a bushel." Mr. Kunselman thought that was too much, and he went to the next man, and the next, and so on throughout the valley, finding their wheat all smelled exactly alike, and he went home taking $3 wheat.

The farmers of the valley had agreed upon a price and got it.

Conditions to-day may not be altogether similar, but the principle is the same, and there are millions of people coming over the hills and down into the valley who must have wheat, and all the farmers need do is to fix a fair and equitable price and stick to it, and get it.—L. G. Himes, Vicksburg, Mich.

WHAT FARMERS SHOULD DO.

Editor Up-to-Date Farming.

I have been reading Up-to-Date since last March. I am convinced that the ideas it contains and the plans set forth for the bettermen of the farmer's condition, are just what the farmers should practice, and I am glad that so many farmers are doing so. I think it ridiculous for any one to argue that the farmers can't get a profitable price for anything they raise. Why, the world must have these products regardless of what it has to pay for them. The farmers can live when the rest of the world are starved. I do not believe, though, that the farmer should have an exorbitant price for anything. I raised a crop of Early Triumph Irish potatoes last year. My neighbors sold at 40 to 60 cents. I hilled mine and asked a dollar for them. At planting time this spring I got $1.00 per bushel for them. The same variety now is selling at 75 cents. My crop is hilled up waiting for $1 ,and I'll get it.

Corn sold here at 40 and 50 cents last fall. I held mine for 75 cents and got it. Some farmers say they can't hold their crop for a better price, because they have to have the money for immediate use; but if the farmer will put his crop away in good condition, he can borrow money on it for six months, even though he may have to pay 10 per cent., rather than sell at the speculators' price.

Bremen Union No. 1 and Gishton Union No. 1 and 2, consolidated and elected a member from each union to price and grade the crops of tobacco belonging to each member of the three unions. These men have priced and graded all of that tobacco, and the owners have signed an agreement to hold the tobacco till they get the price set, and they are sure to get it. Some people think, as tobacco can't be eaten, the buyers do not have to buy it. I know they do. They have contracted so much tobacco—well, the old crop is about exhausted, and there was not two-thirds of a crop raised this year, so the buyers must have all of it to fill their contracts.—R. F. Leigh, Bremen, Ky.

Reproduced from the Mayfield Mirror.

THE MIRROR AND OTHER PAPERS FRIENDLY TO FARMERS OFFICIALLY ENDORSED

We, your committee on current literature, beg leave to recommend Up-to-Date Farming, published at Indianapolis, Ind., THE MAYFIELD MIRROR, at Mayfield, Ky., and the Leaf-Chronicle, at Clarksville, Tenn.

We look upon Up-to-Date Farming as the first and only national farmer's friend, the only journal that even attempts to put farming on a plane above slavery and thraldom. It does it by showing us the visible supply and actual products of the farm, and the demand for the same based on equitable prices through controlled marketing.

THE MAYFIELD MIRROR and the Leaf-Chronicle have also espoused our cause in the dark tobacco belt, and we would urge our brother farmers to give them support, also any other paper that espouses our cause.

Submitted to and endorsed by Vulton Creek Local Union, No. 1, at Vulton Creek, Ky.

J. W. USHER, President
E. E. GAY, Secretary
ALBERT B. CRAWFORD
Committee

We print the above as a sample of how they do it down in Kentucky and a hint to local unions elsewhere. The press is all powerful, therefore we recommend farmers to get the press on their side. Any paper that opposes this effort by farmers to better their business is an enemy to farmers. Any paper that does not help it is not their friend.

. . . PASSES IT ALONG.

Editor Up-to-Date Farming.

I read my Up-toDate as soon as I can after I receive it, and then I go out and stop the first farmer that attempts to pass my place, and if he is not a subscriber, I get him to promise to take it home and read it, and return it to me. In this way I have been able to get the same paper into the hands of three different persons. And in some cases to those whom I considered unfavorable to our proposition, I give as many as three dates at one time to make sure of the explosion of their old-fashioned ideas of selling their products to the lowest bidder.

I am holding my potatoes, oats and wheat, and hope to get the Equity price, though my faith is costing me 6 per cent on money borrowed to make it possible. The man who works my farm has sold his share at 28 1-2 cents for oats, $1.05 for wheat that tested 55 pounds to the bushel, and 25 to 30 cents for potatoes, the present price.

I hope you may be able in the near future to control the production of live stock so as to more easily control the price.

J .A., may you ever be as EVER-IT.—Franklin R. Cole, Albion, Mich.

HOW TO ORGANIZE.

Editor Up-to-Date Farming.

The A. S. of E. at Calhoun, Ky., appointed J. R. Bland, W. E. Bibb, W. N. Short and R. G. Cary to consider and report upon the best way to organize our county. After conferring together they reported that the best way in their judgment would be to appoint an organizer in every magisterial district (or precinct) to organize local unions therein. The recommendation was agreed to, and the following appointments were made: Ramsey precinct, D. M. Wayne; Sacramento, J. R. Brand; Livermore, P. D. Maddox; Vienna and Boston, W. N. Short; Island, B. J. Drake; Calhoun, Mark Cox.

It was resolved that we endorse the Lynchburg convention, and ask the members of the A. S. of E. to hold their tobacco for the prices set—$8 from the ground up for dark, and $12 for bright. Adjourned to meet at Calhoun, Ky., the fourth Saturday in January.

S. B. Roberson. Pres.
G. W. HOPKINS, Sec.

A GOOD TURN OUT.

Editor Up-to-Date Farming.

We had a good turn out at our local union meeting last month. Mr. Colburn was our first speaker, and he urged us to be careful in pricing our products. and then stick to them. J. W. Tennice spoke on legislation, and J. T. Patterson on the general principles of our order, and told how farmers had been defrauded out of their hard earnings. Our charter was granted June 21, 1904, and we had to get three members from Coal Hill to make enough to organize. Now we have 31 members, and a good prospect for more at our next meeting.—John W. Wilson, Altus, Ark.

DON'T SELL AT A LOSS.

Editor Up-to-Date Farming.

I trust you will give the cotton grower your special attention at present. as that industry is in a most critical situation. There is a great deal of cotton unsold—perhaps half the crop—and there is no necessity for selling it at a loss to the producers. But we are afraid the holders may get stampeded, and that would be disastrous. So give us some strong arguments, which you can so well do, and hold us together.—J. R. Johnson, Crosett, Ark.

A FEW LICKS FOR EQUITY.

Editor Up-to-Date Farming.

Having rested awhile, I think it is time for me to put in a few licks for Equity. Those who have read the plan of lining up in front for equitable prices and controlled marketing think panics would cease, and farm products sold like other goods would do away with tory, scab, bolter and dumper. The only objector to the A. S. of E. is the fellow who listens only to those who have not yet formed its acquaintance. Columbus was a lunatic before he found America. By the same rule another great discovery is now in sight, the American Society of Equity.—A. R. Sheckell.

SYSTEMATIC WORK.

To Up-to-Date Farming:

Vulton Creek local union met Sept. 17. After an opening address by President J. W. Usher, we had some good talks by the members on the subjects, "How to Keep the Boys on the Farm," and "The Benefits of a Local Union." We have adopted the order of business as advised by the National Union. Our subject for discussion at next meeting are, "Up-to-Date Farming," and "Education of the Farmer."

E. E. GAY.

Vulton Creek, Ky.

Dear Mr. Everitt—I will write a few lines about our union. We had a meeting December 10, and we are getting along just fine. Several good speeches were made by our members, and we had music also. We will have another meeting at Morganfield on the 17th to agree on the tobacco and corn prices. In our union we agreed to hold our tobacco for 10 cents around and corn 60 cents until April. We are determined to hold for the prices until the roots can't support the trees, and they fall; then we will think about holding some more.

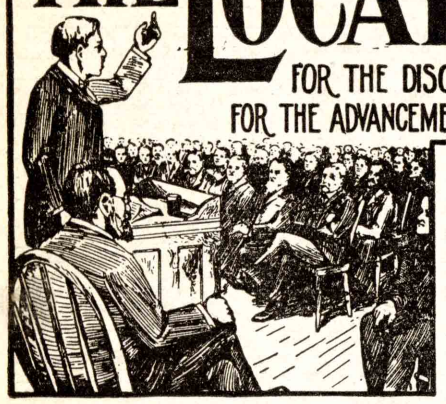
We live on a high hill called Grundy Hill, in Union county, Kentucky, near the Ohio river. We can look over the southern part of Indiana, eastern part of Illinois, and western Kentucky, and we see the A. S. of E. shining in the people's eyes. We read our Up-to-Date Farming all the time ,and it is the best paper farmers ever read We wish you a merry Christmas and a happy New Year.

JOHN KILFOY.

Farmers, as well as other people, must learn that "IT TAKES TWO TO MAKE A BARGAIN," and they must apply that truth to their business.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

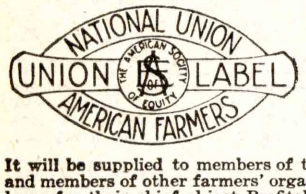
of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc. It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.



How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Oh, Flag of the Free

(By Pearl Ulilla Davis.)

Oh, flag, waving high with those famous stars!
Oh, flag, with your stripes which naught debars!
While you flap and furl,
And leap and curl,
Do you think how hands struggled to give you life?
What great men fell in battle's strife?
How white lips muttered, "With you I die?"
And kissed your folds as Death swept by?

Oh, flag, there is yet a new life for you,
Another great name thou hast come to woo,
As you wave and loop,
And dash and droop.
Another just fighter has risen to see
That farmers must share your liberty.
He has come to battle and make them free
With a banner emblazoned with EQUITY!

Oh, flag, this freedom you justly have won
Has not paved the pathway it should have done!
As you flutter and shake,
And sleep and wake!
Brave toilers have fed the world with supplies,
Have been unrewarded by middlemen spies!
Oh, flag, your honor is greater to be
With stars and stripes amid EQUITY!

County Unions—that's the word.

The cotton situation is helping organization.

Farmers are learning very rapidly now in the school of experience.

The National Union has not provided for the official paper to be sent to every member of the A. S. of E. with the intention of compelling farmers to read, or of compelling them to take a paper, but simply to give every one a chance to read and to learn market facts without having to look to other sources for them. Few farmers would kick at being furnished a grindstone on which to keep their tools sharpened.

Many local unions are having entertainments, and enjoying themselves very much, and doing a great deal of good. We wish they would all do so.

A work local unions should not overlook is to bring out the young people, and accustom them to speak and sing in public. Their talents will be needed.

If you wish to enjoy one of the pleasantest evenings in the history of your local give a supper in regular picnic style. Besides the good things to see and taste, mix in some good things to hear. It will do good.

Every local meeting should work out a prearranged and lively program—make it interesting. Sing songs, make speeches, discuss questions, hear reports of committees (previously appointed), and keep in touch with the living, moving, constantly progressing present.

Here is a suggestion: At each local union meeting read what you consider the best things in the official paper, the things most applicable to your own conditions. It is true, every member has the paper, but most of us get clearer ideas of things when we hear them read than when we read them ourselves. Besides, when they are read in the meetings there is a chance to comment on them. Read also from other papers, and make comments.

THE LOCAL AT THE CROSSING

We had a good meeting last week, but I did not care to report it. About the silliest thing I've heard for a long time was a dialogue by Sue Lambert and Bill Smith. It was no good.

I expect we have made a fool of Jim Denny. Here is what he called a speech at our last meeting:

JIM DENNY ON FEAR.

I'm afeard. I think I'm the feardest man in this township. When I plant I'm afeard it won't grow, and when it grows I'm afeard it will grow too much, and won't be worth anything. I'm afeard it won't rain, for if it don't I won't make anything, and then I'm afeard it will rain and I'll make too much. I'm afeard to not fertilize, for my land is poor and won't produce if I don't; but I'm afeard to fertilize for fear it'll produce too much, and supply and demand'll get in a mix up, and Old Demand'll get it all for nothing, whereas if I had but just a little he'd pay me a big price for it. I'm afeard to not cultivate, for if I don't I wont raise anything, and if I do I'm afeard I'll raise too much. If I don't work they say I'm lazy, and won't pay my debts. If I do work I raise too much, and then they say it aint worth anything, and I can't pay my debts. I'm afeard to read the farm papers, for if I do and do as they say, I'll raise too much as sure as you're born, and then I musn't ask anything for it, for they say I mustn't. The boys want to go to the agricultural school, but I'm afeard to send 'em; they'll learn to raise too much in spite of all I can do, for that is all them colleges teach. Then when the students learn it and do it, they say they mustn't try to sell it for a fair price because there is too much of it. While they are so busy teaching farmers to raise more, they ought to start a school to teach the other fellers to eat more so as to even it up. Then I wouldn't be so feared.

And I'm worried about prayin'. I'm afeard not to pray, for if I don't I'll be lost I reckon; but if I do I'm afeared of overdoin' it. Suppose we should all pray for a good crop and God should hear and give us a bumper. Where'd we be at? What would it be worth? Blessing gone to seed. That's what happened to the cotton growers of the South, and to the corn and potato growers of the North. Too much blessing. Somebody overdone it. No right to price it. It's grab and take. I don't believe God meant it that way, but that's how it goes, and I tell you I'm afeard. It goes agin me whatever I do.

And Jim stopped, apparently exhausted. He talked so slow it took him a long time to get it out. The president looked serious, and seemed to be thinking it all over. Then he said:

"Well, I wouldn't have put it that way; neither would any of you; but under the old conditions it is about so. We live in fears, and no matter how it goes it goes against the farmers. I would like to hear from George Bowers."

Mr. Bowers spoke, and so did several others, but—time's up.

FARMERS SAVE TIME & MONEY BY DOING BLACKSMITHING AND REPAIRING AT HOME

ANY FARMER CAN START a welding fire in this steel forge in two minutes and do repairing at home.
WE GUARANTEE our steel forges to equal in every way any $10 forge and to be as represented or money refunded.
Special Introductory Prices. One forge complete $4.25, or 1 forge, 1 pr. of tongs and 1 anvil vice combined, all for $6.00. Our forges have been used and endorsed by farmers in every state and Canada for the last 7 years. Write for free catalog and testimonials.

TOP BUGGY at BOTTOM PRICE

$50 BUYS THE SPLIT HICKORY SPECIAL
On 30 Days Free Use Plan
The Fastest Selling Top Buggy on the Market.
Why? Because it is made by the old reliable Ohio Carriage Manufacturing Co. from thoroughly seasoned second growth split hickory. Because every Split Hickory vehicle is guaranteed by this company for two full years from date of purchase—the longest guarantee period of any reliable manufacturer. Because the 30 Days Free Use affords ample time for the purchaser to thoroughly satisfy himself that the buggy is first class in every particular, and a better vehicle than dealers sell for nearly double its price.
RIGID FACTORY INSPECTION
Every Split Hickory Special Top Buggy is given the most rigid factory inspection before shipment, so that the company is perfectly safe in staking its reputation for high-grade goods on that particular buggy.
MADE TO YOUR ORDER We not only make Split Hickory Specials so that each one comes up to our ideas of all that a buggy should be, but we let you decide just how you want it finished—whether you prefer a wooden spring bar or a Bailey body loop; whether you want a three or four-bow top; high or low wheels; arched or dropped axles; wide or narrow body—in fact, your wishes are gratified just as far as is reasonably possible.
Split Hickory Specials are designed on graceful lines, finished like pianos, and stand the strain of hard usage because they're built "on honor." Material and workmanship A 1 throughout. Never was more buggy value crowded into a $50 price. In proof of our sincerity, there's our two-year guarantee, with good money back of it.
The 1905 Split Hickory Catalogue of our full line of buggies and harness, 192 pages, is now ready. Save jobber's and dealer's profits by buying from factory.

STATION 99, CINCINNATI, O.

How Success Local Does It

The local union in Kentucky got busy again last week. (They meet every week in the winter time.) About a month ago the old farmer said that it was about time to do something more to help the organization grow; that about three miles away there was a place for a local union, but no local union in its place, and he suggested another entertainment. A young fellow got up and said he thought it would be a good idea to have a basket supper, or a box supper, or something of the kind. So the young folks got together at recess and planned it all out. Each girl would prepare a nice lunch for two, put it in a small box, or basket, with her name inside. Then they would all go down to some school house in that neighborhood and give a little entertainment, and afterward sell the suppers at auction to the highest bidder, the girls eating with the purchasers of their boxes. No one was to know which girl belonged to which box, and vice versa.

They apointed a night, had a notice put in the local paper and posted in public places that the "Success Union" would give an entertainment, supper, and attempt to organize a local union at Holdback school house.

That night they took their music, girls, suppers and a speaker, and went down. There were 22 baskets, and besides these, a big basket of chicken sandwiches, apples and cake, to supply those not fortunate in getting a basket and a girl. They sang songs, played music and recited poetry for a while after their arrival. They found the school house crowded full of young folks, and several old folks were there too, to see what "Success Union" was up to. Then a good talker told why they came, and sold the baskets, amid great fun, and brisk bidding. Two fellows, rivals, thought they knew their fair lady's basket and bid up to $2 to eat her cookery with her. (It proved to be an old maid's basket, after all.) The 22 baskets sold for $16 and twenty lunches were sold at 10 cents each.

After supper, which was thoroughly enjoyjed, on account of the many funny incidents, the speaker called the house to order. He spoke very briefly of the purpose of the meeting and of the plans of the society to control the price of tobacco. He then asked how many farmers present would join a local union there. He found twelve who were willing. He exhibited the paper, Up-to-Date, and told of the new tobacco department. He took the names of the twelve and each one paid his dollar. Then the speaker told them that the $18 received for the super would be used in sending Up-to-Date one year to thirty-six farmers in the county who were not members, so that they might learn of the great new movement. The money was turned over to the secretary of Success Union, who took down the names and addsresses of all non-members around Holdback school house, and sent in their subscriptions with the rest.

The members of Success Union returned home happy, knowing they had once again earned their title, and that besides the fun and enjoyment they had obtained, the result would be at least forty converts to the American Society of Equity.

Premium Reports

I dug my potatoes this morning and from the three little ones (one-half pound) I have 44 pounds, all large, nice, smooth ones. The pumpkins are wonders. They are growing yet (Aug. 5th). I think two of them will weigh 100 pounds each. I am well pleased with your seeds and your valuable paper.

Platte Centre, Neb.

Connecticut is Ahead to Date. Read.

The one-half pound of Up-to-Date No. 1 potatoes comprised three small tubers. From them I made 25 hills. I raised 585 potatoes, weight 79½ pounds, or over 1¼ bushels. One potato measured 11½ inches by 15 inches, and there are more just as good. This is a correct statement. I don't think they can be beat.

G. W. ALLING,
No. Bradford, Ct.

Witness, DANIEL J. SIMMONS.
RAYMOND H. ADKINS.

Up-to-Date No. 1 potatoes are the finest potatoes I ever saw. I tested them thoroughly. I cut one eye to apiece, planted one foot apart in rows two and one-half feet apart and I got as high as 14 ounces to the hill. ROBT. WHITE,
Beaver, Pa.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

OUR GUARANTEE of advertisers as found on third page does not apply to this department. Many people who will advertise here are not rated in the regular commercial directories and it would be impracticable to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

Agents wanted for best agents article on earth. Mend-a-Rip does all kinds of light and heavy stitching and riveting. Agents make $3.00 to $15.00 a day. J, U. Foote Foundry Co., Fredericktown, O.

Agents wanted by Weeks' Scale Works, Buffalo, N. Y. The leading scale at moderate cost. Send for free catalogue and prices.

Agents who want a meritorous article to sell should handle C. & F. Wonder Knives—nine tools in one. It is a handsome pocket knife, light, convenient and has no more parts than an ordinary three bladed knife. Contains strong wire pliers and wire cutter that will easily cut barbed wire fence. Also leather punch, swedging awl, alligator wrench, hoof hook, screw driver and screw bit. Don't you think you can sell an article like this? Price each $1.25. One dozen delivered for $11.00. If not satisfactory your money will be refunded. Now if you will trust us (and the publisher of this paper who guarantees advertisers) send for a dozen. We refund your money if you want it. That's fair. Don't forget to write us—better do it now. Cooner & Fortune Co., Indianapolis, Ind.

Always mention Up-to-Date Farming's Business Exchange when you write to advertisers under this head.

Best Cooking range costs $10.00 to $20.00 less from me than from others. Clapp's Ideal Steel Range is sold on monthly payments or for cash. Chester D. Clapp, 204 Lynn St., Toledo, O.

Your Wants Will Be Supplied Through these columns. Read every advertisement and if you don't find what you want advertise for it. Dispose of your surplus products by placing your card here. Good results to advertisers.

FARMERS - GARDENERS - TRUCKERS

Do not miss this Opportunity to buy seed early from the introducers of the famous

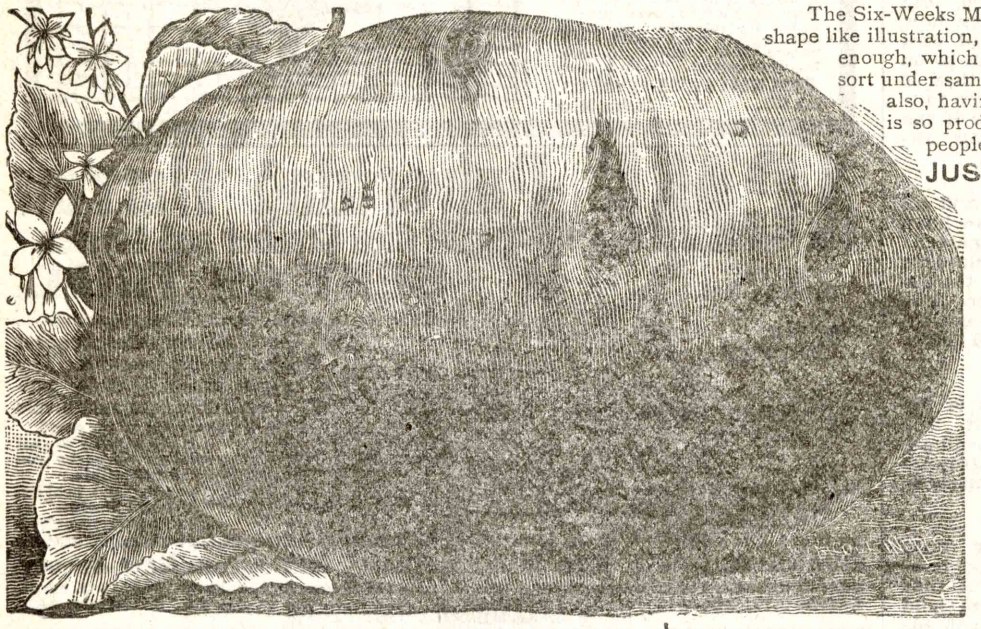
Improved Early Six-Weeks Market Potato

Not one season in all our experience have we had enough of this famous potato to supply the enormous demand. Also by waiting for late shipping they frequently arrive late and defeat your plans for early table potatoes or markets.

You can be sure of getting them to plant early by ordering now. Also the price is less than it may be later.

If you want to beat all your neighbors with new potatoes to eat or market, plant the **Six-Weeks Market.** If a market gardener you cannot plant anything that will make you more money than this potato.

This potato does beat all other kinds and produces fine tubers in 6 weeks from planting, with favorable weather. If you know this to be a fact would you not want some of them Read the testimonials.



The Six-Weeks Market potato is nearly white—(a little pink), shape like illustration, grow fine size, cooks mealy as soon as large enough, which is two weeks or more ahead of any other sort under same conditions. It is wonderfully productive also, having yielded 400 bu. and 600 bu. per acre. It is so productive and such a good keeper that many people grow them for early and main crop.

JUST THINK of one variety of potatoes combining such extreme earliness, good table qualities, good keeping qualities, fine size and shape, and great productiveness. This is the IMPROVED EARLY SIX-WEEKS MARKET POTATO.

From the time you receive the seed we send you until the crop comes on the table or goes to market you will be surprised, delighted and profited by your investment in this potato.

The most remarkable potato since the Early Rose was introduced

We named and introduced the Early Six-Weeks Market Potato several years ago. We have sold them to thousands of customers but there are tens of thousands of people who have not got them. Every family that grows potatoes for their own use should plant this variety. Every farmer, gardener or trucker who grows for market loses money every season he does without them. There is no other variety that can take their place.

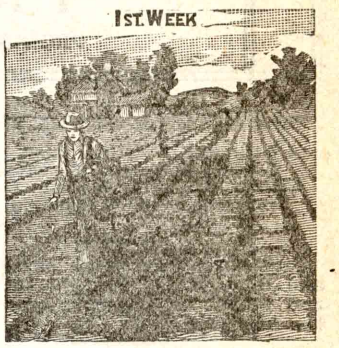
This season we are proud to be able to offer the

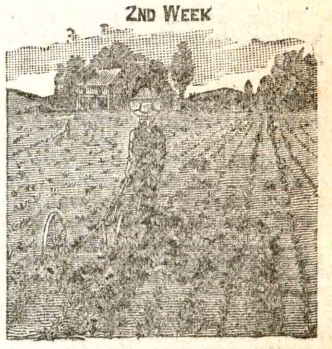
Improved Six-Weeks Market Potato

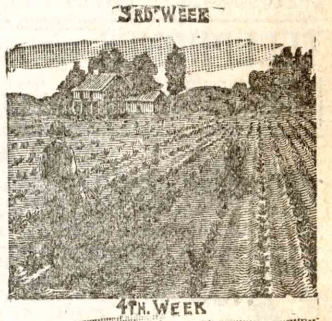
raised from seed obtained from Mr. De Vore, the originator of the variety. Mr. De Vore has been carefully growing the potato and improving it from the time we bought his original stock. He has cared for it as carefully and guarded it as jealously as a dear child. He has yields as follows: One year 420 bu. per acre, next year 380 bu. per acre, and two years after 600 bu. per acre. **The Improved Early Six-Weeks Market** that we now offer is better than the original. Therefore all our old customers should get new seed, and every person who takes pleasure in seeing what good crops, what large yields and how early they can grow potatoes should get seed. They will admit that they never saw, raised, eat or marketed finer or better potatoes than the **Improved Early Six-Weeks.**

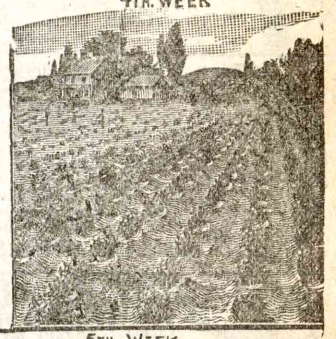
CAUTION Since we introduced our renowned Early Six-Weeks Market Potato some other parties has offered Potatoes under various names, "Early Market," "Five-Weeks Potatoes," "45 Day Potato," etc., or attached their name to it. Some of them use our description of Early Six-Weeks, others claim their potato is as good as our "Six-Weeks." We wish it distinctly understood that we named and introduced this unequaled variety, and are headquarters for the genuine seed.

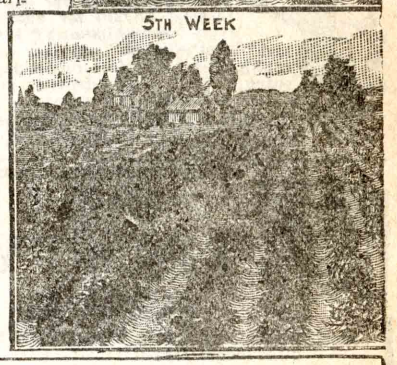
SHIPPING We can ship any month in the winter to southern points as we load in warmed cars. We advise early orders however.











PRICE

—OF—

Improved Early Six-Weeks Market Potato

Small Lots By Mail Postpaid

1 lb.	25c
4 lbs.	75c

J. A. EVERITT, Seedsman, Inc., Indianapolis, Ind.

Agents and Dealers wanted to sell this great Potato

Nothing like them anywhere. If you doubt, send 25 or 50 cents for a liberal sample by express, with Catalogues and beautiful colored hangers. Farmers, gardeners and truckers can make splendid profits selling them

Read extracts from testimonials We have received tens of thousands of reports like these.

I have grown them of size for table in six weeks and matured in 72 days. I consider them the earliest potato in the world, the finest table variety and a cropper. J. W. SHANKS, Athens, Co., O.

I raised at the rate of 395 bu. per acre of the nicest potatoes I ever saw. They are ready to use in six weeks and mature in 72 days. They come so soon the bugs have no chance.
ELIZABETH WASHBURN, Athens Co., O.

From I pound I raised 147 lbs. They are fine, sound, smooth. Ripened in 75 days and were marketable size in 6 weeks. They are the most valuable potato ever introduced.
R. TAYLOR, Ashland Co., Wis.

First class in every respect.
E. Hartman, Sutton Co., W. Va.

They did fine. I could sell a carload for seed if I had them.
John B. Cochran, Jefferson Co., O.

You have got it this time. I mean the earliest and best early potato in existence. We had them for table use in six weeks from planting. They also outyield all others.
August Broehner, Allegan Co., Mich.

Ten dollars per bu. would not buy my six weeks market potatoes if I could not replace them. They are the earliest of all and very heavy yielders. They should be universally grown by market gardeners. Jac. R. Stilson, Onondaga Co., N.Y.

Are as early as represented. Sound, smooth, best quality, heavy yielder. They are very valuable.
C. E. Ward, Sullivan Co., Ind.

Best yielder and earliest potato I ever had. N. Nyedan, Marion Co., Ind.

Planted May 3rd, we dug new potatoes from them and used June 20th. They are the earliest we ever saw.
Daniel Donovan, Carroll Co., Tenn.

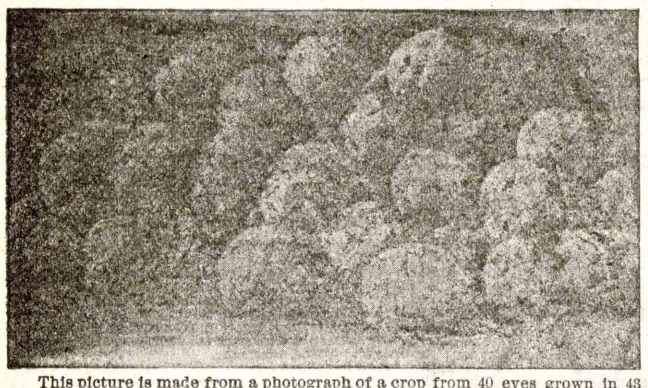
They are the earliest to make market size and earliest to mature that I ever saw. My crop could not be bought for any price. John Gilbert, Meek Co., Va.

Twenty hills of six weeks potatoes yielded a heaped bushel. They bear out your claims for earliness, quality and productiveness. Emil Laurance,
Worcester Co., Mass.

The early six weeks potato can be put on the market two weeks ahead of any other sort which means hundreds of dollars profit to a large grower.
W. H. Morris, Cuyahoga, Co., O.

It is now six weeks and five days since I planted the six weeks market potatos. They did not sprout very quickly but they have nice large tubers on them. They are the earliest potato for this climate I ever saw.
C. L. Ricel, Armtrong, Co. Pa

The best table potato and yield abundantly. Benj. Gemberling,
Licking Co., O.



This picture is made from a photograph of a crop from 40 eyes grown in 43 days. The letter accompanying the Photograph is as follows:

Mr. J. A, Everitt. Dear sir—I send you to-day by freight the product of forty eyes of Six-Weeks Potatoes. They were dug last night and this morning and grew in forty-three days. They were grown from one-eye seed. I have just begun farming on my own land, and am not fixed yet for pushing a crop of early potatoes. They were covered with a breaking plow and given very ordinary treatment. Think I can beat it next season. Several people who saw them were astonished. I expect to exhibit at our county fair.
JOHN L. SAUM, Paulding Co., O.

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

THE MIRACLE OF THE FIELDS.

A little seed, a lifeless thing,
Dropped careless in the ground,
Awakes from sleep, moves to the light,
And food for all is found.

J. .P S.

Raise more and more, say the press and the schools. Put the price lower and lower, says speculation. What is the farmer to do?

Things are out of joint when the more a farmer produces the less he gets for it.

The Department of Agriculture got busy in its fight against the boll weevil to save the cotton crop. It got busier in is fight for the bale (we)evil in assisting to put down prices. In the light of events, for whom was the department saving the cotton crop?

And again. When the department was working so strenuously to increase the cotton crop, did it know it was working for the ruin of the planters by the depression of the price? Or was that a part of the plan?

We know many will consider this very silly talk, but let such people show consistency in the system that urges farmers to constantly and persistently increase their production, and exhausts itself in teaching them how to do so, and when they succeed uses their success to beat down prices so as to leave the farmers worse off than if they had made a comparative crop failure. We'll quit talking nonsense if the other fellows will quit teaching absurdities.

But all the ginners' reports, and all the government reports could not have affected the price of cotton a particle had the planters been so organized as to put on the market only what the demand called for at a fair price. The trouble was not in too much cotton, but that too much was marketed before it was needed.

Even the partial organization of the cotton growers made itself felt. The speculative interests find it exceedingly hard to hold prices down. The growers may still do much to save themselves. Don't sell the cotton.

When producers deliberately burn their product rather than market it at a price below cost, it is evident that controlled marketing has a firm hold among the people. But we do not advise this extreme action. We are unwilling to believe there is more cotton than the world needs. Refuse to sell it now. Store it away. It will every pound be taken at a fair price before another crop is ready for the gins.

After all, under the old system of production and marketing, Uncle Threadbare seems to be the wise farmer. He lays no plans, makes no efforts to increase his yields, and never has too much. If every farmer would do like he does it would be no trouble to get fair prices.

It is the Thriftys, the Rushers, the Hop-Skip-and-Jump fellows that make the mischief. God gives them too much, and down go the prices and away go the profits.

But the world likes the Thriftys better than it does the Threadbares, and so do we, but there is a mighty weak link somewhere in the chain of prosperity when it transpires that the more farmers have the less it is worth to them. This link must be replaced by a strong one. Under what we call the old system the profits are put on the bad crops and the losses on the good ones. This must be reversed. Couple controlled marketing with increased production and you are all right.

We must, therefore, still urge farmers to not be afraid to "raise things," but while you are raising things to supply the world with necessaries and luxuries, raise mischief for those who promote the system that has held you in bondage for ages.

We have said many times that the first important step to good crops is good seed. Both land, labor and opportunity may be lost on bad seed. Know that you have good seed in good time.

In your plans for the next crop, do not let your mind run too much to acres. Big field farming is going out, and "the little field well tilled" is coming into favor. Better cultivation, better fertilization, better and easier handling, and, above all, better marketing—these are what must give the farmers a bank account.

A 320 page, cloth bound book, price $1.00, and 10 cents extra for postage, all for 25 cents, postpaid. See coupons in this paper.

LEAP FROG Best puzzle out. Sample 15c two 25c. Hathaway Mfg. Co., Bridgeport, Ct.

WEEKS SCALE WORKS, BUFFALO, N. Y. The leading Scale at moderate price. Will outwear any other. Reliable, Lasting, Convenient. Does away with all loose weights. Send for catalog and prices.

TELEPHONES FOR FARMERS

Do yourself what horse doctors charge big prices for trying to do. Cure Fistula or Poll Evil in 15 to 30 days.

Fleming's Fistula and Poll Evil Cure is a wonder—guaranteed to cure any case—money back if it fails. No cutting—no scar. Leaves the horse sound and smooth. Free Book tells all about it—a good book for any horse owner to have. Write for it.

FLEMING BROS., Chemists, 207 Union Stock Yards, - Chicago, Ill.

Things To Know About PAGE FENCE

Horizontal wires, double strength, high-carbon, spring steel. More than twice as strong as common fence wire of same size. Top wire No. 7 and second wire No. 9 will support the weight of 30 men. Think of it! By actual test our No. 7 wire has 3560 pounds strength. Common fence wire No. 7 has only 1640 pounds strength, giving wire used in the construction of **Page Fence** 1920 pounds strength over common wire. Horizontal wires in the

PAGE FENCE coiled lengthwise, making a continuous coil spring that contracts and expands to meet the climatic conditions and hugs uneven ground, insuring a taut, well-stretched fence at all times. Two top wires woven separately and joined to balance of fence with loop, which makes our famous **Page Sliding Top.** Heavy pressure from stock rubbing or people climbing over Page Fence is taken up by two top wires without bearing on remainder of fence, which protects the cross wires of the fence.

We have a free book which tells of the many other special features found on PAGE FENCE too numerous to mention in an advertisement. Send for it.

FREE PARING KNIFE

A paring knife made from Page-Wire, a handy kitchen utensil, which illustrates the high-carbon steel used in the Page-Wire, will be sent FREE, together with booklet, upon request. Write at once.

Sharples Tubular Separators

We want you to know Tubular Cream Separators as they are.

The low can, enclosed gears and ease of turning are shown in this illustration from life. Tubulars have neither oil cups, tubes, nor holes — they oil themselves. **They have bowls without complicated inside parts —they hold the world's record for clean skimming, durability, capacity, easy turning and easy washing.** They save half the work—greatly increase the amount and quality of butter—are wholly unlike all other separators. Catalog H-136 will interest and benefit you. Write for it.

The Sharples Co. Chicago, Ill. P. M. Sharples West Chester, Pa.

$25.00 Cream Separator

FOR $25.00 we sell the celebrated **DUNDEE CREAM SEPARATOR**, capacity, 200 pounds per hour; 350 pounds capacity per hour for **$29.00**; 500 pounds capacity per hour for **$34.00.** Guaranteed the equal of Separators that retail everywhere at from $75.00 to $125.00.

OUR OFFER. We will ship you a Separator on our 30 days' free trial plan, with the binding understanding and agreement if you do not find by comparison, test and use that it will skim closer, skim colder milk, skim easier, run lighter and skim one-half more milk than any other Cream Separator made, **you can return the Separator to us at our expense and we will immediately return any money you may have paid for freight charges or otherwise.** Cut this ad out at once and mail to us, and you will receive by return mail, free, postpaid, our **LATEST SPECIAL CREAM SEPARATOR CATALOGUE.** You will get our big offer and our free trial proposition and you will receive the most astonishingly liberal Cream Separator offer ever heard of. Address,

SEARS, ROEBUCK & CO., CHICAGO.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

Live Stock Situation

We realize that this department of Up-to-Date Farming embraces one of the most important departments of the entire farm economy, but we approach it at this time without any great degree of enthusiasm. With almost all market live stock selling at prices which make reasonable profits to the raisers out of the question, we are not of those who can urge continued and increased production. It is true that stock is, at times, heedlessly rushed to the market in quantities beyond immediate needs, but that is no proof that production has outstripped consumption and that prices are depressed in accordance with that much abused but mythical law of supply and demand. There is not too great a supply of meat stocks in the country, not sufficient to justify the prices that now and have for so many months prevailed. This is proven by the prices charged and paid for the finished product.

The trouble is that the market end of the business is in the grasp of an arrogant monopoly that regards neither equity, law, courts nor government. It does not consider the rights of the producers nor the needs of the consumers. It arbitrarily puts the prices up on the one and down on the other. The world knows this. The government knows it, the courts know it, and the officers of the law know it. Are all these powerless?

Much bluster was made a few months ago about an investigation of the trust. Commissioners for this purpose were appointed by the highest authority known to the nation, and some court rulings were had. But what has come of it? The trust is still doing business in the same old way, and defiantly violating the law every day. Prices of live stock are down and meat prices are up.

No national administration ever had a finer opportunity to make a salutary display of its power in the interest of the whole people than has that of Mr. Roosevelt.

Given a new lease of power by an overwhelming endorsement, on a tacit promise to control the trusts, and accepting that endorsement with the declaration that he would not accept a further gift of power, he stands with clean hands and free from burdens or ambitions that could divert from a true American sense of the obligations of the governing to the governed class. Let us hope, and trust, and pray, and wait.

But this does not mean that we need wait forever, nor that we should be content with investigations which do not investigate. Heretofore it has seemed that the more a trust is "investigated" the better it learns how to intrench itself; the bolder it becomes and the more powerful for evil. The people have a right to expect results, and to demand laws, if we haven't them, that will protect producers in their efforts to feed the world, and consumers in their honest purpose to equitably reward those who feed them—to protect both of these deserving classes from the rapacity of law created vultures that fatten upon them.

Meanwhile what shall we do as an honest journalist and the mouthpiece of a great society sincerely striving for equitable conditions? Shall we follow in the road of our fellow craftsmen, and urge stockraisers to exhaust their energies in live stock production, and increase the supply only to see its value cut lower and lower by the powers that now arbitrarily control the market?

Other papers may do that, but it is not our way. We want the stockraisers to produce all that the world will consume, but we want the world to pay them for doing it; and so long as a gigantic machine is premitted to operate between the producers and the users, robbing both in open day and in the very teeth of the law—in spite of the courts and in defiance of the government, we can not urge excessive efforts at stockraising.

About all we feel like saying in this issue is to look forward in hope. Let wisdom and prudence mark your action. Take good care of what you have. See that the rigors of winter bear not too heavily upon the creatures that depend upon you for comfort and life. If you have sheep give them most patient care; they all through the season have returned the best reward, and for some time will continue to do so. The pigs also must have attention if they are to make you any return at all. It is mistaken economy to starve them now. Keep them growing. They'll be needed after a while, and let us hope the powers of evil may be so broken as to permit equitable returns by the time they shall be ready for market. Look well to the horses. Do not let them get thin now. In a few weeks you will have them under harness, and you will expect good work from them. They will render it if your treatment of them has maintained their strength.

Point to Controlled Marketing

In harmony with our contention for controlled marketing, there is a great awakening in the live stock trade, and all parties concerned seem to be favorable to a change. We clip the following from Goodall's Farmer, one of the leading live stock and market papers of Chicago. A distribution of shipments through the week will inevitably lea to a distribution throughout the season and the year, and bring steady and equitable prices. It is gratifying to note the powerful influences that favor this change:

Not in years has a new project put forth in the interest of the trade received such unanimous support from all of the live stock interests as has the five-day market plan, and with all interests working for its advancement, success seems sure. Packers, railroads, sellers and eastern buyers are all working in harmony to bring about a better distribution of cattle receipts in the first five days of the week, while the stock yard officials are also doing all in their power to effect the much-needed change from what is now practically a two-day market to one which can be relied upon by country feeders and shippers as a whole-week market, as good one day as another.

The congestion in trade which has often been noted here when offerings on Mondays and Wednesdays have been of excessive volume, and which has been well illustrated this week, when close to 71,000 cattle have landed here in three days, only to meet a very weak and unsatisfactory outlet, because of the crowding of too many cattle onto the trade in so short a time, can be eliminated through a more equal distribution of receipts, and it is an imperative necessity that steps be taken to effect better conditions.

At yesterday's conference of representatives of the live stock and packing interests all agreed to do their utmost to bring about a change in conditions, and it is earnestly hoped that the live stock raisers and shippers of the country will fall in line to promote a plan which in the end is bound to result in great good to the whole industry.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

HEAR HER CACKLE.

I buy coffee and sugar and tea for the folks,
And other good things for to match,
But as for myself I must hustle around,
And live all the time by a "scratch."
—The Hen.

The hens need a dust bath.

Have plenty of litter in the poultry house.

It is more important to provide the fowls with grit and crushed shells in winter than in summer.

Do not turn the hens out in the snow, but furnish them plenty of fresh water and scatter grain in the trash to keep them scratching. They must have exercise.

A friend interested in our article in last issue about gapes in chicks, asks for a remedy for gapes. We know of no practical remedy. It is easy to talk about remedies and dragging the parasites out of the chicks' throats with horse hairs ,etc., but it is a waste of words.

If you wish to try an incubator, do not put off getting it. You will find all of our advertisers reliable.

We have often urged pullets for winter layers, but when we want eggs for hatching we prefer to have them from older hens.

We do not very much like geese on a farm of our own, but the goose is a hardy fowl, easily raised, and generally sells for a good price.

Lime and crushed charcoal are both good in the poultry house—antiseptic and they keep the air dry and pure.

The farmer does not hesitate to attend carefully to his pigs and calves, but the hens—oh, they can take care of themselves. When it comes to a showdown, which yields the most revenue, and therefore deserves the best care?

There are more Uncle Threadbares in the poultry yard than on any other part of the farm.

If you have an egg eater in your flock, get rid of her promptly. She'll soon have the whole flock eating eggs.

A warm, soft ration is good for laying hens on a winter morning. After that, grain scattered in the trash will serve them all day—will keep them scratching. Do not overfeed. But this warning is seldom necessary.

Those who put up eggs last spring and summer in the water glass solution, are now using the eggs, which they find fresh and good, and pronounce the water glass method a success.

A New Yorker makes this report of eggs from 46 hens, about 20 of which were used for sitters and mothers: January, 1904, 505; February, 442; March, 696; April, 771; May 872; June, 632; July, 677; August, 810; September, 649; October, 293. Total for first ten months of year, 6,347. Don't you believe it? Keep account of your own hens and test it.

I think it would be well to take turkeys into the poultry calculation for next season. We would advise the purchase of a tom and from three to five hens. We have had more experience with the Bronze than with any other variety, and like them better than any other. As we have said before, we do not consider them difficult to raise, and they are certainly a very profitable fowl.

This is the season of roup, and several of our friends have asked for a remedy. Whenever we undertake to write remedy the word twists around until it spells prevention. But if your fowls have the roup, and you wish to treat them, take the affected ones away from the flock, thoroughly clean up the premises, and scatter lime and carbolic acid (in weak solution) all about inside the house. This is the first and most important step. Now if you kill the sick ones it may be as well. But if you don't want to do that, wash their heads in a very weak solution of carbolic acid, not stronger than five drops of acid to a hundred drops of water, then wash in warm water. Repeat this treatment each day.

Fowls sometimes only have colds when they are thought to have roup. Contagious roup is a very serious trouble, and exudations from fowls bady affected becomes very offensive.

H. A. Simon, Warren, Ohio, give us his report of poultry products for 1904:

Average number of hens during year, all hatched in 1903, 80.

Eggs laid in 1904, 948 dozen.

Average price per dozen, 24½ cents.

Total value of eggs, $232.32.

Fifty-six old hens sold, $21.84.

Eighty-three young roosters sold, $24.79.

Total revenue $278.95.

Average value of eggs per hen, $2.80.

During the year we lost and ate 39, which are not taken into account, and we are starting in this year with 95 young hens. Hens are laying well at present. Who can beat this report?

A correspondent residing at Long Point, Canada, gives us the following poultry report for 1904:

Sold 3,287 eggs	$54.10
Sold 31 fowls	13.45
Sold 26 chicks	5.35
Total	$72.90
Cost buckwheat	$13 35
Cost corn	17.57
Cost wheat	5.65
Cost moulee	2.93
Cost corn meal	8.35
Cost oat dust	16
Cost straw	12
Total	$48.09
Profit	24.81

He had 78 hens and 2 males to begin wih. He had 12 hens stolen, 11 drowned and gave one rooster away. He now has 49, all young stock, and is satisfied with the year's work.

Send a postal today and ask for the free INCUBATOR CATALOGUE. Address, SEARS, ROEBUCK & CO., CHICAGO, ILLINOIS.

FORWARD MARCH

A Million Strong

Is there any power on earth that can stand against the united force of one million farmers asking for equity in price of what is their own and which other people absolutely must have?

* * * *

It is with mingled feelings of pride, at what has been accomplished, and responsibility for what remains to be done in the farmers' movement for controled marketing and price making, that I enter the year 1905.

I intend to continue the battle for the farmers' freedom from the bad conditions that have surrounded their business until every enemy capitulates and every serious farm problem is solved.

As the founder of the only movement that can elevate agriculture on a level with the best of other business and bring farmers to the front, I realize the magnitude of the task before me and my co-workers of the National Union.

While the entire press of the country and institutions maintained in the interest of agriculture, are looking to the government for relief through regulation of trusts and corporations and greater power to the interstate commerce commission, we realize that farmers must depend on themselves.

If farmers have depended on the government these many years and their troubles grew worse, how can they expect relief from that source now?

But we will educate and organize the farmers until they are the greatest union on earth, as they are already the most numerous and richest class.

This can be done if they will read the only work ever prepared to educate them as to what agriculture in America ought to be and can be.

I refer to "The Third Power" book.

* * * *

One year ago, when I published this book I dedicated it to "THE LARGEST CLASS, THE MOST DEPENDENT CLASS, THE HARDEST WORKING CLASS, THE POOREST PAID CLASS OF PEOPLE IN THE WORLD—THE FARMERS." And now I rededicate it to them by offering it on terms that should insure an unprecedented sale.

Through "The Third Power" I am prepared to hurl such a scathing fire of facts and truths in the enemy's camp, and hold out such hope to farmers, as the world never knew before.

Soon the voice of a million farmers will be raised as one voice against robbing commission men; unfair weighers and measures; unscrupulous mixers and adulterators; speculators, manipulators and gamblers in farm products.

This war against organized exploiters of producers and consumers will bring all their great and powerful machinery "dead" against us, but we will have with us the farmers who are fighting for a living, fair wages and a profit equal to any other line of business.

GRAIN GROWERS, STOCKMEN, FRUITMEN, COTTON PLANTERS, POULTRYMEN, GARDENERS, TRUCKERS, TOBACCO GROWERS, SUGAR BEET RAISERS, and all classes of farmers use the weapon I provide on this sheet and fire twenty-four shots for education in controlled marketing and profitable prices.

All that is necessary to bring farmers to the front, elevate agriculture above every other industry and make farming the preferred profession, is a new education.

Everything is made clear in the book, 'The Third Power." It now enters on its third edition. It has been enlarged from 275 pages to 320 pages. The apendix contains much new and valuable matter. The price remains

6.00

THIRD POWER BOND

For a Million United Farmers

THIS BOND is worth Six (6) Dollars cash in gold or its equivalent subject to the conditions printed below.

Each of the Coupons attached is worth Seventy-five (75) Cents as payment on a cloth bound copy of the the third Edition of The Third Power book containing 320 pages. The person who possesses this bond is authorized to sell the Coupons at a special price of **Twenty-five (25) ents** each and retain all the money. The amount will be Six Dollars (6.00) if all are sold. Or if not convenient to sell all of them, sell what pou can. Or if preferred, they may be given away.

We are determined to place a copy of **The Third Power** book in every farmer's home in the United States and Canada. All that we ask you to do is to fire 24 shots for better conditions on the farm by placing these 24 Coupons with good people and urging them to use them.

Don't lose this bond, don't transfer it, don't give it away. It is worth **Six Dollars**, which we are willing to pay you for services rendered. Keep it in your pocket. You can sell a coupon or several of them almost anywhere and any time.

the same, $1.00, postage 10c extra, but see the special offer.

If I can get the people to read this book I know the work will be done. I appeal to every farmer and friend of farmers to help me to get the book into the hands of the people so they may be educated anew.

The education they have received through farm papers, farmers' institutes and institutions was in the interts of politicans, speculators, railroads and food trusts. "The Third Power" proves this statement and I defy successful contradiction.

When they read my book they will have a new understanding of agriculture and they will see possibilities in farming that they never saw before.

I will lose money selling a 320-page book on these terms and paying the postage. I figured on making some sacrifices when starting in this work and I am prepared to make them.

I have sacrificed much in time and money in the past and will sacrifice much more, knowing that it will be returned by a thankful people if they will only read "The Third Power,' and become new men and women in their understanding of agriculture.

I WILL GUARANTE CERTAINTY OF PRICES AND PROFITABLE PRICES FOR ALL FARM PRODUCTS IF ONE MILLION PEOPLE WILL READ "THE THIRD POWER" BOOK.

This means about 40,000 people firing 24 shots each. The gun, already loaded, is on this sheet, and more will be provided on request.

Two objects should inspire you. One is the money you make. The other is the good you will do yourself and your brother farmers.

Send one of the coupons and 25c for a book at once to show in your canvass.

Hundreds of people can made from $2.00 to $6.00 a day. Send for all the bonds you can use. Start at once, while your field in unworked.

Merchants, manufacturers, bankers, professional men and all honest middle men want farmers to prosper and will help them to the front if they want to come.

They should read my book, so they will be prepared to meet the new conditions when farmers come to the front. Fire some shots at them.

Remember, "The Third Power" will do the work, but the people must read it, the people must be educated anew. I guarantee "The Third Power" is worth more to any farmer or his children than a full term at an agricultural college while the old conditions prevail.

WILL YOU HELP TO GET IT BEFORE THE PEOPLE?

J. A. EVERITT,

WHAT IS THE THIRD POWER?

Read What They Say About It.

"It is an earnest argument for a higher appreciation of the dignity of agriculture as a vocation. * * * It aims to give agriculture its proper place among the noblest of industries and enable farmers, by co-operation, to secure rights and benefits to which they are justly entitled."—Journal, Indianapolis.

"It shows an existing need of combination among farmers and outlines a plan which will lift farming to the same level with capital and organized labor; or make them the third power in the world. * * * A million farmers may dictate their own prices. * * * The arguments are presented in a convincing manner, and all needed information is given."—Mahin's Magazine, Chicago.

"It shows that the farmers should organize not for political, but for business reason. The assertions are not made modestly but bodly, and in language simple and strong."—The Advertiser, Newark, N. J.

"It emphasizes the power which lies in the hands of the farmer to-day, outlines the opportunities for him to place himself and his business in the highest position to which he is entitled ,and also aid in giving a suitable recognition to agriculture as the third power."—Detroit Tribune, Detroit, Mich.

"The ideas that farmers should organize to protect and foster their interests are set forth and elaborated with great detail, and the effort is made to show that it would be perfectly practicable for the farmers to meet organization with organization, and so to become practical masters of the situation." * * * Indianapolis News.

"It is apparently published in the interest of the American Society of Equity, though not in a narrow sense. It is a general plea for justice to the producer for what is important for man's material welfare."—Brooklyn Times.

"It is a book of interest to farmers all over the country. * * * Its key note is co-operation is the life of trade. Its aims to arouse agriculturists to turn over a new leaf. * * * It is clearly, sanely and concisely written."—Buffalo Evening News.

"It is the most ambitious effort yet made as well as the most complete to show the benefits that will flow to farmers through organization. It is written with a thorough understanding of the subject in hand. The author has evidently thoroughly studied the subject in all its phases. * * * In the space allotted for a review it would be impossible to set out even briefly the line of arguments followed, but we can say, without overstepping proper limitations, that the book is one that every farmer can read with profit."—Indianapolis Sentinel.

"The present discouraging conditions (of agriculture) are forcefully discussed; the benefits of industrial co-operation are clearly and logically presented, and the opportunity is given every farmer to throw off the rusty shackles of sluggishness and indifference, and assist in promoting one of the greatest and best movements of the age. The attention of every person in the country interested in agriculture should be directed to this work."—Albany (N. Y.) Times.

"It is issued as a protest of or for the farmers against the domination of non-producing classes in pricing farm products. * * * It urges upon farmers the value of combination as a solution of the serious problems that affect farming. It reveals an extensive acquaintance with agricultural conditions, and urges upon the farmers the necessity of early and united action for their own benefit."—Seattle Times.

"It will doubtless have its effect in wakening the tillers of the soil to their possibilities."—Evening Telegram, Philadelphia, Pa.

"It is written for the furtherance of the interests of the farmer, *and contains a solution for all the serious problems that affect farming.* * * * Every American farmer should read the book."—Tribune, Oakland, Cal.

"The autbor is evidently a sincere man and an active champion of the best interests of farmers. The book can be read with profit by those who are seriously considering the economic questions of the day."—Cleveland Leader.

"It ought to do much toward stirring up our American farmers to a sense of their power and responsibility as citizens of a republic and conservators of our liberties."—Louisville Times.

"It is a very forcible book, brimful of sound and comprehensive arguments as to why farmers should band together in a powerful organization, which should be able to dictate the prices for their products, instead of, as now, being under the domination of non-producing classes. The author is a strenuous worker in the interest of farmers, and this forceful book undoubtedly will awaken a great deal of interest among them on this topic."—Mail Order Journal, Chicago.

"It is an interesting volume, devoted to propoganda work in the cause of agricultural co-operation. * * * The author shows how far some farmers have gone along this road of co-operation, and what they propose to do to make themselves a united and important power in the industrial life of the country."—Albany (N. Y.) Argus.

"There is nothing altruistic and very little that is visionary about the author of "The Third Power," although largely in the nature of special pleading it is so clearly written, and its logic is apparently so sound ,that it is a surprisingly interesting work, even if one does not happen to be a member of the class to whom it is primarily addressed." — Philadelphia (Pa.) Record.

A bond worth $6.00 in gold (or its equivalent in cash) will be sent to the person who sends in this coupon with 25c for a THIRD POWER book.

This Coupon when accompanied by Twenty-five Cents (25c) will be accepted in full payment for one, one dollar ($1.00) copy of the great book The Third Power.

The third edition, revised and enlarged, 320 pages, cloth bound. Sent by mail postpaid, for this coupon and 25 cents.

This book should be read by every person--especially farmers.

Farmers Are Enthusiastic

Editor Up-to-Date Farming:

I have visited several neighboring local unions lately, and it is encouraging to find the farmers so enthusiastic. They all seem determined to hold their tobacco for the price fixed by the Lynchburg convention. Let us have a report from every union as often as possible, and we will compel Mr. Everitt to do one of two things—issue his paper once a week, or enlarge it, and I for one am in favor of the former.

Right here I am going to inject a little comment entirely unknown to Mr. Everitt. Everything done in connection with this paper and society costs money. Organizers must be paid, printers must be paid, paper makers must be paid, postage must be paid, folding, wrapping, etc., must be paid for. The subscription price of the paper is 50 cents a year. What we are doing and what we are teaching are making farmers hundreds and thousands of dollars, and yet to get new subscribers we must give in premiums almost as much as the entire subscription price of the paper, and even members who know the benefits, are slow about renewing, and seem to think still more ought to be done. But we are not saying this by way of complaint—simply to set farmers to thinking a little. Every one at headquarters will be glad to do what our correspondent recommends, but those who get the benefits should be willing to meet the expenses.—Associate Editor.]

Now let us stand firm, remembering that in union there is strength. The tobacco buyers are trying every way to break our ranks, but thanks to the union they have failed.—James Nation, Utica, Ky.

We leave out what Mr. Nation says about price, because we do not understand it. To grade the tobacco and say that the low grade shall be worth $8, is not in accordance with the Lynchburg convention.

LOGAN CO., ARK., ORGANIZED.

Editor Up-to-Date Farming:

The A. S. of E. of Logan County, Ark., met in delegate convention with Wilkins Local No. 1, and had a discussion of the cotton question. Decided to hold our cotton until we get ten cents per pound. Papers and letters were read from different States in the cotton belt, and those who have been conducting the correspondence were thanked for their work. Decided to hold our 1905 cotton in the pens, and not have it ginned until the market demand justified it. Decided to hold our cotton seed until spring, and then let farmers have it to plant for 20 cents per bushel; and to use all that is left over on the land as fertilizer. The prisce of corn, wheat and oats fixed by the National Union was ratified. H. H. McAfee, S. D. McKenzie and W. B. Ritchie were appointed delegates to the State convention at Little Rock. Adjourned to meet March 30.

H. H. M'AFEE, Pres.
J. E. SPICER, Sec.

HOW UP-TO-DATE TREATED HIM.

Editor Up-to-Date Farming:

I must tell you how your Up-to-Date paper treated me. You told me to hold my wheat for $1 per bushel, and later for $1.20. I had always sold from the machine at from 65 to 70 cents. I took your advice this year, and put my wheat in the granary for $1. In less than three weeks I sold it for $1.05, and had $186 more than I would have had had I not been a reader of Up-to-Date.—Koss Barry, Meridian, Tex.

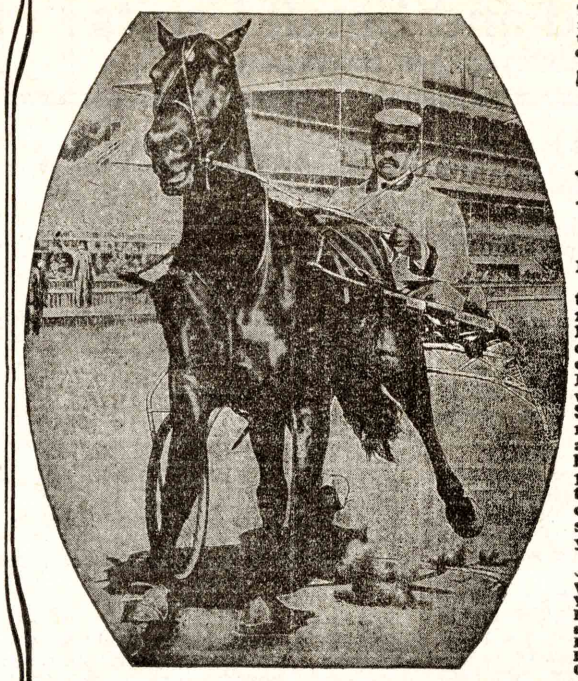
STEADILY GROWING.

Editor Up-to-Date Farming:

Local Union N. 1 of Magazine is steadily growing. One to three members are received at each meeting, principally of the middle aged and younger men. The older men intend to join as soon as the weather gets milder. We now have about 30 members, and all strong in the faith. Up-to-Date Farming is like the old woman's religion, it gets better all the time.—T. J. Maddox, Magazine, Ark.

If you fail to get your paper notify us at once. The most careful clerks in so large a business sometimes may drop a name, and it is not likely to be replaced until our attention is called to it.

BEAUTIFUL COLORED PICTURE OF DAN PATCH MAILED FREE



The Colored Lithograph we will send you is a large reproduction of the above engraving, and is made from a photograph taken of Dan while he was going at his highest rate of speed. It is one of the finest motion photographs ever taken and is as natural and life like as if you actually saw Dan coming down the track. It shows Dan flying through the air with every foot off of the ground.

AN AGRICULTURAL COLLEGE TEST

HIGH RIVER SCHOOL OF AGRICULTURE.

INTERNATIONAL STOCK FOOD CO. HIGH RIVER, ALTA, CANADA.

DEAR SIRS:—I thank you for your letter of the 15th ult., and for all the trouble you have taken to bring "International Stock Food" to my notice. The merits of "International Stock Food" for horses in a poor condition were not unknown to me before your communication came to hand, but I had not given it close attention as a possible medicine for other animals in trouble. A recent trial of the food with a pen of pigs suffering from what I diagnosed as "Erysipelas Pleuro-Enteritis" certainly proved most successful. After losing two hogs within three days out of a pen of seven, I commenced feeding "International Stock Food" liberally to the remainder, all of which had refused to eat the ordinary food and were sick. On the fourth day a third hog died, but the remaining four rapidly recovered and are now well. I took the precaution to feed "International Stock Food" to all pigs on the farm and adjoining pens during this outbreak. and quite believe have saved myself from serious loss by adopting your remedy. I am, Dear Sirs,

O. H. HANSON, Director.

Largest Stock Food Factory in the World. Covers Over a City Block. Contains 18 Acres of Floor Space. Also Large Factory at Toronto, Can., Containing 50,000 Feet of Space. Capital Paid in $2,000,000.00.

We Have Thousands of Similar Testimonials. We Will Pay You $1000 If They Are Not the True Experience of Practical Feeders. Beware of Cheap and Inferior Imitations and Substitutes. Try the New
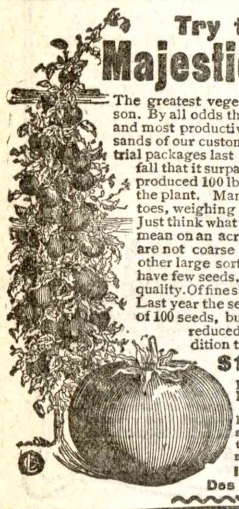
Majestic Tomato


The greatest vegetable novelty of the season. By all odds the largest, finest flavored and most productive in existence. Thousands of our customers who received small trial packages last spring wrote us in the fall that it surpassed all other sorts and produced 100 lbs. to 147 lbs. of fruit to the plant. Many reported single tomatoes, weighing 3 lbs. to 5¾ lbs. each. Just think what this kind of a crop would mean on an acre of ground. The fruits are not coarse grained and poor like other large sorts, but are smooth, solid, have few seeds, and are unsurpassed in quality. Of fine shape and beautiful color. Last year the seed sold at 40c per packet of 100 seeds, but this season, we have reduced price to 15cts, and in addition to this we are offering
$100.00 in Cash
prizes this year for the largest tomato grown.
Our large illustrated catalogue describing the above and many other choice novelties will be sent free if you mention this paper.

ROYAL MANUFACTURING CO., Box 798, Detroit, Mich.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

The orchard is not calling for much work now, but there is never a time when it needs no attention.

Strips of old newspapers wrapped around the small trees are proof against rabbits.

Don't neglect the pruning until it is too late. Spring will be here pretty soon now.

Set the new orchard on a piece of ground that is well drained. A northwestern slope is best.

Make arrangements for spraying. The first time should be just before blooming, the second just after the blooms have fallen, and a third may be given about two weeks after the second.

I am not much in favor of spring plowing of the bearing orchard, but if you wish to crop it, do so with peas, soy beans or other leguminous crops. Such crops hogged down are not bad, but if you cut and take them off, leave enough for a good mulch under each tree.

Don't neglect the berries and small fruits. Of course, the strawberry beds are well mulched. Don't be in a hurry to remove the mulch, and when you do remove it only clean it away from the plants. If the old canes have not been removed from the blackberries and raspberries, now is a good time to do that. Now is also a good time to trim the grape vines. Do this thoroughly, for only new vines bear grapes. Cut back close.

I want again to urge liberal pruning of the old, neglected apple trees. Take great brush piles out of them. New orchards may be made out of old ones. In addition to clearing out, mulch with barn yard manure.

The Hitchings method of orchard treatment is attracting much attention in the East. Mr. Hitchings has his orchards thoroughly set in grass, and takes pains to raise as heavy crops as in his best meadows. He cuts the grass and leaves it every bit on the ground, being careful to see that a thick coating of it is left under the trees. His apples beat all others, and he claims that the grass so left pays him better than if made into hay.

Dig around the peach trees and scatter wood ashes about them. This is a very excellent thing to do.

The healthiest and best bearing pear trees, in our opinion, are those which stand in the thickest sod. And the best bearing plum trees are those under which the chickens work most freely.

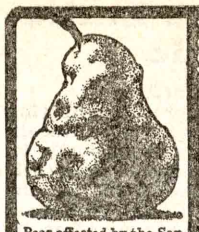
Don't wait too long before you order your flower seeds. You have doubtless had Mr. Everitt's catalogue by this time, and have noted the fine offers he makes, especially the one which includes a beautiful shirt waist set. We hope Our Up-to-Date People will excel all their neighbors in flowers this year. The humblest home may be made beautiful by them, and their elevating and refining influence can not be measured by things in this short life. Raise flowers.

Speaking of flowers naturally suggests thoughts of the garden. For years we have urged that farmers do not pay enough attention to the garden. No tract of land is more important, and none should yield greater value. Order your seeds early; and get the very best of everything. Plant in suitable time and in the best possible manner. Don't be satisfied with a single crop. The garden should be a source of constant supply the summer through. Plant so the crops will come off in rotation. We shall talk more of this later. But now is the time to secure your seeds and have them ready. Peas, beans, radish, lettuce, turnips—these and many more should be planted early and late and between times so as to have fresh and crisp vegetables coming on all the time. The garden that produces a few early vegetables, and grows rank weeds all the balance of the season, is not an up-to-date garden.

It is very easy to have early tomato plants. They may be started in February in a box of good soil, kept moist, and in a warm place in the house, on sunny days near a window where the sun may shine upon it. Good early plants may be had by this simple method.

The gardens should have a good location. See that the soil is deep, rich and thoroughly mellow. Use no manure but what is thoroughly rotted. Chip manure well rotted is of the very bes. Hardwood ashes is a good dressing for lettuce, onions and most other vegetables. Soil can not be too deep for beets nor too rich for pie plant.

Mr. E. A. Seasons, an orchardist of Madison, Ohio, gives us the following interesting experience with apple trees: This being an off year of my Baldwin trees, I decided to experiment with them, and gave each of two trees, as early in the spring as frost permitted, an application of two pounds each of fine ground bone and muriate of potash. The middle of April about two pounds of nitrate of soda was scattered under each. Two adjacent trees of the same variety were left unfertilized. With the coming of the leaves the effects of the fertilizers were apparent. The trees which were fertilized produced glossy, dark green foliage, and the fruit was mulch above the average of size in other years, of a most brilliant color and of the finest eating quality, and exceeded the quantity produced by the untreated trees, whose fruit was of inferior quality, small, tough and, to some extent, scabby. On the untreated trees the early foliage was a sickly color and very slow in appearing, as were the blossoms, which were not at all abundant.



Pear affected by the San Jose Scale which annually destroys $30,000,000 worth of fruit.
Hardie Spray Pumps
are the fruit growers best protection against all insects and diseases which attack fruit trees. The Hardie Spray Pump is the simplest, strongest, most durable and highest pressure spray pump made and "it works so easy."

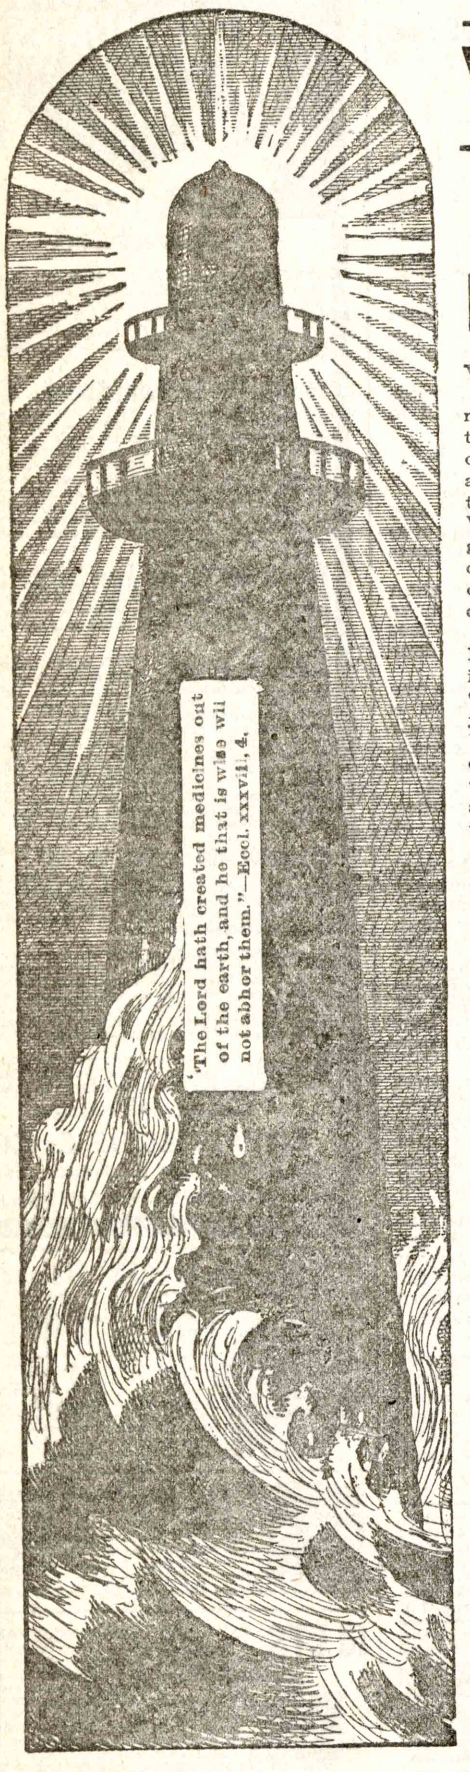
As a Beacon Light

VITAE-ORE points the way for storm-tossed sufferers to a haven of Health and Comfort. If you have been drifting in a sea of sicknesss and disease, towards the rocks and shoals of **Chronic Invalidism**, port your helm ere it be to late, take heed of the message of **Hope** and **Safety** which it flashes to you; **stop drifting** about in a helpless, undecided manner, first on one course and then another, but begin the proper treatment immediately and reach the goal you are seeking by the route **so many have traveled with success.** Every person who has used **VITAE-ORE** is willing to act as **pilot** for you, each knows the way from having followed it; attend their advice, **follow the light** and be cured as they have. **Can you afford to disregard it?**

READ OUR SPECIAL OFFER TO READERS OF THE UP-TO-DATE FARMING



You Are to Be the Judge

SENT ON 30-DAYS TRIAL BY MAIL, POSTPAID.

READ THIS OFFER

WE WILL send to every worthy person who writes us, mentioning UP-TO-DATE FARMING, a full sized **One Dollar** package of **Vitae-Ore**, by mail, **postpaid**, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and dopes of quacks or good doctors or patent medicines he or she has ever used. **Read** this over again carefully, and understand that we ask our pay only **when it has done you good and not before.** We take all the risk, you have nothing to lose. If it does not benefit you, you pay us nothing. **Vitae-Ore** is a natural, hard, adamantine rock-like substance—mineral—**Ore**—mined from the ground like gold and silver, and requires about twenty years for oxidization. It is a geological discovery, to which there is nothing added or taken from. It is the marvel of the century for curing disease, as thousands testify, and as no one, answering this, writing for a package, will deny after using.

Vitae-Ore will do the same for you as it has done for hundreds of readers of UP-TO-DATE FARMING, if you will give it a trial. **Send for a $1 package at our risk.** You have nothing to lose if the medicine does not benefit you. **We want no one's money whom Vitae-Ore cannot benefit.** Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try **Vitae-Ore** on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. **We mean just what we say** in this announcement and will do just as we agree. Write today for a package at our risk and expense, giving your age and ailments, and mention UP-TO-DATE FARMING, so that we may know you are entitled to this liberal offer.

You Are To Be The Judge

Vitae-Ore is a natural product—as natural as the sunshine, the air you breathe, the water you drink or the food you eat. It is a God-made remedy, containing iron, sulpher and magnesia as made in Nature's laboratory, and supplies to the body those elements which are lacking in disease and restores all the bodily organs to a normal, healthy condition.

A Certain and Never Failing Cure for

Rheumatism
Bright's Disease and Dropsy
La Grippe
Blood Poisoning
Sores and Ulcers
Malarial Fever
Nervous Prostration and Anaemia
Liver, Kidney and Bladder Troubles
Catarrh of any Part
Female Complaints
Stomach and Bowel Disorders
General Debility

OLD PEOPLE—For the aged there is nothing better than **Vitae-Ore.** The loss of appetite and general breaking down of the digestive organs is delayed, the blood purified and enriched, the vital organs are strengthened and a peaceful old age may be enjoyed by the use of this great natural remedy without drugs.

Vitae-Ore is a natural Mineral Spring in concentrated form. One package is equal in medicinal strength and curative value to 800 gallons of the most powerful efficacious mineral water, drank fresh from the springs. It is the most potent and powerful antiseptic constitutional tonic, blood, brawn and brain builder, flesh maker and health restorative ever discovered. It gives tone to the system and imparts new life, strength and vitality. It is a germ destroyer, system fortifier, and kills the nidus of the disease.

Vitae-Ore strikes the disease at its root, entirely eradicates every vestige or trace and the patient is cured to stay cured. As a Blood Purifier it is without a peer. No other remedy can equal it. It supplies nature with the elements to build health into diseased bodies. It is the ideal tonic for Weak and Anæmic Men nnd Women. Its use makes the watery, impoverished blood become strong and virile, and as it comes through the veins imparts the color of health to the face, a sparkle to the eye and strength and vigor to the system. When **Vitae-Ore** has done its work you will feel like a new being.

Women are you afflicted with any of the innumerable diseases which are so common and prevalent among your sex? We cannot mention them in this small space, but let us assure you that **Vitae-Ore** is the true "Balm of Gilead" to every sufferer and the many diseased conditions which unfit women for the full enjoyment of life and its duties may be at once alleviated and permanently eradicated by the use of this wonderful remedy.

Men Is Debility taking the vim of and fire of youth? Above everything else you need **Vitae-Ore.** In these conditions it proves to be a powerful tonic, a reviver, a vitalizer, restorer, forcebuilder. It is not a temporary stimulant, but builds up from the bottom by putting each organ, tissue, muscle and ligament in a healthy condition.

You Are To Be The Judge

SAVED HER LIFE

ONE PACKAGE ONLY NEEDED TO PROVE ITS GREAT AND WONDERFUL CURATIVE POWER.

I was taken down with a Fever a year ago, which resulted in Dropsy and Kidney Troubles, and after a time I became afflicted with Tonsilitis and Heart Trouble. My feet and limbs were so swollen I thought they would burst; there seemed to be an ulcer in my stomach, and I had no appetite whatever. I was treated by two of the best doctors in this country, but they did me no good. One of them said that I would have to go to HotSprings and have an operation performed on my throat before I could be cured. I was in a horrible condition, and did not think that I would live to see another winter. I sent for a trial package of Vitæ-Ore, but had small hopes of its helping me, for I thought I was beyond the reach of medicine. I began taking V.-O. and after three weeks' use the swelling was disappearing and my throat was well; my heart was beating normally and the color had returned to my face; the fever had left and I had regained my appetite. After taking two packages of Vitæ-Ore I was in better health than I had been for ten years; I felt like a different woman entirely. I cannot praise V.-O. enough, and even though I were to write for a week I could not tell all it did for me. It has saved my life, and I tell all my friends, as well as the doctors, who are surprised at my improvements, that Vitæ-Ore has cured me. I also advise those who are ailing and wish to get well to take it as I did.

I have since used it for Piles and three applications effected a cure. I have used it in my family for Colds, Fever, Cramp and Ulcers, and I find it good for all; in fact, I think it is the finest general medicine in the world. We can not do without it.

GERTRUDE JOHNSON, Abaline, Ark,

UNCONSIOUS FROM PAIN.

Horrible Sufferings from Sciatic Rheumatism Stopped by Vitae-Ore.

I was stricken with Sciatic Rheumatism some time ago and suffered horribly. At times I would become unconscious by reason of the awful pain. Although I doctored incessantly, the intervals of intense suffering grew more and more frequent and all seemed to be at loss to prevent them. I spent a great deal of money in my attempts to secure relief and tried about everything which was ever known to accomplish any good in such troubles. Vitæ-Ore has cured me, and in an astonishingly quick and effective manner. I have had no return of the trouble and am going about my affairs as though I have never felt the grip of Rheumatism. It is wonderful what this Ore from out of the ground has done in my case, and no sufferer should leave a day go by without trying to see if it will do the same in his. I shall always speak a word for it wherever possible.

CHAS. J. BUDLONG,
Box 158, Washington, R. I.

NOT A PENNY UNLESS BENEFITED

☞ This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS

FARMS For rich farming, and fruit growing, Write J. D. S. HANSON, Hart, Mich.

UP-TO-DATE
Home on the Farm
HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

Don't look for the flaws as you go through life,
And if you happen to find them,
It is wise and kind to be somewhat blind,
And look for virtue behind them.
For the darkest night has a hint of light
Somewhere in its shadow hiding,
And 'tis better far to hunt for a star
Than the spots on the moon abiding.
—Ella W. Wilcox.

It is never winter in the cheerful, genial heart.

The world we see is very small; it is the one we read about that is large.

Is there in this bright country a single home on the farm where reading is unknown?

But mere reading is not enough. Reading and thinking must go together.

Sunlight alone may not make a bright home—there must be light within.

Talk about the good things that people do, or ought to do; life is too short to take time to talk of evil things.

There is danger that children who grow up bad may in turn let their children grow up bad, and thus make a dark streak in society longer than a single generation.

The parent and the teacher that implant noble aspirations in the child's mind prepare a bright and polished stone for the wall good people are building against vice.

When cleaning up the room place a light covering over the winter plants to keep the dust from settling on them.

It is a good plan when sweeping and dusting the rooms to have the doors and windows open—the dust goes out and fresh air comes in.

The teacher that opens the doors and windows of the school room each noon hour will have fewer absentees on account of sickness.

The Japanese home is seldom more than one story, and the rooms are separated by paper shutters or partitions which fit into grooves and may be easily removed.

Try this for a winter dish that will please all: Pop some corn nicely, and roll it as fine as possible. Mix a pint of the corn into a quart of sweet milk; add a small piece of butter and a teaspoonful of salt, beat two eggs with enough sugar to sweeten the milk; mix all together, and bake for 20 minutes. Serve as pudding.

Some Delicious Cookies

An exchange gives the following new formulas for making cookies:

A very nice plain cookie is made with one cup of butter, one cup of sugar, a couple of eggs, three tablespoonfuls of sour milk, one small tablespoon of soda, salt and nutmeg and flour to roll into a sheet.

White cookies are made with a couple of eggs, a half cup of butter, one cup of sugar, nutmeg, three-quarters of a cup of sour milk or cream, half teaspoonful of soda, flour to roll thin and bake in a quick oven.

A delicious crisp cookie is made by creaming a cup of butter and a half cup of light brown sugar; add a teaspoonful of vanilla and one well-beaten egg; slowly stir in two cups of flour and mold lightly with the hand. Take out a small portion of dough each time, roll to the thinness of a silver dollar, cut with a cutter about the size of a silver dollar and bake in a moderate oven until a golden brown color is obtained.

Palatable ginger cookies are made with a cup of Louisiana molasses, one cup of brown sugar, two cups of thick, sour cream, one heaping cup of butter, two eggs, three teaspoonfuls of soda, two tablespoonfuls of ginger and flour to make a soft dough. The butter and sugar should be beaten to a cream, after which add the eggs beaten light and then the molasses, cream and soda stirred together, the ginger and the flour; roll out very thin, cut in small cakes and bake in a quick oven.

A Hint to the Wise

Never enter a home smoking or with tobacco in the mouth.

When a visitor always observe, even at personal inconvenience, the laws and customs of the home.

Rose water, five ounces, glycerine, one-half ounce, and lemon juice, one ounce, makes a whitening and healing lotion for chapped hands.

When walking keep the chest elevated and breathe deeply through the nose. A long walk may then be taken without exhausting effects.

Nuts should be eaten in the winter time. They are extremely rich and nutritious, vegetarians using them in place of meat and butter.

Avoid excessive use of all condiments, pepper, mustard, etc., as they will in time destroy the digestion.

Salt water acts as a tonic on the skin. Gently spatted on the face it will help make the cuticle firm.

For a burn take the white of an egg. By excluding all air and forming a covering over the burn the pain is instantly relieved.

Tender feet should be bathed in alum water. If colored hosiery is worn have the soles and heels white. Tender feet are made more senstive by the dyes used in the stockings.

After exercising or bathing when the pores are open and the skin is in a glow, do not rush out into the open air or into sudden changes of temperature. Severe colds are taken unless good judgment is exercised at such times.

Manners are of more importance than laws, being the foundation stones of civilization.

Simplicity of manner shows the best breeding. Effusiveness and loudness are the stumbling blocks of good manners.

When drinking from a cup the spoon is left in the saucer. It should never be left for a moment in the cup, being used only to stir and dissolve the sugar.

In most cases it is only necessary for a woman on being introduced to bow politely and repeat the name of the person presented.

At a dinner or any meal if a guest upsets a glass or any accident occurs, he should offer a few words of apology which the hostess will smilingly accept and endeavor to relieve his embarrassment by immediately detracting attention from the accident.

When stopping to talk for a moment with a woman on the street it is not necessary for a man to remove his hat and stand with head uncovered; the hat should be raised, slowly replaced and again lifted as the conversation is ended and he withdraws.

In pressing trousers turn wrong side out, spread flat, moisten the knees thoroughly, and press each leg carefully with a hot iron. Then turn, fold with long seams on the legs exactly together, cover with a damp towel and press each leg separately.

Gold Medal Awarded

The Superior Jury at the St. Louis Exposition, after a full consideration of the claims of all foreign and domestic exhibitors unanimously awarded the Gold Medal to us. This puts the official stamp of approval of the greatest Exposition ever held, upon the **LOFTIS SYSTEM**—its goods, prices, terms and methods.

You Can Use the Loftis System. Why not use it as a savings proposition in 1905? You simply select the Diamond that you want from our Catalogue and we send it to you on approval. It costs you nothing to do this, for we pay all express charges and leave you perfectly free to buy or not after seeing our goods. If you like what we send, pay one-fifth of the price and keep it, sending the balance to us in eight equal monthly payments. The monthly payments will be just the same as putting a little money in a savings bank every month and will pay much better.

You Are Not Too Far Away to have a Diamond Savings Account with us. We open these accounts with honest people all over America. The ten-dollar a week employe is just as welcome on our books as is his well-to-do employer.

A Help to Saving. With every Diamond or Watch, we will on request, furnish free, one of the **Loftis** Steel Safes for Home Savings. Drop your nickels and dimes into the little safe as you can spare them and your Diamond will soon be paid for without you once missing the money. It will be the best investment you ever made, and will pay twenty per cent annual profit through the constantly increasing value of Diamonds. Write for our Catalogue today; select your Diamond and begin saving your money at once. All the time that you are saving, you can have the pleasure of wearing the Diamond.

Guarantee and Exchanges. Our Guarantee Certificate is the strongest and broadest ever given by a responsible house. We give one numbered and signed with every Diamond. We accept any Diamond ever sold by us, as so much cash in exchange for other goods or a larger Diamond.

Our 1905 Catalogue is the finest ever published, and shows the finest line of Diamonds, Watches and Jewelry ever put on paper. We show many inexpensive articles, but nothing cheap or trashy. Every piece of goods that is given a place in our Catalogue, must first stand the test of Loftis Quality—Highest in the trade.

Souvenir. If you send promptly for our Catalogue, we will at the same time send you a copy of our Souvenir History of Diamonds.

Write today for Catalogue.

LIBERTY JEWEL CO., Dept. 852 CHICAGO

LETTER FROM DAVID DOBETTER

Number 49

Near Williamsport, Ind.,
Jan. 15, 1905.

My Dear Mr. Everitt:

The years have made another lap since I last wrote you, and the new one is setting out at a hot pace to chase the old one off the track. Looks now as if it would do it in short order. Beats all how time does fly.

But we did our best to give the old year a right good sendoff. We made quite a chang in the usual Christmas program, and I want to tell you about it, for I know you are interested in everything that makes folks happier.

Wife and I went down to the little home of our widow the week before Christmas. We call her "our widow" because it seems as if we ought to look after her as well as we can. Poor woman; she has no one to care much whether she lives or dies. She is a splendid woman, too—a perfect lady, even if she is clothed in home spun—and as good a mother to her little ones as you could find anywhere in the world. Things looked pretty bare down there, I tell you. They are all as careful as they can be of whatever they earn, but somehow those hungry little chaps do keep the pantry shelves bare a good deal of the time, and they do wear out clothes. I wonder if you have noticed that the emptier the cupboard the sharper the appetite is apt to be? But then, boys are always hungry. I remember how my good old grandmother, when I would make my seventeenth trip to the pantry for a big hunk of Johnnycake, used to exclaim: "My, David! Be you holler to the ends of your toes!" That always was a stumper to me. As I look back to those days now I really think I was hollow pretty nearly down to my toes.

And that was the way we found things at the little cabin of our widow—hollow to the ends of the toes! Wife and I talked a good deal about it that evening; and Little Sweetheart, too, who was with us when we made the visit, said as we sat around our cheery fire with the big hickory sticks sending out great beams of warmth and streaks of stored-up sunshine that drove the shadows away to the very farthest corner of the room: "I wish they could have some of the good times we have to spare!"

The good times we have to spare! That set me to thinking. Can it be that we here on Four-Leaf Clover Farm have so many good things that we cannot use them all? Then I thought about the farm and the big barns and the nice, comfortable house and I said right out loud, "We do not know how to use all our blessings, do we? They are running over the top of the cup and being lost! Wonder if we can't do a little better than to let them be wasted this way? " And we hatched up a plan right then and there for putting some of our surplus blessings to good use.

The children came home as usual. God bless their dear hearts! May they always see in home something worth coming to! If there is anything I do long for more than another it is to make the farm home so bright and cheery that the boys and girls will always be glad to get back to it! Lots of farms in this country are not homes even to the men and women who own them, saying nothing about the young folks that are still under the old roof-tree. That's why they are so anxious to get away to town. They want to find somewhere that will seem a little more like home to them. Poor boys and girls, they don't find it, after all their search!

Well, Ben wanted to know if we were going to have a Christmas tree this year. I suppose he remembered the grand time we had a year ago. "Christmas tree! Mother said, "Of course we are! The Christmas tree has come to our house to stay just as long as the children want to come home to enjoy it and help trim it!" But when we got the little tree, instead of bringing it into the parlor and setting it up where it was last Christmas, we loaded it into the big bobsleds and after the breakfast was all done up and the cattle fed a big Christmas dinner, we all bundled in with the tree and away we went down to the widow's cabin.

You ought to have seen the eyes of them all stick out when we went shouting into the door just loaded down with good things. It was as good as a church sociable, and a good deal better, I guess, to see the children peek out with their hungry little faces half hidden behind their mother's dress. This was the first real Chrismas any of them ever had had. We set the tree up in one corner of the biggest room there was, with strings in every direction fastened to the wall to hold the things that could not be put on the tree. When it was all done there wasn't much room left for us big folks, I tell you. But we managed to squeeze in, all except Tom, and he said it was too much for him; he couldn't stand it to sit there and see those children laughing and crying at the same time over the beautiful things that were poured into their laps; so he sat just outside the door where he could look in once in a while. Dear old Tom! His heart is about as big as that of an ox. He fairly shelled out the contents of his pocketbook to get things for the children. His gifts seemed to run toward boots and shoes and things they could wear, and it seemed to me that was about the best thing he could have done. The rest of us tried to suit out things that were needed in the house and for the long cold winter now on the way.

Of course, there were lots of things for the members of our own family. We had brought those along too. And altogether it was just about the finest time we ever had in our lives. About one o'clock mother and Mary drew out the table and set it for dinner. We had to build a little addition onto it by making a couple of tall saw-horses and laying some pieces of board from them to the top of the little table; but it was all right. It was a splendid looking table when the women folks got it all rigged out with turkey, roast pork, vegetables and other things to go along. Mary had been thoughtful enough to bring along a big bunch of flowers from mother's bay window. It did look nice that cold wintry day. And everything was so cosy and bright in that little humble home that I said, "I'll bet Rockefeller would give a million dollars if he could be here and enjoy this as much as we do!" And I do believe we had a better time and that our hearts were ten times more cheery and happy than his was, with all his millions on the back of millions. You can't buy happiness with money. Lots of folks have tried it and found out that it is not for sale that way.

When it was all over we drove away round by town to get home! Going through the streets of the place snuggled down in the bottom of our big bobs, with the bells jingling out the merriest kind of a Christmas, and the boys and girls singing their songs, we saw a good many folks come to the window to look out. It must have seemed to them as if a little piece of the "Good will to all men" had come streaming down from Kingdom come!

It was evening when we drove into the yard at home. The moon was shining brightly and we bundled out to spend the rest of the day around our own fireside. So our Christmas passed into the time gone by. But it did us all good and I think made another little home happy. But how the hour has sped away! Good-bye.

DAVID BOBETTER.

CURE YOUR OWN KIDNEY

And Bladder Diseases at Home at a Small Cost—One Who Did It Gladly Tells You How

Mr. A. S. Hitchcock (clothing dealer), East Hampton, Conn., wishes us to tell our readers who are suffering from any kidney or bladder disease, that if they will send their address to him he will, without any charge whatsoever, direct them to the perfect home cure he so successfully used.

Knowing, as he so well does, the failure of almost every other treatment in stubborn cases, he feels that he ought to place in the hands of every suffering man and woman this simple, inexpensive and withal positive means of restoring themselves to health.

Our advice is to take advantage of this most generous offer while you can do so without cost.

This $1.00 box SENT ON TRIAL

STOMACH TROUBLES CURED!

I will send a $1.00 Box John's Stomach Tablets, enough for one full month

Before You Pay

They cured me of stomach troubles. Try them at my expense. Pay when satisfied. They are the best remedy for dyspepsia, gas on stomach, heartburn, heart palpitation. A trial will prove it. For your own health's sake you should send for them today. Address **JOHN MORROW, Chemist,** 138 **Forrest Bldg.** **Springfield, Ohio.**

FREE ON TRIAL

We have so much confidence in our superb

Standard Washer

that we are willing to send it to anyone for a

30 DAY'S FREE TRIAL

We prepay all transportation charges and deliver it direct to your door without asking for one penny in advance. You keep the washer for 30 days, try and test it thoroughly, use it to do all your washing for a month and if you are willing to part with it, you return it to us and we will pay the return freight charges. This ***Standard Washing Machine*** is different from any other you ever saw. It will clean the clothes of a small wash as well as a large one. It takes dirt as thoroughly out of the wristbands, neckbands, collars, etc., as it does out of sheets, pillow cases and table clothes. It will wash one pair of socks, as cleanly as it will a tubful of sheets. It will not pull off the buttons, nor injure the finest fabric or laces. With the doube rotary motion and ball-bearings, you do the same amount of cleaning with one half the amount of labor and within a quarter of the time than any other washer requires. We don't ask you accept our word for this. Just drop us a line that you are willing to make this test and we will ship the washer at once. Address,

The WIARD MFG. CO., 56 West Ave., East Avon, N. Y.

For this small sum you can buy a **ZOBO** the Wonderful Musical Instrument. There is nothing at anywhere near the cost that will bring so much joy to boys and girls. This musical instrument can be played without instruction or practice by young and old. It furnishes good dance music; can be used in street parades, or any place where music is desired. Nothing better these long winter evenings for a little entertainment around the fire and in the house. It is made of strong material and is not liable to injury. Full printed instructions with each ZOBO. Get a dozen and sell them to your friends. We will send one for 10c postpaid. A dozen postpaid for $1.

S. E. FERRY, *842-844 N. Capitol Ave. INDIANAPOLIS, INDIANA*

Alfalfa Again

A writer in the Rural New Yorker says alfalfa is so valuable a plant that it is worth overcoming any obstacle to produce it, and he believes it can be produced almost any where. He believes strongly in inoculation, and says he used the Department of Agriculture cultures before the discovery had been made public, and that he has used them repeatedly since. He also used soil from the Illinois Experiment Station that had been originally inoculated with soil direct from a Kansas alfalfa field. All these inoculations work well, he says.

Some of the worst difficulties this writer has had to overcome are acid soils, which must be treated with lime, heaving by successive freezing and thawing in the spring and the too rapid growth of weeds before the alfalfa gets possession of the ground. Frequent clipping is the remedy for the latter trouble.

Many locations, declares this writer, where it was thought impossible to grow alfalfa, now count it one of their most valuable crops.

The Lazy Corners

There are few farms on which there is not more or less ground that is not tillable—corners cut off by ditches, steep hillsides, flat and overflowed nooks, etc. These may well be called the lazy spots of the farm, and they should be brought into some sort of use. Every rod should be made to pay its taxes at least. Often such a spot may be made to grow potatoes or some other vegetables, a hoed crop if it is inaccessible to the plow. Sometimes such a spot might make a nice load of hay each year. If you cannot get to it with a mower, remember that only a few years ago all the hay was cut with a scythe. If an hour or two with a scythe make a load of hay, that is good wages. We have seen such places that a little fencing would convert into a rich pasture lot. Make these lazy patches get industrious and pay for their keep.

SHALL KING COTTON BE DETHRONED?

"It was brought to light," so the report by J. T. Patterson, postmaster and merchant at Davis, Ark., writes that at a convention of the A. S. of E. of Johnson county, Arkansas, that several cotton gins that had not ginned a bale of cotton in from four to nineteen years were included in the ginner's report to the government. One gin in the county that has not ginned a bale in nineteen years was reported 250 bales. It is claimed that at least seventy defunct gins were included in the report."

Be up-to-date,
Be never late,
Hasten where progress leads.
Read Up-to-Date,
Get up-to-date,
And try those grand new seeds.

Don't let the "idle season" (we mean the winter, of course, the farmer has no idle season), pass with some A. S. of E. or Up-to-Date work unfinished. The "busy season" (spring and summer), will soon be here, and then excuses will bud out as fast as the leaves.

Bear in mind that the greatest work of the local unions is to increase our membership—to secure the closest cooperation of the entire community. Had the whole country been thus cooperating, or only a reasonable portion of it, there would not have been a ripple in the cotton market of the South and not a hoof of live stock need have been sold in the North below an equitable price.

Local unions should be greatly encouraged by the fact that so many powerful influences, north, south, east and west, are now advocating controlled marketing, whereas when the A. S. of E. began the agitation, not one of them did so. Onward, onward. No matter who takes it up, let the word still be onward.

Paris Local Union No. 3, Paris, Ark., is in favor of an early convention of cotton growers to secure more active work and prompt organization to assist in maintaining the equitable price of cotton. The object is a good one, and will have due consideration.

Would it not be a good thing to call your neighbor's attention to those new seeds that are offered as a premium with Up-to-Date Farming? Every additional person that is induced to read Up-to-Date strengthens your efforts as well as ours.

Don't neglect our valuable seed premium offer. Seed time will be over before long, you know, and you should try those new seeds. Avail yourself of the offer to renew, and call the attention of your neighbors to it.

A CHANCE TO MAKE MONEY!

I have been doing so well in the egg business that I feel it my duty to let others know how they can succeed. I sent to the Beard Chemical Co., Dept. 17, Norfolk, Va., and obtained their Egg Preserver. I bought eggs at 8 to 10 cents per dozen and kept them until fall when I sold them for 25 to 30 cents and cleared $287. I reinvested this money each year for several years, when I had $3,872.50 as the result of my business. I have tried many ways of preserving eggs but this is the only way of keeping eggs perfectly fresh. The yolk won't stick and they look and taste just like new laid eggs. It costs only one cent a dozen to preserve them. My son made $10 to $15 a week selling the Preserver to families who want to keep a few dozen for their own use. This is a good chance for agents. Any person can get full information and free directions by writing the above firm. J. W.

About the South

"About the South" is the name of a 64-page illustrated pamphlet issued by the Passenger Department of the

Illinois Central R. R. Co.

in which important questions are tersely answered in brief articles about Southern Farm Lands, Mississippi Valley Cotton Lands, Truck Farming, Fruit Growing, Stock Raising, Dairying, Grasses and Forage, Soils, Market Facilities and Southern Immigration along the lines of the Illinois Central and Yazoo & Mississippi Valley railroads, in the States of Kentucky, Tennessee, Mississippi and Louisiana.

Send for a free copy to J. F. Merry, A. G. P. A., I. C. R. R., Dubuque, Ia.

Choice Pickings in the YAZOO VALLEY

"Choice Pickings in the Yazoo Valley" is the title of an illustrated 36-page pamphlet describing the railroad lands in the famous Yazoo Valley of the Mississippi, on the line of the Yazoo & Mississippi Valley Railroad, and showing what has been accomplished by the large number of settlers successfully established there. For a free copy, address E. P. Skene, Land Commissioner, I. C. R. R., Central Station, Park Row, Chicago, Ill.

Information concerning rates and train service to the South via the Illinois Central can be had of agents of connecting lines, or by addressing
A. H. HANSON, G. P. A., Chicago, Ill.

40,000 FARMERS WANTED!

TO FIRE 24 SHOTS EACH FOR EQUITY

The loaded gun is in this paper and 24 shots attached. Is it not possible to get these 40,000 farmers from the readers of this one paper? 150,000 copies are sent out to 150,000 families. If 40,000 only will fire their shots, 110,000 will be lost. It surely can't be possible. We will believe that nearly every person who receives this paper WILL do all we ask for their own selfish interest if not for ours and their brother farmers.

See the leaf in this paper that is worth $6.00 cash to you. Get your money and do your duty to the educational movement for equity.

DO THIS NOW

And I Will Give You a Pair of my Handsome

Gold Spectacles

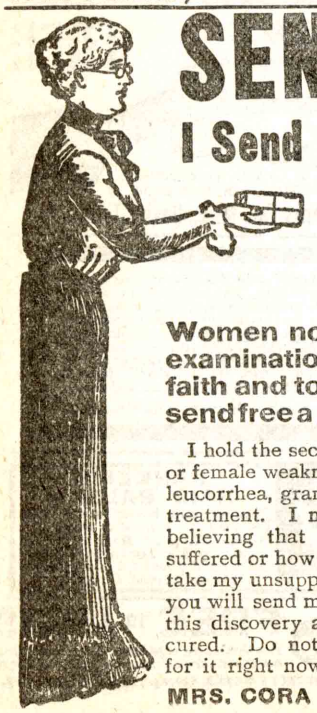
Just send me five names of spectacle wearers and I will do this:—First, I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test), I will mail you a

perfect-fitting five dollar family set of Spectacles for only $1, which will include a pair of my handsome Rolled Gold Spectacles, absolutely free of charge. This set will last a family a lifetime. I have never sold this family set for less than $5 and you could not buy spectacles anywhere near as good as these, even for $10 a *pair*. I am really charging you nothing for them now, as the dollar I will ask you to send with your test is only to help pay for this announcement. This very remarkable but honest offer (to send a five dollar set of spectacles for only $1) is open to everyone (my old customers also), but only for a short time, as I am just doing this to prove to every spectacle wearer in the world the following two very important facts: *First*, that my Perfect Home Eye Tester is positively accurate and reliable and with it you will be able to give your own eyes a perfect test in your own home and thereby I fit you with absolutely perfect fitting spectacles *by mail*, which could not be improved on even if you had undergone a personal examination in any occulist's office, at a cost of $10 or more. *Second*, and most important of all, that on account of my latest improvements, my spectacles have become known the world over as the "Dr. Haux Famous Perfect Vision Reading and Sewing Spectacles" and they are now greatly superior to all others on the market. With them you will be able to thread the finest needle and read the smallest print, day and night, with perfect ease and comfort, just as you did in your younger days, and this, even if your eyes are so very weak now that you cannot read the largest print in this paper. In fact the large number of physicians who have for years and years used and recommended my spectacles to their weak-eyed patients will tell you that they are the most perfect fitting, clearest and best in the world today, and I will give you your dollar back and let you keep the five dollar set of spectacles also, if *you yourself* don't find them to be the finest, clearest and best you have ever bought anywhere at any price. I can only send one set to a family at this price, and this only for a short time, so write me *right now* for my free Perfect Home Eye Tester, and address my company as follows:—

DR. HAUX SPECTACLE CO.,
Haux Building, ST. LOUIS, MO.

I WANT AGENTS ALSO And any man or woman (also storekeepers), without any previous experience whatever, can fit the weakest eyes with my Perfect Home Eye Tester, which is so simple that any one can work it and easily earn from $25 to $100 weekly selling my famous spectacles, either in their own homes, travelling or in stores. My agents need no license anywhere as I furnish the necessary documents with the Agent's Outfit.

NOTE:—The above is the largest mail spectacle house in the United States and perfectly reliable.



SEND NO MONEY

I Send It Free To Suffering Women

A Wonderful Medical Discovery that Cures Women of Female Diseases and Piles as if by Magic, Sent FREE.

Women no longer need submit to embarrassing examinations and big doctor bills. To show good faith and to prove to you that I can cure you I will send free a package of my remedy to every sufferer

I hold the secret of a discovery which positively cures women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhea, granulation, ulceration, etc., are very readily cured by my treatment. I now offer this priceless secret to the women of America, believing that it will effect a cure, no matter how long you have suffered or how many doctors have failed. I do not ask any sufferer to take my unsupported word for this, although it is as true as gospel. If you will send me your name and address, I will send you a package of this discovery absolutely free, which will show you that you can be cured. Do not suffer another day but just sit down and write me for it right now.

RHEUMATISM

Wonderful New External Remedy Curing Thousands. Any Rheumatic Sufferer May Try It Without Cost.

Send Your Address and Get A Dollar's Worth FREE.

I have a sure, quick and lasting cure for Rheumatism. I cure it by means of Vibro Discs, a wonderful new appliance which is used exter-

nally and draws out the poison from every part of the system. It is the wonder of the age, and a godsend to Rheumatic sufferers. There is nothing like it, and nothing equal to it. It banishes pain as if by magic, and conquers this dread disease in all its cruel forms and stages. It is safe, simple and convenient for home use and roots out the acid venom so thoroughly that no relapse or fresh attack can occur. Prove these claims yourself by testing the remedy at my expense. I will send you, absolutely free, four of these Vibro Discs—

a full dollar's worth—if you simply send me your name and address. This is an absolute gift, and I shall neither ask nor accept pay for it now or in the future. Can you afford to continue in pain and misery when you can get this marvelous new and guaranteed treatment simply for the asking? Write me to-day and I will send you the treatment at once and with it an elegant illustrated book on Rheumatism, all free and prepaid. Don't send any money—not even a postage stamp—but send your name and address THIS VERY DAY.

UP-TO-DATE WRITERS

Endorses Us on Roadbuilding

A member of the Ohio Legislature thus endorses our proposition for making good roads, an endorsement which we very highly appreciate:

"I notice an article in Up-to-Date Farming of January 1 on building roads, which has more good sense in it than anything I have yet seen. The Legislature of Ohio last winter passed a good roads law that has but very little good sense in it. About all it provides for is the payment of a superintendent at $4,000 a year, and furnishing him nothing to do. The idea of national supervision is wisdom, and opposition to local supervision and expenditure should be universal. Any law that provides for State and county supervision in connection with any appropriation from the government is wrong, and will absorb more money in the supervising than any State or county would get for the next ten years. Oppose every measure that contemplates local indebtedness or local supervision."

How They See It

We are glad to publish the following letter. It shows the effect a knowledge of this movement has on thinking and conscientious people:

Editor Up-to-Date Farming:

I had your paper as a three months' subscriber, and then I renewed for a year, but after reading your address at Portland, Ind., I can not, with a clear conscience to my family, my country and my God, any longer refuse to become a member of the A. S. of E. So please find enclosed the membership fee, and send me manual, badge, etc., for I am anxious to be identified with what I now consider the grandest move on earth for the farmers and almost all others, and for you to keep this moving until it is a success will make you the world's hero. I am an old tobacco grower, and I suggest that for the next crop, to be sure of fair prices, we reduce our acreage somewhat.—F. F. Phillips, Narrows, Ky.

HISTORY OF A LOCAL UNION

Made Fifteen Hundred Dollars

January 3, 1904, Kenmare Local Union No. 1 held their first annual meeting, and elected the following officers: Q. Richards, president; G. M. Brand, vice president, and J. L. Ruhland, secretary-treasurer. By-laws were also adopted.

The first year of this union was a successful one, the saving to the farmers being more than was at first expected. It saved to its 85 members alone about $1,500, not speaking of what was saved by the six or seven other unions around Kenmare, and it saved that in the three following items: 1. Formaldehyde, for which we had been paying 75 cents per pound; the union obtained it at 22½ cents per pound, a saving of about $100. 2. Binder twine. The price was and would have been 14 and 15 cents; we got it for 11¼ cents, and saved about $500. 3. Coal. The mines combined and would not sell for less than $3. The union made a year's contract with a mine at $2, and saved from $800 to $1,000; a total saving of not less than $1,500.

The coming year we expect to save even more. At our last meeting we appointed a committee to consider the erection of an elevator, which we expect to have ready for the grain of the next crop, which will save us still more. We think farmers should organize in all localities; it will pay them well. JOHN L. RUHLAND.

Kenmare, N. D.

GOING FOR THE PAPERS.

Editor Up-to-Date Farming:

I take the .... of Sioux City, Iowa, and some of our men have been going for that editor. He is always telling how to do with the land in farming to raise more to the acre, but he never tells how to get more money for it. I think your paper is the best all around paper that comes to my house, as it pleads our cause as no other farm paper does, and Farm and Home, Farm and Fireside, and the Farm Journal all come to me. But equity is better than all.—Samuel Lawver, Omega, Okla.

KENTUCKY TOBACCO PLANTERS.

A county convention of tobacco planters of Hancock county, Kentucky, held January 14, and presided over by E. B. Oglesby, with A. H. Bruner as secretary, the following resolutions were adopted:

Resolved, That we hereby agree and bind ourselves to plant not more than 75 per cent. of a crop of tobacco in said county in the year 1905, provided three-fifths of the counties of the States of Kentucky and Virginia, included in the dark tobacco belt, will, by the first day of May, adopt these or similar resolutions.

All counties in other States growing dark tobacco are implored to co-operate with us in this and all other work necessary to bring about a much needed reform in the production and marketing of tobacco, to the end that more remunerative prices may be received.

G. F. LANCASTER,
S. J. BAKER,
A. H. BRUNER,
Committee.

GETTING IN LINE.

Editor Up-to-Date Farming:

I notice the Southern papers have begun to preach the same doctrine that you have been advocating for three years. I am glad to see them getting into line. They are quoting from Up-to-Date some of your very strongest doctrine. I don't blame them. They have been back numbers long enough. There will be a great falling off of subscriptions if they don't get out of the old ruts. The farmers are becoming more and more up-to-date every day. I am introducing Up-to-Date Farming through this part of the country, and it is waking up the farmers to a sense of their duty more than anything they have ever done.—Chas. B. Dowdey, Hopeful, Ala.

Agents Wanted For VITAE-ORE

We want Agents in every locality to sell Vitae-Ore, the most meritorious, widely advertised, and best known medicine on the market to-day—a natural mineral Ore mined from the ground like gold and silver, different from anything ever offered the people. It cures in a different way by a different action, an action that the people like, that causes them to recommend it, and it can be sold by Agents in a manner different from all others. We have spent over one million dollars during the last three years in giving publicity to its remarkable curative and healing virtues, in sending out packages on trial, so the people could learn of its wonderful powers by actual tests. Live, active, energetic Agents in every city and town in the United States and Canada can now reap the benefit in enormous profits from its sale. There is not a town, not a village, not a cross-roads hamlet in the two countries, in which Vitae-Ore is not known to the dwellers therein, and to be known means to be praised, to be bought, to be used—means profit for the fortunate Agents who are allowed to sell it. It has cured thousands upon thousands who have used it, who know what it will do and who tell their friends and neighbors about it. What cannot an Agent do with every tongue working for him, with every ear willing to listen, with every mind ready to hearken? Thousands of women, wives and mothers, heads of families, say that they cannot keep house without it. Thousands of men say that it is their shield and protection from sickness and disease. Each Agent supplies the demand in his town we have created by our trial treatment offer; each Agent fills the needs of his townspeople, makes himself necessary to them. We offer you a chance to share in all this, to become an active, working part and parcel of all this remarkable enterprise. It makes no difference how many times you have tried Agency work; it makes no difference what failures you have made, what troubles you have had, Vitae-Ore is different from all others and work in its behalf is certain to show a different result. Any fairly intelligent man or woman, putting forward the proper effort, backed by our stupendous advertising and publicity, the known and universally acknowledged worth and merit of Vitae-Ore, and the earnest and helpful co-operation which we extend to each Agent, large or small, at all times, can make a big income selling Vitae-Ore. It doesn't take experience. It doesn't take a knowledge of Agency work. It doesn't take a knowledge of medicine. It doesn't take smooth talking nor fine words. Our enormous publicity and the merit of this natural remedy does all of the talking for you. Read our trial offer to sick and ailing people in this paper! This is how we make patrons for you; this is how we make money for you. One package is enough to cure the ordinary cases—the hard, obstinate cases require two, three, and sometimes four packages. We send the first on trial, making the customer for you. You sell the rest! Let us hear from you today, asking for our terms and conditions to Agents. Return this ad. with your request. ADDRESS

THEO. NOEL COMPANY

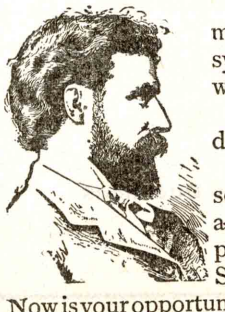
VARICOCELE

Associate Pelvic and Reflex Nervous Diseases Cured by a Painless Safe Method

Richardson Sanitarium where thousands have been cured.

Let me explain the theories, methods and special features of my Sanitarium practice in its application to your case. I have no home treatment scheme, nothing to sell you.



After you know what I do, you will understand why men travel across the continent to see me. Tell me your symptoms and troubles so that I can give you trustworthy professional advice and information.

My interesting and instructive books are free to the man describing his case and enclosing 10c to pay sealed postage.

Write to me before you lay this paper aside. You may not see this announcement again. I do not advertise very much because my cured patients send me their friends and my Sanitarium is full nearly all the time.

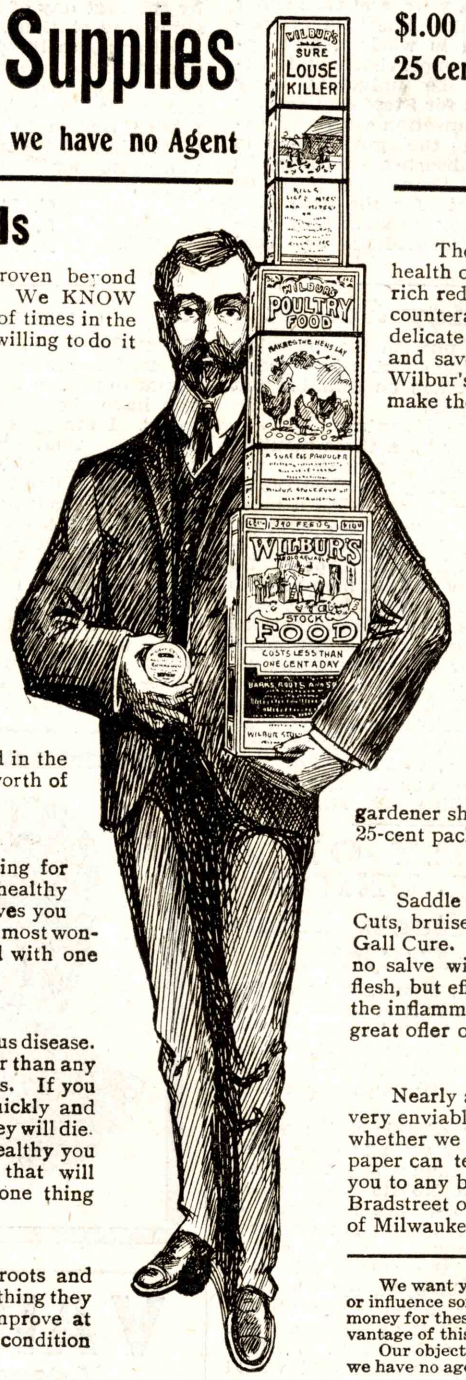
Now is your opportunity; write while my address is before you.

D. D. Richardson, M. D., 123 Michigan Avenue, Special Carrier 206 Chicago

4 FULL SIZE PACKAGES FREE

$1.75 Worth of Farm Supplies

FREE for the asking, sent to any address, where we have no Agent



$1.00 Worth of Wilbur's Stock Food
25 Cents Worth Wilburs Poultry Food
25 Cents Worth Wilbur's Louse Killer
25 Cents Worth Wilbur's Gall Cure

What Wilbur's Stock Food Is

NEARLY a quarter of a century's actual experience has proven beyond doubt that Wilbur's Food is a money maker for feeders. We KNOW THIS. It has been PROVEN to us thousands upon thousands of times in the most forceful manner. We want to convince YOU and we are willing to do it AT OUR OWN EXPENSE.

You know the value of pasture for any kind of stock; how it keeps the animals in good conditon—nature's own way of doing it. There is no argument about the value of the pasture, but it does not last the year 'round. We prepare a food, which, mixed with grain and fed to stock, furnishes in stall or feed box in the proper porportions the ingredients of pasture diet, invigorates and fattens stock at small enough cost to make the food a money-making investment for the owner of one cow, horse, hog or sheep. and a proportionately larger one for the owner of thousands of heads.

FOR COWS

You know when the pasture goes down in the fall, the milk goes, the butter goes, the flavor goes, until all are shortest when the price is highest. Wilbur's Food invigorates cows; it supplies the needed roots, barks and leaves of the pasture, sustains the flow of milk and color, quantity and flavor of the butter. Take a cow right off the pasture, feed her Wilbur's Food in the stall and she will show very little loss of milk, and one cents worth of Food per day saves one dollar's worth of grain per month.

FOR STEERS AND CALVES

One ounce of Food fed with grain to the steers when fattening for market will put flesh on them and save you money on grain. A healthy animal wastes no food. It is all transformed into flesh. For calves you are raising, or ones you are fattening for veal, you can obtain the most wonderful results by using one-half measure of Wilbur's Food mixed with one pint of ground oats or corn meal.

FOR HOGS

Hogs, you know, are the most susceptible animals to contagious disease. But you know, too, if they escape contagion, they are kept cheaper than any other stock. There is either "make" or "break" in raising hogs. If you keep your hogs healthy, they can resist contagion, will fatten quickly and cheaply. If they get sick and refuse to eat, you know how quickly they will die. Nothing will save them; medicine is useless. To keep them healthy you must feed them something they will eat, and something that will satisfy the demands of their systems. We believe there is only one thing in the world that will do this and that is

WILBUR'S FOOD

It is not medicine, it is a pure food made from pure barks, roots and seeds. Hogs like it and hundreds of hog raisers say it is the only thing they can feed which proves satisfactory. Every hog that eats it will improve at once. If fed for thirty days the hog will be in perfectly healthy condition and fatten fast and cheaply.

PREVENTS ABORTION

The health of young animals depends almost altogether upon the health of the mother before delivery. Wilbur's Stock Food makes rich red blood and gives the young animal a good start in life. By counteracting colds and soothing the nerves while the mother is in delicate condition, Wilbur's Stock Food PREVENTS ABORTION and saves for the breeder at least one-half more of his increase. Wilbur's Stock Food fed in small quantities to young animals will make them grow large, strong and fat.

WILBUR'S POULTRY FOOD

WILBUR'S Poultry Food is an egg maker and a fat maker, which will not only force more profit from the poultry yard but will also prevent disease and save birds. We put out the largest package of egg food that has ever been offered for the money. Every poultry raiser and every farm wife wants Wilbur's Egg Food because it pays them to use it. It makes hens lay and produces larger, heavier birds. A 25c package will be sent FREE as one of the four parts of this offer.

WILBUR'S LOUSE KILLER

Wilbur's Sure Louse Killer does away with lice every time. It is sure and complete death to ticks, mites and small parasites of all kinds, whether on animals, fowls or plants. The directions are simple and the results are sure. Wilbur's Sure Louse Killer also makes a remarkably effective sheep dip. Every poultry raiser and every stock owner, farmer or gardener should keep Wilbur's Sure Louse Killer on hand. A full-sized 25-cent package ABSOLUTELY FREE as part of this offer.

WILBUR'S GALL CURE

Saddle and harness galls are cured while the horse is working. Cuts, bruises and old sores are healed up quickly by the use of Wilbur's Gall Cure. This is more than a mere salve. It does something which no salve will do. It not only presents healing agents to the wounded flesh, but effectually keeps out of the sore all air and dirt and reduces the inflammation. A 25 cent box of Wilbur's Gall Cure is part of this great offer of FREE GOODS for a test.

OUR RESPONSIBILITY.

Nearly a quarter of a century in successful business has given us a very enviable position in the business world. Any banker can tell you whether we are responsible and the publishers of any large agricultural paper can tell you if we do as we agree. Further than this we refer you to any bank or wholesale house in Milwaukee or to R. G. Dun & Co., Bradstreet or any other commercial agency, and the First National Bank of Milwaukee in particular. Ask your local banker.

We want you to become acquainted with our goods and either accept the agency or influence some other reputable party to represent us. We shall not ask for any money for these goods. THEY ARE ABSOLUTELY FREE. You should take advantage of this offer at once. Cut out the coupon below and mail today—Now.

Our object in sending these free goods is to introduce them in localities where we have no agency.

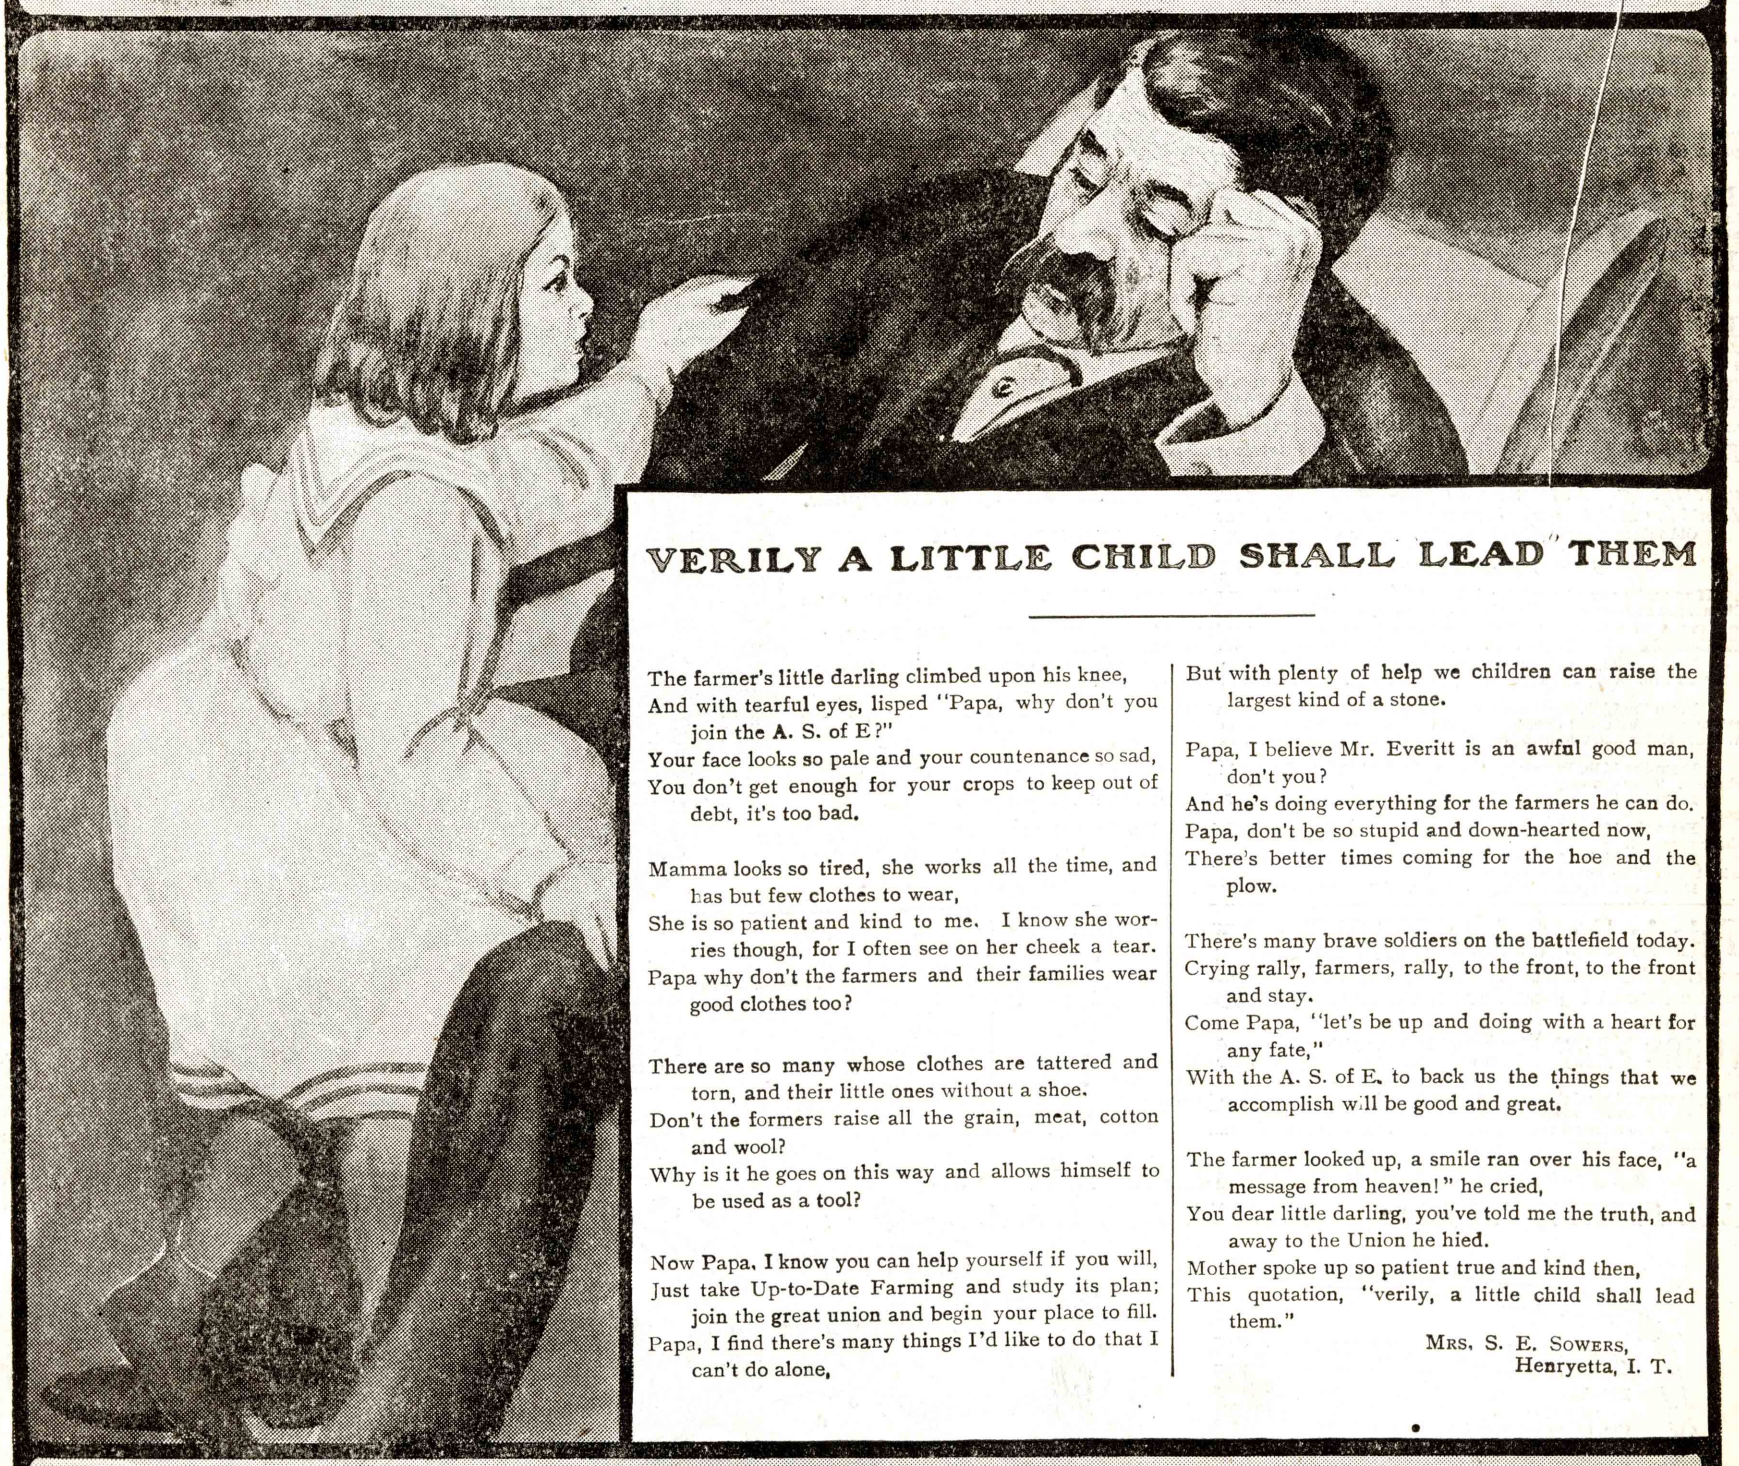
UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object,* EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan,* CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, FEBRUARY 15, 1905



VERILY A LITTLE CHILD SHALL LEAD THEM

The farmer's little darling climbed upon his knee,
And with tearful eyes, lisped "Papa, why don't you join the A. S. of E?"
Your face looks so pale and your countenance so sad,
You don't get enough for your crops to keep out of debt, it's too bad.

Mamma looks so tired, she works all the time, and has but few clothes to wear,
She is so patient and kind to me. I know she worries though, for I often see on her cheek a tear.
Papa why don't the farmers and their families wear good clothes too?

There are so many whose clothes are tattered and torn, and their little ones without a shoe.
Don't the formers raise all the grain, meat, cotton and wool?
Why is it he goes on this way and allows himself to be used as a tool?

Now Papa, I know you can help yourself if you will,
Just take Up-to-Date Farming and study its plan; join the great union and begin your place to fill.
Papa, I find there's many things I'd like to do that I can't do alone,
But with plenty of help we children can raise the largest kind of a stone.

Papa, I believe Mr. Everitt is an awful good man, don't you?
And he's doing everything for the farmers he can do.
Papa, don't be so stupid and down-hearted now,
There's better times coming for the hoe and the plow.

There's many brave soldiers on the battlefield today.
Crying rally, farmers, rally, to the front, to the front and stay.
Come Papa, "let's be up and doing with a heart for any fate,"
With the A. S. of E. to back us the things that we accomplish will be good and great.

The farmer looked up, a smile ran over his face, "a message from heaven!" he cried,
You dear little darling, you've told me the truth, and away to the Union he hied.
Mother spoke up so patient true and kind then,
This quotation, "verily, a little child shall lead them."

MRS. S. E. SOWERS,
Henryetta, I. T.

FOR THE CO-OPERATING FARMERS OF AMERICA

HAVE YOU SENT FOR YOURS?

WE HAVE A COLLECTION FOR YOU.

If you have not wont you please do it now? UP-TO-DATE is going to be a greater power in 1905 than ever before. Don't you see that it is getting better and stronger every issue. It has been the greatest in farm journalism for more than two years. Cannot you say, as does the Editor of The Farmers Journal as follows:

"We scarcely find a sentence in UP-TO-DATE FARMING but what is so true, so forcible, so convincing and so directly to the point that we want to copy it all in to **The Journal** so that our readers may profit by it."

Also we copy from a farm exchange as follows:

"We are anxious for our readers to read Up-to-Date Farming, Its gospel is the gospel of salvation for the agricultural interests as sure as you live."

Can it be possible that you farmers who have read this paper for the past year fail to recognize the Magnitude and Value of the work we are doing? We say no. You surely are not blind and dead to your own interest. We wont believe it. Therefore we now look for your renewal of subscription **at once.**

NEW SUBSCBIBERS ARE ALSO EARNESTLY SOLICITED. IF YOU CAN TAKE ONLY ONE PAPER IT SHOULD BE THIS ONE. IF YOU CAN TAKE SEVERAL THIS SHOULD BE THE CHIEF ONE.

Your Hands Are Tied when you let the speculators price your crops, but when you price them yourself it is different. No matter how pleasant farming is now, it will take on new attractions when you get the price you ask for your own crops. This is what UP-TO-DATE FARMING teaches. Don't you want to enjoy the benefits?

There Will Be No Guessing when you are a subscriber to Up-to-Date Farming. Then the prices of your crops will be as stable as are the prices of plows, binders, interest on money, taxes, etc. You may need to wait a while now but the price comes.

There Are Many Other Reasons but we cannot give them here. Order this paper to your address for the next year and the truth of all we say in this advertisement will gradually come to you and make a new man or women of you as regards your understanding of agriculture.

Up-to-Date Farming is printed twice a month. It has nearly 150,000 subscribers already, but must have a *million or more.* If *all* farmers knew how valuable this paper can be to them, we would have a million subscribers in two weeks. We know farmers are just like any other class of people—they want opportunities to make money and Up-to-Date Farming makes the opportunities. It has done so for many thousands, and we have their letters stating this fact. It can do as well for *every* farmer.

The Subscription Price Is 50 Cents Each number will do you more real pratical good than a whole year's volume of any other paper, because it tells you the vital things about your business that other papers have not begun to print. These things are of the greatest importance to you and you *will not* get the best results from farming until you know them. You must read Up-to-Date Farming to understand it, appreciate it, enjoy it and profit by it. When you begin reading this paper the possibilities that lie around the farming millions will begin to dawn upon you.

We want you to send your order direct from this advertisement. For fear you will put it off we are going to offer you a valuable premium if you send promptly. Good seeds are as valuable as good teaching and both mean success, Mention this paper and send promptly and we will give you four seed novelties as follows:

1 Large Pkt. **Smith's Prolific Corn.** New hybrid. Greatest cropper. Yields over 100 bu. to acre as easily as common corn yields over 60 bu. Fine appearance. Yellow Dent, ears 10 to 14 in. long. Always 12 rowed. Grains ⅝ in. deep, ⅓ in. wide, nearly ¼ in. thick. Cob 1 in. diameter. Stalk 8 ft. high, 2 in. thick at base; blades 6 in. wide. Bears often 4 ears to stalk. This is a remarkable variety and one that every corn grower should procure at once. IT IS NOT OFFERED FOR SALE AT ANY PRICE.

1-2 lb. **Snow White Sensation Potato.** A new seeding, and one that will create a sensation. Season medium late. The skin is the whitest of all and the flesh is as white as fine flour. There is no yellow tinge in the flesh whatever. Oblong shape, large size. A most remarkable potato indeed, and will take the country by storm. It outyields Carman and Sir Walter Raleigh, while for handsome appearance and table qualities those varieties will not be wanted when **Snow White Sensation** comes on the market. This potato is not for sale **at any price**

1 Pkt. Cabbage **The Volga.** A new variety from Russia. It is remarkable for perfection of form and solidity of heads, Mr. Allen, the largest grower of cabbage seed in America, says, "Without exception the nearest approach to perfection of any variety we ever grew." It is a late variety and for winter it keeps better than any other. Every gardner will be delighted with this fine fall and winter cabbage.

1 Pkt. Peppers **Mongolian Giant.** Do you love to grow giant vegetables? There is a fascination in having the largest. Grow this pepper and you will have the fruit that will be the wonder and admiration of the entire neighborhood. There is no variety finer for filling with cabbage. The flesh is thick, meaty, solid and pleasant mild flavor. This is truly a mammoth vegetable and one of the greatest attractions for any garden. Bushes grow 1½ to 2 ft. high,

Remember *We don't charge a cent for seeds and potatoes. We offer them to guarantee your prompt subscription because we need it in carrying out our great undertaking. But you need Up-to-Date Farming even worse than we need your subscription. Don't lay this paper aside until you have sent the order.*

Old subscribers may also have this premium when renewing their subscription, if they ask for it.

READ SOME REPORTS ON THE 1904 SEED COLLECTION

If you miss any of our FREE SEED DISTRIBUTIONS you miss some good things. If any of our old subscribers did not get as good returns as here reported, try again as every article in the '05 collection is a gem.

EXPLANATION—The Premium potato was sent out under the temporary name of "Up-to-Date No. 1." But has been named and is being introduced this year as Everitt's Abundance.

Mr. Everitt:—I value your paper very much. Of the seeds you sent, the Yard Long Corn is just immense—the largest I ever saw. The Pumpkin and Melon are good and the Potato out yields all other kinds.
David A. Bolick, Bloomfield, Ia.

From the ⅛ lb. premium potatoes I planted 22 hills and raised 147 potatoes, weighing 73 lbs. I took second premium at the Flathead County Fair. I also took second premium on pumpkins from the seeds; first premium on White Wonder Melon and two first premiums on Yard Long Corn—one on best half bushel the other on 6 best stalks.
E. J. Cramer, Chautauqua, Mont.

From the ⅛ lb. Premium Potatoes I raised 45 lbs. I regard this as a large yield. The tubers are large, uniform and shapely. They are very valuable and I thank you for the start.
E. McIntire, Worthington, W. Va.

From the ⅛ lb. of premium potatoes I dug 172, weighing 55 lbs. (over 100 lbs. to one.) The other seeds were extra good.
W. J. Hylton, Wolverine, Va.

From the ⅛ lb. of premium potatoes I raised 99 tubers, weighing 48 lbs. I would not take the price of the paper for these potatoes.
G. K. Arnly, Gamewell, N. C.

From the ⅛ lb. of premium potatoes I raised 53 lbs. of as nice, large, smooth potatoes as I ever saw. I am delighted with them. The Yard Long Corn is fine.
19 hills of the potatoes yielded 26 lbs. All other seeds a success.
G. W, Millower. Watkins, N. Y.

This is the Offer: FOR 50 CENTS we will send UP-TO-DATE FARMING twice a month for one year. Also four seed novelties as explained, and a due bill good for 25 cents' worth of packet seed, your selection.

YOURS FREE If you will show this offer to 4 of your Neighbors and get their orders we will send . . **YOURS FREE**

That, is we will send five (5) for the price of 4, or you can keep 50 cents for the fifth order. ¶SUBSCRIBERS ALREADY PAID IN ADVANCE can have their subscription extended another year, OR WE WOULD LIKE if they will make a present of the paper to a friend not now a subscriber. In this way they can get the Free Seed Distribution and we get a new reader.

25c Due Bill We not only want your name but all of your neighbors'. The good that this paper can do is not for a few farmers but for all. Therefore, send us 10 or more addresses on a separate sheet with your order and we will send a due bill good for 25 cents' worth of seeds (vegetable or flower) selected from the catalogue of a leading seed house (your choice.) Surely you will now come and help us to get the million subscribers.

UP-TO-DATE FARMING

J. A. EVERITT, Publisher *INDIANAPOLIS, U. S. A.*

MAIL US THE GRAIN OF CORN

Pub. UP-TO-DATE FARMING, Indianapolis, Ind.

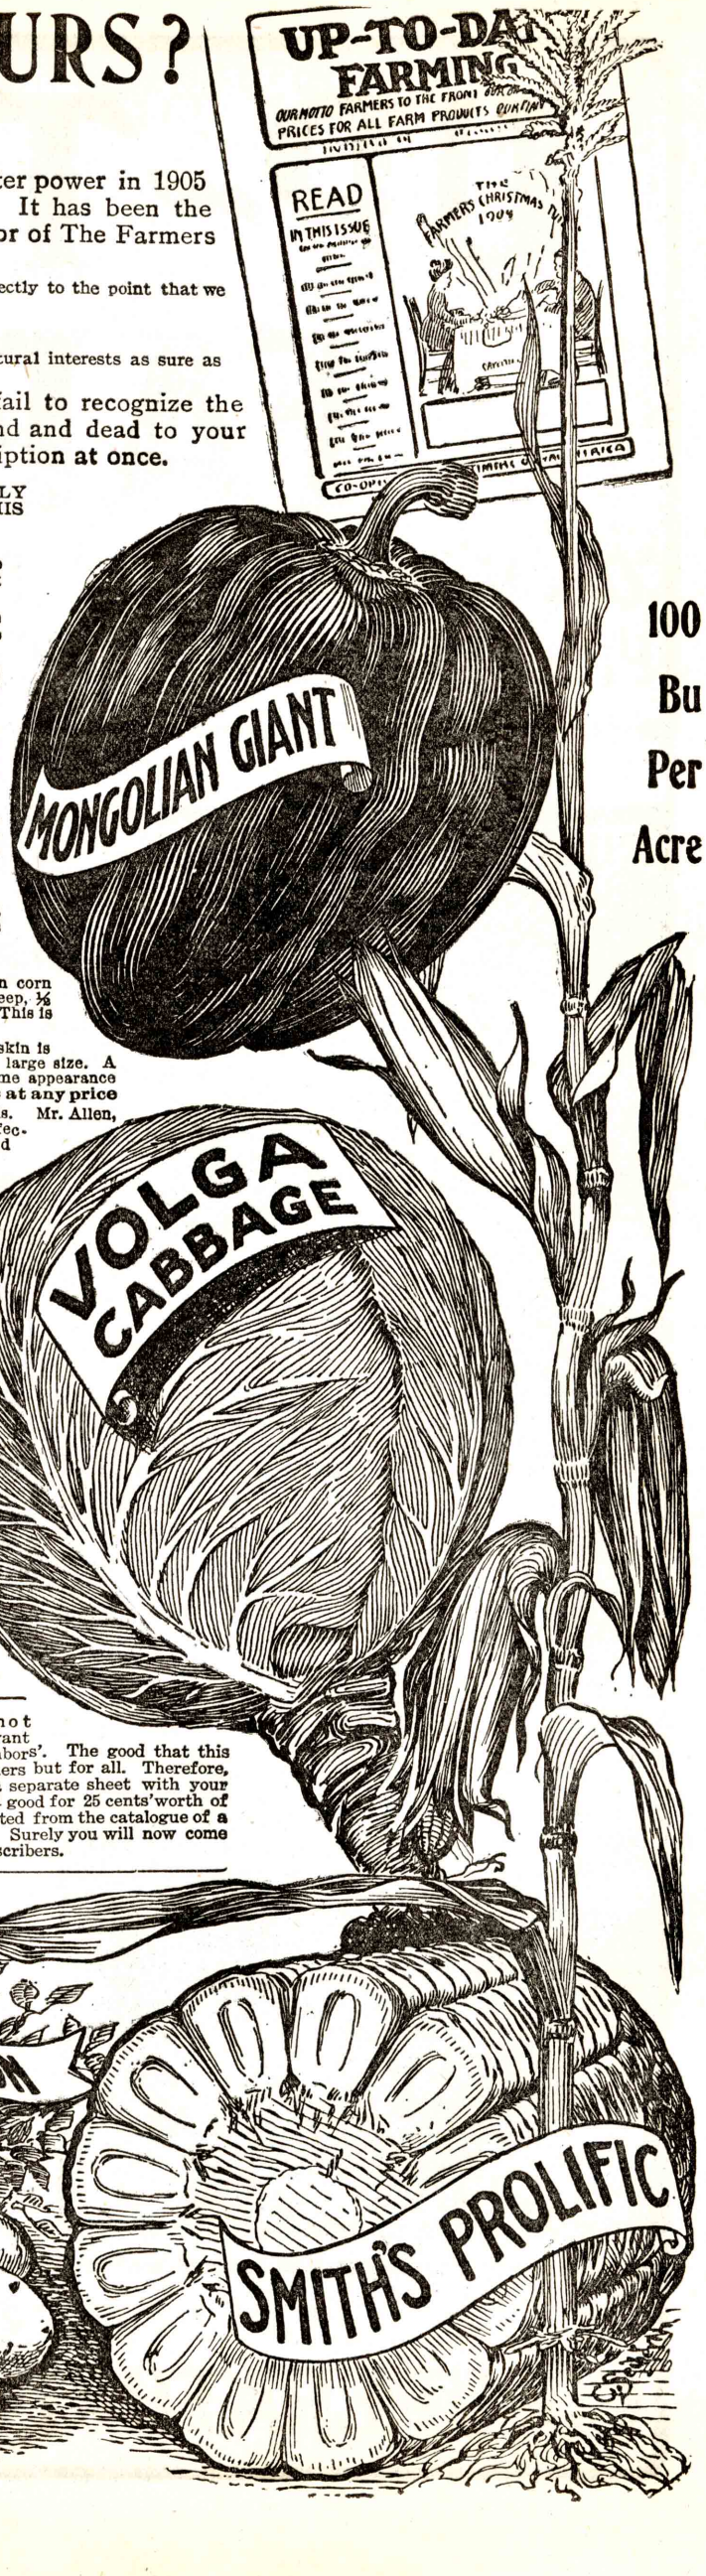
Dear Sir: Send me Up-to-Date Farming one year to the following address. You will also send the seed premium for prompt subscription as advertised in Feb. 15, 1905, UP-TO-DATE FARMING.

Name.....

P. O.....

County..... .....State.....

If you send the list of Names they must be on a sheet separate from order and we will send due bill.



Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 227 West Washington Street

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | INDIANAPOLIS, FEBRUARY 15, 1905 | Number 4

UP-TO-DATE FARMING
PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher
JOHN P. STELLE, ASSOCIATE EDITOR

SUBSCRIPTION PRICE FIFTY CENTS A YEAR
Foreign Subscriptions $1.00 a Year.
MEMBERSHIP IN THE AMERICAN SOCIETY OF EQUITY, $1.00, including a year's subscription.
Three Month's Trial Subscriptions will be Accepted for 10 Cents.
ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Dat fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18 The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizihg and sustaining organized effort for improved conditions. Look for the **LABEL.**

NATIONAL UNION UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	**$ 1.20**
Corn, No. 2 " " " "	
Until January 1st, 1905,	**.50**
From Jan. 1 to Apr. 1, 1905,	**.55**
" April 1 to next crop	**.65**
Hay, No. 1 timothy, " per ton	**12.00**
Oats, No. 2 white, " per bushel	**.40**
Barley, No. 2 " per bushel	**.58**
Barley, No. 3 " per bushel	**.52**
Potatoes—Chicago, per bushel,	
Until January 1st, 1905,	**.55**
After January 1st, 1905,	**.65**
Tobacco, (Price on the farm or at the market town)	
Virginia, dark, average per cwt.	**$ 9.00**
" bright, " "	**12.00**
Kentucky, dark, " "	**8.00**
" burley, " "	**12.00**

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Have you the grit?

This is an age of Get-up-and-Get.

It takes Vim and Push to win.

Farmers have greater need to work than they ever had before. We do not mean on the farm, but among their neighbors.

And they have more to encourage them than they ever had before, because the battle is clearly going their way, and it would be disastrous not to follow up our advantage.

A successful army takes advantage of every waver of the enemy. In this fight for Equity the farmers must do the same. The speculative price makers are on the run, sure as you live. Keep them hustling.

A Herrick, Mich., man sees danger to the peace of the country and loyalty to the government in this movement to secure equity in business. Why, bless you, my dear friend, the surest road to perpetual peace is the one that leads to righteousness, and the truest loyalty is that which makes for justice and equity in both public and private affairs. The President himself will tell you so.

"How can I best help the cause?" is a question that should be on every farmer's lips, and it should be there for an answer. Each must answer it for himself. He knows the direction in which his influence leads, what he can best do and in what way he can have most effect. Pitch out and do it.

Farmers, "Choose ye this day whom you will serve. If the Lord be God, follow Him; if Baal, then follow him." A slight paraphrase of this Scripture text makes it fit the present situation. There are two contending forces—organized speculation, striving to unjustly control agricultural products so as to absorb its profits, and the producers themselves who justly claim reasonable remuneration for their toil, and seek to secure equity for themselves and all others. Which side are you on? "He that is not for me is against me," you know, is another bit of Scripture, and "He that gathereth not with me scattereth abroad." Show yourself on the side where RIGHT is, and you will be on the side where YOUR INTEREST is also.

Is there a farmer who is willing to sit off on the fence while his neighbors chase away the dogs that are slaughtering his sheep? That's the fellow that stands off by himself and looks on while his neighbors are chasing away the powers that have been absorbing the profits due his labor, and are striving for fair prices for his products. D-u-m-p-e-r dumper. Call it Dump, for short.

Everything can something do,
But of what kind of use are you,
If you're a Dumper?

Don't neglect those Third Power Coupons. They are made so as to enable Our People to get the Third Power book into the hands of outsiders. It is a $1.50 book, and of course is cheap at 50 cents, which is all it costs if Our People sell the coupons at 25 cents each, which they are authorized to do. Those who have a coupon, whether they buy it or receive it from a friend as a present, get the book for the coupon and 25 cents.

Up-to-Date Farming is published purely on its merits. It has not a penny of revenue other than that which comes from the legitimate sources open to all other papers, and from which other legitimate publications derive their support. Hence we can confidently appeal to those who feel that we are doing for them a work which other papers are not doing to help us get into other hands, for the sake of enlarging our opportunities as well as affording us means of doing more and more.

Keep in mind the established prices. The National Union is still satisfied that the minimum prices fixed are correct. Remember that the prices set are for market centers, the farm prices being those prices less transportation and reasonable charges for handling. Do not get confused on these prices, and do not try to arrange other scales. And we do not advise holding above them. When we claim equity we must do equity.

A word of warning at this time cannot be out of place. The speculative price-makers who have so long had trade their own way, cannot be expected to surrender tamely. They would willingly sacrifice a year's profits to break up our organization and destroy this movement. Their next supreme effort will be directed at those who are now holding their crops, and they will try much harder to keep later prices down than they are now trying to keep down present prices. Their object in this is obvious. If they can make later prices lower than prices that have gone before, they will try to get in their work on our very best people, who have held their stuff most determinedly, by making it appear that they lost money by holding, and thus strike our movement at a vital point. This is their program. Watch its development, and be prepared for it. Do not be afraid to hold, but sell promptly when you are offered the price.

To Stop Production

Dispatches from the Indiana oil fields tell us the oil men "are talking of abandoning operations for a period of six months in view of the constant reductions in the price of oil." Exactly. What right have the oil men to put a price on oil, and what right have they to stop production when they have more than the market will take at their price? Of course the oil men have a right to do both, but when farmers talk of doing such a thing—Ge whiz! the Boards of Trade begin to jerk the "Rubes" through a barb-wire fence, and the agricultural press dumps salt in the scratches!

"The Chinese Must Go!"

This was a rallying cry almost everywhere a few years ago. Church people, perhaps, started it, labor organizations took it up, the politicians re-echoed it, Legislatures discussed it, and Congress enacted stringent laws bearing upon the subject, and excluding the Chinese. The general concensus has been that the country did well in these enactments, and that no material interest has suffered because of Chinese exclusion.

But watch for a change. A different sentiment is to be cultivated. The monopolistic employers of labor are becoming dissatisfied, not with American labor, but with the wages American labor demands, and cheaper, more subservient labor is desired. See if the metropolitan press does not pretty soon begin to apologize for the Mongolian in America, to deprecate the rigidity of the exclusion laws, and to mildly suggest their repeal or modification. Many reasons will be given but not the real one. The Chinese will be spoken favorably of as house servants and as laborers in remote farming districts, etc., but never as material for filling the ranks of American labor, but that will be the real purpose in view, and fewer months than make a year may see the need of another Dennis Kearney.

A 320-page, cloth bound book, price $1.00, and 10c extra for postage, all for 25 cents, postpaid. See coupons in this paper.

In 1905 farmers will come to the front, never more to be put in the rear.

THE COTTON CONVENTION

ITS WORK A LITTLE DOUBTLUL

We have watched with deep solicitude the great cotton convention recently held in the city of New Orleans. It was one of the largest representative gatherings of the kind ever held in the country, and as men of ability and prominence in movements for relief for the cotton growers were directing it, we looked to it for something substantial in that direction. Of course we have at this writing little information of the work of the convention other than what we glean from the Associated Press dispatches, but its work seems to be fairly epitomized in the following four propositions:

"1. We must tie up and take care of the surplus of this crop and remove it from the markets of the country until next fall, and hold the balance of the crop absolutely in our possession until prices advance to normal conditions.

"2 We must reduce the cotton acreage and the use of commercial fertilizers at least 25 per cent. under that of 1904.

"3. We must arrange for a general system of bonded warehouses under local control of the people throughout the South.

"4. We must at once proceed to organize the producers of the South in every cotton-growing county on a business system of relief and a protection for the future."

We suppose we may fairly assume that the following extract from a well received address delivered by E. K. Summerwell, of New York, outlines the idea of the convention as to how things should be done in order to bring to the cotton growers permanent relief:

"I advocate as the true solution of the question before us the storing of cotton at natural points by local warehouse companies, united, however, through a general storage warehouse company, which shall provide for the uniform receipts and methods and exercise over them such supervision as may justly inspire confidence in them and make their receipts good collateral the world over.

"The natural storage points are not the villages or hamlets where a few bales are marketed, but the concentration points where an ample supply warrants the erection of standard, modern sprinkler system warehouses. Any other are worse than useless. Insurance rates alone prohibit their use. Built on the compartment plan, the warehouse is available for general storage when not needed for cotton, and the system on the whole is of the highest value to every fair-sized town and city of the South."

Up-to-Date Farming proposes to accept the work of the convention in good faith and with high hopes until convinced that an unfortunate course has been taken; but if we may judge from the above four propositions and the extract quoted, we fear what it did is not reassuring.

The first proposition is all right in spirit, but it assumes that there is a surplus which it is necessary to hold until next fall. Why make that distinction? Why not include the entire crop in the latter part of the proposition, and hold it all until a satisfactory price is offered, and no longer; that is, sell it as fast as it will bring the price? Or, as we urged in a previous issue, remove one-fourth of the crop entirely out of the market, label it at a higher price and sell the ballance as it reaches the planters' present minimum.

A DOUBTFUL PLAN

Of the second proposition we have already expressed our opinion . To arbitrarily reduce the acreage and curtail the amount of fertilizer used is a confession that the farmers have done too well, that they have been too industrious, that their lands are too fertile, and it is tantamount to serving notice upon the agricultural schools and colleges and press that they have taught the people too perfectly in the art of production, and it is, therefore, time for them to take a recess. And to the people themselves that they have become too industrious, and it is time for them to gather up their fish-hooks and rub up their old guns, and put in a portion of next summer in hunting and fishing as in the old pioneer days. And if so of cotton, so also of corn, hay, potatoes and tobacco. The idea is antagonistic to all modern teaching, and repulsive to the spirit of progress itself.

DON'T BE NARROW

On the third proposition we have also previously expressed ourselves. Its practicability and efficiency depend altogether upon how it is done. The fourth proposition we approve, except that we deprecate the narrowness of the proposed organization. To organize the cotton growers alone is to make at best a sectional arrangement for the relief of a single interest, whereas there are other interests just as worthy of relief, and needing it just as badly, and that it is just as easy to organize for all as to organize for one, and the organization would be in a geometrical ratio stronger, as it would then have no rivalry or opposition, but would have the universal support of all agricultural interests. We have expressed our opinion on this matter more fully elsewhere.

THE SAME OLD SMELL

But if the extract from Mr. Summerwell's address expresses the idea of the convention as to warehouses and storing, we have little hope of any good coming of it. Those warehouses would be built by and under the control of the purchasing element instead of the producing element, and cotton in them will have passed beyond the control of the farmers just as much as if it were in the warehouses of the New York Exchange, and it would in a very short time have just as little effect on price so far as benefitting the grower is concerned. Human nature is human nature, and greed is greed, no matter in whose name it may be gratified. The method proposed brings the cotton as near to the speculative interests as it is possible to get it, and a surplus thus stored would have an effect upon the market just as depressing as if it were thrown upon the Boards of Trade. Notwithstanding Mr. Summerwell's declaration to the contrary, we contend that the villages and hamlets, and the farms where it is produced, ARE THE NATURAL storage points for the cotton; the places proposed by him are not the natural but the COMMERCIAL storage points, just as are those of the Boards of Trade.

Why Cotton Only?

We note the effort that is being put forth to organize the South solidly in the interest of cotton . Some powerful influences are at work, and commendable zeal is manifested, not only in organizing the traditional "heads of messes," but of carrying the work into districts and townships. But why cotton only? Of what benefit will this compact organization of cotton growers be to the growers of tobacco? Of rice? Of peanuts? Of fruits? Of vegetables? All grown in the same localities, too. We have noted that no matter how closely related an organization may be to other things, it is exclusively, generally arrogantly, for the thing which represents its primal purpose, and is as little a friend, we had almost said as much an enemy, to all other interests as though it had no part in common with them.

The cotton growers need to be organized. They must co-operate in such a way as to control their business and protect their interests, or suffer; but why take the time and incur the expense of organizing this great interest by itself, while the same effort would bring beneath the same protecting roof the tobacco growers, the rice growers, the sugar producers, the truckers, and all other interests of the South which need it just as badly as does cotton?

And there are the sturdier products of the higher latitudes—the wheat, the corn, the hay, the barley, the beans, the potatoes, the stock and northern fruits. The producers of these must co-operate also, for there are powers that are grinding them into poverty, as are those that are so boldly robbing the growers of cotton.

SUPPORT EACH OTHER

Would not an organization of cotton growers feel much stronger if it were also an organization of tobacco growers, and of the growers of all other products of the South? And would not these feel much stronger still if they knew that their organization was an organization of wheat growers, stock raisers, and all the hardy products of the North?

All farmers are natural allies. They alike cultivate the earth, and from its fruitful bosom all their rewards come. The same spirit of greed and cruel speculation, made ruinous by combination, plunders them all, and the same spirit of union and co-operation must save them from these plunderers. How much more powerful, then, if all be combined together, with all co-operating in the same way, and each supporting the other like mighty armies, ready to throw powerful reserves and reinforcements wherever the fight may chance to be severest?

We are glad to see farmers organize, but we have misgivings concerning these exclusive societies, and fear that instead of hastening the great consummation of independence for agriculture in general, they may delay it. Special societies have arisen time and again, to look after special interests, only to fall in defeat or in victory, never making a permanent success. Such is very likely to still be the history of them.

It is better to have an organization broad enough to cover every inch of cultivated soil, and to protect every useful thing that grows therefrom, with a banner wide enough to include within its victorious folds their each and every interest.

Silly Slush from Sensible Men

It has been the custom for a certain class of the American people to berate the railroads for about all the ills they suffer. If the money market becomes as tight as a Dutch sailor the blame for hard times is promptly saddled on the railroads. If the crops are poor, the summer hot, the winter cold, or the baby sick, there is always some one to prove beyond the shadow of a doubt that the railways have either directly or indirectly caused the trouble. Fortunately this class of barlow whittlers and squirrel hunters do not form the bulk of our population, and there is reason for believing that there are not as many of them now as there were some few years ago.

One can scarcely believe that such froth could be found in a respectable publication in this enlightened day, yet we clip the above personally from the Chicago Drovers' Telegram of Jan. 16, 1905, so there can be no mistake about it.

That sickening twaddle, of course, is aimed at the farmer, and the astute editor, absolutely devoid of argument, concluded he could easily rout that element by dashing the contents of a stink-pot in his face, and perhaps invoke a spiritless, brainless laugh at the expense of the rural population.

FARMERS AND THE RAILROADS

The farmer is not opposed to the railroads, nor has he accused their management of anything of which it has not been guilty.

As a class, the farmer has been benefited by the railroads perhaps more than has been any other class. He fully realizes that, and is never slow to admit it; and he is the last man who would destroy or weaken the railroads, and the first that would fight for them were their destruction threatened. But he realizes also that the great corporations that manipulate and control the railroads have treated him with less consideration than any other of their patrons, and that they have done him greater wrongs.

Water is useful to the farmer, and he would not give it up, could not do without it, but he requires it to be held within due bounds, though he may have to dig ditches and build dams and dikes to hold it there.

Fire is indispensable to the farmer, but its great usefulness does not place the farmer under obligations to sit down, dumb and stupid, while it consumes his crops, his buildings and his home.

RAILROADS AND THE FARMERS

The writer of the above quotation knows, as well as the writer of this article knows, that the railroad corporations have been unjust; that they have discriminated against the small or moderate unorganized shippers in favor of the large organized shippers; that they have not made rates based upon the cost of the service, but upon what the "traffic will bear;" that they have combined with each other to destroy competition, that they may the easier enforce exorbitant charges; that they have given advantages to localities and other corporations in which their own capitalists were interested, that have ruined and driven out of business other localities and enterprises just as deserving of consideration and service, but from which the railroad capitalists were not drawing special revenues; that they have gone into collusion with other corporations, of which they themselves have generally been the parties most in interest, who own, or claim to own, private lines of cars that do a carrying business, and make their own charges and enforce their collection by the railroads surrendering to them the business, and permitting no competition on their lines.

THE KICKING FARMERS IN GOOD COMPANY

These are things of which farmers complain, and they complain justly. They can well smile at the sickly ridicule hurled at them by a thoughtless press, for they are in good company. The great stockmen of the West are entering the same complaints. So are the dairymen and fruitmen, the coal operators and the timber men. The governors of several States have taken it up and demanded restraining laws, and the legislatures are discussing them. The President of the United States made these things the subject of a vital part of his message, and the Congress is giving them most interested attention. The "Barlow whittlers and squirrel hunters" may give their trousers an extra hitch upward, and consider themselves honored by the slush aimed at them by the subservient tools of a monopolistic press.

We have no apology for this article. But for the contemptible paragraph quoted it would, perhaps, never have been written.

In 1905 farmers will come to the front, never more to be put in the rear.

INCONSISTENCY

SOME FALLACIES SHOWN UP

The inconsistency of modern teachers of economics, especially those relating to rural life and farm production and marketing, are so glaring as to be almost incredible were they not shown so plainly in both teachers and teachings. In a recent issue of a prominent livestock publication, one that is in very close touch with the packers' comibne, we find the following:

If the planter in the South would raise more livestock he wouldn't have to burn his cotton.

The object of that paragraph must be to teach the cotton grower that if he would grow less cotton and more cattle he would better his condition. Very close to the above paragraph, in the very same paper, evidently written by the same hand and at very nearly the same time, we find this:

When we get just as many cattle as the market needs, and no more, the word millennium will be engraved on the front gate.

That paragraph means, if it means anything, that there is always more cattle than the market needs, that should there come a time when there would be no more than the market needs, the fact would be so startling as to justify a looking for the millennium; and it is intended to teach, if anything, that an increase in cattle production is not desirable and consequently is not likely to be profitable . Where is the consistency, then, in advising cotton planters to diminish their production of cotton, of which it is claimed they have too much, and increase their production of livestock, of which the teacher (?) declares there is already too much?

NOT TOO MUCH

We contend there is not too much of either cotton or cattle, or any other good thing. If there is, our entire system of teaching and preaching, of urging the race to be industrious and progressive, to "make two blades of grass grow where but one grew before," is at fault.

FOR LACK OF THOUGHT

From the Racine, Wis., Times, of Jan. 16, we clip the following:

No one really believes that a considerable part of the agricultural community has become impregnated with the utopian idea that it can dictate the price of wheat and other cereals, and yet there is an effort being made in that direction; and we have seen it manifested on the local market in a plan to hold wheat for $1.20 a bushel, corn for 50 cents and other grains for prices inconsistent with market values.

It is too nonsensical a proposition to be treated seriously. The unvarying law of supply and demand will ever regulate the price of cereals and other farm products and of all other commodities as well.

What does our Wisconsin contemporary consider to be the market value? How does he know whether a price is or is not consistent with the market value? Who make the markets? The trade and other journals publish them, but who furnish the figures? Supply and demand, we suppose our friend would answer. But who is supply and demand? Who is or are authorized to speak for supply and demand? Supply and demand is not a personage, not an entity, but a condition, rather a compound condition, two things, or, rather a thing and a desire for it, coupled with the ability to gratify the desire.

WHO SHALL DO IT?

Again we ask, who is authorized to make the figures that shall represent the relation existing between the desire and the thing, measured in the currency of the country? If any one does it in this age of speculation, of diamond cut diamond, he does it very imperfectly, very awkwardly, very absurdly. That it is done at all "is too absurd a proposition to be treated seriously." Supply is an annual thing, a thing depending upon the crops and the seasons, and, therefore, cannot change but with the seasons. And demand is not a thing of great flexibility. Consumption does not change with every rise and fall of the tide or change of the moon, but prices, what our friend regards as "market values," do change in most unexpected and unreasonable ways, and at times when there could have been no change either in the supply or the demand. These changes, which none are so ignorant as not to note in the market reports, tally strangely with "the unvarying law of supply and demand," which our Wisconsin friend declares "will ever regulate the price of cereals and other farm products, and all other commodities as well."

IT IS LAUGHABLE

We try to be too civil to laugh at any one who seems to be serious, but that "all other commodities" is too good. Who puts prices on farm implements, on nails, wire and other iron and steel products, on coal, gas, oil, and all other such articles or commodities? May the genius of modern thought send at least a feeble ray of light up in the direction of Racine, Wis.

HE KNOWS BETTER

But this editor is not ignorant of the fact, he is simply inconsistent, for in the very next sentence he declares:

If the farmers could and would stand together they might be able at certain times to play hob with grain markets. And they would be justified, for the speculator, the elevator man and the packer have toyed with the farmer for many years.

How could all this be if supply and demand does it, and if it is supply and demand, something that is not a personality, but an unvarying law, how would the farmers be justified in "playing hob with the market?"

FARMERS ARE DOING RIGHT

The fact is, the farmers are simply doing just what our Wisconsin friend says they would be justified in doing ;nothing more, nothing less, and their work, if he would take time to understand it, would be approved by him, and he would see that its accomplishment is as certain as that effect follows cause.

We wish to mention one more case of this strange inconsistency on the part of intelligent people, and then we shall dismiss it.

SHOOTS VERY WILD

W. D. Woods, in the Charleston, S. C., News-Courier, of Jan. 16, says:

That so many farmers were able to hold their cotton speaks well for their financial prosperity and business ability, but holding it when it could have been sold at a very remunerative price speaks very poorly for their judgment. To put the whole thing in a nutshell, they simply turned speculators and are so unfortunate as to be on the losing side.

Mr Woods is painfully inconsistent. In refusing to accept an offered price for cotton, or any other product, the producer is only standing upon his rights. The cotton is his; he may sell or he may refuse; there is not an element of modern speculation in it. The speculator's work is a double one, he buys to sell again. Even this may be done in a legitimate way, free from any great wrong. But the modern spirit of commercialism, supported by powerful combinations, which enables the operators to force prices down upon the producers to a starvation level and up to the consumers to an almost prohibitive level, is a wrong against which both producers and consumers are justified in combining, and friends of equity and fair dealing should support the movement.

THEIR JUDGMENT NOT AT FAULT

Neither is Mr. Wood justified in attacking the judgment of those who did not sell their cotton on the earlier market. They could not know of such a crop as has since been reported by the Department of Agriculture, nor, in fact, do they yet know it. No such estimates had been made by experts, and the expert price makers were themselves deceived, or no such early prices would have been made . Besides, had all rushed to sell on the earlier market, as Mr. Wood seems to think good judgment would have prompted, there would have been such a congestiton as the world never before saw, and whose effects upon the future could neither have been foreseen nor foretold. And were that teaching to become the rule of the South, the cotton market, and all other markets, so far as the producers are concerned, would be a confused jumble, a rush and a grab, the principal effort being to get first to the market. The effect this would have on production no Daniel is needed to tell. We are glad that the South so generally sustains the holding of cotton, and that the country generally is sustaining the holding of all crops for equitable prices. The future will prove not only its judgment but its wisdom.

Farming's Greatest Need

From a very excellent article in the Indianapolis Star of recent date, on the work of the "Corn School" at Purdue University, we clip the following paragraph:

Indiana's only hope for growth as an agricultural State lies in increased production. There are about as many farms in the State as there ever will be, but the returns per acre are not what they should be or will be when good seed is universally used.

We agree with our contemporary in the main, and heartily second every movement for increased intelligence among the rural masses, and a more widely disseminated knowledge of the technique of agriculture. But is increased production Indiana's only hope?

There are two objects in farming, either of them of sufficient importance to form a foundation for as great a calling as humanity knows. One object is to furnish a livelihood, including the comforts and luxuries of life to which humanity in this age is entitled, for those engaged in it; the other is to feed and clothe the world of humans and to feed the world of beasts .

The first of these objects the education of the age seems almost to have ignored . The world has taken it for granted that the farmer would make a living because he had it in his own sinews and his acres. The less thoughtful have even ridiculed the living he has made, the clothes he has worn and the schools his children have attended, as though anything was good enough for those who are "only farmers."

The farmers' PROFIT end of this business, therefore, has received little attention, little thought or consideration, and the effort of rural education has been directed to the second object of farming, an increase of the quantity produced. No doubt many who have been so zealous and sincere in teaching how to produce more have believed they were, at the same time, teaching the farmer how to increase his income or profits, but they had not considered the market end of the crop.

What always follows an increased yield, a bumper crop, to use the words of the commercial press? Invariably low prices. Many cases are recorded in our most authoritative statistics where a smaller crop actually brought the producers more, not only in price but in amount sold for, than a larger one preceding or following it.

Take the cotton situation in this country today. An immense crop is reported—the very fruition of the teaching of the schools and the agricultural press—and immediately following the announcement of the size of the crop, the market was demoralized, and the producers were excited and disturbed as they have not been for years.

Take the corn crop, the hay crop, and the potato crop of the year just past. There were early reports of great yields, and the market fluttered like a bird in a cage, but could not find its expected low level, because influences were at work which had never been before, and which the schools did not teach.

Take the live stock interests. Growers are everywhere complaining at what they call ruinously low prices, and they are answered that there is an overproduction—too much on the market—just what the schools and institutes and press have labored to bring about.

Therefore, while we favor education, uphold our colleges and support our institutes, we seriously doubt if "Indiana's only hope" lies in increased production, or that of any other State of this great Union, but rather in more remunerative and steadier prices. Guarantee to the farmer steady and remunerative prices, prices on a reasonable level with the prices of things he must buy, and he himself will do what the schools and institutes and press have failed to do, he will solve the problem of increased production. And this guarantee, these steadier and remunerative prices, will in no wise oppress the consumers of his products.

Wool and Cotton

Bradstreet's quotes from the National Provisioner to the effect that "wool is now at a danger point," and says:

It is high, but cannot be expected to strain the market at so high a mark over a long period with the slump in cotton prices and a big cotton crop meeting it at the looms. The disposition to more largely use cotton in the weave will be increased with the wide margin now existing between wool and cotton prices. This will naturally affect the fabrics when these go forward. The textile market must heed the hint. The gap between cheaper cottons and very high woolens—should the mills essay to maintain present prices—will call the mixed-goods grade of fabrics into the market to shade off values from the high fabrics to the lower lint plane. Any readjustment, whatever its nature, must affect both the wool and the textile market and drag them to a lower level.

"Drag them to a lower level!" That is a phrase which both flockmen and planters should heed. The productive interests cannot stand a lower level, and this condition proves what has so often been said in these columns, that no one product stands alone, and that no organization short of one which takes in the entire productive field can solve the problem of price which affects every product that grows from the soil, including the great corelative live stock interest.

In spite of the selfishly restricted efforts of the cotton leaders, we implore the wool men to rally to their support, and the wheat, corn and hay men also, and the livestock men too. Let it be known once for all, that we are all on the same turbulent sea and in the same fragile boat. The shock that sinks cotton pulls us all beneath the same wave, and, on the other hand, a victory for cotton is a victory for every other agricultural interest.

Not a Sure Index

From Press Bulletin 164 of the United States Geological Survey we clip the following:

The general prosperity of the country in 1904 was reflected in an unusual demand for the cut stones (diamonds.)

The demand for diamonds and the prices paid for them is not always a true index of general prosperity. In that period of our country's history when there were no immensely rich and but few who were desperately poor, it might have been more certainly taken as such than now, when even multimillionaires are not uncommon, and when the range between the rich and the poor is so tremendously wide. The immensely rich may make an active trade in diamonds, while the lower, and even the middle classes, may not be in the enjoyment of prosperity.

But our purpose in mentioning this matter is to call attention to an error too often made by those who direct public affairs. They constantly move within the wealthier circles, and seldom see the masses of the people. When there is evidence of prosperity among those with whom they most associate, they take it for granted that the same prosperity reaches down through all the ranks of our people . But such is not always the case. Indeed it often is not so. When the wealthier classes are buying diamonds, thousands of deserving people are hesitating about buying necessities. We do not mean the unfortunately pauperized classes, for "the poor ye have with you always," but many who should be well to do—whose toil and methods of living entitle them to comfortable competence.

When Secretary Wilson figures it that the farmers are the wealthiest people on earth, it does not follow that all farmers are prosperous, or that a majority of them are. They may all deserve to be, but they are not. Whatever else may be said, it will not be claimed by reasonable people that farmers have always had their due. Present methods and systems of doing business have placed them at a disadvantage, and put above them and into other hands the prosperity that ought to be theirs, and that is too often credited to them in official statistics .

In making their estimate of general prosperity we would advise officials to consult the condition of the great middle classes rather than that of the purchasers of diamonds.

No Help from High Places

Mr. Don M. Leach, of Ackley, Iowa, writes us that in his Christmas address to farmers, Gov. Cummins, of that State, said:

"You farmers are not the beneficiaries of the opportunity to sell things at a higher price than they should bear, for the reason that there is no combination among you, and never can be. While the buyers of your cattle and hogs have found it possible to combine, the producers and sellers of stock and grain have never yet been able to centralize into a trust, and you never will be."

Now, we take it that Gov. Cummins is not in favor of the continued exploitation of the farmers . He virtually admits that they are being exploited, for "the buyers of their cattle and hogs have found it possible to combine," but his only consolation for the farmers is that they cannot do so.

If the governor is correct, the outlook for the farmers is not encouraging. The parties who deal with them can combine, they have combined, and they have worked their combination to its full benefit, have made prices and compelled their acceptance without any reference to supply and demand, cost of production or any other law of trade. Efforts, feeble and spasmodic it is true, have been made to apply the civil law and restrain them through the courts, but all to no avail. And these combinations which have already proven strong for evil, will get no weaker, but continually stronger.

But Gov. Cummins is not correct. Farmers can combine, not into a trust with a capital stock to do the business of the commercial world, but to the extent of selling when they are offered a reasonable price, and of refusing to sell when they are not. This is the only way in which farmers can compete with the combinations that would impoverish them, and in such combination they have this advantage, that they are the producers and first owners of the articles dealt in, and, therefore, have the first word in the deal. This gives them such an advantage as to make their victory sure if not easy.

Up-to-Date Is Right Again

This paper has all the time contended, and the A. S. of E. is based upon that contention, that mutual interest is the most powerful link that can bind people together, and that self-interest will prompt to united action when mystic rites and plighted vows may not. Another unhappy proof of this comes to us from Kentucky. Some kind of local tobacco association there took written and signed obligations from its members that they would make certain agreed disposition of their tobacco. As was to be expected, some failed to keep their agreements, and now law suits are promised, just the thing that true farm organizations ought to prevent. We clip the following from a recently published letter from the chairman of the executive committee:

"Replying to your inquiry as to what we are to do about the parties who joined the Dark Tobacco District Planters Pretective Association and have violated their obligation to same by selling their tobacco, I know very well what we can do about it. I consulted able lawyers in Tennessee and Kentucky, before our constitution, our charter or pledge were admitted for acceptance, and was assured that they were legal and binding. I have since consulted these lawyers, and they again assure me that there is no question of our right of action against the violators of our pledge and also the right to injunction against the delivery of the tobacco."

All of which we regard as very unfortunate. The A. S. of E. seeks no pledge; it lays no foundation for lawsuits; it puts its members upon their honor and manhood, and places before them their own financial benefits as the incentive to prompt them to stand for themselves. If there be any whom these will not hold firm, obligations will not do it. Besides our conditions are such that unanimous action is not needed, and if some fail to meet the expectations of their neighbors, their defection cannot seriously affect the result, as there is always a need which it is proper to meet, and meeting that need, if it is known that only the need is to be met and there is to be no glut, it cannot and will not materially disturb the price, and the recognition of the dumpers will make them each year fewer in numbers.

ACTIVITY IN KENTUCKY AND TENNESSEE

Editor Up-to-Date Farming.

I am glad to be able to state that the farmers of this county (Montgomery, Tenn.), and over the entire dark tobacco district, are earnest for controlled marketing and equitable prices. The members of the A. S. of E. are the vanguard, and as solid as a wall of adamant, and are working in perfect harmony with the local tobacco association. This association, known as the Clarksville Dark District Tobacco Planters' Association, embraces as its territory about sixteen counties in Kentucky and Tennessee. Its plan is identical with the plan of the American Society of Equity, with one exception: The farmers sign a written agreement to place the sale of their tobacco in the hands of an executive committee to sell. This executive committee is composed of the chairmen of several counties. The planters will prize their tobacco, or have it done at some of the various prizing-houses established over the territory. These houses furnish the hogsheads and prize at 25 cents per hundred weight. They can, if they desire, store it, and the banks will advance them money at 6 per cent. interest Those who prize are required to execute a bond as a guarantee for all reclamations.

The conflict is on. The farmers are solidly united. No tobacco is being sold, but a few crops of farmers that do not belong to any organization. I have never heard of a member of the A. S. of E. selling, whether he belonged to a local union or not. Nearly 8,000,000 pounds are held by organized farmers in this county alone. Ten million pounds is the county's estimated 1904 crop. In the entire dark tobacco district 80,000,000 pounds are thus held out of 100,000,000 pounds produced. So the farmers are controlling the situation this year.

The trust and their agents have been greatly surprised at the action of the "ignorant" farmers. They tried ignoring the organization at first, but that would not work. Then they resorted to ridicule, and that failed. Now they have about subsided: while the farmers are warming up more and more. I have received letters from members of the A. S. of E. in and out of the dark tobacco district. All write that the farmers are doing just like we are—standing together and holding their crops. I live in the midst of the dark tobacco belt, near Clarksville, the great market for this tobacco. It is bought and handled here for several foreign countries, each taking a different type. The prices we are now holding for are as follows:

Type	Price per lb. cts.
Italian A	12½
Italian B	11¼
Italian C	9½
French A	10
French B	9½
French C	8½
Austrian A	15
Austrian B	12
Austrian C	11
German spinner, fine	13½
German spinner, medium	12
German spinner, common	10
Antwerp leaf	8½ to 10
African leaf	9 to 11½
Snuff leaf	9
Snuff lugs	8
All other lugs	6¾ to 8¼

These are the prices the farmers demand, and judging from the situation now they will win out, and realize their prices. Last year they received about an average of 4½ cents per pound. For the pessimist to longer contend that the farmers can't organize is preposterous. They have organized, and they are controlling the prices, and even the "dumpers" who have sold have realized an advance of 3 cents per pound over last year's prices. They are receiving the benefit of organization that they had not the moral courage and manhood to join. The greatest need the farmer has to perfect his organization is information Up-to-Date Farming is the first and only paper to my knowledge that taught them how to really improve their condition. They should rise in their might and demand of that old, dilapidated, worm-eaten structure, the agricultural press, that it either change its tune or hang its harp upon the willows. Everything has made progress in the last 25 years but the farm papers. What have they taught the farmers but to grow more and more and get less and less for it? The larger the general crop the poorer the farmer, unless he can sell it at a profitable price. The farmer has never been taught how to grow more on an acre of land by the agricultural press, but more only as he cultivated more land. This is true, or the U. S. census is false.

The A. S. of E. and Up-to-Date have caused a revolution of thought along this line. Their slogan, no matter what you grow, get reasonable pay for it, will lead to agricultural independence, prosperity and happiness.

Before I close I want to say, and I am in earnest about it, if farmers generally would read Mr. Everitt's book, The Third Power, it would unite them so insolubly, and give them so many advantages, that prosperity not dreamed of would be realized. It is of all books (the Bible excepted) the one that farmers should read. If the greatness of a book is measured by the good it brings to the masses, the great common people, it is the greatest book that has come from the press in 25 years. D. T. HAMILL.

Guthrie, Ky.

Fairness and Equity

Editor Up-to-Date Farming.

We are progressing finely. Last Saturday night we had a meeting of the A. S. of E. at Glenville school house, where we have a strong lodge of good farmers, who seem to be determined and resolute men, and who talk as though they mean business. One of the results of the meeting was ten new members.

HON. J. A. PEAK.

Resolutions were unanimously adopted to the effect that, as tobacco growers, we will reduce our crops to ten thousand plants to the hand, which equals two and a half acres, and we count boys under fourteen half that amount. We propose to publish this action throughout the dark tobacco belt, and I am satisfied it will be very generally agreed to.

It would not be equity to compel buyers to pay us a reasonable price this year, and next year flood the market with an overproduction, which would be liable to cause the buyers loss on that previously bought. I therefore consider this reduction of crop a logical and equitable thing to do.

And other farm products need like attention. It is ridiculous how low hogs and cattle are selling, considering the price consumers have to pay. These things should be regulated, and can be if the farmers will stand pat and demand it. The farmer must be taught self-confidence and to claim his rights and privileges. There are hundreds of men in this country who are good citizens and industrious men, who move about from pillar to post, eking out a miserable existence, but who would do well if they had a fair show. I have reference to renters or croppers, who work hard from dawn to dark, and at the end of the year they barely come out even, because they don't get enough for their labor. The land-owners are not to blame, because they are in the same boat and must accept the same prices the renter gets. J. A. PEAK.

Glenville, Ky.

The price of the new third edition "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents. See coupons in this paper.

Have you sent your renewal of subscription? If you are not a member of the A. S. of E make the remittance, $1.00, and become a full member. You will value the members manual badge, etc., and besides your money will help us to carry the work forward for other members. Don't put off your renewal any longer.

THE BEEF TRUST

Supreme Court Decides Against It

Attorney General Moody has argued before the Supreme Court of the United States the case brought by the government against the packers' combine, or so-called Beef Trust. The facts as the Attorney General states them are so entirely in agreement with what has been said in these columns against that powerful and hurtful combine that we make the following extracts from his able statement of the case as he presented it before the Supreme Court:

"It (the combination) creates such a relation between independent persons as will result in the controlling or limiting of production, the suppression of competition either with respect of prices, territory, or customers, the destruction of competition of others outside the combination, and the creation by such means of a monopoly in the modern sense of the word. Such contracts as these, if not universally, have been by the great mass of authorities held to be against public policy, and unlawful in the sense of being unenforceable between the parties.

* * *

"It appears from paragraph 8 that the defendants have combined and conspired arbitrarily to raise, lower and fix prices of fresh meat, and to keep them uniform as among themselves. This conspiracy is rendered effective by periodical, secret meetings throughout the country by the agents and attorneys of the defendants. At these meetings uniform prices are agreed upon, and the defendants adhere to the prices thus fixed. That such an agreement relates to and restrains commerce, according to the well-settled rule of this court, is so plain that I cannot permit myself to argue it.

* * *

"Their offence is complete when the combination is made. The combination is not cured of its vice if, perchance, some agent sees fit to divide the carcasses before they are sold. Let not the offence of these defendants be obscured by any refinement concerning the details of their conduct. Controlling 60 per cent. of the fresh-meat industry of the whole country, they sit down at their slaughtering and packing establishments, and, with the aid of the telegraph, through the instrumentality of countless agents and attorneys, spread throughout the country, clothing their transactions and sheltering their misconduct by ciphers and secret codes ,lower or raise, and when thus lowered or raised, fix and maintain absolutely, as among themselves, the price of every pound of one of the great necessities of life, as it enters and follows the channels of interstate commerce. This is an unlawful restraint of commerce among the States, and was so declared in the Addyston Pipe case, from which all the ingenuity of counsel cannot distinguish the case at bar."

* * *

"From this (paragraph 10) it appears that the defendants are all engaged in the common effort to obtain unlawful railroad rates, which they subsequently share or pool among themselves, and that their scheme contemplates not only the pooling of these unlawful rates, but the exclusion of all outside competitors from obtaining them. There is set forth, perhaps inartificially, a combination upon this subject. No competition can long endure against those who are secretly and in defiance of the law enjoying rates for the transportation of their property in interstate commerce, which constitute a preference over all others in the same business. No more fruitful source of monopoly can be found than the enjoyment of preferential rates. The history of the country demonstrates this."

* * *

In the seventh paragraph of the petition it appears that the defendants have agreed upon this device: In pursuance of the conspiracy among themselves, their agents bid up the price of livestock at certain selected times to an abnormal point. This naturally induces the shipment from other States of livestock to the points where the price is bid up in quantities much larger than under normal conditions. Then, taking advantage of this congestion of the markets, they refrain from bidding against each other in the purchase of livestock, with the result that the producers and owners of the stock are forced to sell it at ruinous prices. Thus, the unlawful conspiracy to refrain from bidding against each other is made doubly profitable, and the great profits which come from the transaction in turn increase the power of the combination and tend to fasten upon the people a monopoly. The conspiracy in this case is ancillary to the conspiracy to refrain from bidding and to the creation of the monopoly which the whole case discloses.

Since the above was in type, the Supreme Court has decided against the packers, and we may soon see what will come of it.

Mass meetings were held in Georgia in December to pledge the cotton growers to hold their cotton for 10 cents. They will apply to the local banks for aid to tide them over.

A Good Thought for Good Roads

The McLeansboro Times, a leading paper of Illinois, takes the following view of road building. The condition in Illinois is not peculiar to that State. Almost every State could muster a strong force from the penitentiaries that might do as grand work in road making. We are in favor of roads, and we second any effort to make them which does not savor of long debts, corroding interest and bonds:

We have perhaps three or four thousand convicts in our State penal institutions. These men were engaged in the manufacture of various articles of commerce, which went far toward paying the expenses of their maintenance. At the behest of organized labor these convicts, or the greater portion of them, are now idle, a condition which is proving very unsatisfactory both to the State at large and the convicts themselves.

At both penitentiaries are enormous quarries of soft stone. Crushed stone or macadam makes fine roads. At a comparatively small cost immense crushers could be put in and the convicts put to work preparing this stone for use on the roads of the State ,without coming into competition with outside labor. It would take years to macadam all the roads of the State, but years have been consumed in the discussion of the good roads question and nothing of consequence accomplished yet.

In this manner we could have good roads al lover the State, and when it is done there will be no bonds or other indebtedness outstanding for posterity to wrangle over.

Cold Storage of Apples

It is as amazing as it is gratifying to note the wonderful increase in the sentiment favorable to holding farm products to steady prices and to secure legitimate profits to the producers. We have no knowledge that this was ever advocated for the purposes named previous to the agitation begun by the American Society of Equity. Now one meets it almost everywhere, and in most unexpected places. The producing people will never again be content with the old uncertain but always ruinous grind of up-and-down prices, and the consuming people will freely accord to them the right to steady and equitable prices, when they see it is so much better for all. Note the following from Farm Life, published by one of the strongest houses of the country, Rand, McNally and Co., Chicago. How gladly we endorse that article. Observe the reason given for cold storage—to equalize prices and prevent the fruit from being "sold below the cost of production:"

The system of cold storage of apples will inevitably exert a very decided influence in equaling prices during the entire year. It will measureably prevent overcrowding the market in the fall season which frequently causes the crop to be sold below the cost of production. When a surplus of apples is forced upon the market the grower fails to get what he should for his crop, and the consumer fails to get what he should have when he needs it. A constant supply, at a fair price, of well-matured apples, carefully handled, honestly packed in bushel and half-bushel boxes, and placed and held in cold storage houses to meet the ever-increasing demand for prime fruit, would prove profitable. The cold storage system has come to stay. The number of houses of small capacity should be greatly increased. That the cold storage business is a profitable one is shown by the rapidly increasing number of large cold storage houses that are being built.

There is a power
Strong as a tower,
'Tis the farmers organized.
Hour by hour
Read the THIRD POWER,
'Till its strength is realized.

We would like for our friends to read the advertisements in this paper as well as the editorials and other reading matter. Our advertisers will do what they say. If they don't, report to us.

Have you sent your renewal of subscription? If you are not a member of the A. S. of E. make the remittance, $1.00, and become a full member. You will value the members manual badge, etc., and besides your money will help us to carry the work forward for other members. Don't put off your renewal any longer.

A 320 page, cloth bound book, price $1.00, and 10 cents extra for postage, all for 25 cents, postpaid. See coupons in this paper.

SUBSCRIPE now. RENEW now. Up to-Date Farming will be a power in 1905.

In Western Michigan

Editor Up-to-Date Farming:

I am located in the fruit belt of western Michigan; South Haven is our market town. We raise no surplus wheat, corn or hay. A few carloads of hogs are sent to Chicago in the fall and winter, but much meat is sent back during the year, so it may safely be said we produce no surplus meat. The butchers are buying dressed hogs as low as $4.15, but consumers are charged nearly as much for steak or roast as when the farmer got a fair price for the stock.

Beans and potatoes are our main crops for market, aside from fruits and berries, for which this section is noted. I do not believe American intelligence is willing to give up defeated by Armour and Co., or any other concern. Some means must be devised. I dare say a small packing plant would be impracticable, but could we not with cold storage hold back much of our perishable products until the market needs them? If each section similarly located would do the same it would relieve the overcrowded centers. I believe farmers' warehouses would help us with our fruit, berries, beans and potatoes. Crops could be collected, grades maintained, and sales made to dealers in carloads, or even in smaller quantities, thus saving expense to both grower and shipper.—H. B. Northup, Kibbie, Mich.

How to Succeed

Editor Up-to-Date Farming:

In the month of March last year we organized a local union in our school district, and every farmer near us has joined it. We are very enthusiastic for the growth of the society, and certainly we ought to be, for it has made us money. The writer of this has saved $118 through the advise of the A. S. of E., and I personally know that every member here admits the A. S. of E. was a factor in getting better prices for our products. In consideration of these facts our local union has organized another local in an adjoining township. We have urged them, and no doubt they will organize the next school district, etc. Should this plan be adopted all over the country it will not be long until we shall be a million strong. When that is accomplished the American farmer will indeed be brought to the front, where he so properly belongs.—T. D. Donnewaul, Carlyle, Ill.

It Is for General Welfare

The principles of controlled marketing as taught by Up-to-Date Farming greatly elevate farming, and bring it to a higher level. To raise large crops is only half of intelligent farming; to know how to market them profitably is the other half. Up-to-Date Farming is the only agricultural paper that I know which advocates and teaches how to secure profitable prices for farm products, and for that reason it does more good for the farmers directly, and others indirectly, than all the other farm papers combined. What does it profit the farmer to raise large crops and then sell them at a loss? Immense crops have been raised for several years, and at a loss to the farmers.

I believe so long as farmers pay no attention to marketing their crops, their action cannot be considered intelligent. No matter how much scientific and general knowledge a man has, and how skillfully he produces, if he sell his products at a loss he cannot be regarded a successful farmer.

My advice to all farmers is to subscribe for and read the paper that alone teaches this important part of farming, and learn not only that, but about the American Society of Equity. It cannot be necessary to urge present subscribers to renew, and to solicit new subscriptions. It is for our general welfare, and to secure equity in life and business.

C. W. LAND.

Holland, Ind.

W. H. McMillon, of Paris, Ky., recently lost a large tobacco barn by fire, which contained about 20,000 pounds of tobacco.

Think of it! A 320 page book, cloth bound, for 25 cents, postpaid. It is a book worth more to farmers than any college education they can obtain.

Third Power Book

"Its object is to make the lot of the farmer more tolerable. * * * Chiefly by making him independent of the stock jobbers in the money market. It teaches how to keep all those engaged in agriculture well informed of prevailing conditions; of the best methods, and also to prevent ruinous underselling, to promote scientific and intensive farming; to stop the wholesale desertion of the farms by reducing the hardships of the tillers of the soil and bestowing on them the just rewards and some of the luxuries of life."—The Messenger, New York.

"It is one of the most interesting and important books ever written upon the subjest of co-operation among farmers. It tells in an absorbingly interesting way of the possibilities for greater profit and truer success that awaits the farmers. There is not a dull line in the book ,and it is one which should be read by every farmer as well as by every person interested in agricultural people."—Judicious Advertising, Chicago.

"It is a great book for farmers and all who are interested in social problems from the farmers viewpoint. It is ably and forcibly written, portrays the cruel and disheartening facts that farmers must contend against, but is itself never disheartening but full of a streng, sane hope of better things and is a program for their attainment. It is the thought and purpose of a man of affairs and a patriot as well that reveal themselves in the pages."—The American Co-operator, Lewiston, Me.

"It teaches the humane idea that co-operation is the life of trade. * * * Here is a sign of advancing civilization—a sign that the thoughts and purposes of men are changing for the better. * * * Thought and effort are heaving the world's wide breast and betoken coming changes that shall bring about better conditions for humanity."—Patriot, Jackson, Mich.

The price of the new third edition "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents. See coupons in this paper.

It is claimed that the Victory Feed Mill is the oldest and best grinding mill made. If the latter claim is correct, it is an important consideration, for all mills are not good grinders. The manufacturer, Thomas Roberts, Box 100, Springfield, Ohio, promises to send the proof to any of our readers who will ask for it.

The Folding Sawing Machine Co., 16 South Clinton street, Chicago, Ill., contend that the excellence of their saws enables the user to save the work of one man without diminishing the amount of work done.

The Champion Saw is one that cuts both ways, and it is claimed that a cord of wood an hour can be cut with it. Write to Famous Manufacturing Co., 737 Railroad avenue, East Chicago, Ind.

Weeks Scale Works, Buffalo, N. Y., sell a leading scale at a moderate price, one that they claim will outwear any other. Write them, mentioning this paper.

A telephone book may be obtained free by writing to J. Andrae & Sons, 868 West Water street, Milwaukee, Wis. Mention Up-to-Date Farming.

This is a good time for farmers to think about their fences. The American Steel and Wire Company, Dept. 151, Chicago, Denver, New York or San Francisco, claim to have solved the fence problem in their Ellwood Fence. Write for their free booklet describing it, and mention Up-to-Date Farming.

There are about 300,000 farms in the United States that produce tobacco. From the most authentic sources of information, we learn that no less than 400,000 families are directly interested in the production and sale of tobacco. Through the plans of the American Society of Equity nearly every one of these 400,000 families could be brought in direct touch with each other in marketing the crop.

Think of it! A 320 page book, cloth bound, for 25 cents, postpaid. It is a book worth more to farmers than any college education they can obtain.

In 1905 farmers will come to the front, never more to be put in the rear.

The cost of the army last year was a little more than $200,000,000. That would be a strong boost in road making, wouldn't it?

Those who trade with our advertisers may expect fair treatment. Note our guarantees.

One Home in Five

Has Someone Cured by Liquozone. Won't You Try It—Free?

We judge from our records that one home in five, the country over, has some one whom Liquozone has cured. Some have been cured of little ills; some know that their lives have been saved by it.

These homes are scattered everywhere. Your neighbors and friends live in some of them. If you will only ask about Liquozone there are plenty to tell you about it. It is wrong to stay sick with a germ disease while millions know that Liquozone can cure it.

And any sick one, anywhere, may try it at our expense. We will gladly buy the first bottle—a 50 cent bottle—and give it to any sick one free. You don't need to rely on those who were cured by it. You may test it, without a penny of cost, for yourself.

Won't you—for your own sake—do one or the other? Won't you let your friends tell you how it cured them, and how it constantly keeps them well? Or, won't you let us buy you a bottle and see what it does for you?

What Liquozone Is

Liquozone is a product which in the past two years has sprung into world-wide use in the treatment of germ diseases. It is now used by the sick of nine nations; by physicians and hospitals everywhere. It is constantly used in millions of homes in America.

The virtues of Liquozone are derived solely from gas, made in large part from the best oxygen producers. No drugs, no alcohol—nothing but this gas enters into it. The process of making takes 14 days, and requires immense apparatus. At the end of two weeks we get one cubic inch of Liquozone for each 1,250 cubic inches of gas used. The attainment of this product has, for more than 20 years, been the constant subject of scientific and chemical research.

The main result is, to get into a liquid, and thus into the blood, a powerful, yet harmless, germicide. And the product is so helpful—so good for you under any condition—that even a well person feels its instant benefit.

We Paid $100,000

For the American rights to Liquozone, and the rights in other countries have sold for proportionate sums. We mention this fact to indicate the value of Liquozone—the value to you. Men have never before paid such a price for any discovery used in the cure of sickness.

We need not tell you that we proved Liquozone well before buying it. For years it was tested through physicians and hospitals, in this country and others. It was employed in every stage of every germ disease; in all the most difficult cases obtainable. With thousands of sick ones, considered incurable, we proved that it did what medicine could not do. Then, and then only, did we pay the price.

Since then we have spent nearly $2,000,000 to make Liquozone known. We have bought the first bottle and given it free to every sick one we learned of. These people told others, and the others told others. The result is that Liquozone is now more widely employed than any medicine ever was. And no one can doubt that it is doing more for sick humanity than all the drugs in use combined.

How Liquozone Cures

The greatest value of Liquozone lies in the fact that it kills germs in the body without killing the tissues, too. And no man knows another way to do it. Any drug that kills germs is a poison, and it can not be taken internally. For that reason, medicine is almost helpless in any germ disease.

Liquozone is a germicide so certain that we publish on every bottle an offer of $1,000 for a disease germ that it can not kill. Yet it is not only harmless but of wonderful benefit—better than anything else in the world for you. No one is so well that he can not be helped by it.

The reason is that germs are vegetables; and Liquozone—like an excess of oxygen—is deadly to vegetable matter. To the human body Liquozone is exhilarating, vitalizing, purifying—the most needful, the most helpful thing possible. But to germs it is certain destruction; and these facts are true of nothing else in existence.

Germ Diseases

These are the known germ diseases; all due to germs or to the poisons which germs create. These are the diseases to which medicine does not apply, for drugs can not kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding Nature to overcome the germs. But those results are indirect and uncertain, depending on the patient's condition. A cure is always doubtful when drugs are used, and some of these diseases medicine never cures.

Liquozone alone can destroy the cause of these troubles. It goes wherever the blood goes, so that no germ can escape it. The results are almost inevitable. Diseases which have resisted medicine for years yield at once to Liquozone. "Incurable" diseases are cured by it. In any stage of any disease in this list the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anæmia	Leucorrhea
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Piles—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goitre—Gout	Varicocele
Gonorrhea—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer accomplishing what no drugs can do.

One Full-Size Bottle Free

If you need Liquozone, and have never tried it, we ask you to send us the coupon below. We will then send you an order on a local druggist for a 50 cent bottle, and will pay the druggist ourselves for it.

We have already done this with 2,000,000 people, and it has cost us over one million dollars to announce and fulfill the offer. Don't you realize that a product must have wonderful merit when we spend $1,000,000 just to let the sick try it?

That is our only method of making Liquozone known. We publish no testimonials; we tell you of none it has cured; we use no physician's indorsement. We prefer to ask you to try it, at our expense. Then judge for yourself what it does.

If you have already used Liquozone, this offer, of course, does not apply to you. But if you have not used it—if you don't know its results—please send us this coupon to-day. Do that in justice to yourself. The acceptance of this offer places you under no obligations; and it will introduce to you a product better than anything else in the world for you.

Liquozone costs 50 cents and $1.

CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to The Liquozone Co. 458-464 Wabash Ave., Chicago.

My disease is .....

I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

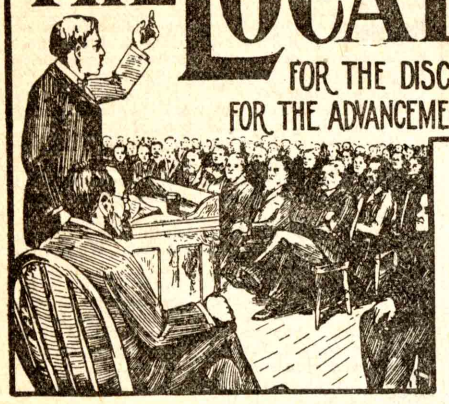
M 115—2 Give full address—write plainly

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

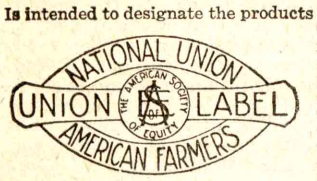
of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.



It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Twelve Cents Another Year

Tell us, Southern people, tell us,
You've a right to have a say,
Why you labor till the night time
Fades into another day—
Why you hustle till the daytime
Hazes darkly into night,
Making cotton which another
Prices anything but right;
If you put your standard higher
There'll be buyers, never fear,
When the grafters seek your cotton
At 12 cents another year.

Far away back in the distance,
With your face aflame with joy,
All alone you gathered cotton,
Like a happy little boy.
If a vandal seek to rob you,
Stand ye there in fearless might,
To protect those bales of cotton,
They are yours, defend the right.
Hurrah for the sturdy farmer,
Stand for justice, it is near,
And the grafters glad will take it
At 12 cents another year.

According to the threadbare system,
In your annual cotton deals,
How you hurried to the market,
How you dumped your cotton bales.
Cling ye still to that old system?
Dump ye yet your cotton so?
That is why, 'mid all the changes,
Cotton prices ruled so low.
Up, then, farmers! Don't be dumpers,
Equity comes with a cheer,
And you'll sell your cotton quickly
At 12 cents another year.

—Mrs. Dollie Benham.

Arapaho, Okla.

National Organizer H. B. Sherman, having completed his work in Virginia, or, at least, given all the time to that section he could for the present, is now in Arkansas, and will devote considerable time to the cotton belt. We have excellent reports from him down there. The people of the South see the advantages a national organization that includes all crops, has over any local and special movement, and they are giving Mr. Sherman and the A. S. of E. a magnificent reception, the press showing the utmost friendliness and deepest interest. With the nucleus we have in all the Southern States, Mr. Sherman will find a ready field all around him. We bespeak for him the fullest confidence, consideration and assistance.

It's booming.

If 1905 keeps up its present pace, listen for the million.

We regret the cotton situation, but it is opening eyes wider than they were ever opened before, and may result in ultimate good.

We wish the A. S. of E. to go on record as being opposed to burning cotton and to reducing the acreage of the next crop. Neither is necessary to secure fair prices.

The A. S. of E. can accomplish its every purpose for the farmers without capital stock—all that is needed is enough to meet current expenses. If farmers have money enough to subscribe for capital stock, we advise them to keep it. "A bird in the hand is worth two in the bush," and a dozen on the wing.

A local with 20 members was recently organized at Masonville, Ky., by Hon. W. P. Stephens. C. O. Cruse is president, and T. H. Jackson is secretary.

Many who for the first time read a copy of Up-to-Date Farming are so impressed that they at once write us a long letter covering points that have been discussed time and again in these columns. We are glad to have such letters, but of course we cannot make room for them in the paper, as their arguments would simply be a repetition of what our readers are entirely familiar with.

A 320 page, cloth bound book, price $1.00, and 10 cents extra for postage. all for 25 cents, postpaid. See coupons in this paper.

The Local at the Crossing

Our meeting took a peculiar turn last week, a turn that was entirely unexpected. Not one of our members is a cotton grower. but we all take a keen interest in the present cotton situation, because we know that upon the prosperity of the cotton growers our own prosperity to a considerable extend depends, and because we see in the cotton situation a situation that may at any time be forced upon the producers of any other crop.

As you know, our members are a reading and thinking people, and they have been liberal patrons of the agricultural press. Each member had with him at the last meeting the latest copy of every farm paper taken by him, and when they were placed on the secretary's desk there was a pile of them, and they came from all parts of the country. On opening the meeting the president said:

"I have asked all the members to bring to this meeting the latest copies of their farm papers. I regard this a critical time in the history of agriculture. Unless we can be relieved of the uncertainty under which we now labor in this age of graft and manipulation, farming must go backward instead of forward. The only way to relieve us of the uncertainty is to guarantee to us a steady and reasonable price, an equitable price, whether yields be great or small. As it is we dare not raise too little, and we are in constant danger of raising too much. We are justified in looking to our agricultural editors to lead us out of this wilderness of doubt and uncertainty. I want the secretary to take up those papers one by one, and see if he can find anything in a single one of them arguing to a better system of marketing and the assurance of equitable prices. Of course Up-to-Date may be laid aside, for we all know how that is."

The secretary did as requested, several members assisting him. A great deal of good matter was found as to the improvement of stock and increasing the quantity; as to enriching the ground, improving the seed, rotating the crops, all looking to an increase of the yield, but not a syllable as to how to secure a remunerative price, some actually declaring that the farmers had no business to be concerned about the price.

The President—That is exactly as I expected it, in fact as I knew it would be. The thing hardest for me to understand is that, in the light of present events and methods, men who are smart enough to be editors, and who are informed on farm work and farm life, persist in ignoring the thing most essential to success on the farm.

Pat Murphy—I move that the prisident appoint a committee av three to sit on the corpses of these papers and detarmine whither they came to their deaths by sooiside or wilful neglict av dooty.

Joe Riley—But these papers are not dead.

Pat Murphy—A baste that won't ate of the best food and rafooses to swally the best drink, is dead enough for an inquest.

George Bowers—Mr. President, I move the adoption of the following resolution:

Resolved, That we are not antagonistic to the agricultural press. We appreciate their efforts for rural improvement, but in this crisis we believe they should no longer hesitate in helping the farmers to secure equitable prices for all farm products, and until they do that they should not expect the hearty support we have heretofore given them.

The resolution was adopted.

Jim Denny—Let's do something. Show 'em we mean it. These papers need warmin' up. Give 'em some light on the subject.

And before any one knew what he was up to, he had them in the stove.

A good friend writing from Cormorant, Minn., fears farmers may not be able to control prices because all cannot be induced to hold crops at the same time. All do not need to hold at the same time; it is not desirable for them to do so. The world must be supplied every day, and whatever will be taken at the price should be on sale. Hold only when the market refuses to pay the price. There never need be a time when this cannot be done.

LOCAL UNIONS OF THE AMERICAN SOCIETY OF EQUITY.

Below is a partial list of local unions of the A. S. of E. Further installments will be printed each issue until the entire list is published. Then we will print lists of new unions as organized.

Our reason for printing these is to give members and non-members some idea of the developments of this farmers' movement with the hope that this showing will encourage organizations in localities now unorganized.

Understand, this is only a small part of the unions in any State. If these partial lists are preserved a complete list can be had and maintained. If members or local unions want to correspond with each other the addresses will be supplied from headquarters. Send a return card or stamp.

Besides the local unions there are many thousand members of the National Union not belonging to locals yet. These members should see that a local is organized at once. Much good in many ways comes from the local unions.

If any of these local unions have not been meeting we urge them all to become active at once. Let each member take it upon himself to demand and secure activity.

(These lists have been unavoidably crowded out for a few issues.)

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Agents wanted for best agents article on earth. Mend-a-Rip does all kinds of light and heavy stitching and riveting. Agents make $3.00 to $15.00 a day. J. U. Foote Foundry Co., Fredericktown, O.

Agents wanted by Weeks' Scale Works, Buffalo, N. Y. The leading scale at moderate cost. Send for free catalogue and prices.

Agents who want a meritorous article to sell should handle C. & F. Wonder Knives—nine tools in one. It is a handsome pocket knife, light, convenient and has no more parts than an ordinary three bladed knife. Contains strong wire pliers and wire cutter that will easily cut barbed wire fence. Also leather punch, swedging awl, alligator wrench, hoof hook, screw driver and screw bit. Don't you think you can sell an article like this? Price each $1.25. One dozen delivered for $11.00. If not satisfactory your money will be refunded. Now if you will trust us (and the publisher of this paper who guarantees advertisers) send for a dozen. We refund your money if you want it. That's fair. Don't forget to write us—better do it now. Cooner & Fortune Co., Indianapolis, Ind.

You should send for our book "Proper Care and Feeding of Chickens, Ducks, Geese and Turkeys." It is a most valuable little book and worth many times the price asked to any farmer or poultry raiser. A very valuable book for beginners. Old poultry raisers will get many valuable suggestions from it. Price 10c, stamps or coin. DesMoines Incubator Co., Box 153, DesMoines, Ia.

A Few Health Hints

Whooping cough develops slowly, and for several days it may not be told from an ordinary cough or cold; then it suddenly becomes more violent and lasts longer, and the characteristic catching of the breath—whooping—manifests itself.

Diphtheria begins with a sore throat and a swelling of the glands of the neck, with white specks on the tonsils. Seek at once the best medical aid.

The first symptoms of scarlet fever are vomiting, a sore throat and high fever. The eruptions appear first on the neck and chest, and then cover the entire body. The disease is most contagious during the height of the fever, and when the "skin begins to scale off."

Nervous people might improve their condition by drinking more water. The best physicians now recommend that women who suffer from nervousness, or nervous exhaustion, drink a great deal of water between meals. Water seems to be a kind of nerve food, and it has a soothing effect when sipped gradually.

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

Upon the fields have sifted down
The beautiful flakes of snow,
Each laden with a morsel rich,
To make the field crops grow.
—*J. P. S.*

Will spring find the farm tools in bad order?

Prepare to grow good crops, but, at the same time, to get good prices.

It is surprising that able papers have so long taught farmers how to produce stuff, without ever yet making a suggestion as to how to get good prices for it.

Decide right now to put no crop in ground that will not produce it. If you have no good ground, make what you have better, and cultivate fewer acres.

There ought not to be any non-productive ground where the legumes will grow—clovers, peas, etc. These will make the soil productive, whethee cut and taken off for feed, pastured down or turned under.

Our plan of getting the most out of the legumes—the most of renovation and fertility—is to pasture them some, and then turn under.

If you are in a grass country, a hay-making country, try a field this way, and see if it don't pay you more dollars to the acre than any other field on the farm. Break early in September, pulverize well, and pack down with a heavy roller. Seed between the twentieth and last of September to timothy, good, clean seed, about a bushel to eight acres, applied with a good wheat drill (unless you have a special seeder) with a fertilizer attachment, applying at the same time about a hundred pounds of ammoniated bone to the acre. Early in March sow broadcast two quarts of clean red clover to the acre. Harvest a good crop of hay the first season. Pasture lightly until the middle of September. Next harvest take off a heavy crop of hay, which is likely to be mostly clover. Pasture until the first of September, and then turn under, let lie a week or two, work down and seed to timothy as before, except that the bone may be omitted. Seed to clover again in the spring, and repeat as before. And so on, we do not care for how long. You may once in awhile interject a crop of wheat, or corn, or potatoes, very profitably.

A good deal of money is lost, and bad opinions had of farming, by depending for too many years upon the same seeding to grass. People used to think a meadow ought to last always, but that was in the days of Uncle Threadbare.

There is one fact we wish to impress upon farmers more than almost any other, and that is the importance of good seed. No matter what crop you propose to grow, the best is none too good, and less than the best is not good enough. And we are not saying this in the interest of any seed house, for it must be confessed, and we are sorry of it, that all seeds from seed houses are not of the best, but we are saying it in the interest of farmers. A difference in seed often makes a difference in yield and quality; representing the difference between a profitable crop and an unprofitable one.

We advise farmers to test their seed corn; it is an easy thing to do. From a representative ear, or from several representative ears, take say one hundred grains, plant them in good, moist, sandy soil in a box, basin, or even in a dish. Cover with two or three thicknesses of wet brown paper, or old newspaper, and keep in a warm place. Within a week every good grain ought to be sprouted. Unless as many as eighty out of the hundred sprout, it is not fit to plant. Be sure that the soil is moist all the time, but not wet.

Uniformity in size of grain is very important in seed corn. Corn is mostly planted by machinery now, either drills or check rowers, and no machine can evenly plant grains that differ much in size, and the success of all subsequent operations, and of the crop itself, depends upon even planting, upon uniform distribution of the grains in the row so as to insure a good and even stand. In selecting seed corn farmers should be mindful of this fact.

The export of corn is rapidly on the increase. The following steamers recently left Boston in a single week, laden as indicated: The Bohemian, for Liverpool, with 150,000 bushels of corn; the Philadelphia, for London, with 60,000 bushels of corn; the Brazilian, for Glasgow, with 51,000 bushels of corn, and the Idaho, for Hull, England, with 32,000 bushels of corn. Corn raisers need not be afraid they have raised too much corn. All they've got to do is to stick to it till they get their price.

Latest advices show potatoes a little better. There was a large crop of this important food product last year, but the capacity of the people for consumption is very great, and potatoes need not, and will not, be a drug on the market, nor will they go at unremunerative prices unless the producers themselves will it so. There is a scarcity of potatoes abroad.

Rice

Rice is an important, almost universal article of food, in some countries, like China and Japan, constituting the principal article of diet. In the United States, however, though very generally used, it may be regarded as a "side dish" only, and does not constitute any considerable bulk of our food, though found very generally on American tables.

Rice is grown commercially in but five of the United States, North Carolina, South Carolina, Georgia, Louisiana and Texas. In the first three production is rapidly on the decline, how rapidly the following figures show: North Carolina in 1899, 22,279 acres; in 1904, 1,800 acres. South Carolina in 1899, 77,657; in 1904, 33,300 acres. Georgia in 1899, 21,998; in 1904, 9,000. But in Louisiana and Texas it is as rapidly on the increase. In the former State the acreage in 1899 was 201,685; in 1904 it was 367,500; in the latter it was 8,711 in 1899, and 234,200 in 1904. Last year the three Atlantic States produced 1,124,820 bushels of rice (in the rough) and the two Gulf States produced 19,759,700 bushels.

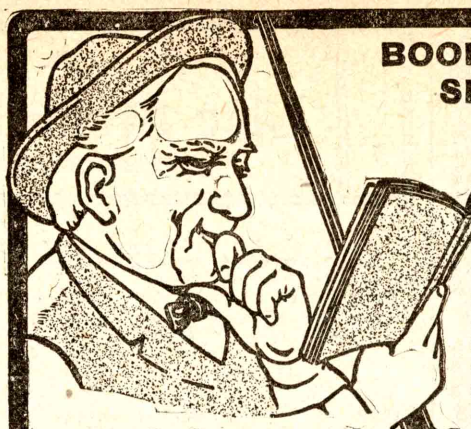
The price of rice has ruled low for some years in the centers of production, and this is given as one reason for its abandonment in the Atlantic States, but in the centers of consumption prices have been well maintained, which undoubtedly indicates an excessive margin between the producer and the consumer. As in the case of live stock and beef, somebody between the grower and the eater is getting more than his share of the rice crop.

Government Reports

Government crop reports are receiving an attention they have seldom had and good will come of the agitation. Ulrich Senn, Sr., of Cormorant, Minn., writes :

We are told that the government crop reports are in the interest of the farmer, but they almost invariably hurt the farmer, because they are the biggest humbugs ever concocted. I formerly sent in the reports from here, but I reported the truth and was dropped as no good. The railroad agent now makes the reports. Often they are made by some uninformed farmer, who thinks the locality benefited by big reports. That is why so many of the reports exaggerate the conditions.

Isn't it a little strange that the milling journals always have it that wheat is so abundant that it ought to be cheap, and flour so scarce that it Union, and also our local union. Many, ought to be high?



BOOK OF OUT-DOOR SPORTS FREE

We wanted every lover of out-door sports to know all about the famous "Stevens" Rifles, Pistols and Shotguns, so to make it worth their while to learn, we compiled a valuable 140-page illustrated book, telling not only all about "Stevens" arms, but containing useful and interesting information on hunting, shooting, notes on sights, ammunition, how to handle and care for fire-arms, etc., etc., and this we will send to you free, if you will send us your name and address, enclosing two 2-cent stamps to cover return postage.

Have you tried our CLEVER RIFLE PUZZLE?—it's a puzzler, but "easy when you know how." It will be sent FREE postpaid if you ask for it.

STEVENS

have always been regarded the highest example of gun making. For accuracy, safety, balance, action, durability and portability "Stevens" Arms are peerless.

Southwest—
to Prosperity

Get Rich in the Southwest. We know you can because thousands are already doing so. They have seized upon opportunities, and in developing the natural resources have opened the door of opportunity for others—opened it, mind you, not closed it. Don't wait for Prosperity to come to you. Go to Prosperity. Get into partnership with the Southwest and you will have a partner that does not know what failure is. It is worth a great deal to you to be located in a prosperous, growing country that has not reached the dead level of development.

Opportunities. There are many opportunities for small manufactories, industries of various kinds, mechanics, merchants, farmers and stock-raisers. The best of them are along the new lines of the Rock Island, and our folder, Business Opportunities, will tell you all about them.

Mild Winters Southwest. Right here may be the difference between success and failure. You can work more days in every year in the Southwest than in the East and North—the la d works with you. The earning capacity of the land is greater, the earning capacity of every man is greater, whether farmer, mechanic or tradesman. They're plowing in their shirt sleeves in the Southwest **to-day.** Think of that. The climate is mild and pleasant, the soil rich and markets good. Nowhere in the world is there such an opportunity for men who want to improve their condition.

How We Can Help. The Rock Island has no land to sell, but is deeply interested in inducing a desirable class of people to locate tributary to its lines. To do this we maintain a department for the purpose of giving truthful and complete information regarding every opening that exists in our vast territory. We have collected valuable data about all the districts along our lines. We will tell you where the openings are, the amount of capital needed and the price of lands.

Low Rates. To enable you to look the country over, very low Homeseekers' rates are made by the Rock Island.

Act at once if you want the first choice. There are hundreds who will read this and decide that the Southwest is the place for them, and they will never regret it. Fill out the coupon below and mail it to the undersigned. All your questions will be promptly answered by personal letter. **Do it to-day.**

Please send me illustrated booklet about _____ (name section) with full information and particulars of reduced rates to that section.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

Though dumb, the brutes upon the farm,
Speak to us words we ought to heed;
In mercy's universal tongue,
They ask us to supply their need—
To see they suffer not from storms,
Nor feeble grow for lack of feed.
—*J. P. S.*

How about the curry comb and the brush? We have known these tools lost during the winter.

Do the horses stand in a manure pile when they are in the barn? That is very liable to injure their feet.

Regularity of feeding, regularity of watering, comfortable housing, a clean bed to sleep on and a dry place to stand on—observe these rules with the stock and you will have a pretty clear ticket so far as the animals are concerned.

The Connecticut experiment station seems to have proven that pigs do better on skim milk than on full milk rich in butter fat.

A farmer near Iola, Ks., sold a cow to a butcher, agreeing to take one quarter of the beef. On settlement he owed the butcher $2.30. The cow was figured at the regular price for live stock, and the "quarter" at the regular price for dressed beef, with the above result. There is a terribly voracious animal somewhere between the feed lot and the butcher's block.

As a general rule a cow's best years are from four to ten inclusive.

According to the official test made at St. Louis, 100 pounds of milk from Jersey cows equaled 135 pounds from Holstein cows in butter production. But we are not told which cow would soonest produce 100 pounds.

The outlook for wool prices is very flattering for the producers. Boston is the leading market in this country, and the total amount on hand of all kinds is 28,840,000 pounds against 78,820,000 pounds two years ago. There are only about 59 million pounds in the entire United States against more than 157 million pounds a year ago. This indicates an active demand and remunerative prices.

The hog is considered a filthy animal, but if she is, it is because she has filthy surroundings. I hate a filthy pig pen. If you will notice penned up hogs, you will observe they are more cleanly in their habits than most animals. Give them a chance.

Don't have the sows too fat at the time of breeding them if you wish a large litter of pigs.

If you breed the mares next spring, have an eye to what the market wants. Good drafts and stylish drivers seem to be to the front just now, but good, serviceable horses of almost any style are in fair demand.

Before the spring calves begin to appear, I wish to enter a protest against sending so many of them to the veal market. Prices are sometimes tempting, because it is ready money and seems so much like clear profit, but it is not a commendable practice, and should not be indulged by those who have pasture.

Now is the time when sheep need the greatest care. It is a mighty good plan to separate the ewes and lambs from the rest of the flock, and give them extra feed and attention. The lambs will pay you for it. It is excellent to have a warm, dry room where the ewe with a very young lamb can be put to herself a day or two.

If you have a motherless lamb, and a ewe should loose a lamb, rub the orphan with the dead lamb, and the ewe will be very apt to adopt (own) it.

Sheep are not in so much danger from the cold as they are from the wet. Keep the sheep's wool dry, and a dry place for their feet, and you are likely to have very little trouble with them. But don't get the old idea that sheep need no water—they need water, and they should have it regularly.

The leguminous crops are the greatest friends of the dairyman, as they furnish cheap feed and of the very best quality for milk and butter production.

The success or failure of the dairyman depends more upon the quality of his cows, perhaps, than upon anything else. No amount of feed and care will make a good cow of a bad one. What the dairyman must have is plenty of good milk rich in butter fat. Keeping an unprofitable cow is like hauling wheat to market with a leak in the wagon bed.

I do not believe it is a good plan to wet the cow's teats when you commence milking. I have seen persons wet their hands and the teats with milk. It looks filthy. Do you think it makes the milking any easier? Try it dry once.

Do not neglect the colt's hoofs. So much of the horse's future usefulness depends upon his feet that every possible care should be taken of them, and it is often the case that not enough attention is paid to the hoofs of the colt.

Free Seed Distribution

I am a reader of Up-to-Date, and like the paper very much. The seed I got last year was all right. The yard-long corn was good, as was the other seed, and the pumpkin was immense. I raised three on one vine, and the three weighed 297½ pounds, the largest weighing 141½ pounds, and measured 78 inches around.—Wesley Barlow, Greentown, Ind.

The premium potato we received last year, we cut into eleven pieces, planted one piece to the hill and raised about a half bushel of very nice potatoes, which we think was very good, as we gave them but little extra care. —S. H. Hadley, Independence, Kansas.

I planted the half pound of Up-to-Date potatoes you sent me last year, and I have 65 pounds of as fine potatoes as any one need wish for, averaging the size of a pint cup.—Mrs. Alice F. Owens, Pimento, Ind.

I planted my half pound of Up-to-Date potatoes I received as a premium last year, in 22 hills, and raised very nearly a bushel of fine potatoes.—Calvin Dickens, Peachtree, W. Va.

From your last year's seed premium I now have 34 pounds of fine potatoes, after using about a peck before digging time; six of them weigh 5 pounds. I never saw anything finer than the White watermelons. The Big Heart were larger, one weighing 50 pounds, but none can come up with those round, white, thin-rined ones.—Mrs. J. W. Mikel, Pleasant Hill, Ill.

From the half pound of premium potatoes I raised 44 pounds, and they were fine. The pumpkins were also fine, weighing about 40 pounds.—Eugene Garey, Changewater, N. J.

From the two small Up-to-Date potatoes you sent me last spring, I raised a heaping bushel of large, handsome potatoes.—John H. Marks, West Penobscott, Maine.

From one-fourth pound of the premium potatoes I raised 40 pounds. That is 160 pounds from one pound of seed, or 160 bushel to a bushel of seed. I call that good. I gave no extra cultivation.
A. D. COFFEE,
Gordonville, Tenn.

The Bee.

Bee work is pleasant. The bees do the work; you only will have to help a little.
Why not make a start at bee culture?

Learn From Lewis.

If you want to know all about bees and **Beeware**, ask for the new illustrated Catalogue G, and mention this paper. This new catalogue, complete in every sense, deals with all known phases of the modern bee business and is of tremendous value to anyone interested in this subject. It devotes special attention, however, to the beginner, for **Lewis is authority and the beginner has everything to learn.**
Handsomely illustrated, with descriptive matter concerning all sorts of Beeware. Catalogue G also contains an unexcelled treatise on bee culture.

G. B. LEWIS COMPANY, Watertown, Wis., U.S.A.

SHOEMAKER'S BOOK on *POULTRY*

and almanac for 1905, contains 224 pages, with many fine colored plates of fowls true to life. It tells all about chickens, their care, diseases and remedies. All about **INCUBATORS** and how to operate them. All about poultry houses and how to build them. It's really an encyclopaedia of chickendom. You need it. **Price only 15c.**

UP-TO-DATE
Poultry and Bees
PRODUCTION AND MARKETING

When the buds begin to open,
And the flowers begin to blow,
And the hens begin to cackle,
And the roosters 'gin to crow—
Then we think of buying, something
With what follows, don't you know?

Get the nest boxes ready; have them fresh and clean.

No, it's not spring yet, but the gentle maiden is on her way with an apron full of eggs.

Feb. 15. Good time to clean out the poultry house. Put the droppings where the lettuce and onion beds are to be.

In planning for next season's chicken raising remember that scrubs eat just as much as thoroughbreds.

I think it is possible to keep too many hens, though where they have the range of a farm there is not so much danger.

Keep everything clean, give nothing but good feed, have plenty of clean water, and no filth for the fowls to get to, with clean dry quarters at night—you won't need any cholera medicine.

The poultry will need care 365 days this year. Is that according to your contract?

If you didn't let the old hen and the old rooster go last fall, (then is when they should have gone), let them go now. Eggs for setting should be from yearling or two-year-old hens, and roosters of that age are the best to mate with them.

I do not know that poultry pays off many mortgages, but it principally supports a good many families.

An Ohio man is hatching chickens in his beehives—making bees hatch chickens, so he tells the American Cultivator, and he seems to be serious about it. He uses chaff hives, puts a piece of cheese-cloth above the bees and lays the eggs on it, and then has a cushion at the sides and over the eggs. He says: "I can hatch over bees every fertile egg." Solomon must have been mistaken; there are new things under the sun.

For market, the plump, yellow-skinned varieties are the best. The dark-feathered kinds are likely to have a bluish skin, and are not so attractive in the market when dressed.

Market Pointers

A prominent dealer in one of our largest market cities gives our readers the following valuable hints:

It is hard to get hens to set in winter and is almost necessary for the farmer to use incubators to raise broilers in time to bring the best prices. The incubator on the farm is being brought to more profitable use every year. There is no doubt that the incubator and brooder method of raising chickens is a wonderful improvement on the hen method. It is cheaper and a greater number of fowls can be raised from the same number of eggs. Hens can be made to lay nearly double as many eggs if they are not required to set, and it is a good plan to use incubators instead of taking the hens from their work. The incubator is no longer an experiment.

The breed of turkeys raised does not make so much difference as the breed of chickens. Any kind of turkey will bring the market price if it is plump and fat, although the Bronze seems to be the best all-round breed, and the blooded stock will fatten more quickly and at less expense than the common run of fowls.

In raising ducks never keep anything but white-feathered stock. The Pekin duck is the best and always brings the top of the market.

With geese only the largest breeds should be kept. The Toulouse, African or any other large breed is all right, and it costs no more to raise a large bird than a small one. The market is never over-stocked on large, fat geese.

The best season to sell chickens is from the first of January to the first of November. Every farmer seems to want to dispose of his poultry during November and December, and consequently the market is always overstocked at that time. The surplus young roosters should be sold during September and October, as they will bring more then than later. If it is impossible to market them until after that time, it is best to hold them until after the first of January, for prices are always low during he intervening months. Turkeys are most salable around the holidays. Old turkeys and large young gobblers should be marketed for Thanksgiving and Christmas; poor stock should never be sent to the market. All should be well fattened before being shipped. The hens and small young gobblers should be kept until after the holidays, but should be marketed by the first of February.

Live geese sell best in September and October and dressed geese any time after the first of December to the first of March. There is no particular season in which to sell ducks.

Broilers bring the most money from the first of March to the first of July, the highest price being obtainable from the middle of April to the first of June. They sell by the dozen from the first of March until about the first of July and the remainder of the season by the pound. They generally bring from $3 per dozen the first of March to $6 or $7 per dozen during April and May. About the first of July they will, as a general thing, bring from twenty cents to twenty-five cents per pound, the price gradually going lower. Chicks should weigh from one and a half to two pounds each the first of March, and, as the season advances, from two to two and a half pounds each. They should be shipped alive from the first of March until the first of November.

Rocks and walls and trees and posts have long been made tell people of things offered for sale ,and in these days the muse is compelled to perform the same duty. Witness the following:

Sing a song of Sure Hatch
The Incubator Co.,
Imagine eighteen million chicks
Lined up in a row.
And just suppose with one accord
They'd all begin to crow—
Wouldn't that be a lusty ad.
For the Sure Hatch Co.?

If you are thinking of using an incubator you might do well to write to that company for their catalogue, which they send free. Sure Hatch Incubator Co., 283 Clay Center, Neb., or 1283 Indianapolis, Ind. Over 24,000 of these incubators were sold during the present year.

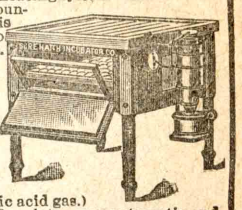
Think of it! A 320 page book, cloth bound, for 25 cents, postpaid. It is a book worth more to farmers than any college education they can obtain.

In 1905 farmers will come to the front, never more to be put in the rear.

WE PAY $18 A WEEK and expenses to men with rigs to introduce poultry compound. Year's contract.
IMPERIAL MFG. CO., DEPT. 79 PARSONS, KANS.

MONEY CAN'T BUY
A Better Incubator than the Old Reliable
SURE HATCH
Read the Reasons—Here are Some

The **Sure Hatch** is built of straight, grained California Redwood, the best material known for incubators. California Redwood will not shrink or swell, warp or crack—other woods will.
The **Sure Hatch** Water Heater has 138 square inches of heating surface—others from 15 to 30 sq. in. 12 oz. copper pipe heating system—never leaks, never wears out. Abundant heating surface is absolutely essential to economy of operation.



The Sure Hatch Ventilator keeps pure, warm air in circulation among the eggs all the time. Other "ventilators" skim off the air from top of egg chamber, leaving eggs surrounded with foul air (carbonic acid gas.)
The Sure Hatch Regulators are automatic and keep the temperature at the proper degree. You don't have to "stand guard" over the regulator to be sure it regulates. **Sure Hatch** Egg Chambers are asbestos lined.
The **Sure Hatch** sales have passed the 60,000 mark and are climbing upward rapidly. Tens of thousands are making money with them, and so can you if you will give it a trial.
The **Sure Hatch** terms are exceptionally liberal—60 days trial, freight prepaid east of Rocky Mountains, and money back if not satisfactory.
The **Sure Hatch** $100,000 Guarantee, good for five years from date of purchase, is our own pledge of good faith.
The **Sure Hatch** Catalogue of 1905 is **now ready** and will be sent free on request. Write at once. Address office nearest you.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

After the darkest midnight
The dawn again will glow;
And after the bleakest winter
Will springtide flowers blow.

But we would not love the blossoms
If every month were May;
And we would not heed the sunlight
If it were always day.
—*S. A. Rutherford.*

Hope now hovers over the orchard.

Do not neglect the young trees; a little attention may save some that might otherwise be lost.

Aye, and do not neglect the old trees. They really need more attention than the newly set ones. The amount of brush in the old trees that has outlived its usefulness should be taken out so as to make room for new growths. It is possible thus to make new trees out of old ones.

You would not expect many valuable pigs from a sow you neglected to feed. Is it any more reasonable to expect great quantities of valuable fruit from a tree you absolutely neglect to feed?

The tree cannot move about in search of food, and it exhausts the supply within its reach just as certainly as an animal does, hence all the greater need for feeding it.

Why does a young tree produce finer fruit than an older one? Because the tree is young and vigorous is generally understood to be the reason, but may it not be because the young tree is better fed than the old one? The young tree has not yet exhausted its supplies, and it is therefore better nourished.

By the way, why does a tree get old? The natural life of a tree is very great. The writer has eaten apples from trees known to have been in bearing for a hundred years. It must be, then, that our orchard trees get old prematurely. The horse without a sufficiency of nourishing feed soon becomes "old," and weak, and lean. A tree may do the very same. Here is our conclusion: The unfertilized orchard must soon become worthless.

Is it not possible that in all our spraying and other such work, we are treating an effect rather than a cause? The weakened or injured wheat or corn is much more liable to chinch bug attacks than is the vigorous and rapidly growing. Were we to put the same expense in the shape of fertilizing at the root of the tree, might we not have better results than in putting it in the form of poisons among the branches? The true course at present, no doubt, is to do both.

A Kansas orchardist ties a band around his trees to catch the larva of the coddling moth—anything under which they can crawl for a hiding place. These bands should be examined every few days. On one occasion he caught 520 larvae under one band.

Mr. Hale, of Connecticut, is perhaps the greatest and most successful peach grower in the United States, having large orchards both North and South. He uses all the hardwood ashes he can get, and considers them worth 25 cents a barrel in a peach orchard. He favors broadcasting the fertilizers, and spreading it all over the ground rather than under the trees only.

Fig raising is becoming an important industry in California. An 8-year-old tree is expected to produce 100 pounds, a 15-year-old tree 200 pounds, and a 20-year-old tree 300 pounds. The price is variable, sometimes going as high as 8 cents per pound. The trees are set from 36 to 64 to the acre.

Mr. M. J. Wragg, of the Twentieth Century Farmer, makes grafting wax after this formula: One pound of tallow or raw linseed oil, two pounds beeswax and four pounds rosin. Slowly mix all together, stir well, and when partially cooled, pour into a vessel which has been oiled to keep the wax from sticking. He applies warm with a brush, being careful to cover all cuts and to fill all cracks.

The fruit exported from this country in 1904, it is said, will exceed in value $20,000,000. Ten years ago it was only $3,000,000, and twenty years ago $2,000,000. Refrigeration has had much to do with the great increase.

Small Fruit

There are not enough of small fruits grown on the farms. There are families in which a dish of strawberries is never seen, and where raspberries are as much of a stranger. The universal growth of wild blackberries furnishes these in greater or less abundance, but the cultivated sorts are too much neglected.

Plan to have a better supply of these delicious fruits in the future—set beds of them next spring.

For beginners we recommend the self-fertilizing sorts of strawberries—there are many excellent varieties. Select a rich piece of ground that is well drained; prepare it about as you would an onion bed. For a small bed we would put the plants in rows 18 inches apart and 12 or 15 inches apart in the rows. Cultivate well, and especially keep the weeds down the entire season.

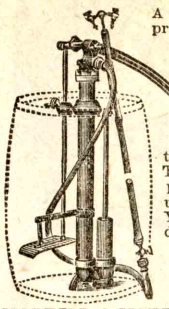
Blackberries or raspberries may be planted in rows two or three feet apart. They are very hardy and easily grown.

Grapes are not difficult to grow, are very hardy and may be set in nooks that are not accessible to other culture—in corners that are now idle, and have been, perhaps, for years.

As we have said, if you have not already a supply of these fruits, prepare to start them in good shape next spring.

FARMS For rich farming, and fruit growing, Write J. D. S. HANSON, Hart, Mich.

Get the Best



A *Good* Spray Pump earns big profits and lasts for years.

THE ECLIPSE is a good pump. As practical fruit growers we were using the common sprayers in our own orchards—found their defects and then invented **The Eclipse.** Its success practically forced us into manufacturing on a large scale. You take no chances. We have done all the experimenting.

UP-TO-DATE Gardening and Flowers

HOW TO GET BEST RESULTS AND BEAUTY

The brighter the flowers the brighter the days,
The lighter our hearts the more cheerful our ways;
Let's grow the bright flowers in multitudes rare,
And keep ourselves cheerful in spite of all care.

—*J. P. S.*

1905. Don't neglect the garden.

Give the garden plenty of well rotted manure, but be sure it is free from weed and grass seeds.

Work the garden plot very deep and see that it is well drained.

We believe in making gardens it is a little better to have the rows run north and south, so that all parts of the ground and all the plants may be sure at some time in the day to have the benefit of the sunshine. If planted east and west the taller growing plants, such as pole beans, sweet corn, the larger peas, etc., should be on the north side, so as not to shade the other plants.

Rhubarb or pie plant and asparagus are about the first vegetables to get from the garden, but unless you prepared for them last year, you are likely to do without them this year. Rhubarb may be grown from seeds. Plant in very rich, well prepared ground in rows one foot apart. If they do well they may be removed to the permanent rows in the fall, though many think it best to wait until the second fall. It is much quicker and better to start with roots. The Victoria is the best.

Asparagus may also be started from seed, but it is a slow process; it is better to get roots, which should be set very early in well manured, rich, sandy loam, in rows 9 inches apart and 9 inches apart in the rows; set very deep, and handle with care, so that the roots shall be exposed to the air as little as possible. Like rhubarb, when once started the bed is permanent, requiring only an annual top dressing of manure, and to be kept clear of weeds. Try the Columbian Mammoth White.

In all but the permanent plants like rhubarb and asparagus, plant for a succession, say every week or ten days. It is out of date to depend upon a single planting of beans, sweet corn, etc. Another thing that is out of date is to expect but one growth from the same row Just as soon as the first planting in any row has "finished its course," take it out and plant something else, thus keeping not only a succession of vegetables, but keep the ground busy.

Plant early peas as soon as the ground will do to work; even if a little frost should come after they are up it is not liable to seriously injure them. Make the rows from two to three feet apart, and plant the seeds quite thickly in the rows about two inches deep. When up, draw the soil to them slightly, and again as they increase in height. Peas may be planted every ten days or two weeks until midsummer. For the first, second and third planting, Everitt's Extra Early Reliance is the best. Follow with American Wonder, Horsford's Market Garden, etc. Don't wait until the last planting of the early to begin planting the other varieties. Of the late sorts the Black-Eyed Marrorwfat and Large White Marrowfat are good. Try the Magnificent, a green wrinkled main crop variety, and the Prolific Giant Podded Sugar Pea. It is what our grandmothers used to call a salad pea, is cooked pod and all like snap beans, is very brittle, tender and sweet. Pods extra large.

We shall continue this garden talk in next issue, but meanwhile we must not neglect the flowers. Our Up-to-Date People will have an abundance of them not only in the garden but about the home. Of course provision is already made for the Perennials; they are already waiting for the first breath of spring to call them into life and beauty. The Biennials, too, were provided for last summer and fall, and are ready to show their gratitude this spring. Our chief concern at present, therefore, is with the beautiful annuals.

The beauty of growing flowers depends much upon their arrangement in the beds, just as the beauty of a bouquet depends upon the tasty arrangement of the flowers as much as upon the flowers themselves. Each flower bed should really be a living, growing, constantly developing bouquet. We cannot do better for our readers in this respect, perhaps, than to quote from Mr. Everitt's catalogue for 1905.

The following list will be found convenient to many in making their selections:

Plants of tall growth, suited for large beds, backgrounds or centers, around which smaller kinds may be grouped. Antirrhinum, aquilegia, asters, balsam, cacalia, calendula, delphinium, gaillardia, hollyhocks, marigold, miribilis, salpiglossis, scabiosa, stocks, sweet william, zinnia, etc.

Climbing plants for trellises, verandas, pillars, etc.: Canary flower, cinnamon vine, cobea, cypress vine, ornamental gourds, ipomae, nasturtium tall, sweet peas, wild cucumbers, etc.

Spreading or trailing plants adapted to vases, hanging baskets, rockeries, etc.: Abronia, alyssum, gilia lobelia, maurandia, myosotis, nemophila, nolana, sanvitalia, verbena, etc.

Low-growing plants of spreading habit, adapted to small beds, ribbons, massing or edging: Abronia, ageratum, alyssum, caliopsis, campanula, candytuft, catchfly, centranthus, clarkia, convolvulus, daisy, lobelia, mignonette, myosotis, nasturtium dwarf, pansy, verbena, petunia, pholx, poppy, portulaca, pyrethrum

Selection of colors: If it is desired to fill separate beds with flowers of a single color, and of such kinds as will have a fine appearance and bloom the whole season, select from the phlox drummondi, pansy, verbena, petunia, salpiglossis, stocks, balsams, zinnias, etc.

Fragrant flowers: The migonette, sweet pea, alyssum, stocks, carnation, are all fragrant and fine for cut flowers.

Have you sent your renewal of subscription? If you are not a member of the A. S. of E. make the remittance, $1.00, and become a full member. You will value the members manual badge, etc., and besides your money will help us to carry the work forward for other members. Don't put off your renewal any longer.

In 1905 farmers will come to the front, never more to be put in the rear.

No Smoke House. Smoke meat with KRAUSERS' LIQUID EXTRACT OF SMOKE.

Made from hickory wood. Gives delicious flavor. Cheaper, cleaner than old way. Send for circular. E. Krauser & Bro., Milton, Pa.

This Potato Free

This **NEW POTATO** is just what everyone is looking for. Drouth and blight proof, and the earliest on record; nothing can equal it; best quality and smooth, while its yielding qualities are simply marvelous. We are raising stock to offer in **1906,** but want to test it this year in every section of the country to make good our claims, and we offer **One Sample Potato** for testing **free** to anyone enclosing **10c.** to pay for postage and packing. It will be carefully packed from frost, and it is worth many dollars to those fortunate enough to get one.

Our New Seed Catalogue for 1905 is **free** and will be sent with every potato. If you enclose address of two families who buy seeds, we will include **Free Sample Great Corn Novelty** to be offered next year. Send to-day.

It is all in the seed

The profit from your farm depends as much on the seed you plant as your skill in cultivating it. It is an easy thing to gain from $5.00 to $15.00 an acre by wise choice of seed. Start right—the best farmer on earth can't raise a big crop from poor seed. The same truth applies to vegetable and flower gardening.

Our Northern Grown Seeds

are best for all soils and climates. They possess the vigor peculiar to all Northern plant life. Over 20 years of effort in seed breeding have been successful because we have kept constantly in view the most essential point—YIELD. Our latest and a very sensational introduction is **Peep'o Day Sweet Corn,** ***earliest, tenderest, juiciest.***

For 16 cents, stamps, we will mail you 300 seeds Peep'o Day Sweet Corn—enough for 60 hills; also our 1905 Pictured Catalogue of Northern Grown Farm, Vegetable and Flower Seeds. If the corn is not wanted, we will send our 1905 Pictured Catalogue Free. It contains special trial offers.

NORTHRUP, KING & CO., Seed Growers, 66 Northrup, King Bldg. MINNEAPOLIS, MINN.

Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

We cannot change yesterday—that is clear,
Or begin on to-morrow until it is here;
So all that is left for you and for me
Is to make to-day as sweet as can be.
—Emma C. Dowd.

The winter is growing old; there are spring breezes somewhere. It should always be springtime in the heart.

There are bright and beautiful homes in the city; people expect them there, and their brightness and beauty are generally bought with money. But there are bright and beautiful homes in the country, on the broad and fertile farms, and on the small and less pretentious places. Their brightness and beauty are not bought. Care and industry made them—gave beauty to the surroundings, while loving hands planted the seeds, and God painted the flowers. The interior may be plain, but if love and refinement dwell there it is beautiful.

Traveling an unfrequented road in a "backwoods" locality, I met a school boy plainly clad and evidently poor, but as I approached, a cheap hat was politely lifted, and I was met with a pleasant, respectful greeting. That boy told me of the refinements of his home and parents, or of his own refinement of heart, much more plainly than if he had tried to do so in words. Will boys who have not yet reached that poin tthink of it?

The country schools are now closing; the farmer boys and girls of America are passing another mile-stone in their lives. What has the space just traversed brought them? They have made progress in their studies, of course, are further advanced in that which we call an education than they were six months ago; but are they more manly and more womanly? Have they higher conceptions of life and its responsibilities, a keener sense of what is honorable and right, a more refined appreciation of what people owe each other, nigher aspirations for what is good and noble? This is learning; this is education; and the schools do not teach enough of it.

The "whole wheat" flour that is now being exploited, and sold at about double the price of best flour, is said, by government experts, to be only fine white flour and middlings mixed—good for food ,of course, if unadulterated, but why should it cost double the price of flour?

Usually the first task of the little girl is to wash the dishes, but it is one that most likely the mother does less perfectly than any other. The story has it that the wise young man in search of a wife asked to see the breadpan. We would ask to see the dishrag. We venture that fewer housekeepers would be willing to show their dishrags than any other article of as constant use. The very name of dishrag seems to carry odium with it. It is time for reform to get into the kitchen. There should be two dishpans instead of one, one in which to wash the dishes and the other in which to rinse them, and there should be dish towels instead of dishrags, not large enough to be unhandy, but large enough to not become greasy and dirty before the meal's dishwashing is finished, and then they should be thoroughly washed out before the next using. Linen is the best material for them.

It is quite a little step from the kitchen to the bedroom, but that will be ,found the place next needing a touch of reform. Of course all of Our Up-to-Date People thoroughly and frequently air their bedrooms, and let in as much sunlight as possible, but there may be room for a word or two about the beds themselves. In the towns and cities the cheaper mattress has pretty well crowded out the more costly feather beds, but the latter, because the feathers may be plucked at home, and do not have to be bought, still predominate in the country. The fresh, clean feather bed is hard to beat for a comfortable resting place, but the long-used and soiled one—give us anything in preference. Where feather beds are used, the feathers should be renovated at least once a year, and every effort should be made to keep them clean, and they should be frequently sunned besides. All the covers should be shaken out every day, and they should be sunned every few days, and the sheets should be laundered as often as the wearing linen. We are talking for good housekeeping and comfort now, and against the doctors and graveyards.

Try this way with apples: Cut in quarters and sprinkle with sugar. Place in a dish and leave in a slow oven for several hours. Flavor with small chips of lemon peel if desired. When ready to take out they should be a rich red, and unbroken. Also: Cut peeled apples into slices and fry in a little very hot butter until a delicate brown.

Here is a nice cheese sandwich: Crumble the yolk of a hard boiled egg; season with pepper, mustard and salt; add a quarter of a pound of cheese grated fine; mix thoroughly and moisten with a little vinegar, spread between slices of bread or halves of biscuit.

Coffee and tea are neither so popular in well informed circles as they once were. Strong tea is especially objectionable on account of the tannin it contains. Those at all subject to rheumatism or like affections should never use it. We do not strongly recommend a beverage at all at mealtime, but the least objectionable one is warm water. It may be used plain or with cream and sugar—either or both.

Mix a mustard plaster with the white of an egg, and it will not burn the skin as it does when mixed with water or vinegar.

A thoughtful writer has said we never take into the body to much pure air, seldom too much pure water, but we very often take too much food. Yes, we eat too much, and what adds to the trouble, we eat it too quickly. We give the delicate organs that keep us alive absolutely no chance, and then we complain when we become dyspeptic. Pie is a terrible dietetic sinner. But it is not so much the fault of the pie as it is of those who serve and eat it. It comes on often after we have already finished the meal, and perhaps have eaten too much. Then we eat a piece of pie because it is pie, and the mischief, if not actually done, is well begun. Learn to eat slowly, and you will not eat so much, but you'll be better nourished and you'l lhave better health.

The Lamp

A bright light in the country home is the exception rather than the rule. The following hints we regard as good:

Many a lamp has been set aside as unfit for use, nay, even dangerous, because the dust had accumulated in the small air tube at the side of the wick. Next, if you will boil your burners and toughen your flues by putting them in water and gradually heat them until boiling hot, then let them cool in the water, they will serve you twice as well. To get your burners to burn clear and brilliantly, boil them every now and then in a strong suds made of pearline ,as it will remove the oil and leave them bright and clean. Polish with dry flannel and chamois skin. Use the best of headlight oil and fill every morning full to the brim and never cut the wick, but turn it just above the tube and rub the charred part off with a match. You will have a brilliant light night after night if you follow these directions.

BOUND TO SUIT

This Split Hickory Special is a Made to Order Buggy, yet sold for only

30 Days' Free Use Plan

$50

Therefore it is **bound** to suit the buyer. Split Hickory Vehicles are made by well paid, **skilled union labor,** in one of the largest and best equipped factories in the country. We employ **no girl labor** in our factory nor do we have **boys** doing our painting and striping. Every Split Hickory buggy embodies the results of over twenty years successful carriage manufacturing, insuring comfort, durability and correct style. Here are some of their 100 points of merit.

Screwed rim wheels; quick shifting shaft couplers; long distance dust-proof axles; oil tempered springs; finest quality imported all wool broad cloth upholstering, cushion and back; spring cushion and solid spring back; top has genuine No. 1 enameled leather quarters with heavy water-proof rubber roof and curtain, lined and reinforced. Wheels, gear, body and all woodwork carried 100 days in pure oil and lead; 16 coats of paint, with highest grade of finishing varnish.

To thoroughly acquaint you with our Split Hickory Vehicles, and our new and liberal plan of selling direct to users we want to send you our handsome **1905 Catalogue,** comprising 192 pages, fully illustrated. The catalogue shows our complete line of Vehicles and Harness.

Send us a postal card request. Address

Bog Spavin

Lameness resembles bone spavin, but the bunch is in front of the true hock joint, a little to the inner side, and is soft and yielding, hardening sometimes as the case grows old.

Fleming's Spavin Cure (Liquid)

is a special remedy for the soft and semi-solid bunches that make horses lame—Bog-Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It isn't a liniment to bathe the part, nor is it a simple blister. It is a remedy unlike any other—doesn't imitate and can't be imitated. Easy to use, only a little required, cures the lameness, takes the bunch, leaves no scar. Money back if it ever fails. Write for Free Horse Book before ordering. It tells all about this remedy, and tells what to do for blemishes of the hard and bony kind.

Breckinridge County, Keutucky

From the Breckinridge Democrat:

A winter snow storm had small effect in keeping Breckenridge county farmers from attending their meeting last Saturday. The court room was almost full of people at 10 o'clock, the advertised time for the meeting, but so intent were they upon having every one present at their deliberations that the meeting was put off unil 1 p. m., when the noon train could swell the number anxious to help along the great work of standing for more equitable prices for that money-producing commodity, tobacco, the crop upon which so many depend for their ready money.

Promptly at the appointed time the meeting was called to order by G. S. Wilson, who, in a well received speech, stated the object of the meeting to be to discuss the marketing of the present crop of tobacco so as to get the Lynchburg prices of not less than $8 around for Kentucky dark tobaccos, and $12 for burleys. He pointed out the necessity for concerted action, and of some system that would prevent the buyers from securing the best crops at good prices and leaving the inferior ones to be sold at whatever could be obtained. He mentioned tobacco buyers, good men and honest, and tobacco liars, who reported sales not made in order to influence other men to sell their crops. His reference to not fighting individuals but standing for their rights and his bold declaration that the prices must be $8 and $12 elicited thunderous applause.

Mr. Wilson was elected President for one year; Joel H. Pile, Secretary; Sherman Ball, Vice-President, and Silas Miller, Treasurer.

Robert McGavock, the first speaker, praised the delegates to Lynchburg who had labored to arrive at what would be a fair compensation to the grower. He told of the greatness of the organization, the powers of which would soon need circumscribing to hold the producers to what would be really reasonable and equitable for their product. He outlined Hancock's plan for securing good prices, paid his respects to the silk hat speculators and said it was business on the part of the farmer to name his prices for his commodities instead of meekly asking "What'll you give me?" He urged selling the crop this time, not giving it away. Close attention and merited applause were given this man's earnest talk.

Sam Baker, a Lynchburg delegate, ably and effectively addressed the listeners, who lost not a word. He told of their estimating the real cost of producing, including labor, time, interest on investment, wood for burning beds, canvas, fertilizers, the labor of the grower being put at $1 per day—less than what is paid for work in banks, factories, stores and railroads—it runs to $6 per hundred pounds for Kentucky tobacco. Then the price of $8 is only a gain of 33 1-3 per cent. above real cost to market. He said the production in 1900 was 1,367,000,000 pounds and in 1904 only 760,000,000, the supply diminishing and the demand increasing, and showed that better prices are due us. Of the 700 growers in his county all but 200 had pledged themselves to stand firm and fight to a finish. He closed with an eloquent appeal for the rights of the grower whose work the year around is given to producing this crop.

The Hancock county resolution was adopted, and a contract for the sale of tobacco was agreed upon, of which the following is the condition:

Containing 98,000 pounds more or less for which the second parties agree to pay the sum of $8 per hundred all around on conditions named as follows: It is understood that if this tobacco is in the growers' hands after the first day of May there is to be added to the above price 50 cents per month until sold. First, the parties of the first part agree to put their tobacco on the market in good shape. Second, the parties of the second part agree to receive it straight and give lawful weight. Third, in case the interested parties cannot agree on any of the crops, it is hereby understood that the parties who have bought the tobacco must unload it and the committee in charge be notified of the trouble at once and they, with the purchaser, settle the controversy, such settlement to be permanent.

Doing It Well

We clip the following from the Breckinridge, Ky., News. Farmers ought to remember with liberal support papers that thus aid them in this great movement:

When a farmer makes up his mind to do a thing he can do it well, do it quick and do a great deal. At Ryan's schoolhouse, near this city, a few farmers met, twelve of them formed themselves into a local union of the American Society of Equity, and, in twenty minutes they pledged themselves to hold 150,000 pounds of tobacco for the prices set by the Lynchburg convention. It took them a long time to make up their minds to take this decisive step, but they finally took it, and they took it quick. But there are dozens of other farmers in this county as well as in many other counties, who decided much sooner to take this step and the result is that they are still holding, and it doesn't matter to them if the trust doesn't like it. Farmers of this spirit, determined farmers asking for rights which have been trampled on for years, were the kind that met at Hardinsburg last Saturday to decide on the best plans for holding their tobacco for the Lynchburg convention prices. And they were three to four hundred strong and would have been a thousand or more strong if the weather had not been so inclement. And what they did in the old court house at Hardinsburg thousands of other farmers are doing in other counties, and nearer and nearer victory appears to those who are in the right, and are proving that they are in the might.

He depended upon Supply and Demand, but—

He slipped up on it!

To the person who will write the best story not to exceed 200 words, of which the above picture shall be the most fitting illustration, and to be received at this office not later than March 15, 1905, we will give $1 cash or three annual subscriptions to Up-to-Date Farming. To the second best we will give one annual subscription. Both stories will be printed in Up-to-Date.

The Farmers' Journal, Abilene, Texas, has reduced its subscription price from $1 a year to 50 cents. This is one of the brightest little papers published in the South, and it is as true to the cause of real agricultural reform as the needle to the pole. Southern farmers ought to give it a circulation of a hundred thousand during the next six months.

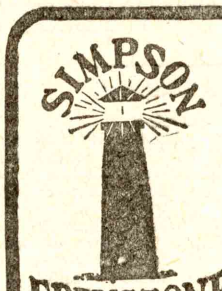
SIMPSON



EDDYSTONE PRINTS

It always pays

to use good material for making clothes. A trifle more in the beginning means better quality, more wear, finer printing, faster colors, prettier patterns, and greater satisfaction as long as the dress lasts.

Simpson-Eddystone Prints fill all these requirements and give the individuality to a dress that every woman appreciates.

Our ideas of quality are high and we live up to them. Every piece of prints is thoroughly inspected before it leaves our hands. This is why our calicoes have been the **Standard of the United States for 62 years.**

Great variety of patterns in Blacks, Black-and-Whites, Silver-Greys, Light Indigo Blues, Shepherd Plaids.

Sold by all first-class dealers.

The Eddystone Mfg Co (Sole Makers) Philadelphia

AT TWO-THIRDS RETAIL PRICE

When you buy a carriage or harness from our factory you give us two-thirds the sum you would pay the dealer. The remaining one-third is your profit. We are the only house in the state of Ohio selling direct to the customer who actually manufacture the vehicles and harness they offer for sale. We can and do sell a high grade class of work at a great saving to the purchaser, and our liberal guarantee carries with it abundant evidence that prices are not offset by reduction of quality. We absolutely refund money to any dissatisfied customer who purchases a carriage or harness from us and pay freight both ways. Write for free catalogue showing styles and explaining our plan. We have thousands of testimonials from satisfied customers.

UP-TO-DATE WRITERS

Good Example to Follow

Editor Up-to-Date Farming:

We are so much interested in the doings of A. S. of E. people elsewhere we will let others know what we are doing.

Our local (Heflin No. 1) met Jan. 21, at 10 o'clock, with nearly all the members present. We took our dinner baskets, and, with our wives and children, spent a pleasant, and, I hope, a profitable day.

We had previously taken action on the tobacco question, which is of vital interest to us in this section. Our committee reported about 65,000 pounds as pledged to hold for the Lynchburg prices. This includes nearly all the tobacco in this school district. We turned it over to E. C. Baird as salesman for our local.

We had samples of all this tobacco at our meeeting Saturday, and it created great interest among the farmers, both members and non-members of the Society, and we received three new members at this meeting.

After the business of the day was over, we spent the time in listening to talks made by members of the Society, and an address by Deputy Stevens, which was highly enjoyed by all present. We expect to have a corn show soon to see who has the best variety so as to improve our seed and increase our crops. We think other locals might try this plan, in regard to most farm crops, with pleasure and profit. Our local has had the pleasure of organizing two others in the past two weeks.

Hoping Up-to-Date may soon reach a million interested readers, a thing it so richly deserves, and that farmers everywhere may awake to their opportunities,

T. F. TANNER.

Heflin, Ky.

Won a Victory

Editor Up-to-Date Farming.

Our local became dissatisfied with the millers. Wheat was $1.05 per bushel, but flour ranged from $3.20 to $3.50 per hundred. The millers would not give more than 28 to 32 pounds of flour to the bushel of wheat, and no bran. Our farmers kicked, but that did no good. Finally they sent away for a car load of flour, which they got for $2.88 per hundred. Since then wheat has not gone down a cent, but millers have notices posted offering flour at $2.75. The price of potatoes has been raised about 15 cents per bushel because the farmers refused to take the offered price. Our president, John Pioutrouski, recently made a fine address on the trusts and the union farmer.—J. D. Williamson, Pinckneyville, Ill.

J. D. WILLIAMSON.

Capt. McBride, of Illinois

Capt. John T. McBride, of Chester, Ill., is one of those earnest, far-seeing men who realize the importance of an educational work in all reform movements. In ordering thirteen copies of the Third Power for distribution, he says:

"By the educational work which you are doing you are demonstrating to the understanding of the masses of farmers some of the value which they can secure through co-operation with each other, and you are likewise incidentally demonstrating the important fact that, in order to enable a great class like the farmers scattered all over the country to co-operate with each other they must have one central head from where eminates such information as all need. This will enable all to move at the same time and in harmony with each other for the accomplishment of a common object, that object being one in which all can equally share, as is the case with profitable prices for farm products.

JOHN T. McBRIDE.

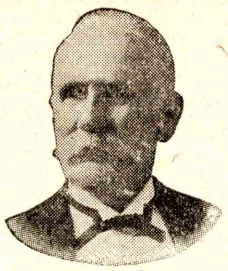
Chester, Ill.

Senator B. R. Tillman, of South Carolina, says: "The cotton will not go into sight at the present price, and I know of no means to make men sell who do not want to."

A Virginia Veteran's Wise Words

Editor Up-to-Date Farming.

Wonderful to say, in a city as large as Richmond, no place could be found in which to store the farmers' tobacco! But after it was sold it all found a place. Farmers, what is the matter?



W. W. HOBSON.

Have we no friends in our capital? We have been playing fools long enough. Let each one of us turn over a new leaf, and be fools no longer. We must profit by the fable of the lark and the husbandman, and attend to our own business. We have depended long enough upon the city people to help us they are too busy helping themselves.

Now, what can we do to prevent a repetition of the glut of December? Let the tobacco growers organize, and then we can have a man of our own in all the markets, and when too much tobacco comes in he can put it out of sight until the market wants it. Thus we may have our business done for one-half what it now costs, and there will be no glut.

Years ago there was a most worthy, honest and just man in the cattle business, with whom I did business in Richmond, Va. It was Col. Robinson. Many will remember him. On one occasion I had a nice lot of cattle, and he had written me when to bring them in. I did as directed, but when I got to his pens I never saw such a glut before or since. Col. Robinson met me at the gate ,and said: "Well, you have done as I told you, and if you will still do as I say you will come out all right." I replied: "It is my part to raise the cattle; it is yours to sell them." "Well," said he, "I have an empty lot: put your cattle in that; it is out of sight ,and I will sell them when the market wants them." And he did, at a good price, when the glut was over, and the gain in weight paid for the feeding.

Why can't we do so with our tobacco? Many think they have to sell, but when their tobacco is in the hands of our representative they can get money to meet their wants.

I read Up-to-Date Farming with the greatest interest, as it is doing more for the farmers than others.

WILLIS W. HOBSON.

Ballsville, Va.

The Farmer Is Going to Win

F. B. M'GOWN.

It is given up by some of our best business men that the farmers are going to win this time. Don't sell unless you get your price. You have thousands to back you. Don't haul your tobacco or other stuff to market until you have sold it. Christian County is with you. F. B. McGown, Hopkinsville, Ky.

DO THIS NOW

And I Will Give You a Pair of my Handsome

Gold Spectacles

Just send me five names of spectacle wearers and I will do this:—First, I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test), I will mail you a

perfect-fitting five dollar family set of Spectacles for only $1, which will include a pair of my handsome Rolled Gold Spectacles, absolutely free of charge. This set will last a family a lifetime. I have never sold this family set for less than $5 and you could not buy spectacles anywhere near as good as these, even for $10 a ***pair.*** I am really charging you nothing for them now, as the dollar I will ask you to send with your test is only to help pay for this announcement. This very remarkable but honest offer (to send a five dollar set of spectacles for only $1) is open to everyone (my old customers also), but only for a short time, as I am just doing this to prove to every spectacle wearer in the world the following two very important facts: *First*, that my Perfect Home Eye Tester is positively accurate and reliable and with it you will be able to give your own eyes a perfect test in your own home and thereby I fit you with absolutely perfect fitting spectacles ***by mail,*** which could not be improved on even if you had undergone a personal examination in any occulist's office, at a cost of $10 or more. *Second*, and most important of all, that on account of my latest improvements, my spectacles have become known the world over as the "Dr. Haux Famous Perfect Vision Reading and Sewing Spectacles" and they are now greatly superior to all others on the market. With them you will be able to thread the finest needle and read the smallest print, day and night, with perfect ease and comfort, just as you did in your younger days, and this, even if your eyes are so very weak now that you cannot read the largest print in this paper. In fact the large number of physicians who have for years and years used and recommended my spectacles to their weak-eyed patients will tell you that they are the most perfect fitting, clearest and best in the world today, and I will give you your dollar back and let you keep the five dollar set of spectacles also, if ***you yourself*** don't find them to be the finest, clearest and best you have ever bought anywhere at any price. I can only send one set to a family at this price, and this only for a short time, so write me ***right now*** for my free Perfect Home Eye Tester, and address my company as follows:—

DR. HAUX SPECTACLE CO.,
Haux Building, ST. LOUIS, MO.

I WANT AGENTS ALSO And any man or woman (also storekeepers), without any previous experience whatever, can fit the weakest eyes with my Perfect Home Eye Tester, which is so simple that any one can work it and easily earn from $25 to $100 weekly selling my famous spectacles, either in their own homes, travelling or in stores. My agents need no license anywhere as I furnish the necessary documents with the Agent's Outfit.

NOTE:—The above is the largest mail spectacle house in the United States and perfectly reliable.

CURE YOUR OWN KIDNEY

And Bladder Diseases at Home at a Small Cost—One Who Did It Gladly Tells You How

Mr. A. S. Hitchcock (clothing dealer), East Hampton, Conn., wishes us to tell our readers who are suffering from any kidney or bladder disease, that if they will send their address to him he will, without any charge whatsoever, direct them to the perfect home cure he so successfully used.

Knowing, as he so well does, the failure of almost every other treatment in stubborn cases, he feels that he ought to place in the hands of every suffering man and woman this simple, inexpensive and withal positive means of restoring themselves to health.

Our advice is to take advantage of this most generous offer while you can do so without cost.

Nineteen different States and Canada have reported local unions during January.

National Organizer Sherman is now among the cotton growers.

If any one has a doubt as to what can be done, what should be done, what must be done, and how to do it, let him hear National Organizer Sherman once.

We must depend upon the locals for prompt renewals. Take advantage of that very liberal seed premium offer. And do more; call the attention of outsiders to it.

Note that Third Power Bond. The most crochety must admit there is nothing in that to the publisher, but whoever reads the Third Power will be a convert to the doctrine of controlled marketing. A 320-page book seldom sells for less than $1.50 or $2. Here is one that may be obtained for 50 cents even if the coupon be purchased. The price of the coupon, 25 cents, goes to the person who takes the trouble to dispose of them; the coupon and 25 cents gets the book—the publisher only gets 25 cents, the purchaser gets the most valuable 320-page book he ever bought.

Let every farmer become an orator. There is not a farmer but has interests to be defended, and the day is past for him to depend upon some one else to make his defense. Every local union should be, and is, a school of oratory. No farmer but can tell what he thinks, defend what is right, urge what he desires, and oppose what he believes to be wrong. Learn to do this in the meetings.

Learn something every day. There are millions of sources of information. Every sentence you read ought to give you some new thought. Retain these thoughts with a view to telling them in the meetings. Doing this is the only difference between smart men and those who think they are not.

An appreciated visitor at headquarters recently was W. D. Wilson, of the Dairy Reporter, Elgin, Ill. Mr. Wilson is thoroughly imbued with the fact that reform is seriously needed in almost all the relations of life, especially in the production and price-making, and he believes the plan of the A. S. of E. well calculated to work this needed reform.

68-PAGE BOOK AND TRIAL FREE

Cures All Uric Acid Diseases—Kidneys, Bladder, Rheumatism

Free Treatment Proves the Cure; Free Illustrated Book Tells all About it—Send For Them Both Today

To readers of Up-to-Date Farming: If you or anyone you know of is suffering from a disease of the kidneys, the bladder or any form of rheumatism, you are urgently invited to send name and address to get a free trial treatment of a wonderful non-alcoholic discovery by the celebrated French-American specialist, Dr. Edwin Turnock, by which you can cure yourself of any Uric Acid disease in a short time in your own home and save the necessity of an operation and the expense of doctors and druggists. Send for it if you have Bright's disease, diabetes, dropsy, gravel, weak back, stone in the bladder, enlarged prostate, frequent desire to urinate, pains in the back, legs, sides and over the kidneys, swelling of the feet and ankles, retention of urine, wetting the bed, or such rheumatic affections as chronic, muscular or inflammatory rheumatism, sciatica, rheumatic neuralgia, lumbago, gout, etc. It will promptly remove every trace of uric acid poison and its complications, stop all aches, pains and swellings, strengthen the kidneys and the bladder so that they will become normal again, and so revitalize and build up the entire constitution as to make you feel healthy and strong as in your prime.

Are you in the grip of a Uric Acid Disease? This will cure you; prove it free

It did this for legions of others, among them such well-known persons as Mrs. Martha Coker, Tyler, Tex.; G. G. Rector, Marshall, N. C.; Mrs. Mack Devean, Noank, Conn.; Archibald Ritchie, Mt. Forest, Ont., Can.; Mrs. C. H. Sweetland, Webster City, Iowa; Ph. J. Brown, Kellspell, Mont., and it will surely do it for you. Write to the Turnock Medical Co., 2492 Bush Temple, Chicago, Ill., and since every free treatment is accompanied by a 68-page illustrated book going fully into all the details, it behooves you to send your name and address promptly for these free offerings. Do so today sure, for you cannot justly say you are incurable until you have tried this really remarkable treatment, and as neither money nor even stamps are asked for, you should certainly make a free test of it at once.

RUPTURE CURED WHILE YOU WORK. YOU PAY $4.00 WHEN CURED. NO CURE, NO PAY. ALX SPEIRS Bx 265 WESTBROOK ME

About the South

"About the South" is the name of a 64-page illustrated pamphlet issued by the Passenger Department of the

Illinois Central R. R. Co.

in which important questions are tersely answered in brief articles about Southern Farm Lands, Mississippi Valley Cotton Lands, Truck Farming, Fruit Growing, Stock Raising, Dairying, Grasses and Forage, Soils, Market Facilities and Southern Immigration along the lines of the Illinois Central and Yazoo & Mississippi Valley railroads, in the States of Kentucky, Tennessee, Mississippi and Louisiana.

Send for a free copy to J. F. Merry, A. G. P. A., I. C. R. R., Dubuque, Ia.

Choice Pickings in the YAZOO VALLEY

"Choice Pickings in the Yazoo Valley" is the title of an illustrated 36-page pamphlet describing the railroad lands in the famous Yazoo Valley of the Mississippi, on the line of the Yazoo & Mississippi Valley Railroad, and showing what has been accomplished by the large number of settlers successfully established there. For a free copy, address E. P. Skene, Land Commissioner, I. C. R. R., Central Station, Park Row, Chicago, Ill.

Information concerning rates and train service to the South via the Illinois Central can be had of agents of connecting lines, or by addressing

A. H. HANSON, G. P. A., Chicago, Ill.

$10 (payable $1 a month) will make you a partner in a business, 27 years old, paying 15 per cent dividends.

An extraordinary opportunity to profitably and safely invest your idle money or your weekly savings---Special offer to Up-to-date readers---Vick's Family Magazine free for five years---Big discounts on all seeds, fertilizers and agricultural implements---Read every word of this announcement.

If you act at once—if you send in your application THE VERY DAY on which you receive this copy of Up-to-date Farming—you can secure an interest in the famous old James Vick business and share in the big profits.

We consider that, in securing the sale of this stock, we are more fortunate than any other investment brokers in the United States.

We do not believe that anything on the market at the present time, nor anything that will be on the market this year, can possibly equal an investment in the James Vick Company.

It is an extraordinary condition that makes it possible for the public to secure an interest in an enormously profitable business which has been conducted as a close corporation for more than a quarter of a century.

What the business has done in the past.

James Vick, founder of the famous seed business, established VICK'S FAMILY MAGAZINE in 1878. The success of the Magazine has been phenomenal and it is a much larger and more profitable part of the business of The James Vick Company than people generally suppose.

The business paid large dividends right from the outset.

James Vick, the founder, died in the year 1882 leaving an estate estimated at half a million dollars.

The Present Company.

The James Vick Company is regulalarly incorporated with an authorized capital of one million dollars and is chartered under the special act of Congress of 1902 and authorized to do business in every state in the Union and in Canada.

The stock is divided into one hundred thousand shares—par value $10 a share.

The general offices of the company are at 62 State Street, Rochester, N. Y.

The business is in the hands of men of extraordinary ability and energy and it is growing faster than ever before.

Mr. F. C. Owen, president and general manager of The James Vick Company, is undoubtedly better qualified to be at the head of such a business than any other man in the United States. He knows the business from A to Z. He is a self-made man. He is broad-gauged in every sense of the word. He is a man of exceptionally pleasing personality—a characteristic of most men who do great things. Again, like all men who accomplish big things, he is extremely enthusiastic about everything he undertakes and he has made a decided success of every enterprise he has ever gone into.

Probably the most difficult (although by no means the most important) work he has ever done was that in connection with the starting and building up of the greatest educational publication in the United States—The Normal Instructor.

We have never known a man who enjoys more perfect health, or who can do more intelligent managing and, at the same time, handle an enormous amount of important detail work.

Mr. Owen is 35 years of age.

With such a man at the head of the company, and with the most competent men that money can hire at the heads of all departments, the greater development of this famous old business is just about as nearly certain as the continued success of the United States government.

Vick's Family Magazine is a very large and very profitable part of the business.

Few people realize how much money is spent by advertisers and what enormous fortunes are made by successful publishers.

While VICK'S FAMILY MAGAZINE has a circulation of more than 100,000 copies a month, and is making a lot of money, it is a small magazine compared with some that have been pushed more aggressively.

For instance, THE WOMAN'S MAGAZINE of St. Louis has a circulation of 1,600,000 copies a month and has a gross yearly income which we estimate at over one million dollars. That enormous business has been built up in about five years by circulation booming methods now being applied, for the first time, to VICK'S FAMILY MAGAZINE.

We have estimated the gross receipts of Munsey's Magazine, for advertising and subscriptions, at fully $1,650,000 and we have been told that the net profits of that magazine are in excess of $700,000 a year.

At the time The Ladies Home Journal of Philadelphia was started VICK'S FAMILY MAGAZINE had been making money for many years and yet The Ladies' Home Journal has a circulation of more than 1,000,000 copies a month and an estimated annual income of $2,400,000.

Comfort, a magazine which is printed on very cheap paper, and which we consider inferior in many ways to VICK'S, was started only a few years ago at Augusta, Maine, by a man who had practically no capital. It now has a circulation of 1,250,000 copies a month and has made its owner, Mr. W. H. Gannett, a multi-millionaire.

We might mention any number of instances where magazines of less merit than VICK'S, have quickly earned immense fortunes for their owners.

Mr. Owen and his associates are just putting into operation a series of circulation booming plans which we firmly believe will, inside of the next two or three years, give VICK'S FAMILY MAGAZINE a larger circulation than any other publication of any character anywhere in the world.

F. C. OWEN, President of the James Vick Company

The magazine at the present time has more than 100,000 circulation, is carrying more high-class advertising than any similar magazine in the United States, and the net earnings are upwards of 20 per cent. This is fine testimony to the ability of Mr. Chas. E. Gardner who is the advertising manager. The circulation is now growing so rapidly that a new advertising rate twice the present rate will go into effect within the next three months.

Free.

Everyone who buys stock—even the investor who takes only one share—will receive absolutely free, VICK'S FAMILY MAGAZINE every month for five years. The magazine is ably edited, beautifully illustrated, and will be of much interest and help to every member of the family.

Dividends.

Dividends are paid every four months—January first, May first, and September first.

The company is now earning and paying dividends amounting to 15 per cent a year which is less than it has paid in the past.

The reason for the reduction is that a considerable amount of money is now being expended in booming the circulation of the magazine.

We do not believe that the dividends will be less than 5 per cent each four months at any time and, although we want to be very conservative in estimating the profits of the future that none of our clients will ever be disappointed, we do not hesitate to predict dividends amounting, at the very least, to 20 or 25 per cent a year, as soon as the agricultural implement and fertilizer departments are well under way, and the magazine business made much more profitable by greatly increasing the circulation and increasing the advertising rate accordingly.

How money makes money.

Just think of what 15 per cent means. It means that, if you invest $10, you will receive $1.50 a year for the use of your money and, at the end of a year, your $10 share is likely to be worth $15. If you invest $100 you will get $15 a year in dividends. As the dividends are payable every four months you would get $5 three times a year instead of waiting a year for your $15. If you invest $1,000 the 15 per cent means a dividend check for $50 every four months—$150 a year.

Can there be an easier way to earn money than to make your idle money earn it for you? Certainly not. That is the way people get rich. Don't say you haven't an idle dollar. You can certainly lay aside that much every month.

If we induce you to begin saving a dollar or a few dollars a month, by investing in this substantial, safe, profitable old business, we will be doing you more good than if we were to make you a present of a thousand dollars.

All Common Stock.

The stock is full paid and non-assessable. It is all common stock. As there are no preferred shares all shareholders will receive the same percentage of dividends. If you buy a single $10 share you will receive the same percentage on your money as will be received by the largest stockholder.

JAMES VICK, Founder

Why stock is now offered to the public.

For many years there has been a great and constantly growing demand on the part of the customers of this company for the various commodities which could be handled to excellent advantage in connection with a big seed business.

The two lines for which there has been the most general demand are agricultural implements and fertilizers.

The profits on both of these lines are very large and there are no off years.

A properly managed business of this character will continue to grow almost indefinitely. It may grow faster some years than others but it will never go backwards.

The present capital of the business is all required to handle the seed and publishing business, NOW THAT THEY ARE GROWING SO RAPIDLY, and, in order to quickly raise capital for taking on the fertilizer and agricultural implement businesses, in addition to the publishing and seed business, it was decided to market five hundred thousand dollars' worth of the treasury stock.

A few of Mr. Owen's personal friends and business associates in Rochester immediately made application for large blocks of the stock and it is probable that upwards of two hundred thousand dollars' worth of the stock will go to them. We expect to immediately place another one hundred thousand dollars' worth with our clients. This will leave about two hundred thousand dollars' worth to go to the general public.

It is the desire of Mr. Owen and other officers of the company to distribute the two hundred dollars' worth, as far as possible, among investors—particularly farmers, fruit growers, and those having large truck gardens—who will take SMALL blocks of the stock, say ten to twenty-five shares each. Of course, the object of distributing the stock in this way is to more widely advertise the Vick seeds and other products.

Every shareholder will naturally give a preference to the company in which he owns stock, ESPECIALLY IN VIEW OF THE FACT THAT ANYONE OWNING TEN OR MORE SHARES WILL BE GIVEN A SPECIAL DISCOUNT ON ANYTHING SOLD BY THE COMPANY.

This discount will be liberal. In many cases it will, in a year's time, amount to more than the cost of the stock.

We know that the many farmers, truck growers, and garden owners, throughout the country, who have patronized the Vick house for years will appreciate this opportunity to invest a little money in this business. The great prestige of the house, and the fair and generous treatment always accorded its customers are sufficient guarantee that every dollar received from investors will be used to the best possible advantage in building up a business by far the greatest of its kind.

EVERY INDIVIDUAL READER of Up-to-date Farming CAN AND SHOULD save AT LEAST $1 a MONTH and invest it wisely. Make your resolution to begin saving NOW—before you turn this leaf. Send $1 as first payment on one share if you cannot take more.

WELLS & CORBIN, Fiscal Agents, 2267 Land Title Bldg., Philadelphia

USE THIS COUPON AT ONCE

As this announcement is appearing simultaneously in a number of publications (reaching four or five million readers) you can readily see that, to be sure of getting any of the shares, you will have to act promptly. Send in your first payment immediately and secure some shares. Then make any investigation you care to and, if you do not find the business exactly as represented in every detail, your money will be promptly returned to you. Be sure to make your reservation at the earliest possible moment.

UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING.

INDIANAPOLIS, INDIANA, MARCH 1, 1905.

Jubilee Collection of Beautiful Roses

For Readers of Up-to-Date Farming, for New Subscribers, or for Renewals. If you have not renewed yet, don't put it off longer. If you have renewed, have your time extended another year, or send a new name.

ALL HARDY. PLANTED ONCE WILL BLOOM FOR A YEAR.

Meteor

A velvety-red ever-blooming, of the deepest glowing crimson. A beautiful open rose, a free bloomer in the garden, also a very excellent pot rose. The best rich red rose for the garden. Buds and flowers very large and elegant; borne on long stems.

Perle des Jardins

Few other roses have as firm a hold in popular favor and are so highly prized. It thrives well in the open air, blooming freely. Its large, full, well-formed, golden-yellow flowers, borne on stiff stems, make this variety especially desirable for bouquets, while the dark foliage of the plant furnishes an excellent setting for the fragrant, delicate hued blossoms. Richly perfumed and equisitely beautiful, ever blooming. Some protection in north is advised.

New Rose

Margaret Dickson

This magnificent new white Hybrid Perpetual Rose is the greatest acquisition made in roses for the past ten years. Some idea of its beauty and worth can be formed from the fact that wherever it has been exhibited it has carried off first honors. The color is white with pale flesh center, petals very large. The flowers of magnificent form, produced on long, stiff stems, are very double, and have the true magnolia fragrance.

OUR OFFER For 50 cents, the regular subscription price of Up-to-Date Farming, we will send the paper one year and give one one-year-old rose bush of each of the three varieties. All delivered to your post-office, and guaranteed to be in good condition. This offer is good for new subscribers or renewals. If your subscription is paid in advance it can be extended another year, or the paper sent to another name. REMEMBER we send three (3) rose bushes, not one, with each 50 cent subscription. This offer should induce many thousand new people to subscribe for Up-to-Date Farming, and thus will learn of the great work it is doing. SHOW THE OFFER to all your neighbors, and get them to send also. MAKE UP A CLUB, we will accept five orders for $2.00. You can make fifty cents on each five orders. AGENTS WANTED.

Address all orders to,

J. A. EVERITT, Publisher

Indianapolis, Ind.

FOR THE CO-OPERATING FARMERS OF AMERICA

HAVE YOU SENT FOR YOURS?

WE HAVE A COLLECTION FOR YOU.

If you have not wont you please do it now? UP-TO-DATE is going to be a greater power in 1905 than ever before. Don't you see that it is getting better and stronger every issue. It has been the greatest in farm journalism for more than two years. Cannot you say, as does the Editor of The Farmers Journal as follows:

"We scarcely find a sentence in UP-TO-DATE FARMING but what is so true, so forcible, so convincing and so directly to the point that we want to copy it all in to **The Journal** so that our readers may profit by it."

Also we copy from a farm exchange as follows:

"We are anxious for our readers to read Up-to-Date Farming. Its gospel is the gospel of salvation for the agricultural interests as sure as you live."

Can it be possible that you farmers who have read this paper for the past year fail to recognize the Magnitude and Value of the work we are doing? We say no. You surely are not blind and dead to your own interest. We wont believe it. Therefore we now look for your renewal of subscription at once.

NEW SUBSCBIBERS ARE ALSO EARNESTLY SOLICITED. IF YOU CAN TAKE ONLY ONE PAPER IT SHOULD BE THIS ONE. IF YOU CAN TAKE SEVERAL THIS SHOULD BE THE CHIEF ONE.

Your Hands Are Tied when you let the speculators price your crops, but when you price them yourself it is different. No matter how pleasant farming is now, it will take on new attractions when you get the price you ask for your own crops. This is what UP-TO-DATE FARMING teaches. Don't you want to enjoy the benefits?

There Will Be No Guessing when you are a subscriber to Up-to-Date Farming. Then the prices of your crops will be as stable as are the prices of plows, binders, interest on money, taxes, etc. You may need to wait a while now but the price comes.

There Are Many Other Reasons but we cannot give them here. Order this paper to your address for the next year and the truth of all we say in this advertisement will gradually come to you and make a new man or women of you as regards your understanding of agriculture.

Up-to-Date Farming is printed twice a month. It has nearly 150,000 subscribers already, but must have a *million or more.* If *all* farmers knew how valuable this paper can be to them, we would have a million subscribers in two weeks. We know farmers are just like any other class of people—they want opportunities to make money and Up-to-Date Farming makes the opportunities. It has done so for many thousands, and we have their letters stating this fact. It can do as well for *every* farmer.

The Subscription Price Is 50 Cents Each number will do you more real pratical good than a whole year's volume of any other paper, because it tells you the vital things about your business that other papers have not begun to print. These things are of the greatest importance to you and you *will not* get the best results from farming until you know them. You must read Up-to-Date Farming to understand it, appreciate it, enjoy it and profit by it. When you begin reading this paper the possibilities that lie around the farming millions will begin to dawn upon you.

We want you to send your order direct from this advertisement. For fear you will put it off we are going to offer you a valuable premium if you send promptly. Good seeds are as valuable as good teaching and both mean success, Mention this paper and send promptly and we will give you four seed novelties as follows:

1 Large Pkt. **Smith's Prolific Corn.** New hybrid. Greatest cropper. Yields over 100 bu. to acre as easily as common corn yields over 60 bu. Fine appearance. Yellow Dent, ears 10 to 14 in. long. Always 12 rowed. Grains ⅝ in. deep, ½ in. wide, nearly ¼ in. thick. Cob 1 in. diameter. Stalk 8 ft. high, 2 in. thick at base; blades 6 in. wide. Bears often 4 ears to stalk. This is a remarkable variety and one that every corn grower should procure at once. IT IS NOT OFFERED FOR SALE AT ANY PRICE.

1-2 lb. **Snow White Sensation Potato.** A new seeding, and one that will create a sensation. Season medium late. The skin is the whitest of all and the flesh is as white as fine flour. There is no yellow tinge in the flesh whatever. Oblong shape, large size. A most remarkable potato indeed, and will take the country by storm. It outyields Carman and Sir Walter Raleigh, while for handsome appearance and table qualities those varieties will not be wanted when **Snow White Sensation** comes on the market. This potato is not for sale **at any price**

1 Pkt. Cabbage **The Volga.** A new variety from Russia. It is remarkable for perfection of form and solidity of heads. Mr. Allen, the largest grower of cabbage seed in America, says, "Without exception the nearest approach to perfection of any variety we ever grew." It is a late variety and for winter it keeps better than any other. Every gardner will be delighted with this fine fall and winter cabbage.

1 Pkt. Peppers **Mongolian Giant.** Do you love to grow giant vegetables? There is a fascination in having the largest. Grow this pepper and you will have the fruit that will be the wonder and admiration of the entire neighborhood. There is no variety finer for filling with cabbage. The flesh is thick, meaty, solid and pleasant mild flavor. This is truly a mammoth vegetable and one of the greatest attractions for any garden. Bushes grow 1½ to 2 ft. high,

Remember *We don't charge a cent for seeds and potatoes. We offer them to guarantee your prompt subscription because we need it in carrying out our great undertaking. But you need Up-to-Date Farming even worse than we need your subscription. Don't lay this paper aside until you have sent the order.*

Old subscribers may also have this premium when renewing their subscription, if they ask for it.

READ SOME REPORTS ON THE 1904 SEED COLLECTION

If you miss any of our FREE SEED DISTRIBUTIONS you miss some good things. If any of our old subscribers did not get as good returns as here reported, try again as every article in the '05 collection is a gem.

EXPLANATION—The Premium potato was sent out under the temporary name of "Up-to-Date No. 1." But has been named and is being introduced this year as Everitt's Abundance.

Mr. Everitt:—I value your paper very much. Of the seeds you sent, the Yard Long Corn is just immense—the largest I ever saw. The Pumpkin and Melon are good and the Potato out yields all other kinds.
David A. Bolick, Bloomfield, Ia.

From the ½ lb. premium potatoes I planted 22 hills and raised 147 potatoes, weighing 73 lbs. I took second premium at the Flathead County Fair. I also took second premium on pumpkins from the seeds; first premium on White Wonder Melon and two first premiums on Yard Long Corn—one on best half bushel the other on 6 best stalks.
E. J. Cramer, Chautauqua, Mont.

From the ½ lb. Premium Potatoes I raised 45 lbs. I regard this as a large yield. The tubers are large, uniform and shapely. They are very valuable and I thank you for the start. E. McIntire, Worthington, W. Va.

From the ½ lb. of premium potatoes I dug 172, weighing 55 lbs. (over 100 lbs. to one.) The other seeds were extra good. W. J. Hylton, Wolverine, Va.

From the ½ lb. of premium potatoes I raised 99 tubers, weighing 48 lbs. I would not take the price of the paper for these potatoes. G. K. Arnly, Gamewell, N. C.

From the ½ lb. of premium potatoes I raised 53 lbs. of as nice, large, smooth potatoes as I ever saw. I am delighted with them. The Yard Long Corn is fine.
19 hills of the potatoes yielded 26 lbs. All other seeds a success. G. W, Millower. Watkins, N. Y.

This is the Offer: **FOR 50 CENTS we will send UP-TO-DATE FARMING twice a month for one year. Also four seed novelties as explained, and a due bill good for 25 cents' worth of packet seed, your selection.**

YOURS FREE **If you will show this offer to 4 of your Neighbors and get their orders we will send . . YOURS FREE**

That, is we will send five (5) for the price of 4, or you can keep 50 cents for the fifth order. ¶SUBSCRIBERS ALREADY PAID IN ADVANCE can have their subscription extended another year, OR WE WOULD LIKE if they will make a present of the paper to a friend not now a subscriber. In this way they can get the Free Seed Distribution and we get a new reader.

25c Due Bill We not only want your name but all of your neighbors'. The good that this paper can do is not for a few farmers but for all. Therefore, send us 10 or more addresses on a separate sheet with your order and we will send a **due bill** good for 25 cents' worth of seeds (vegetable or flower) selected from the catalogue of a leading seed house (your choice.) Surely you will now come and help us to get the million subscribers.

UP-TO-DATE FARMING

J. A. EVERITT, Publisher *INDIANAPOLIS, U. S. A.*

MAIL US THE GRAIN OF CORN

Pub. UP-TO-DATE FARMING, Indianapolis, Ind.

Dear Sir: Send me Up-to-Date Farming one year to the following address. You will also send the seed premium for prompt subscription as advertised in Mar. 1, 1905, UP-TO-DATE FARMING.

Name.....

P. O.....

County..... .....State.....

If you send the list of Names they must be on a sheet separate from order and we will send due bill.

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 227 West Washington Street

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | INDIANAPOLIS, MARCH 1, 1905 | Number 5

UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher

JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR

Foreign Subscriptions $1.00 a Year.

Membership in The American Society of Equity, $1.00, including a year's subscription.

Three Month's Trial Subscriptions will be Accepted for 10 Cents.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞ Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizihg and sustaining organized effort for improved conditions. Look for the LABEL.

NATIONAL UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	-	$ 1.20
Corn, No. 2 " " " "		
Until January 1st, 1905,	-	.50
From Jan. 1 to Apr. 1, 1905,		.55
" April 1 to next crop	-	.65
Hay, No. 1 timothy, " per ton	- -	12.00

Don't they squirm?

The speculative price makers die hard.

The man that holds the plow owns what the plow produces, if he is working for himself. If he owns it he has a right to put a price on it.

The farmer has no more right to put a price on the plow that somebody else made than the man that made the plow has to put a price on the crops the plow cultivates.

But after the farmer buys the plow, he may put a price on it, and sell it or not just as he pleases.

After crops are bought the purchasers very properly make the prices for subsequent sales. If the farmer controls prices, he must do it while the crops still belong to him. This lets the dumper out.

The stay-out and the dumper are two people that don't aid price making.

Reformers who copy the methods of those who need reforming, will never reform anything. Most of the so-called protective associations and farmer stock companies follow the trusts as close as they can without becoming a part of them. When their work is summed up in a few years you will not be able to tell "t'other from which."

The Supreme Court landed a pretty hard snow ball between the eyes of the beef trust, but the packers will continue to do business in the same old way. They may turn a few things "eend for eend," but that will be about all the difference.

The local unions are getting after the stay-outs. It is well enough. Those who dance and get the fun—the benefits—ought to pay the fiddler.

Don't you think this issue of Up-to-Date is about "what the doctor ordered?" Show it to the neighbors and tell them all about it. Help us with that March run for 20,000 new ones or renewals. Each may yet have that valuable seed premium. Or those experimental seedling potato tubers, with a chance to develop a valuable new variety in which there may be a fortune.

Did you know the newspapers were saying so many good things about the A. S. of E. and Up-to-Date? Read those extracts in another part of this paper. You know how they made fun of all in the beginning. But when a lot of earnest men put in their best licks as the A. S. of E. have done, chips are going to fly, and by and by some big old knotty trees will fall.

We said men, but women have done some very effective work also. The women constitute the force of moral suasion, quiet reasuring and wholesome example. The men may be the rolling thunder of the movement, but the women are the quiet lightning flashes.

Isn't it a spectacle when the richest class in the country must go obsequiously with something to sell and say "What'll you give?" and then turn around to the fellow behind the counter and say, "What'll you take?" If you fellows up high persist in making the farmer so rich, get out of his way and let him do business.

Orders for the Third Power book are now being received at the rate of hundreds per day, thousands per week. Those bonds and coupons are goers. Every coupon is worth a quarter, but Mr. Everitt gives them to his friends in appreciaton of their services to this cause; they in turn may give them to their friends or sell them at 25 cents each, just as they please. All who have a coupon may get the book for it and 25 cents—a 320-page book, nicely bound, that would ordinarily sell at from $1 to $1.50.

In 1905 farmers will come to the front, never more to be put in the rear.

Have You Renewed?

Dear reader, if a subscriber to this paper, this question is addressed personally to you. If your paper reaches you in a wrapper, the date with your address shows the time to which your subscription is paid. If it does not reach you in a wrapper, and if your subscription is in arrears, your paper will be marked with an X on the first page.

Now please pay attention to the date or mark and favor the publisher with a renewal at once, if your time is not paid ahead.

Have you ordered your "Third Power" book? If not don't put it off longer. See coupon offer elsewhere.

The third edition of 10,000 copies of the "Third Power" will soon be exhausted. They are going like hot cakes, and no wonder. Did you ever know of a 320-page, cloth bound book, for 25 cents, post paid? Such a book sells for $1.00 to $2.00 in all book stores. While the price is cheap, the book is priceless in value to every American citizen, and particularly to farmers. We are waiting for your order, if not sent.

Why We Give Premiums

We deplore the practice of giving premiums to subscribers. This feature has, however, been so thoroughly engrafted on the publishing business in this country that it is difficult to get away from it. We believe it should be prohibited by law and newspapers sold only on their merits. While the public look for a premium with a subscription we will accommodate them. We offer some attractive ones in this issue. We aim to make them so attractive that they will draw that renewal from every subscriber who has not sent it already; or if sent, the time can be extended another year. Or, better yet, let us send the paper to a new name.

A careful review of the situation shows that so much of the standard farm crops are now being held, as to insure a proper distribution of the year's supplies, and guarantee to those who hold, equitable and profitable prices. No one need have any fears as to the outcome.

As we have often said, we rejoice at the spirit of organization manifested among the cotton growers, our only regrets being the narrowness and inefficiency of single crop organizations. But we can assure our friends in the South that the A. S. of E., with its broad platform, is among them, that it is meeting a cordial welcome, is growing rapidly, its purpose not only national but international in character, and its banner wide enough to float over every product that comes from the soil.

If the A. S. of E. were thoroughly organized, as it is rapidly becoming, and had all its objects accomplished and its plans in operation, there would be more worthless cusses out of a job than ever kicked the gravel on a tramps' high way. They would be the slick haired Dinguses that have lived all their lives by cheating honest men.

Some of the papers that are beginning to catch their breaths in painful suspense, still speak of the A. S. of E. as a trust. The wish is father to the thought. They are on the dividing line between night and day, beginning to see a little but not very clearly. They are not yet sure what is to happen, and feel that they must say something. They find themselves between the devil and the deep sea, and are doubtful which way to run. Or like the little darkey lost in the woods, who first prayed to God and then to the devil, because he said he didn't know which might get him first, and he wanted to be on good terms with both. They would like to tickle the farmers but they don't dare to ruffle the trusts.

A 320-page, cloth bound book, price $1.00, and 10c extra for postage, all for 25 cents, postpaid. See coupons in this paper.

The Telephone as an Aid to Accomplishment

Wonderful Spread of a Marvelous Invention

What the A. S. of E. has accomplished demonstrates that it will accomplish much more. The great field crops, on account of their bulk and qualities of easy storage, may be controlled through the established avenues of information, but there are other products upon which the support of millions depends, whose marketing successfully in the interest of the producers hinges upon the quickest and cheapest means of sure and direct communication between the producer and the market centers. In this class we place live stock, fruits, vegetables, and all other perishable products, or products that deteriorate if not marketed immediately when ready for market. To successfully market such products will finally make necessary a directing market head, and special representatives at the market centers, with semi-official representatives in the side markets or smaller cities and towns. For instance it often transpires that when the market centers, like Chicago, St. Louis, Cincinnati, New York, and other great cities, may be supplied and a glut threatened, hundreds of smaller consuming points may be bare and anxious for that very product. It can easily be seen that directing shipments to these points would not only supply consumers at reasonable prices, but it would relieve the congestion at the great centers, restore the equilibrium, maintain steady prices, make trade safer and easier, and often save millions, frequently involving the entire profits of the crop, to the producer.

NEED DIRECT COMMUNICATION.

To accomplish this very desirable result, the thing most needed is cheap, speedy and sure communication. This points directly to the telephone. The telegraph was great in its day, is great yet, but when a farmer or producer can place a receiver to his ear at his own home, and be told, vive voce, just what to do with his next shipment, and when to make it, the telegraph with its skilled operator, must yield the palm of utility to its younger brother, the telephone.

The strides this instrument has made in the little more than twenty-five years of its existence, shows that its use in this way is entirely practical, and that a broad foundation is already laid for it. We regret that we have not complete tabulated statistics of the telephone service of the United States later than Jan. 1, 1903, but its magnitude at the time was astounding, and its growth since then has been more rapid than in preceding years. We give the report of the Census Department at Washington, as summarized by Bradstreet's of Feb. 4, 1905:

Statistics are shown separately for three classes of telephone systems, as follows:

1. Commercial systems, including all systems operated by individuals, firms or corporations primarily for revenue.

2 Mutual systems, including all systems operated through a mutual arrangement between the persons deriving benefit from the service, primarily for the benefit of the owners, revenue being incidental.

3. Independent lines having no regular exchange or central.

Although the commercial telephone has developed entirely during the past thirty years, it is now of vastly greater importance than the telegraph. In 1902 the wire mileage operated by commercial and mutual telephone systems together constituted 70.6 per cent. of the combined mileage for such systems and commercial telegraph systems, and these same telephone systems gave employment to 70.7 per cent. of the wage earners, paid 65.5 per cent. of the wages, received 68 per cent. of the revenue, and paid 67.8 per cent. of the expenses.

The number of miles of wire in use in 1902 was 141 times, and the number of telephones nearly forty-three times, as great as in 1880.

In 1880 the population of the United States was 50,155,783 and the number of telephones of all kinds was 54,319, giving an average of 923 persons per telephone; the population of continental United States in 1902 is estimated at 78,576,436, and the number of telephones operated in that year was 2,315,297, giving an average of thirty-four persons per telephone.

The total revenue of all telephone systems, from operation and all other sources, amounted to $86,825,536, or an average of $37.50 per telephone; of this amount, 94 per cent. was derived from actual operation. The total operating expenses amounted to $56,867,062, or $24.56 per telephone ;the total net income was $21,660,765, or $9.36 per telephone, and the net surplus for the year was $6,678,046, or $2.88 per telephone.

The commercial and mutual systems reported 2,315,297 telephones as in operation during 1902. There were 2,178,366 subscribers reported, giving an average of approximately one telephone to each subscriber.

The estimated number of messages, or talks, during the year over the wires of the commercial and mutual systems was 5,070,554,553. Of the total number of messages reported, 97.6 per cent. were local and the remaining 2.4 per cent. were long distance and toll.

The commercial telegraph messages sent during 1902 numbered 90,834,789, or less than one-fifty-sixth of the telephone messages, and the pieces of first-class mail matter that passed through the mails during the same year numbered 4,611,271,580, or not quite as many as the telephone messages.

AMAZING GROWTH.

That there was as early as January, 1903, a telephone in operation for every thirty-four persons in the United States, and that, during 1902 the messages or talks by telephone equaled an average of 65 for every man, woman and child in the country are almost beyond belief. Indeed it could not be believed did it not come from such an indisputable source.

As we have before intimated, telephone develelopment during the years since Jan. 1, 1903, has undoubtedly been greater than during any preceding years, and the increased development during these later years has been very largely among our rural population. In the working out, then, of our market system a good foundation is truly already laid; and it need not be argued that these lines are largely owned and controlled by companies and corporations not interested in, perhaps not in harmony with our idea of controlled marketing. What matters it? When people "talk face to face," the medium through which they talk, whether it be God's own air or a corporation's wire, cannot pervert the words.

Besides, farmers need be very little beholden to the wires already in use. What has been built up in twenty-five years without a special purpose other than the mere prospect of business, can be duplicated in less than a fourth of that time with the great purpose of a life interest at stake!

The problem of conrolled marketing and securing equitable prices for all crops and products is simply solving itself.

ONE OF OUR OBJECTS.

NOTE—One of the original objects of the A. S. of E. was a national telephone system. The time appears to have arrived to work out this object. Daily we are called upon by special industries to help them work out their problems. The fruit growers, the stock growers, the gardeners and truckers, the poultrymen, dairymen, etc., etc., are all looking to the A. S. of E. for help to work out their special problems while co-operating in the great national body with the growers of staple crops.

Through the farmers' national telephone system, and representatives of the growers, on each important market and the national headquarters, the market conditions and requirements may be communicated to headquarters daily and then transmitted to all parts of the territory affected. In this way marketing may be controlled, the supply directed to the best markets, the markets supplied with the maximums they will consume, but no gluts ever occur. This will be working out the plan of the A. S. of E. to have a clearing house (or more than one), for every farm crop. Equitable prorata distribution of crops will be made to all markets, resulting in much greater consumption and uniformity of prices. Every person can see advantages in this system where certainty and definiteness will prevail, over the old hap hazzard, hit or miss plan of marketing as in the past, when the only certainties were with the transportation companies and commission men.

It is also intended that this step shall operate to the building up of the society and in cementing its members in a bond of mutual self-interest. Members of the A. S. of E. will receive benefits on account of the superior advantages of this system of marketing over non-members, consequently all will want to become members. There is not a section of the country, nor a farm crop grown that cannot be greatly benefited by this system of marketing in absolute control of the producers themselves.

"I'm tired out!" said the editor of an old style agricultural paper. "So are your readers," replied an A. S. of E. farmer who happened to be passing the window.

In 1905 farmers will come to the front, never more to be put in the rear.

Supply, Demand and Price of Livestock

We give the following summary, from the National Provisioner, of the completed report of the Bureau of Statistics of the United States Department of Commerce and Labor regarding the live stock trade:

During the year 1904, 33,513,899 head of cattle were received at the markets of Chicago, Kansas City, Omaha, St. Louis and St. Joseph. This total was somewhat in excess of the movement for either 1902 or 1903. Gains were made largely in hog receipts, while the cattle movement indicated a decided decline. This largely accounted for the fact that although the aggregate number of head received showed an increase, the total number of cars required to handle the movement was over 5,000 less than for the previous year.

At Chicago a shrinkage is apparent in the year's total livestock receipts, but an increase is noted in the shipments. The arrivals of cattle, calves, hogs and sheep were less during 1904 than for the two previous years, the only increase having been in the receipts of horses and mules. The total gain in shipments was accounted for by larger withdrawals of cattle, hogs, sheep, horses and mules. The aggregate arrivals for the year amounted to 15,376,009 head, handled by 286,873 cars, compared with 15,713,515 head, carried by 302,915 cars, in 1903, while the shipments totaled 4,436,072 head, carried by 92,876 cars, and 3,628,130 head, in 86,307 cars. The difference between receipts and shipments amounted to nearly 11,000,000 head, indicating, to some extent, the enormous size of Chicago's packinghouse industries.

St. Louis livestock arrivals for 1904 amounted to 4,563,366 head, consisting of 1,261,942 cattle, 2,361,623 hogs, 746,139 sheep, and 193,662 horses and mules, being about a million head in excess of what they were in 1902 or 1903. The heaviest gains occurred in hog receipts, although arrivals of other animals were somewhat larger. Shipments of the same character from this market during 1904 amounted to 1,034,911 head, as against 806,171 head in 1903 and 677,151 head in 1902. Livestock receipts at Kansas City, which amounted to 5,462,302 head during the past year, were somewhat larger than those of 1903, but show a decrease as compared with similar movments in 1902. Shipments from this city for 1904, amounting to 1,507,524 head, varied but little from those of the two previous years. At Omaha, livestock receipts were 5,045,029 head in 1904, and 5,218,836 head in 1903, while shipments for the two preceding years amounted to 1,336,275 head and 1,296,164 head, respectively.

SUPPLY AND DEMAND DIDN'T COUNT.

We have two objects in publishing that report. One is its value as a matter of news, giving information as to the magnitude of the live stock interest of the country; the other is the lesson it affords on the subject of marketing and price making.

Note that the aggregate receipts, counted by heads, was somewhat in excess of the same counts the previous year, but the increase was in the smaller animals, because there were 5,000 fewer of car loads. Hence, the meat supply was 5,000 car loads less than it was the year before. The demand could not have been less, for population is constantly increasing, not only by births but by the influx of immigration, and the ability to gratify the demand could not have diminished, because it is claimed the people were never more prosperous. Everybody knows that live stock prices ruled low last year. Why should they? A 5,000-car loads less of supply, a naturally increased demand, backed by an unusual degree of general prosperity to enable the demand to gratify itself, if supply and demand rules the price, why did not higher prices prevail? We address this question more to the agricultural press and the teachers of the farmers than to the farmers themselves. The latter have had the truth pounded into them by the merciless sledge-hammer blows of adversity; they know how it is, but the former persist in teaching the fallacious doctrine that supply and demand regulates the price, and that no other power can do it.

So plain a showing from official figures ought to convince the most prejudiced that supply and demand does not control the prices, that powerful influences that profit by their control do it, that it is done without reference to any interests but their own, often to the ruin almost of the productive interests, that they use the once effective but now obsolete, law of supply and demand as a cloak to hide their methods of plunder. And the press and schools that still teach that doctrine are but cloak holders to hide the nefarious schemes.

MUST ORGANIZE.

What can the stockraisers do? Join with the other lines of rural life in organizing to control the marketing. While the supply was less last year, it was wholly uncontrolled. It went upon the market pell-mell; some days a famine, some days a feast; some days a scarcity, more days a glut. Under such circumstances of course the market was but a plaything in the hands of the price manipulators. But with such an organization as to keep the supply steady, always enough but never too much, both market and price would be steady, and the arbitrary price makers, speculative price makers, would be completely baffled. This is what must be done in the interest of both producer and consumer, and many traders will heartily second and support the movement.

The Beef Trust and the Supreme Court

In last issue of Up-to-Date Farming we gave some of the most trenchant points in Attorney-General Moody's argument in the case of the United States against the Packers' Combine before the Supreme Court, and announced at the close that the court had decided against the trust. The decision was the unanimous finding of the court, and was far-reaching in its effect. It fully sustains Judge Grosscup's previous decision, merely modifying its language slightly to make it more explicit.

Lawyers say this is the most sweeping decision so far as hurtful combines are concerned, that has yet been handed down by the Supreme Court, or any court. It is in the form of an injunction, enjoining the packers from doing certain things, that is, forbidding them to do them.

WHAT THEY WERE GUILTY OF.

The court found that the packers had combined in an agreement not to bid against each other in the purchase of live stock; that they had combined to put up prices for a few days in order to encourage heavy shipments, and to put prices down by the time the stock should arrive; that they had combined to fix prices at which they would sell the dressed meats and other products, even agreeing to restrict shipments when necessary to compel the payment of their price; that they had combined to establish a uniform system of credit to dealers who would handle their stuff, and to keep a black-list of dealers who dared to sell below their prices or to handle other meats; that they had combined to make uniform exclusive charges for cartage done by them and which their customers had to pay; that they had combined to get less than lawful rates from the railroads, securing to themselves advantage in freight rates over competitors, in effect driving all competitors out of business.

It will be seen that the court found the combine guilty of all and more than Up-to-Date ever charged them with, and the decision forbids them to do any and all of these things. But law and court decisions hang upon technicalities, and the most explicit provisions and broadest decisions, when they relate to business transactions, are easily evaded, and we imagine that this ruling of the Supreme Court will be no exception. But it will have a most valuable effect in its information to the people. The public now knows that the combine has done these things; the fact can no longer be disputed, and the methods of doing them are laid bare. It shows how helpless the unorganized stockmen are in the hands of such a monopoly, and that the consumers of meats and other butchers' products are just as helpless in the same hands, and that the dealers are as helpless as the eaters. It shows up monopoly as it has never been legally shown before, and should convince all that if liberty be maintained, monopoly and special privilege must be overthrown.

MAY EVADE THE LAW.

This case is important in another respect. The Packers' Combine months ago was found guilty of all these things in the United States Court at Chicago, and Judge Grosscup entered an injunction, of which this recent decision of the Supreme Court is but an affirmation, forbidding the packers to do them. It is now found that they have continued to do them in violation of that injunction. They are, therefore, in contempt of the United States Court, and liable to criminal prosecution. Will they be so prosecuted? It may not be amiss to compare the treatment these great corporations receive with the treatment that has been meted out to labor organizations and others under charge of contempt in the alleged violation of injunctions.

But the thing that comes most directly home to the masses, not only the producers of the meats but the consumers of them, is, that, if packers may combine and compel to themselves advantages that cannot be enjoyed by others, and arbitrarily make low prices on the raw material and high prices on the finished products, and though the highest courts may find them guilty and forbid their doing so, there may yet be ways through technicalities, for them to continue practices just as hurtful, how may the public prevent the practices and overthrow the monopoly?

COUNTER ORGANIZATION.

Evidently the only way is by counter organization—counter combination, if you please. We do not mean a combination to usurp special privileges, or the building up of a counter-monopoly, or even of a competing monopoly, though this is the plan generally suggested by those who promote counter organization. Away with all monopoly, and away with all special privilege. The stockraiser or farmer that proposes monopoly or claims special privilege is just as guilty as is the packer who does the same thing. The counter organization that is entirely legitimate, that carries with it not a single element of monopoly nor of specal privilege, and yet that must be entirely effective not only against the packers' combine, but against all like combines, is simply an organization for making prices, not prices of another's property but of their own, not prices that favor some particular purchasers, but prices alike open to all purchasers. The essence of the Magna Charta that the Barons won from King John, the essence of the Bill of Rights, the core and substance of the Rights of Property, is, that the owner may put his own value upon his possessions, the only modification being the public Right of Eminent Domain. But this does not apply to personal property or products, which are personal property. The most hurtful, the most dangerous privilege of all is the privilege of putting a price upon the property of others. This privilege, backed by other privileges, which admit of such manipulation as to compel the acceptance of the price, strikes at the root of liberty and nullifies the Bill of Rights so far as property is concerned.

People must reclaim the right to price their own property. Speculative combinations will then be harmless, because there will be nothing for them to exploit.

Who Prices Things?

When the question of farmers pricing their products was first suggested by Up-to-Date Farming, it elicited all sorts of comments, many of which showed a wonderful degree of ignorance on the subject. Not a few high up in the scientific and educational world declared that all prices were fixed by inflexible laws which it was folly to think could be interfered with or changed. They really believed so, because they had given the matter no thought; they simply took for granted what custom had led them to believe.

The business world, of course, was better informed, but, as a rule they thought it was to their interest for price-making to remain as it had been, hence they seconded what the schools and press said, and offered ridicule where the others in vain tried to present argument, and contended that no set of farmers, nor all of them together, could do anything to affect the price of farm products.

But these people know more about price-making than they did two years ago. It takes agitation to set people to thinking; they often make discovery of things which they never dreamed could exist, but which, once seen, they wonder they had not seen them before.

EVERYTHING PRICED ARBITRARILY.

Among the discoveries to which the agitation of the last two years has led, is the fact that everything is priced arbitrarily, that none of the markets are controlled by rules or laws, fixed or otherwise, that most of the commodities are priced by the manufacturers or producers of them, but that farm products are (or were), priced by influences entirely foreign to their producers, and that the producers dumped them on the markets so made, without so much as asking the reason why, or entering a protest beyond a grumble when prices were ruinously low.

Since the farmers have had their eyes opened and understand the matter, the price- makers are not so careful to conceal their methods as they were when all the world but themselves were so ignorant concerning the matter. Take illuminating oil—coal oil. That is an article more universally used perhaps than any other. The coal oil lamp is found in the hovel and the palace, except in the cities where gas and electricity supply its place. An undisputed article in the Indianapolis Star tells how the price of that necessary article is fixed, and has been for ten years:

ONE MAN PRICES COAL OIL.

"Ten years ago the Standard Oil Company took upon itself the duty of fixing the price of all crude oil produced in the United States. Previous to January 23, 1895, oil was received by the Standard ,as well as numerous other pipe line companies and refineries and certificates issued for the same on the same plan as grain certificates are issued by elevator companies in Chicago in wheat, corn, etc. The holder could cash these certificates at any time at the current price of oil. This price was set by the oil exchanges in Pittsburg and Oil City, where it bobbed up and down much the same as grain does in Chicago, and railroad stocks in New York.

"Once a few of the large producers quietly bought in certificates until they controlled the market, although they did not have the oil, for that was in possession of the Standard, but they did bid up the price so that their profits were a few hundred per cent., and then made John D. Rockefeller and his associates settle at the high bid price. This cost the Standard a few million and it also set the controlling spirits in that corporation to thinking.

"The oil exchanges were put out of business. To the Seep Purchasing Agency, of Oil City, was given the pleasant work of making the price of crude and today Joseph Seep is the man who tells the world every day just how much will be paid for oil of a certain grade in any part of the United States.

"On the above date, ten years ago, the following statement was forwarded to all oil producers in the United States:

"'Hereafter, in all oil purchases, the price paid will be as high as the markets of the world will justify, but will not necessarily be the price bid on the exchange for certificates. Daily quotations will be furnished you from this office. JOS. SEEP.

"'Oil City, Pa., Jan. 23, 1895.'

"Since that date the buyer for the Standard, for such is the position of Mr. Seep, has daily made the price of oil, running it up and down, just as he may be directed by the officials of that corporation.

"Only a few days ago Mr. Seep wrote The Star confirming these statements and in his letter said:

"'There is a large amount of oil products in California and Texas that I do not buy. I buy about 90 per cent. of the oil produced in New York, Pennsylvania, Ohio, Indiana, West Virginia and Kentucky for which I use about 25,000 checks per month; amount to, in round numbers, $100,000,000 per year.'

"In the old days, so oil operators report, when a new field was discovered the oil was analyzed and the price was set according to its intrinsic value. An oil containing a large percentage of paraphine and naptha was graded high and an oil tainted badly with sulphur, which is expensive to extract, was graded low just as wheat and corn is graded when taken to the market on its weight and value.

"Today oil is bought at just whatever price Joseph Seep may say when he arises in the morning, regardless of supply and demand or quality."

What have our friends to say now of the "inflexible law of supply and demand?" And why has not the farmer as good a right to put a price on the wheat, corn, cotton or tobacco that he coaxes by cultivation out of the soil, as the Standard Oil people have to put a price upon the oil God himself created and that their machinery sucks out of the earth? Shame on you fellows that say the latter have a right which the former have not.

Up-to-Date and Stock Companies

This paper has frequently warned farmers of the danger of investing their money in joint stock companies. Of course this has not pleased the promoters of such companies. We did not expect it to please them. We did it in the interest of the farmers.

In none of our articles on this subject have we impugned the motives of the promoters, nor have we questioned their honesty. We have simply dealt with the companies themselves in the light of history and the conditions which surrounded their various purposes.

In the light of history it cannot be said that such companies or corporations have been successful, and such as are organized to relieve the farmers from the exactions of the strongly organized and heavily capitalized trusts and combinations have a work between them and success which makes success too remote to figure upon, and loss of the small capital invested too certain to admit of its being placed in the doubtful column.

We have now before us a lengthy communication from Mr. John H. Blose, of Tremont City, Clark County, Ohio, in which exceptions are taken to what we have said concerning the Farmers' Co Operative Harvesting Machine Company of North America, located at Springfield, Ohio. This concern has as grand a name as the International Harvester Company of America, perhaps, but it has not the power. The former is made up of farmer stockholders, who have invested their medium earnings in the enterprise; the latter is made up of strong and powerful corporators, who have pooled their issues, and gone in to win against all comers.

We are not at all opposed to the Springfield corporation. Indeed our sympathies are entirely with it, and no publication will be more rejoiced to record its success, but the history of such enterprises and the obstacles in its way are entirely against its success—we mean its ultimate success as a paying investment for those who buy its stock. And this, as we have said in former articles, does not in the least question the honesty or ability, or business integrity of those who must have the management of the enterprise, nor do we question the need for it. The need is great, and its field of usefulness is large. The point we make, and the only one we have ever made, is that corporation's stock is not, never has been, and perhaps never will be, a safe investment for farmers.

The statisticians are still glorying in the wonderful wealth of the farmers, reckoning him up into the billions and billions. Ought not so wealthy a person be able to put a price on what he owns? Hey?

We Offer $5,000

As a Guarantee on Liquozone. The First Bottle is Free

A great deal is said in these days about Liquozone.

Millions are telling of the good it has done; for one home in five—wherever you go—has some one whom Liquozone has cured.

This remarkable product has become the talk of the world. In the past two years, the sick of nine nations have come to employ it.

But so great a good could not be done to humanity without harming the interests of a few.

The consumption of medicine has immensely decreased. The popularity of the few physicians who cling solely to drugs has diminished. And in numberless homes where Liquozone is in daily use, sickness has been almost banished.

These facts have injured some interests. And a few of the injured attack what they blame for the injury. They denounce that which has done the good.

The usual method is to insinuate that Liquozone itself is a medicine; that, despite our claims, it is a compound of acids and drugs.

Such statements are oft repeated; and we cannot doubt that some are led to believe them.

Our answer to all is this:

The virtues of Liquozone are derived solely from gas, by a process requiring immense apparatus and from 8 to 14 days time. The gas is made, in large part, from the best oxygen producers.

Nothing whatever enters into the product, save the gas and the liquid used to absorb it, plus a touch of color.

And, to emphasize this answer, we offer $5,000 to any one who can disprove it.

In this business, methods which are subject to criticism are most carefully avoided. We permit no misrepresentation; no claims which have not been fulfilled. Our product is too vital to humanity to be laid open to prejudice.

What we say about Liquozone is true. What we claim it can do has, again and again, been done. And in any disease which we claim that Liquozone will help, we assume the whole risk on a two months test with every patient who asks it.

Before we bought the rights to Liquozone, it had been tested for years in thousands of the most difficult cases obtainable. We found that diseases which had resisted medicine for years yielded at once to it. Sickness which had been pronounced incurable was cured.

The value of the product was placed beyond possible question, before we staked our fortunes and reputations on it. It was amply proved that, in germ troubles, Liquozone did what medicine could not do.

Then we gave the product away—gave millions of bottles, one to each of millions of sick ones.

We have published no testimonials; no evidence of cures. We have never asked a soul to buy it.

Our method has been to buy the first bottle ourselves; to let the sick try it without the cost of a penny; to let the product itself prove its power.

Most of you know the result. There is no neighborhood—no hamlet so remote—but knows some wonders which Liquozone has wrought.

And Liquozone is probably doing more to cure sickness, and to prevent it, than all drugs, all medicines combined.

How petty is that self-interest which would have you go back to the old methods—to the days before Liquozone! Back to the time when the very cause of disease was unknown, or when no one knew how to meet it!

What Liquozone Is

The greatest value of Liquozone lies in its germicidal powers. It is a germicide so certain that we publish on every bottle an offer of $1,000 for a disease germ that it cannot kill.

Yet it is absolutely harmless to the human body. Not only harmless, but helpful in the extreme. Even a well person feels its instant benefit.

Liquozone is the only way known to kill germs in the body without killing the tissues, too. Any drug that kills germs is a poison, and it cannot be given internally. Medicine is almost helpless in dealing with inside germs.

But germs are vegetables; and Liquozone—the very life of an animal—is deadly to vegetable matter. This fact—above all others—gives Liquozone its value. There is no other way to directly end the cause of any germ disease.

Germ Diseases

These are the known germ diseases. Nearly all forms of all these diseases have been traced to germs, or to the poisons which germs create.

These are the diseases to which medicine does not apply, for drugs cannot kill inside germs. All that medicine can do is to act as a tonic, aiding Nature to overcome the germs. But those results are indirect and uncertain. The sick cannot afford to rely on them. And no one needs to now.

Liquozone alone can destroy the cause of these troubles. It goes wherever the blood goes, so no germ can escape it. The results are almost inevitable. We have seen them so often in every disease in this list that we have come to rely on them. Liquozone has proved itself so certain that in any stage of any of these diseases, we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anæmia	Leucorrhea
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Piles—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goitre—Gout	Varicocele
Gonorrhea—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer accomplishing what no drugs can do.

50c Bottle Free

The way to know Liquozone, if you have never tried it, is to ask for a bottle free. We will then send you an order on a local druggist for a full-size bottle—a 50 cent bottle—and will pay the druggist ourselves for it. This applies only to the first bottle, of course—to those who have never used it.

The acceptance of this offer places you under no obligations. We simply wish to convince you; to let the product itself show you what it can do. Then you can judge by results as to whether you wish to continue.

This offer itself should convince you that Liquozone does as we claim. We would certainly not buy a bottle, and give it to you, if there was any doubt of results. You want those results; you want to be well and to keep well. Then be fair with yourself; accept our offer to-day. Let us show you, at our expense, what this wonderful product means to you.

Liquozone costs 50 cents and $1.

CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to The Liquozone Co. 458-464 Wabash Ave., Chicago.

My disease is .....

I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

M 115—3D Give full address—write plainly

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

It Makes One Tired

"Farmers must farm better, put more of their land into meadows and permanent pastures, grow more stock, make, save and apply more manure, plow less, cultivate better, grow larger crops of better quality, and prepare them to meet the demands of the market; grow relatively less of the staple agricultural crops whose prices are fixed by the peons and serfs of the cheap lands of the world."

In the light of acknowledged events, isn't there just about as much rot in the above paragraph as could be crowded into that many words? And yet it is the instruction given by a prominent agricultural teacher, and has quite gone the rounds of the agricultural press.

"Farmers must farm better." The business of farmers is to cause useful and needed products to grow from the soil, and the better the farming the more of these products are made.

Last year more than two billion bushels of corn was produced in the United States, more, it is claimed by the buyers, than can be consumed, and, therefore, the price of corn should be low, they say. Last year, then, the corn farmers farmed too well. What sense is there in telling them they must farm better?

Last year, it is claimed, the cotton planters produced a crop of some thirteen million bales, two million bales more than the world needs, the buyers say, and hence the planters should accept a very low price. Is it not adding insult to injury to tell the cotton planters they must farm better?

The live stock market reporters tell us there has been too much stock on the market all the past year, and when there comes a time that there will not be too much, the millennium will be near, hence stockmen must accept prices close to or below the cost of production. What is to be thought of the man who would tell the stock farmers they must farm better?

The potato growers raised a large crop last year, the buyers say entirely too large for the producers to expect usual or remunerative prices. How much would the potato growers pay an instructor to tell them they must farm better?

And so of other crops, especially fruits and vegetables.

In the face of these facts, isn't such teaching absurd, ridiculous, contemptible? And yet that is the burden of the instruction given the farmers all the time and everywhere. The remainder of the paragraph, except the last part of it, all points to increased production as the thing for the farmer.

At the last he is told to grow "less of the staple agricultural crops whose prices are fixed by the peons and serfs of the cheap lands of the world."

We suppose excusable ignorance is to be pitied rather than blamed. But is ignorance ever excusable in those who would instruct others? It is the first duty of educators to educate themselves. Those who instruct as per the above paragraph, know little about marketing or price fixing. They know, perhaps, what they pay for articles they purchase for use in their families, but whence the price cometh, or whither goeth the profits, they know not, because they have given this part of the subject no thought, having simply accepted the preconceived opinions of the selfish or ignorant. And upon these opinions they base their instructions!

What prices are "fixed by peons and serfs of other lands?" Not one in America. Where the old system of marketing still prevails, all prices of farm products are fixed by the purchasers, the speculators and price manipulators. On the second day of last December, the ruling price of American cotton was around 9 cents, being bought in places at 10. On the 3d of December, after the publication of the report of the Department of Agriculture, the price fell with a suddenness that startled the cotton world. What "peon" did that? What "peon of other lands" plays with the live stock market, with the tobacco market, with the potato market, with the broom corn market, with the fruit market, with the hay market, with the vegetable market—with the price of every product not controlled by the organized producers under the new system?

Verily, there needs to be an overhauling of teachers, a change of texts, a revision of sermons. Instead of the old text of "farmers must farm better," try this—

FARMERS MUST MARKET BETTER.

Bear in mind that Up-to-Date Farming does not admit that farmers farm too well; it is the false logic of the old timers that makes it appear so. We do not admit that farmers have produced too much of any good thing. We can, therefore, consistently advise continued and even increased production, but as a matter of first and greatest importance, we urge farmers, through organization, to

MAKE AN EQUITABLE PRICE AND MARKET BETTER.

That is our text. That is out sermon. That is our instruction. That is

WHAT CAN BE DONE.

Then the drones, the back numbers, the out-of-dates, will have no occasion to tell the farmers they "must farm better."

Pitiful Squeaks

Did you ever hear and pity the helpless squeak of a rat in a trap? A good many of our contemporaries are just about in that fix. And they are squeaking.

The walls that have so long fenced in the farmer, and kept him from the enjoyment of what truly is his, are tumbling with age and the weight of their own absurdity. Old theories are exploded, and truths, heretofore ignored, are being established and are beginning to influence the actions of men, and newspaper writers that persist in using the old, worm-eaten pencils of the past, can't help it. Hence the feeble squeaks:

"J. A. Everitt's original ideas were not without merit, but—"

"When a man begins class agitation he begins to get dangerous."

"No nation ever lived or ever will live that recognizes classes."

Hear the squeak? Poor rats. In a trap, sure as you live.

No agitation ever led to improved general conditions that was not class agitation. We mean agitation started by a class, promoted by a class, and by a class brought to the attention and acceptance of the world for the world's good. That is precisely the character of the present agitation for equitable prices for farm products, not alone for the farmers' good, but for the good of the world.

But, "no nation ever lived or ever will live that recognized classes!"

Bosh!

No nation that has classes, can live, or deserves to live, that does not recognize them. And no nation ever existed that did not have classes.

Rome had classes. It refused to recognize them—ignored the classes that formed the great body of its people. Two words express it—Rome died.

Russia has classes. Russia refuses to recognize its lower and middle classes. Russia is the sickest nation in all the world to-day.

Our own country, the best of all countries, has classes. Too many of our national administrations have failed to recognize many of them, and tramps, and strikes, and lockouts, and poverty where poverty ought not to be, have at times given the country a decidedly bilious complexion.

Poor rats! Pitiful squeaks!

They Get It Back

The Dingley law placed a tariff of 25 cents a bushel upon Canadian wheat. When the farmers were inclined to complain at the high tariffs that were put upon manufactured articles they were compelled to buy, they were pointed to this 25-cent wheat tariff, and were assured that it evened up the whole list. Up to that time no wheat had ever been imported into the United States, and it is doing no violence to say that it was supposed none ever would be. But 1904 saw a time when importations might be made, and this 25-cent tariff stood between the United State $1.20 and the Canadian 95-cent wheat. But the millers, our farmers' principal buyers, wanted Canadian wheat, and if they could get it without paying the tariff, they could force down the price of our wheat.

But, no, they must pay the tariff. Old U. S. intends to enforce the law, so farmers were told. If the millers get the Canadian wheat they must pay the tariff—but—but—but—if they will mix it with United States wheat and import the flour, THE TARIFF WILL BE PAID BACK TO THEM!

Did you ever learn the difference betwixt tweedledum and tweedledee?

Encouragement to Cotton Holders

Information from over the water is very encouraging to cotton growers who are holding for the equitable price. William P. Smyth, U. S. consul at Tunstall, England, writes that reports as to the condition of the Egyptian cotton crop are very discouraging in as much as they foreshadow a shortage in next year's crop of the class of the staple that comes into competition with American cotton. The consul also says there is a movement on the part of Lancashire manufacturers to force sales at low prices to enable them to stock up before the inevitable rise comes. They think by thus combining and giving foreign advices to back up the efforts of the American exchanges the price of cotton may be held down until the bulk of the 1904 crop is on the market. Combinations are being formed for this purpose, says the consul, and they intend to operate through agents sent directly to Louisiana and all the cotton-producing centers of the South, and he wishes cotton growers warned of this fact. These agents, of course, will come with tales of big crops in Egypt and everywhere else. That is what they are sent over for—crop liars of the first water. Consul Smyth gives this advice:

"Planters can warehouse their cotton until stocks are worked up on the English side and the necessities of the manufacturers compel them to treat on more liberal terms with the growers or their representatives, as the case may be. A considerable sum of money can be saved to American cotton growers. The erection of new mills in Lancashire, and the effect which their consumption is likely to have on the market next year, lend additional interest to this subject."

A Silly Dodge

In the last issue of Up-to-Date Farming we quoted some silly slush from a champion of the railroad corporation management. We now have something of the same kind from a champion of the packers' combine, which the Supreme Court of the United States has decided is a monopolistic law-breaker. We quote:

"According to the yellow press, the big meat packers are responsible for all the ills which at present afflict humanity."

It then goes on to enumerate a number of silly things, including the war between Russia and Japan, saying it supposes the beef trust is held responsible for all of them.

When a champion of any institution feels called upon to name impossible things as matters of which its principal has been accused, it may be taken for granted that the person or corporation attempted to be so defended is guilty of things its champion cannot and dare not defend, and it seeks to hide the real guilt behind the gauzy curtain of silly ridicule.

1,000 MEN WANTED

The American Society of Equity needs over 1,000 more capable men at once.

In the development of this farmers' movements its ramifications will be similar to that of some great insurance companies, but greater than any of them.

To carry out the plan of the A. S. of E., organize the farmers, keep them organized and secure for them profitable prices on every crop, will require a permanent representative in every congressional district and frequently in every county. Also hundreds of representatives will be needed for the leading market cities.

The time has come when steps must be taken to solidify the rank and file of the society and secure for the members all the benefits that must result when the plans are completely worked out.

To this end we call for volunteers. If you want to engage in a pleasant and profitable business at home or elsewhere, your own choice, send your application at once. Only men of intelligence, ability and integrity need apply. To applicants will be sent further particulars and list of questions to be answered. We will employ on salary, or salary and commission combined. You can work part of the time or all the time. Promotions for deserving people will be certain and rapid, until this great machine of co-operation is built complete.

Please use below blank:

To the Officers of The American Society of Equity, Indianapolis, Ind.

Gentlemen: I hereby make application for a position with your society as per your call in Up-to-Date Farming. I am now engaged at ..... In the past I have been engaged at..... I can give (write ALL or the part of your time you can give to the work)..... of my time.

Name .....

Address .....

On receipt of this application we will send the different plans and particulars.

The Private Car Line Evil

Another great evil that the transportation agitation has brought prominently before the public is the private car line imposition. Many of the great corporations, not railroad corporations at all, but in many cases owned and controlled by the same capitalists, own extensive lines of freight cars, especially such as are adapted specially to the transportation of perishable freight. These corporations contract with the railroad corporations to haul their cars over the latter's lines at a specific price, the railroads turning over to the private car company the freight business of their lines that is adapted to the kind of cars owned by the car company. The car companies make their own rates, accept such freight as they choose, reject such as they please, and discriminate between points as suits their fancy or as they consider to be to their interests. They do this with impunity, because the corporations that own the cars are not recognized as common carriers, and are not under the jurisdiction of the Interstate Commerce Commission—they are simply doing a private business in their own private cars. See how easy it is for this class of people and corporations to evade law?

The enormity of this abuse is startling. We cannot here go into detail, but it developed recently in a Congressional investigation, that a single Chicago corporation, the Armours, operated 14,000 cars, without owning a foot of railway, and that their daily income from these cars was $72,000, which would make their annual income, counting only the ordinary working days, more than $22,000,000! This vast sum is drawn from the money earners, the wealth producers, and as the business done by the Armours is almost entirely with soil product, it follows that this twenty-two millions is drawn from the farmers.

But this is not all. It developed that the Armours have vast fruit and vegetable interests both north and south, and that they so discriminated against all interests but their own, as to leave thousands of dollars of such products belonging to others to rot in the orchards and fields, while the market was left bare to be eager at a high price for their own.

One other view that we have not seen mentioned. Railroad corporations are taxed upon their roadbeds and rolling stock, the valuation of these being apportioned among the counties and municipalities through which the lines pass. Of course, and properly, only property belonging to the corporations is assessed against them. These extensive lines of private cars do not belong to them, and thus it is possible for a large portion of the railroad equipment to entirely escape taxation, while, at the same time, their owners are taxing the people who must pay the taxes the corporations escape, $22,000,000 a year for their private coffers!

And we have spoken of but one of these private car lines. There are many of them.

A government that cannot, or will not, protect its people from such impositions, such plundering, ought to be——given both power and inclination to do so.

Good Roads in Illinois

There is before the Illinois Legislature, supposed to have the support of Governor Deneen, a good roads bill, which appropriates $250,000 as the first "installment." It provides for the usual Board of Road Commissioners, and one-fifth of this appropriation, or $50,000, we are told, is to meet the expenses of this board. A locality to get any benefit of the appropriation must tax themselves a sum equal to the amount they expect to get. The enactment of this bill into law would, as we see it, be a great misfortune to the land owning farmers of the State, not but that good roads would be a great benefit to them, and that they need them, but the perpetual and constantly increasing addition such a measure would make to their annual tax bills is appalling. Note, also, that for every four hundred dollars State aid they receive to apply on road building, one hundred must be paid to a commission of doubtful utility. Also for every $500 thus paid by the State, they must themselves pay $500 in additional local taxation.

Take a county like Hamilton, for instance, twenty-four miles north and south, with its railroad line crossing from northwest to southeast. The peoples' greatest need, therefore, for good roads is the long way of the county. Building roads in that county, which is comparatively level, but which has no road material near, would cost not less than $2,000 per mile, or, say, $50,000 for a single road the full length of the country. To this must be added one-fifth or $10,000 to pay the commissioners. Or, meet what will be claimed by the advocates of the measure that the commissioners are expected to absorb only one-fifth of the State appropriation, and add $5,000 more than the actual cost of the road. How many farmers are in favor of the measure?

It is no relief to say that a locality need not build if the people do not wish to. Every dollar of State aid must be obtained through taxation, and every taxpayer must bear this burden no matter where the roads may be built.

We do not blame the tSate for wanting good roads, but road building should be a national undertaking just as the improvement of rivers and harbors is. If necessary, issue road building treasury notes to meet the expenses, and have the work done under the supervision of the expert engineers of th United States army. The nation has many times loaned its credit to corporations to build railroads; let it do as much for the people in the improvement of country roads.

Another Legal Whack

The Interstate Commerce Commission has given the Packers' Combine another serious blow, this time over the shoulders of the railroad corporations. In a very recent decision the Commission has held that various railroads discriminate in freight charges in favor of the packers and against the producers of livestock. Shippers of livestock, of course, pay the freight charges on the live stock from the point of shipment to the market, while the packers pay the freight on the finished meat products from the point of packing to the point of consumption. The commission finds that certain roads charge higher rates on the raw material—live stock—coming in than upon the finished product going out. In other words, they charge the farmers, who have no organized defense, higher rates than they charge the packers, who have a powerful and unyielding organization.

It is gratifying to note that the administrators of the law are taking cognizance of these irregularities (we are using diplomatic language), and are deciding in favor of the public—rather, we should say, deciding justly. But with the wrongdoers organized as they are and the sufferers unorganized, these wholesome decisions can afford no more than temporary relief. Those who are wise enough to perfect the great combinations that can create and maintain a monopoly in a country where the very idea of monopoly is abhorrent, will find no difficulty in evading laws, decisions, courts, and even congressional action. The powers of hurtful monopoly will never be broken until those who suffer from it are able to meet organization with organization, and control the commodities monopolized, which the farmers can do in the case of farm products and live stock, because they are the original owners of these things, which cannot be affected by outside monopoly until they change ownership.

Fruit growers and truckers are organizing in many localities, but their efforts are single handed and issolated. Were they all in the A. S. of E., with telephone communication with all the markets, and an agent of their own there to handle the products, and to tell them over the wire when to gather, when to ship and where, of what use then would the crop liar be?

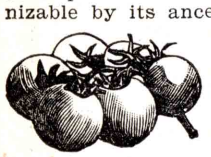
A 320-page, cloth bound book, price $1.00, and 10c extra for postage, all for 25 cents, postpaid. See coupons in this paper.

SUBSCRIBE now. RENEW now. Up-to-Date Farming will be a power in 1905.

EXPERIMENTS ON EVERY FARM

Start a New Potato

A few improvements have been made by accident, but most of them by experimenting. In this way every crop of farm, garden and orchard has been so improved as to be scarcely recognizable by its ancestors of 50 years ago. In this line of improvement the potato has a prominent place. Some may think so, but potatoes will not mix in the hill.



POTATO BALLS.

The only way to improve them, or to start new varieties, is from seeds that grow in small balls that form on the vines.

Rev. J. Reynard Lawrence, of Massachusetts, has devoted 15 years to thus experimenting with and propagating new varieties of potatoes. Last fall we succeeded in purchasing Mr. Lawrence's entire surplus stock of new seedlings. As is well known, potato seeds do not reproduce the varieties that grew them. In this regard they are the most capricious of plants, seeds from the same ball may produce as many distinct kinds as there are seeds, and it takes several years of patient culture to know just what the new potatoes will be. Those we have from Mr. Lawrence have already been grown for three years, and they are just now ready to develop into what they are to be. Mr. Lawrence says of them:

"In offering your customers the seedlings I sent you, you are giving them the benefit of three years' care and work. They have the opportunity to reap where they have not sown. The drudgery and weary waiting are over, and the possibilities are just opening to their hand. They are the result of growing for two to three years, seedlings from hybridized balls of Early Ohio, Early Rose, your own Green and White Mountain, and Uncle Sam and Scotch Rose. They are nearly all three years old, with a few small tubers of a new seedling of my own. There are all types from Blue Victor to Carman, from Early Rose to Bliss's Triumph; long, short, flat, round; eyes deep and eyes shallow, flush and raised; color white to black or black-purple, rose, pink, red, blue, yellow, mixed, and almost every combination. The farmer or gardener who is so fortunate as to grow some of them may find something superior to any variety he may now be growing. I noticed what seemed to be duplicates of nearly every variety now grown, as well as types which have never been offered."

We could sell these little seedlings to regular potato propagators at a very profitable price, but we did not buy them for that purpose; we want to give our subscribers a chance to try them—an opportunity to win a prize in the introduction of possibly a grand new potato. How to distribute them was something of a question, but we have decided to use them solely to increase the circulation of Up-to-Date Farming.

THE OFFER To any present subscriber or person not a subscriber who will send 50 cents for a year's subscription to Up-to-Date Farming. We will send free and postpaid one-half pound of tubers assorted. Large tubers will be divided so as to give each subscriber the advantage of as many varieties as possible.

The premium and paper will be sent to different addresses if so instructed. If your subscription is paid, it may be extended another year.

SPECIAL.—We will accept five orders for the price of four. That is, five or more at 40 cents each.

We make only this one condition: We wish each recipient to report to us the result of the season's trial, and to give us the refusal of contracting for the introduction of valuable new varieties that may be developed.

UP-TO-DATE FARMING,
Indianapolis, Ind.

The price of the new third edition "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents. See coupons in this paper.

The seed premium offer is still available, but planting time will be over before long, you know. Let us have twenty thousand new subscribers and renewals before the first of April. That is what we have set our stakes for, and we want the locals to help us get them. Suppose each local, not each member, each local should average one a day from the first of March to the first of April, it would make more than thirty thousand. Add to this what we shall get through our other means of general subscription work, and the total would run to near fifty thousand for the month. We believe we may depend upon this special March effort for a test of earnestness.

One of the brightest papers coming to this office from the South (and we get many bright ones from there) speaking to its own patrons, recently said: "We are anxious for you to read Up-to-Date Farming; its gospel is the gospel of salvation for the agricultural interests, sure as you live."

Tobacco Growers, Attention!

The American Society of Equity has not been able to send organizers into the tobacco growing districts of the following: Pennsylvania, Connecticut, New York, Wisconsin and Ohio.

This crop is an important industry in sections of each of these States. It is desired to organize those growers to round out the tobacco growers' branch of the A. S. of E. Therefore we want the names of all such growers. If you are one, send your name and others of your acquaintances, and each will receive something to their benefit. If not a tobacco grower, but if you know some, please send their addresses to

THE AMERICAN SOCIETY OF EQUITY,
Indianapolis, Ind.

Harvester Talks to Farmers—No. 1.

A Series of Personal Talks to the Grain and Grass Growing Farmers of America.

WHEN you come to harvest your grain or grass you want to have at hand, ready for use, a harvesting machine upon which you can put every possible dependence.

Naturally, with a crop before you that won't wait for cutting, you want to feel perfectly safe about your harvesting machines.

You don't want an experiment nor a "may-be-so;" you can't afford to run a risk.

We have purchased this space from the publisher of this paper, for the purpose of letting in a little light on the harvesting machine question.

In a series of talks we intend to show you how you can get a harvesting machine which you can *know* will bring you through the harvest in good shape, without loss of time, without delays, and without trials of temper.

We want to point out, from the *farmer's view*, the advantages of certain machines, telling in every case the *why* and giving the reasons behind every statement we make.

This is an advertisement, but every word in it is *true*—and we prove it.

It means more to your pocket-book than it does to ours.

Since the invention of the modern grain harvester and self-binder, more than a hundred different machines of various styles and types have been put on the market.

The vast majority of them were offered for sale but a very short time.

Why?

What is it that determines the success or failure of a farm machine or implement?

Simply the *will of the farmer.*

He is the judge and the jury in the case. His decision is final.

Take your own case as an example. You want any labor saving machinery for use on your farm that is *good.*

You don't want the poor kind at *any price.*

The farmers of this country have always been on the lookout for anything and everything that holds the promise of better results.

If a good thing is presented to them, they buy it and pay for it and make a success of it.

So if an agricultural implement of any kind fails to make a success, there is only one reason for that failure, and that is that it has not the merit that commends it to the good judgment and sound sense of the practical farmers who are asked to use it.

On the other hand, if a machine succeeds in winning popular favor, not only for one year, but throughout a series of years, you can depend upon it, that there is a *merit behind it.*

You can't fool the farmer more than one season.

So then, when you see such harvesting machines as the Champion, the Deering, the McCormick, the Milwaukee and the Plano, growing in popularity every year and gaining a stronger, firmer hold on the respect of the farmers who buy them and use them, you are pretty safe in making up your mind that there is good, honest value in these machines—a value and a merit not found in machines which have failed to win the confidence of any considerable number of farmers.

But mind you, it is not an easy matter to build a first class machine every time, any more than it is an easy matter to get thirty bushels per acre of wheat every season, or to breed a 2:10 trotter or a champion bull every time.

The manufacturer has his troubles—just as annoying as those of the farmer.

And the securing of first class materials is one of his first and most grievous difficulties.

The lumber market, the iron market, the steel market, fluctuate; he cannot be sure what the materials will cost him a few months hence.

Quality varies. Very frequently a shipment of coal or steel or lumber or paint or canvas does not come up to specifications.

Sometimes the thing most needed for making a perfect product seems almost unprocurable.

This uncertainty of securing the right materials, at the right time, at the right price, naturally led to an inevitable result:

The manufacturers of the principal harvesting machines—those which had made for themselves a place on the market—said:

"Here, we can't stand this; we *must* have better materials than we are getting; we *must* have them when we want them, and we must have them at a fair price. If there's no other way to do it, we'll mine our own ore, roll our own steel, saw our own lumber, make our own paint, mine our own coal and make our own coke, as well as build our own machines. If one of us cannot operate an iron mine and a steel mill, maybe two of us together can—certainly five of us can."

So five it was.

The manufacturers of five of the best self binders decided that by *co-operation* they would produce for use in their several factories materials for harvesting machine building, such as they *could not possibly procure* in any other way—materials which would be under their personal inspection from start to finish, and which they could be sure were right in every particular.

They have done that.

They have done it exactly on the same principle as several farmers club together to import a good stallion or to own a good boar, or a score of farmers co-operate in building a creamery, or five hundred or more farmers form their own fire insurance company.

This co-operation has resulted in producing materials which enable the manufacture of a line of harvesting machines which have never been equalled for *durability* and *long life,* for *reliability* and *certainty of results* and for *all round satisfaction* in the hands of the farmer.

Such harvesting machines as are produced today in the various plants of the International Harvester Company could not, by any possibility, be produced under any other condition—excepting at an immense advance in cost to the farmer.

We want to tell more about the facilities of the International Harvester Company in later articles in this series—more about its immense lumber camps in Arkansas and Missouri; about its coal mines in Kentucky; its iron mines in Wisconsin and Minnesota—its steel mills in Illinois; we want to tell about the other improvements it has effected and economies it has made, both in manufacturing and in distribution—but in the present article we want only to leave these two thoughts with you:

1. The International Harvester Company is made up of the manufacturers of only those machines which the *farmers* of the country had endorsed as being most worthy of confidence. The Champion, the Deering, the McCormick the Milwaukee and the Plano *have proved their worth* and gained the enthusiastic approval of users in all parts of the country.

2. The International Harvester Company, by co-operation of its five plants, has facilities for manufacturing, from the mine and forest to the farm, possessed by no other manufacturer of agricultural implements, enabling it to *know* that every machine in any one of its plants has in it only the best procurable materials.

We want you to think of these two things.

The harvesting machines endorsed by the most farmers.

The harvesting machines with the best materials in them.

That means something to you.

Look for our next talk, and, in the meantime, you will doubtless find agencies in your own locality for these harvesting machines. Each dealer understands thoroughly the one line he sells, and carries a complete stock of repair parts. He'll be pleased to show you his particular line and to provide you with catalogue and full information.

In the International Harvesting Machines,

Champion, Deering, McCormick, Milwaukee, Plano,

You Are Offered

The **Quality** which comes from the world's greatest facilities in manufacturing.
The **Economy** which comes from stable, uniform cost of materials.
The **Safety** which comes from a well established, permanent institution.
The **Convenience** which comes from separate agencies everywhere and repairs always on hand.

You cannot afford to overlook these advantages. They are not offered you in other lines of harvesting machines.

Remember. The International lines are represented by different dealers. See them for catalogues.

Binders, Reapers, Headers, Header-Binders, Corn Binders, Corn Shockers, Corn Pickers, Huskers and Shredders, Mowers, Tedders, Hay Rakes, Sweep Rakes, Hay Stackers, Hay Balers, Knife Grinders, Gasoline Engines, Weber Wagons, Binder Twine.

Whose Orders?--Insufficient Address

Persons often fail to receive what they order on account of insufficient address or shipping instructions. Watch the items below, and if you find yours, write at once, to J. A. Everitt, Indianapolis, Ind.:

Jan. 9—50 cents, T. B. Ray, no address.
Jan. 11—50 cents. Mrs. J. A. Steen, no address.
Jan. 16—50 cents, neither name nor address; letter mailed at Pennis Park, Pa.
Jan. 20—50 cents, Cloverport, Ky.; no name.
Feb. 6—25 cents, neither name nor address; letter mailed at Kubli, Ore.
Feb. 8—50 cents, neither name nor address; letter mailed at Belleville, Ill.
Feb. 11—25 cents, neither name nor address. Mailed at Coopertown, Tenn.
Feb. 13—20 cents, Moran, Ky.; no name nor address. Mailed at Hughes Springs, Tex.

Speakers

Officers and workers who will accept calls to address meetings. Write them for terms.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Agents Wanted

Agents wanted by Weeks' Scale Works, Buffalo, N. Y. The leading scale at moderate cost. Send for free catalogue and prices.

Agents wanted for best agents article on earth. Mend-a-Rip does all kinds of light and heavy stitching and riveting. Agents make $3.00 to $15.00 a day. J. U. Foote Foundry Co., Fredericktown, O.

Agents who want a meritorous article to sell should handle C. & F. Wonder Knives—nine tools in one. It is a handsome pocket knife, light, convenient and has no more parts than an ordinary three bladed knife. Contains strong wire pliers and wire cutter that will easily cut barbed wire fence. Also leather punch, swedging awl, alligator wrench, hoof hook, screw driver and screw bit. Don't you think you can sell an article like this? Price each $1.25. One dozen delivered for $11.00. If not satisfactory your money will be refunded. Now if you will trust us (and the publisher of this paper who guarantees advertisers) send for a dozen. We refund your money if you want it. That's fair. Don't forget to write us—better do it now. Cooner & Fortune Co., Indianapolis, Ind.

Farmer Agents wanted. Turn your spare time into dollars. The demand is what makes the quick sales. It is easier than you think. "Sold eight in five hours work," Harmon J. Wood, Marion, Iowa; "sold first dozen in one and a half days," J. W. Babcock, Pleasantville, Iowa; "sold five in half day," C. A. Grigsby, Miltonville, Kan.; took eight orders this afternoon," Frederick Childs, Morristown, N. J.; "sold 20 in two and one-half days," H. Holloway, Whiting, Iowa; "sold 7 in four hours," H. C. Page, York, Neb.; "sold 13 in one and a half days." Lyman A. Hall, North Greenwich, N. Y.; "my sales of 3 days' work is 26 Account Books," E. R. Follett, Concordia, Kan.; "saw 9 farmers this afternoon, sold 7," Wm. H. Spicer, Ledyard, Ct. The Farmers' Account Book is a time-saver and a money-saver. It increases in value from year to year. We pay our agents very liberal. Write today, before someone else takes the agency for your locality. Farmers' Account Book Co., Newton, Ia.

Free farm right for the best gate. Send only 50c for set of gate castings and farm right worth $10.00 will be given you. Agents make 500 per cent. profit. Thorpe Broom Co., Wapella, Ill.

Osgood Scale Co., wants local agents. Beautiful catalogue free. Good business. Osgood Scale Co., 24 Central St., Binghamton, N. Y.

Farm Lands

Farms Wanted. In exchange for Hardware, Implement, Drug, Grocery, General Merchandise stocks, Mills, Hotels, Livery Stables, City Property, etc. If you have anything to trade, write us. We can match you. Northern Iowa Land Co., Independence, Iowa.

Cheapest Lands on market. For sale 400,000 acres very rich land. Will cut 2,000 to 10,000 feet fine lumber per acre. Can furnish it any size or shape. Rents for $600 to $800 per acre when cleared. We have one tract 32,000 acres, one 9,487, another 10,000. All will cut 8,000 to 10,000 feet lumber per acre. Only $9.50 per acre. Single farms sold. Would like to find community where neighbors want to buy homes or invest. Will visit them personally. I refer all to Editor of Up-to-Date who knows me and has been my guest. Cannon & Cartwright, Box 4, Morganfield, Ky.

Implements and Supplies

Coiled Spring Fence. Don't fail to read our page announcement in this issue. Best fence that can be made at wholesale price. Write us sure. Coiled Spring Fence Co., 416 Main St., Winchester, Ind.

Corn Planter—best on earth. Made by the H. P. Deuscher Co., Hamilton, O. Mention Up-to-Date Farming and receive catalog and prices free.

Booklet Sixty-Two tells about Two-wheeled Power Windmills and Armsaver Huskers. Address Double Power Mill Co., Appleton, Wis.

Famous Mfg. Co., 737 Railroad Ave., East Chicago, Ind., make the best saw on earth. Cuts both ways, one cord per hour. Only one man needed. Write for free particulars.

Feed Mill. The Victory is oldest and best grinding mill made. Catalogue free. Thomas Roberts, Box 100, Springfield, O.

Fence strongest and best made. Freight paid. Prices low. Write for free book. Page Woven Wire Fence Co., Box 795, Adrian, Mich.

Free "A Short Treatise On the Value of Land Rolling." A booklet every farmer needs. Name this paper and write H. P. Deuscher Co., Hamilton, O.

From Factory to Farm, no agents or middlemen. 14 inch steel beam plow; double shin, best that money can build, only $9.00. Hapgood Plow Co., 544 Front St., Alton, Ill.

Kelly Duplex Grinding Mills. They are the fastest, easiest running, strongest and most durable mills made. New double cutters; force feed; never choke. Four sizes, any power. The O. S. Kelly Co., 161 N. Lime St., Springfield, Ohio.

Loomis Machine Co., Tiffin, O., make the Clipper Well Drill. Latest and best. Send for free catalog.

New Plow Attachment. Learn to get one free. Woodward & Son., Clinton, Michigan.

Saw mills made by the DeLoach Mill Mfg. Co., Box 850, Atlanta, Ga., are best. We pay the freight. Catalog free.

Stump Pullers, $25 to $150. Send for catalog. H. L. Bennett, Westerville, Ohio.

Stump and tree pullers, powerful, handy, low priced. Book free. Milne Mfg. Co., 835 Ninth St., Monmouth, Ill.

Wagons with low wheels, wide tires are the up-to-date kind. We make them. Book on "Wheel Sense" free. Electric Wheel Co., Box 170, Quincy, Ill.

Windmills The Aermotor is superior to all others. Our free book tells why. Send for it before buying. Aermotor Co., 1216 Twelfth St., Chicago.

Live Stock

Angora Goats, (pairs only). Also Ohio and Virginia farms for sale. J. H. Harpster, Millersburg, O.

For Sale O. I. C. shoats. Males and females. Eligible to registry. Anton Hoing, Inglefield, Ind.

14 big black jacks for sale. Two Worlds Fair winners. Jennets with foal. J. W. Riley, Newstead, Ky.

Free Readers of Up-to-Date Farming will be given "The Standard Feeder" if they write for it. This 160-page book is handsomely illustrated and contains the practical experience of more than 100,000 stockmen. Tells what you must know to make stock raising a success. Gives information that every farmer and stock raiser should know, but most of them don't. You need it, send a postal for it now, today. Standard Stock Food Co., 1569 Howard St., Omaha, Neb.

German Coach and Percheron Stallions. Best stock. Prices low. Roots & Kimzey, Tamaroa, Ill.

I want to buy 10 or 15 Berkshire sows, 7 to 9 months. Reference editor Up-to-Date, Box 21, Morganfield, Ky.

Jacks and Jennets for sale reasonable. For information address T. I. Mize, Faith, Ky.

Jacks For sale. 250 Jacks and Jennetts. "25 reasons why farmers should raise mules" free: Bargains. Baker Jack Farm, Lawrence Ind.

Wanted Registered Cattle. Will exchange good Illinois or Iowa farm. Box 81, Independence, Iowa.

Miscellaneous

Barns of plank cheapest, strongest. Book for stamp. Shawver Bros., Bellefontaine, O.

Binder Twine for farmers, local unions and dealers. From factory to you at wholesale prices. Anti-trust twine. Orders accepted and filled now at 10½c per lb. Sold in bales of 50 lbs. each. Buy your twine now, price is sure to advance as harvest approaches. Twine guaranteed. None better at any price. Samples free. Prairie Mfg. Co., Indianapolis, Ind.

Bran and other feed in car lots quoted delivered your station. Ship your grain and save dealer's excessive profits. Cooper Commission Company, Minneapolis.

Broom Corn seed for sale. Good seed at equitable prices. J. A. Everitt, Seedsman, Inc., Indianapolis, Ind.

Canning Business information for a 2c stamp. Warford, Newburgh, N. Y.

Catalog of split hickory buggies, carriages, etc., free. Don't buy until you have our great buggy book. Ohio Carriage Mfg. Co., Station 99, Cincinnati, O.

Enjoy the long winter evenings by having a Zon-O-Phone in your home. We send one on trial before you pay a cent. Try it, and if you like it, and want to keep it pay $5.00, and after that only $2.50 a month. The cost is only $25.00 and is as good as musical instruments costing much more. It will play any make of Disc Records. Catalog free. Cincinnati Talking Machine Co., 1228 Vine St., Cincinnati, O.

Every reader who mentions Up-to-Date Farming in writing will be sent free the cutest little novelty they ever saw. It accurately fortells every change in weather. Just address Geo. H. Stahl, Quincy, Ill.

Free Every reader of this paper will be sent our large book giving lowest prices on 20,000 articles. Anything you want or need on the farm. Prices lower than anywhere else on earth. Goods best. Send 10c. to help pay postage and we pay the rest. White VanGlahn & Co., Dept. D, Chatham Sq., N. Y. City.

Fruit Paper. "The handsomest farm paper in America." Departments for all branches of farming. Sample free. 50c a year or 25c and names of 10 farmers who grow fruit. The Fruit Grower Co., 1511 S. 7th St., St. Joseph, Mo.

Free On trial. We are willing to send our Standard Washer on trial for 30 days free. We know it to be the best washing machine made, but you don't, so we will do this to convince you. We pay all charges and deliver it direct to your door without asking a penny in advance. Keep it 30 days and if it is not the best washing machine you ever saw and you do not want to keep it, send it back at our expense. It don't cost you a cent. Could we make such an offer if we did not make a superb machine? The Standard Washer IS the best. Write today. The Wiard Mfg. Co., 56 West Ave., East Avon, N. Y.

Gloves direct from manufacturer to wearer. Our Cowboys Indian Tan Buckskin Gauntlets only $1.00. Send for our free catalog, mentioning this paper. Deerskin Glove Co., Gloversville, N. Y.

Guns Stevens rifles and shot guns known everywhere as the best. J. Stevens Arms Co., 365 Pine St., Chicopee Falls, Mass.

Gun Catalog free. Best guns made, $5 to $21. Union Fire Arms Co., Desk T, Toledo, O.

International Correspondence Schools, Box 875, Scranton, Pa., are prepared to teach you any avocation in your own home. You need take no time from your present work. Write for free book.

Men wanted to work on farm. Good wages. Send stamp. Link Webber, Ludlow, Ill.

Stoves of any kind for cooking and heating. My superior location and facilities enable me to sell a better stove at $10.00 to $20.00 less than others. Cash or payments. Six months trial. Freight paid. Complete catalog free. Chester D. Clapp, 204 Lynn St., Toledo, O.

NEW LONDON, OHIO, FEB. 4, 1905

UP-TO-DATE FARMING,
Indianapolis

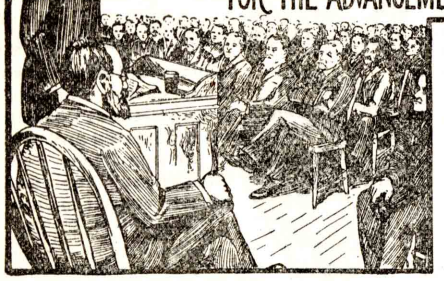
Gentlemen:—I have received plenty replies to my little adv. in the Business Exchange of Up-to-Date Farming and think it is all O. K. to advertise in. Your paper has proved to be a good one for my business. I will use your paper later.

Yours very truly,
C. M. SACKETT.

This is what the Business Exchange does for others. It will do the same for you. If you want to reach prosperous, progressive farmers there is no better medium than through these very columns. Many readers of Up-to-Date Farming can do a profitable business by using this paper alone for advertising. There is no better one with which to start. No better time than now. Send in your order for the next number.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Hon. H. B. Sherman, National Organizer of the A. S. of E., will, until the next issue of this paper, have his headquarters at Fort Smith, Ark., and his special field will be the outlying districts in Arkansas and Indian Territory adjacent thereto. Persons desiring to communicate with him should write direct to Fort Smith.

Think. Act. Organize.

Do you ever miss a local meeting? Don't.

Does the local ever fail to meet? Don't allow that.

Who read the best piece at last meeting? Why not have a prize at each meeting for the best piece read by a member?

What is to be your leading crop? Discuss it at the local meeting.

Write to distant locals, and thus get in communication with workers everywhere.

Write to headquarters, too, and keep us posted as to the work you are doing, and as to the work needed to be done.

Should any one fail to receive his paper be sure to notify us. It is not neglect or carelessness in any department here, but mistakes will be made sometimes. Always name the postoffice to which the paper has been coming.

Let the children learn and say pieces at the local meetings. See the one said by Johnnie Cary at the local at the Crossing. It is a fact that every one should do his part.

Examine your record, Mr. Secretary, and see if all the members of your local have renewed. We depend upon the secretaries to look after this matter.

The lists of local unions we are publishing are good for two purposes—they show how strong we are, and they put all of our people in touch with each other. Preserve these lists as a part of the files of the local.

It is a good thing to have general rallies once in awhile. Let's have from the first to the tenth of April rally days, during which time every local will be expected to have a rally, a big meeting. Why don't we fix a certain day for rally day? Because, if we do that, locals could not attend any rallies but their own. Making a ten days' rally period, dates may be so arranged that neighboring locals may visit each other at their rallies. Fix your dates with that in view. We want to encourage such visits. Discuss questions that lead to thought in our lines, and if you have not already formed county unions, make that a feature of the discussions. Write to headquarters about your meetings.

The Local at the Crossing

The president was absent from our last meeting, having been called to an adjoining county to assist in organizing some locals there. George Bowers acted as president pro tem., and in calling the meeting to order, said:

President Protem.—We have been meeting regularly here for more than a year. Many of us have come when it was really a hardship for us to do so. We have paid our membership fees, and have met other necessary expenses to keep up this local union, and the Society which is doing so much for us as farmers. Other farmers all over the country have done the same. I am not complaining. I propose to keep this thing up, and I am sure each member here is of the same mind. What we have learned in our meetings has paid us for all our investment, and what we have enjoyed has paid, not only the interest but good dividends also, saying nothing of what we have gained by our system of controlled marketing, which I count as the net profit on our investment, the cost and trouble being otherwise remunerated. But what we have gained in better prices, others who have not turned a wheel, who have not paid a cent nor done a thing, have gained just the same as we have, and some of them boast that they do not need to join the A. S. of E., nor even to subscribe for Up-to-Date Farming to get the benefit of controlled marketing. All they have to do, they say, is to watch us and do as we do.

Now, I cannot say that I object to others getting benefits from my labor, especially when it makes my share none the less, but there is such a thing as fair play, and I believe every one should do his part. If such persons would come in like men and help, it would not only add to our strength, but it would help the National Union that much to push the work to completion and accomplish the great results we are aiming at. I do not believe it is manly to thus reap where others have sown. All should take hold and put in his mite and push.

Joe Riley—Mr. President, the Widow Cary's little boy learned a piece last week at school that fits in exactly right here. I see he is here with his mother and sister, and I would like for him to say it just as he said it at my house last night. I told his mother I believed the local would like to hear him say it.

President Protem.—Johnnie, will you speak it for us?

A lad of eight came forward.

President Protem.—Ladies and gentlemen, Master Johnnie Cary will say a piece for us.

—THE MAN THAT HANGS BACK—

We are laboring hard
As farmers to-day,
To obtain for our products
Reasonable pay;
And the man that hangs back
Is a blot on our sky,
And acts very much
Like a pig in a sty.
He eats what is given
And clamors for more,
And ne'er thinks of asking
Whence cometh the store.
No matter whose labor
Thus gets him his feed,
His only concern
Is supply for his greed.
A shame on such farmers,
Arouse ye and say,
"I'll help you, my brothers,
I'm coming to-day.
And where duty calls
I'll say Here am I
And no longer be like
An old hog in a sty."

Pat Murphy—Be jabers, and ye're roight, me boy. The felly that sits on a stump and whittles while the rest av us builds a bridge for him to cross on is worse than a pig, and be the holy St. Patrick, he'd go hungry if he waited on me for his fade!

Pres. Protem.—I didn't mean to get up any feeling on this subject, but those who can help and will not, and yet reap the benefit of what we do, I suppose it is no more than right to class with the dumps.

Charles Lambert—We must not forget that we stand for equity. It is true that equity would say that each should do his equitable part, and then properly have his equitable share of the benefits. But let us not be hasty. Bring the matter before such people in a spirit of kindness, and the reasonable ones will come in and help us; the unreasonable ones would be but little use if they were here.

A strange face rose above the heads of the members in the back part of the room, and a voice not heard there before said:

"Now, see here, fellers, this is the first one of these danged meetings I've been to, and I want to say I ain't no hold-back, though I'v been actin' like it. What does she cost?

President Protem.—The membership fee is one dollar, and each member gets—

Voice—I don't care a ding what he gits. I done better with my stuff last year than ever before, and believe now you fellers caused it. Here's that dollar.

And the dollar was tossed on the desk amid the cheers of the members.

After a few more speeches, and a vote of thanks to Johnnie Cary, the meeting adjourned, and everybody shook hands with Daddy Oakley, the new member.

Following the Calf

One day through the primeval wood,
A calf walked home, as good calves should,
But made a trail all bent askew—
A crooked trail, as all calves do.
And men two centuries and a half
Trod in the footsteps of the calf.

A moral lesson this must teach
Were I ordained and called to preach,
For men are prone to go it blind
Along the calf paths of the mind,
And work away from sun to sun,
And do what other men have done.
They follow in the beaten track,
And out and in, and forth and back,
And still this devious course pursue,
And keep the path 'cause others do
—Adapted.

March and spring.

But winter will still do some lingering.

What was it you intended to have done before spring?

Now, see here. About those plows and harrows. Ain't you forgetting something?

Neighbor Thrifty has his seed corn all in good shape, and he is now testing its vitality by planting some in a box in the house.

Look well to the seed oats. Don't plant chaffy stuff. It won't pay.

We are right now on the heels of clover sowing time. Be careful about foul seeds. Have a special eye to buck horn and red sorrel.

We are told that seed wheat is very scarce in the Northwest. We advise our friends up there to not sow light, chaffy and damaged stuff. Some are importing seed from Canada, and paying the duty. Don't let that put you in the notion of a reduction of the wheat tariff unless there is a corresponding reduction on what you have to buy. You can pay the tariff on the Canadian seed, and then make about an even swap, and next year you have 25 cents on the bushel the advantage.

In the spring wheat country many things have happened since last seeding time; and now another seeding time is almost here. You lost money last year by rushing into the market, just as Up-to-Date said you would; but you will know better next time. Don't hesitate to sow all you want to, but make up your mind to market with good judgment.

Nineteen hundred and four was a good school for broom-corn growers. Quite a number in the distant areas were lied out of much of the crop's value, but they will be better equipped for next market, and the broom-corn areas will not be a healthy place for the crop liar.

Remember if you sell your corn now below a price based on 55 cents at Chicago, you are not getting what it is worth. Look out for yourself; nobody is going to look out for you.

As a rule, farmers don't work their corn land enough before planting. Break it early and deep, and let it lie till good planting time, then disk it thoroughly and harrow it. If you roll it between the disking and harrowing it will pay. Do this, and your crop is half made when it is planted.

The meadows should have attention in March. Take everything off of them. Let no sprouts remain to bother at harvest time. Take out the bunches of yarrow and other perennial weeds that show green before the grass does. If these are so abundant as to make too much of a job, turn the whole thing under and cultivate it once. This is good advice.

Early potatoes do best on older and well manured land—it can't be too rich if the manure is well rotted and worked deep. The medium late, or main crop likes a clover sod, also worked deep. The late potatoes give best results in a fresh, deep sandy loam that has plenty of humus.

Speaking of oats, have you ever tried Everitt's United States and Canada oats? Of course, whatever we raise it is better to have that which will make the best returns. These oats have won their name by their great success in both of these countries. The straw is good length and very strong, heads long, branching, and loaded with large, plump, heavy, white grains, and on fair tests have yielded double that of ordinary oats growing beside them.

We may be pardoned if we say a word concerning two special varieties of seed corn. Improved seed corn is attracting more attention now than anything else in the whole range of farm seeds, and we believe nothing can beat the Farmer's Interest as a white variety, and Mr. Everitt now has a new condidate for public favor in a yellow variety which he has named the Co-operating Farmers' Corn. The ears range from 9 to 12 inches long and from 7½ to 8 inches in circumference, with 16 to 20 rows of broad, deep and thick kernels on a medium sized red cob. It matures in 110 days, and is very successful in a very wide range of latitude. It is fully described and illustrated on page 30 of Mr. Everitt's 1905 catalogue .

How to Inoculate for Alfalfa

Prof Hopkins of Illinois, one of the most distinguished soil experts of the country, advises in inoculating for alfalfa to use at least 100 pounds of inoculated soil to the acre. The soil should be scattered over the field, he says, with some degree of uniformity, but it is not like seeding grain, and it is not absolutely essential that every square yard in the field should receive its due portion of infected soil. Some care should be taken in spreading it over the higher places in the field, but if places should be missed on sloping land or on lower lands the bacteria will soon be carried over them by the surface drainage waters. Indeed, if all the watersheds in the field—that is, all ridges and high places—are well inoculated the entire field will ultimately become infected, the bacteria being carried by soil washing, but the infection is more rapid ,of course, if the infected soil is spread over the entire field with some degree of uniformity when it is first applied .

If possible, the soil should be applied at about the time the alfalfa seed is sowed and then harrowed in with the seed, but it may be applied a month or two before sowing the alfalfa or at any time afterward, and it is not absolutely necessary that it be harrowed in, although that is advisable.

If applied to a field where the alfalfa is already a year or two old the infected soil may be mixed with the soil of the field by harrowing or disking (the disks being set straight, so as not to cut off the alfalfa roots), preferably early in the spring or after cutting has been made.

The infected soil may be applied in any way to get it over the field—as by hand (throwing it from the wagon), with an end gate seeder, if the soil is dry enough and sufficiently well pulverized, or in any other way which may be found convenient.

The results obtained during the past year fully confirm the results previously reported by the Illinois station concerning the importance and value of inoculation for alfalfa. The information which we now have strongly indicates that if it is provided with the proper bacteria alfalfa can be successfully grown on any soil where both corn and red clover are successful crops.

To inoculate with bacteria cultures (the so-called Vest-Pocket Fertilizers) a portion of soil is treated with a solution rich in the bacteria, and then spread on the field as described above.

In 1905 farmers will come to the front, never more to be put in the rear.

NATIONAL SEEDER

The Only Ball Bearing Seeder

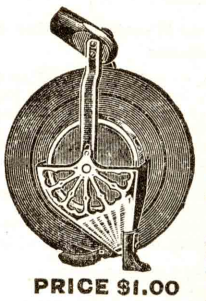
THE "BEST" IS THE NATIONAL—THE NATIONAL IS "BEST"

PRICE $1.50

It will sow at a round Wheat or Rye, 50 feet; Buckwheat, 45 feet; Flax seed, Clover or Millet, 36 ft., Grass seed, 30 to 36 ft.; other seeds, etc., according to their nature and condition. By the superior construction of the hopper and attachment of the sack it sows out very clean. The old style seeders don't do this. Full directions with each machine. Warranted to give satisfaction. Sold by the best trade everywhere. If your dealer does not have the National take no other but send order to us direct and we will prepay the express on first seeder going to your neighborhood for 25 cents extra.

You've Wanted it a Thousand Times

The Eureka Seed Drill



PRICE $1.00

It will sow and cover Beets, Cabbage, Carrots, Celery, Lettuce, Onions, Radishes, Spinach, Turnips and all such seeds with the greatest regularity. The quality of work equals that done with the costly machines and infinitely better and faster than hand work.

You Save Seed. You Save Time. You Stand In An Upright Position. The Work Is Easier. You Get a Better Stand. You Open the Row, Sow the Seed and Cover All At One Operation. No Other Like Machine Does This. HAS FORCE FEED WHICH INSURES REGULAR FLOW OF SEED. THIS IS THE ONLY SATISFACTORY DRILL OF THE KIND MADE. THERE IS NONE OTHER "JUST AS GOOD."

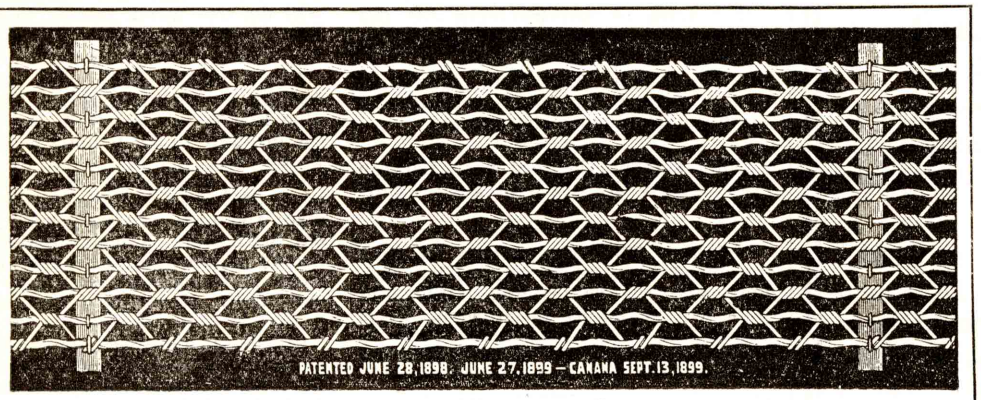
If you want to see one of these machines before buying, write us giving the name of your dealer, and we will arrange to send samples of these machines to him. Weight of machine only 4 lbs. Can deliver by express, charges prepaid, for $1.50.

PRAIRIE MFG. CO., Indianapolis, Ind.

COILED SPRING FENCING

STRONGEST AND BEST FENCE MADE

OUR **High Carbon Self-Regulating Closely Woven Coiled Spring Farm Fencing** is not an accident; not a cheap, short-lived, flimsy fence, made only to sell. On the contrary, it is the result of seventeen years of ceaseless application and experiment. The needs of the farm were studied; practical farmers were consulted; strength and durability were the virtues striven for; and out of all this effort has come the fence of greatest strength, of longest life, and most practical service.



Style No. 100.

This is our **Standard Coiled Spring Farm Fence.** In addition to being the Strongest Fence Made the mesh is so small it will turn anything in the way of farm stock.

Material Used in Its Construction.

We use only **High Carbon, Coiled Spring Steel Wire,** having the highest breaking strain and greatest durability. We make it in our own Wire Mill, that we may be sure that it is high grade. We are not dependent upon other wire manufacturers, who are indifferent to quality, and who think any kind of wire is good enough for fence construction.

We heavily galvanize our wire with the best high-grade, commercially pure spelter, which is an absolute proof against rust and corrosion. It is the safe guard that insures the long life of our fence, and enables it to render service long after other fence, not so constructed, has become useless.

How it is Woven.

The mesh wires in our **Coiled Spring Fence,** run continuously from one end to the other. No loose ends or frayed margins. They are woven in such a manner that there can be no slipping on line wires. They are tightly wound, not only around the line wires, but around each other. Each wire is compelled to bear its portion of strain, thus making a closely woven, self-regulating, compact fence, with a breaking strain unsurpassed.

SOLD DIRECT TO THE FARMER AT WHOLESALE PRICES

Contraction and Expansion.

The coil in our **High Carbon Coiled Spring Steel Wire** perfectly provides for contraction and expansion, and is the most important achievement wrought in years. No ratchets are used, yet through all the extremes of temperature, our **Coiled Spring Fence** remains at uniform tension, rigid, and upright, requiring no attention whatever, There is no sagging, no bagging, and no tugging at posts.

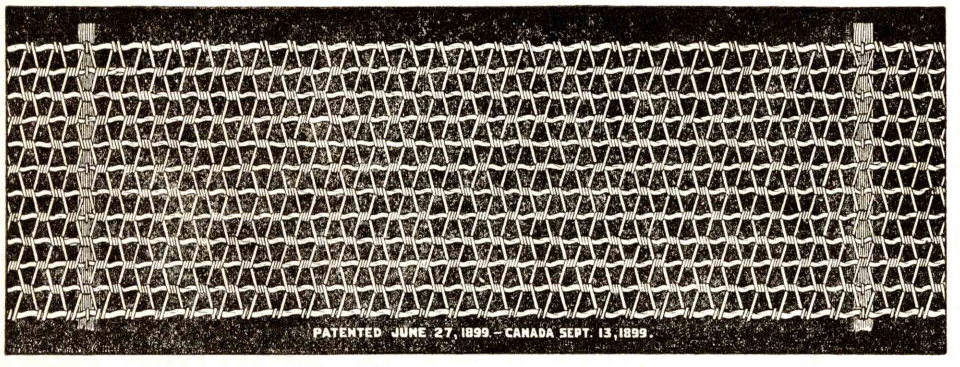
How We Sell Our Fence.

We originated the plan of selling fence direct to the consumer at wholesale prices and prepaying the freight. There are no middlemen standing between you and our factory to increase the cost of our fence by demanding a profit for no other service than letting the fence pass through their hands. We can ship to you as well as the dealer. You can drive to the freight station as easily as to the dealer. You buy of us as the business man buys,—direct from the manufacturer at their lowest prices. Read our guarantee below and note its liberal proposition. Buying fence of us is as easy and safe as buying a simple household necessity of your local merchant.

Special Coiled Spring Hog Fence. Style, 104.

Style No. 104 is positively the strongest and best Hog Fence made. The meshes are woven so closely that it will turn small pigs, and the barbed wire at the bottom prevents hogs from rooting along the fence, By weaving the barbed wire into the fence, it is impossible for stock of any kind to be injured.

Be Your Own Merchant.
Keep the Dealer's Profit in Your Own Pocket.



Stock and Poultry Fence. Style 105.

The above cut shows our Combination **Stock and Poultry Fence, Style 105,** 50 inches high, 2 inch mesh. This is a good, strong, durable fence, and will turn any large or small stock on the farm.

Our Guarantee.

WE Guarantee every rod of our fence to be made from high-grade material, and by careful and painstaking workmen. You may examine the Fence thoroughly at your railroad station, and order the shipment returned if you are not pleased with it. Or, you may take it home, erect it and use it for Thirty Days from date of its receipt, and if you are dissatisfied for any reason, you may return the fence, letting freight charges follow, and every cent paid us will be promptly returned to you.

We pay the Freight to your station on 40 Rods or more.

Your Confidence.

WE cannot expect your order unless you have confidence in our integrity, confidence in our product. For seventeen years we have sold direct to the consumer, and for seventeen years we have kept faith with our customers. They have grown into an army now, and all will testify that they have found us fair and square, living up to every statement, fulfilling every guarantee in both spirit and letter, letting the buyer judge for himself whether he wants to keep the goods he buys or wants his money back. We court your patronage on the same platform. If you buy fence of us and don't like it, tell us so, and we will trade back and no questions asked. We want your order, but don't want it if you can buy a better fence elsewhere for the same money.

The styles shown on this page are only a few of the many styles we make. Write for our 40-page Catalogue. It contains full description and illustration of all our styles of Farm Fence, and is replete with information valuable to any fence buyer. **Write today. Get in touch with us and save money.** Address,

We are making special prices on Barbed Wire.

COILED SPRING FENCE COMPANY,

416 Main St. WINCHESTER, INDIANA, U. S. A.

BUYING A CREAM SEPARATOR

Thousands of dairy farmers are going to buy a Cream Separator this Spring. The purchase of a separator is a most important investment. Great care should be taken to make no mistake.

No other farm investment is of equal importance to the cream separator. It makes or wastes money twice every day in the year, and it may last two or twenty years.

There is easily a difference of from $50.- to $150.- per year between the benefits and savings of a De Laval machine and a poor one. A De Laval machine lasts at least twenty years with small cost for repairs, while other machines last from two to ten years and cost a great deal meanwhile.

So far as advertisements and circulars are concerned, about as much is claimed "on paper" for poor machines as for the De Laval. Some of the biggest claims are made for the poorest and trashiest machines.

If the buyer wishes to be guided by the best experience of others and the best of authority he must purchase a De Laval machine, and he can surely make no mistake in doing so.

98% of the creameries of the world, which have been using Cream Separators for twenty-five years, now use De Laval machines. Almost every prominent dairy user does so. 60,000 farmers scattered all over the world, or more than ten times all others combined, do so. Every important Exposition for twenty-five years, ending with St. Louis in 1904, has unhesitatingly granted Highest Honors to the De Laval machines.

But if from any imaginable reason the buyer wants to get his own experience or make his own choice then let him TRY as many machines as he pleases, but by all means TRY a De Laval before he reaches a conclusion and actually invests his money in any of them.

There are De Laval agents in every locality whose business it is to supply machines in this way, and who are glad of the opportunity to do so. If you don't know the nearest agent send for his name and address. It will cost you nothing and it may save you a good deal.

By all means don't make the foolish mistake of sending your money in advance to some "mail order" concern and getting back a "scrub" separator not actually worth its weight in scrap-iron. If content to buy such a machine at least SEE and TRY it first before you part with any money.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

THE IMPRISONED HORSE.

This roof it has sheltered me
From many a storm,
And the walls that surround me
Have kept me from harm.
But, listen! A twitter
Above me I hear!
'Tis the chirp of a swallow,
And spring time is near.

—J. P. S.

The term of imprisonment for the live-stock is drawing to a close.

Think it over. How many sins have you to answer for for your treatment of the stock during the winter?

Don't slacken the feed yet. Let the stock go on the grass in good condition.

Neighbor Thrifty's pasture lot that he sowed to rye last fall looks nice now, and the calves and lambs and pigs will be happy on it soon. It is wonderful what a difference there is in Neighbor Thrifty's stock and Uncle Threadbare's just across the road.

Don't worry much about the "balanced ration." It is useful in affording the wise people something to work upon and keep them out of mischief; but the average farmer will continue to see that the ration he gives his live-stock will balance against their daily needs.

An Illinois stockraiser speaks it this way: "Corn is the staple feed. Where corn cannot be grown to good advantage or purchased cheaply, beef making is uphill business. Bluegrass and white clover pasture, with corn, is the model ration. If allowed free access the steer will "balance" this ration to suit himself more skillfully than any chemist. Provide pure water, a little shelter, and the steer that cannot make beef isn't worth much extra trouble. Get rid of him."

Be not discouraged over the continued low prices of livestock. People must eat, and some means will be devised to enable the grower to get his profits. Mr. John G. Osborn, of Port Byron, Ill., an experienced grower and feeder, says: "The outlook is promising. The area suited to beef production is limited, while the consumptive demand is increasing, and is limited only by the number of people and their ability to buy. The present obstacle is the so-called Beef Trust, which, by manipulating the markets, enables the packing house owners to accumulate vast fortunes, which should be distributed among the producers."

If the cotton planters win their victory on the price of cotton, which they are sure to do now that they are aroused, it will be a victory for the sheep men also. The price of wool depends to quite an extent upon the price of cotton, and neither should be allowed to pull down the price of the other. Reciprocity and equity, you know.

While on this subject, we may say that the consumption of wool in this country in 1850 was 71,176,355 pounds, while 50 years later, in 1900, it was 436,662,576 pounds. We have reached a point now where sheep may be made profitable for wool alone. Add to the fact that mutton is now the best meat product in the market, sheep raising ought to be a safe business.

Let us quote from Prof. Plumb on this sheep matter: "The man who loves animals, who keeps a few sheep consistently and patiently, or on a large scale, who breeds and feeds with wisdom, enjoys the work and makes money. As before stated, for the money invested sheep pay a large profit under fair conditions. What we need today in America is a large number of good shepherds and sheep."

Here are some facts that might be painted over every door in the barn lot: Young stock should be kept growing. It should be kept thrifty. Keep the feed boxes clean, and see that the feed is eaten by the animal to which it is given. Clean up the lots where playful animals run—old drags, mowers, plows, etc. It is cheaper to keep such things out of the way than to doctor up a wounded colt. A mind that will think, and an energy that will do, are worth money in the barn lot.

Don't depend upon corn alone for feeding the suckling sows. The profitable hog is the one that can be soonest brought to 200 pounds or over, and to do that the pig must do its best from the beginning. Feed the sow corn, of course, but feed her rich slops also; the pigs will very soon learn to eat with her. Wheat middlings or shorts make the very best of slops. Feed it fresh, and with just a little salt in it. Never feed sour slops.

Stock raising must enter into the calculations of the diversified farming of the central States of the Union. Our agricultural lands are becoming less and less productive through continued clean culture, and need above everything else a liberal supply of vegetable matter, which can be supplied in no way so well as by livestock and pasturage, and barnyard manure.

A great many of our exchanges note a marked increase in the table use of cream. That is a change which we think is to be commended, especially in the country. While it is true that butter is made on the farms, farm butter is not given its proper place in the market, and we believe it is a good plan to cut out a great deal of the churn work, and let the cream itself come to the table.

This is, of course, an age of microbes and bacteria, and milk, of all fluids perhaps, is most susceptible to them. The use of milk, especially in the country, is so universal that we cannot too strongly urge the utmost cleanliness of person and vessels, and purity of air and surroundings in all the processes of handling it. Of course, our grandmothers knew nothing of bacteria, but the milk, if badly handled, got foul all the same. No worse article can go into the human stomach than bad milk.

It ought not to be necessary at this age to urge dairymen, and farmers too, to keep for milk, none but good cows. An entire herd has often been brought into disrepute, and profits prevented, by a single unprofitable cow. Keep no calves from inferior milkers; in fact, don't keep the inferior milkers—send them to the block.

Farmers are apt to feed what they have on hand without any reference to its feed or cash value as compared with what might be purchased. On most farms it is corn, corn, corn for everything and all the time, whereas in many cases the corn would be sold, and more and better feed bought with the proceeds. For instance, when corn and wheat bran are worth in the market about the same, pound for pound, and you are feeding a milch cow. The bran has the advantage of bulk, by no means an unimportant matter, and it is 12 per cent. protien, while corn is only 8 per cent. protien. In such case it will pay to sell the corn and buy bran. And so it will in many other cases.

The price of the new third edition "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents. See coupons in this paper.

$25.00 Cream Separator

FOR $25.00 we sell the celebrated DUNDEE CREAM SEPARATOR, capacity 200 pounds per hour; 350 pounds capacity per hour for **$29.00**; 500 pounds capacity per hour for **$34.00. Guaranteed the equal of Separators that retail everywhere at from $75.00 to $125.00.**

OUR OFFER. We will ship you a Separator on our 30 days' free trial plan, with the binding understanding and agreement if you do not find by comparison, test and use that it will skim closer, skim colder milk, skim easier, run lighter and skim one-half more milk than any other Cream Separator made, you can return the Separator to us at our expense and we will immediately return any money you may have paid for freight charges or otherwise. Cut this ad out at once and mail to us, and you will receive by return mail, free, postpaid, our **LATEST SPECIAL CREAM SEPARATOR CATALOGUE.** You will get our big offer and our free trial proposition and you will receive the most astonishingly liberal Cream Separator offer ever heard of. Address,

SEARS, ROEBUCK & CO., CHICAGO.

Raising Horses

The Southern Farmer has this very sensible talk about farmers raising horses:

There is a very good demand for horses suitable for hauling in the cities and for farm work, whether they are of the heaviest type, the medium strong backer "big little" sort or the express van kind. Seeing that most farmers are certain to use one of these varieties in order to do the work of the farm, it is satisfactory to know that the surplus ones will find a ready sale, and surely the breeder has the advantage, inasmuch as he can market the four and five-year-olds and fill up the gaps with the youngsters which are coming on year after year. There is no reason why the farmer should not work this system, if he breeds at all, and if he does it is well to aim at the heaviest kinds that his mares are capable of producing; by which I mean that blocky mares with substance should be mated with the weighty stallions, and it is usually better when breeding draft horses to select a sire on the larger, rather than on the smaller side of the mare.

Horse breeding commends itself for this reason that the work of the farm has to be carried on with horses, and their presence is indispensable; therefore, those which are fitted can be made to answer the dual purpose of workers and breeders, which must be better from a financial point of view than if geldings are purchased and worked out with no prospect of renewals except by clipping into the bank for a fresh supply.

An Island of Turkeys

There is an island of about four thousand acres in Long Island Sound that is almost wholly given up to turkeys. They are tame turkeys, though they roam over the island almost like turkeys in the wild state. No shelters are provided and they secure much of their food the same as wild ones do. In winter they roost in the thick foliaged fir trees. As a result of this treatment they are very hardy, seldom have diseases of any kind, and the lagest sometimes attain a weight of 50 pounds. They really have something of the game flavor, and command the highest price in the market. They are raised there by thousands.

Charlie Drefenbach, Sparta, Ill., gives us the following poultry report:

We had 150 chickens the first of January, 1904, and during the year we sold 185, for which we received $45.57. We sold 481 dozen eggs for $70.05.

Charlie is a boy of 13, but says he likes poultry. In 1903 he sold 750 dozen eggs for $98.61, but he does not tell us how many hens he began with nor does he tell us how many he had at the close of 1904. These omissions rob his report of much of its value. He tells us he also had geese, turkeys, ducks and guineas.

CAN YOU ANSWER THESE QUESTIONS?

How does the stomach of the horse compare with that of the steer in size?

When is the best time to water a horse?

How much grain and hay should a work horse be fed?

How does the cost of raising a colt compare with that of raising a steer?

What are the principal causes of sterility in stallions?

Is it safe to work mares in foal?

How soon can a mare be bred after foaling?

What is the value of the droppings of a steer, measured by the price of commercial fertilizers?

What does it cost to produce a pound of beef?

What do you do for thumps in pigs?

How much gain in weight should you make for every bushel of corn fed to steers or hogs?

What percentage of corn passes through steers undigested?

What weight cattle command the best prices on the market?

How great "a spread" between the price paid for feeders and the selling price is necessary to show a profit?

What is the period of gestation of the different farm animals?

How long is a good boar capable of service?

All these and a thousand and one other questions of vital interest to every man who owns live stock are answered in "The Standard Feeder," a book of 160 pages, handsomely illustrated with views of prize live stock and the homes of successful stockmen. It contains the practical experience of more than 100,000 farmers and feeders who make money from stock. The price of "The Standard Feeder" is 50 cents, but one copy will be sent to you free, if you mention this paper and tell how much stock you keep. Address Standard Stock Food Co., 1569 Howard street, Omaha, Neb.

GERMAN COACH AND PERCHERON STALLIONS. Prize winning Coachers, black and bay, 6 yrs-old, absolutely sound, sure breeders, good style and action. Black 2-yr-old Percheron, weight 1700 lbs., will make a ton horse. Prices low, terms reasonable, but no trade. Address, **ROOTS & KIMZEY, Tamaroa, Illinois**

UP-TO-DATE Poultry and Bees
PRODUCTION AND MARKETING

Poets seldom sing of poultry;
It's too common and plebean;
But the hens bring in the dollars,
And the dollars bring the queens-
Ware, and something to put in it,
Which is more than we can always say
Of sheep and hogs and cattle.
So we listen to the poultry lay,
Glad when the hens begin it.
—Late Hatch.

March 1. Clean out the poultry house, renew the nests, whitewash the walls and boxes—get ready for business.

If the price of eggs keeps good, which we think is more than probable, we believe it will pay better to sell the eggs than to set too many of them.

In this connection, though, we must remind our friends that in early spring is the time to provide for next winter layers—the early pullets.

It is a fact, too, that there is more profit in the early hatched chickens than in the late hatches. We advise our friends to bring on the principal crop early.

If any of Our People are thinking of taking up a special breed this spring, we have this advice to give: For eggs, Leghorns, Hamburgs, Houdans and Spanish; for size and weight of fowl, Brahmas, Cochins, Langshans; for medium weight and medium to fair egg production, Plymouth Rocks and Wyandottes.

As a grain feed for this time of year wheat cannot be beaten. It is perhaps the best of the grain feeds for eggs.

One thing is important—keep the hens busy. Manage in some way to make them work for their feed. The heavy breeds are naturally lazy; some means should be adapted to keep them stirring. This time of year feed outside the house, and in straw or trash, so as to make them hunt for the grain.

Do you ever think of cleaning the dirty looking eggs when you gather them up? It is a good thing to do, whether they are to be sold or set.

Before you buy an incubator, send for catalogues and select the best. Only the best are advertised in Up-to-Date Farming.

If you are selling eggs for hatching, it is your duty to take as much pains with them as with those you propose to set yourself. This is a part of what your customer is buying, and it is what you, at least tacitly, are selling.

There is a possibility of having laying hens too fat, especially in the case of the heavier and less active breeds, but not many poultry people are guilty of over feeding.

Lime is useful about the poultry yard. Don't be stingy with it. It is a great promoter of health and preventer of disease. We have never known gapes where lime was scattered freely about the yard and runs.

You have noticed how industriously hens will scratch where wood ashes have been thrown. They are getting bits of charcoal that is very good for them.

Do you keep your flock carefully culled? It don't pay to keep any but the best, and it DOES pay to keep the best. The only way to have the best is to keep the flock carefully culled. It takes time, and it requires that the flock be watched, but what is worth doing at all is worth doing well. Success is measured by results, and the only way to get results is to work for them.

If you are raising chickens from an incubater, of course you are using a brooder. Oatmeal mixed to a dry dough with milk, baked and crumbled fine, is a good feed. Coarse corn meal treated in the same way is also good. Corn meal baked brown—black gets our meaning better—and fed once or twice a week, is good.

Incubater and brooder raised chickens must have access to flinty sand and gravel. They'll pick out such as they need

Mr. Man, last year you promised your wife a supply of brood coops, and some good feeding coops before she should need them this year. It's just like you not to have done it. Better get busy. The Good Book says "Pay your vows!"

Say, Poultry People; have you a surplus of fine breeding stock? Make it known through our Business Exchange, and get good prices for it. Have none? Then look through the ads and get some good stock cheap, so you may have plenty to advertise next year.

Some families are very much like a poultry yard—the females do the work and the males do the bragging.

Mr. Wilson, of the Department of Agriculture, is a good figurer. He has it that the U. S. Hen laid 20,000,000,000 eggs last year. To count them at 60 a minute, and working eight hours a day, would take him 1893 years, and then he would get turned out of the union for counting overtime. The eagle may soar and scream in America, but the hen lays it all over him.

I have not a doubt but bad drinking water is chargeable with much of our poultry troubles, and that with pure drinking water always at hand, and no bad water in reach, the percentage of chicks raised to the number hatched might be materially increased. A drinking fountain is about the only way to accomplish this, and we know of no handier and simpler one than the "Sanitary," a picture of which we show here. It is strongly made of heavy galvanized iron, and it can be cleaned and filled in a minute; the water is always fresh and clean. One that will hold a gallon of water costs only 50 cents.

H. A. Daniels, of Millington, Mich., six years ago mated some Indian Game hens with a White Leghorn rooster, a cross he has ever since kept up, getting new Leghorn roosters every spring, and says he has built up the best flock for general utility he ever saw. The game blood added hardiness, increased size and better table qualities. We have known other thoroughbred crosses that gave excellent results.

There are not so many amateur bee keepers in this country as there once were. Most people who keep bees now are skillful in their management. Such know they need attention at this time of the year. The keeper should see to it that they are in good shape to benefit by the very first honey flow, which, in the central latitudes, is the fruit bloom. Clean out about the hives, note well their condition, and have them in the best shape possible.

In 1905 farmers will come to the front, never more to be put in the rear.

WINTER EGGS PAY. DO YOU GET THEM?
If not, you have the wrong breed, or else no breed at all like Peter Tumbledown's hens. If you want winter eggs—hens that are hardy, good foragers and the leaders in market for broilers and fryers, I have them for you. They are Prize Winners, also. I keep them for profit and breed with these points in view. My strain "The Bird for Business" is a money-maker. You will have to place order early to insure delivery at time you say. Orders booked now for immediate or future delivery at $2.00 for 15; $5.00 for 45; $10.00 for 100. A. R. TUBBS, Weston's Mills, New York

FROM THE EARTH'S VEINS TO YOUR VEINS.

WE DON'T CARE if you **are skeptical,** we care not if you have **no confidence,** it makes **no difference** if you give no **credence or belief,** it matters not even if you **lack hope.** It takes **only a trial**—all welask. It will do the work—it cannot help doing it. It comes from out of the ground, **from the earth's veins,** the dust out of which man was first made, and **flows like fire** through the veins of the sufferer, the sick and the needy, curing whether the user believes in it or does not believe.

CRUTCHES ARE THROWN AWAY but not through hope, bandages are taken off, but not through confidence, purges are poured into the sink, hot water bottles are laid away on the shelf, plasters are destroyed, but not through faith. **It is the work the Ore was made for,** the duty for which it was put into the earth's veins and it can no more help doing it than can man help following his natural destiny—the sufferer can no more resist its action, its power, than can man resist the power of the sun, the tides of the earth itself.

IT IS DIFFERENT from anything that has ever before been offered, from those other treatments you have used, **as is pure milk from chalk and water or the brilliant sunlight from a tallow candle.** It flows like life through your veins, pure as it came from the veins of the earth and **acts** in a different manner, **cures** in a different way. It is different from all others and can be **differently offered** to those in need—**on trial,** the user **to be the judge**—a way sellers of medicine dare not duplicate or copy.

IF YOU WANT IT if you need it, if you are suffering for it, wasting away day by day, for lack of that **help and health** which it alone can bring to you—**SEND FOR IT!** It will not cost you **one single penny** if it does not help. Nothing to begin with, **nothing at any time** if you are not satisfied, if you don't want to pay for it. **You are to be the judge!**

OLD CHRONIC CASES are those we seek especially. It matters not what you think, what you have thought, what the doctors think or what they would make you think. It counts not a whit what desperate efforts you have already made, what disappointing failures you have already been through—**SEND FOR IT ON TRIAL!** It is different—a trial will prove it, the **only thing** that can prove it, **the only thing** that is needed to prove. A trial will tell **its own plain story** a story that will mean **comfort, peace, health** and **happiness** for you. You must only first **open the book,** by sending for it, by beginning its use.

You Are to Be the Judge!

The deciding power is to be left entirely with you. You say yes or no, right or wrong. If it does not help you, you do not pay—not a cent! We know it, **know it will help, know it will cure,** know we will be paid, or we **could not, would not, dare not** offer it on trial in this way. Read our Special Offer and then **send for a package today. If you need it, how can you refuse?**

WE WILL SEND TO ALL

Readers of Up-to-Date Farming, a **full-sized $1.00 package of VITÆ-ORE by mail, postpaid,** sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand that we ask our pay only when it has done you good, and not before. If not, no money is wanted! **We take all the risk, you have nothing to lose.** If it does not benefit you, you pay us nothing. We give you thirty days' time to try the medicine, thirty days to see results before you pay us one cent, and you do not pay the one cent unless you do see the results. **You are to be the judge!** We know Vitæ-Ore and are willing to take the risk. We have done so in thousands upon thousands of cases and are not sorry.

Vitæ-Ore is a natural, hard, adamantine rock-like substance—mineral—ORE—mined from the ground like gold and silver in the neighborhood of a once powerful, but now extinct mineral spring. It requires twenty years for oxidization by exposure to the air, when it slacks bown like lime and is then of medicinal value. It contains free iron, free sulphur and free magnesium, three properties which are most essential for the retention of health in the human system, and one package—one ounce of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water found on the globe, drank fresh at the springs. It is a geological discovery, to which nothing is added and from which nothing is taken. It is the marvel of the century for curing disease, as thousands testify, and as no one, answering this, writing for a package, will deny after using. **VITÆ-ORE** has cured more chronic, obstinate pronounced incurable cases than any other known medicine and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescription which it is possible to procure. If yours is such a case, do not doubt, do not fear, do not hesitate, but send for it!

Vitæ-Ore will do the same for you as it has done for hundreds of readers of Up-to-Date Farming if you will give it a trial. Send for a $1.00 package at our risk. You have nothing to lose but the stamp to answer this announcement. We want no one's money whom Vitæ-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitæ-Ore on this liberal offer! One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just as we agree. Write to-day for a package at our risk and expense, giving your age and ailments, and mention Up-to-Date Farming so we may know you are entitled to this liberal offer.

A Certain and Never-Failing Cure for

Rheumatism
Bright's Disease and Dropsy
La Grippe, Blood Poisoning Sores and Ulcers
Malarial Fever
Nervous Prostration and Anaemia
Liver, Kidney and Bladder Troubles
Catarrh of any part
Female complaints
Stomach and Bowel Disorders
General Debility

MAKE THE EFFORT WHICH MEANS YOUR CURE

Nothing is so pitiable to witness as wrongly applied effort, particularly so when the effort thus put forward is earnest and persistent, of a kind that, placed in the proper channel would be productive of the results sought after. Especially is this true of the attempts of sick and ailing people to secure a cure for their ills, many wasting some of the best years of their lives in an effort along the wrong direction, lives that are made miserable by a protracted disorder that apparently defies all efforts to eradicate it. They will apply themselves diligently to the treatment, will follow it and dose themselves day after day with a determination and spirit that is, indeed, commendable, but the effort is misdirected and nothing but additional and prolonged distress comes of it.

The trouble is, that they are treating the SYMPTOMS, the external evidences of a disturbance within, and not the CAUSE which brings it about. They deaden the immediate discomfort by drugging with narcotics and preparations which depend for temporary efficacy upon a narcotic influence and are doing nothing to get at the fountain head of the trouble, which remains in its seat, undisturbed and unconquered. Thus it is that the treatment is kept up, week in and week out, month after month, year after year, the sufferer always seeking a cure and not realizing that what he is seeking lies in an entirely different direction. Doctors diagnose the case, question as to the symptoms and treat the symptom instead of investigating for the cause, and having discovered it, taking proper steps to remove the wrong condition which makes it possible. Patent medicines, too, are placed on the market and advertised to treat the symptoms, to relieve this and that outward manifestation of an inward abnormality, while the CAUSE goes merrily on, causing more and more symptoms as time progresses, more work for the doctors and more sales for these so-called medicines.

Vitæ-Ore treats the CAUSE, not the symptoms. It gets into the veins, courses through the vital organs, doing its good work in each, setting each to rights and by so doing removes the inward disorder itself. It is a CURE and not merely a check for a time upon the outward physical manifestation of that disorder. This is one of the reasons for the absoluteness and permanency of its cures, the principal reason for the wide range of symptoms it causes to disappear. Many different symptoms and local disturbances can be attributed to one particular lesion, one fundamental lack of functional activity that is primarily alike in many separate cases, accounting for the ease with which Vitæ-Ore effaces such different symptoms by the perfect removal of these underlying and controlling causes.

"LIFE SEEMS WORTH LIVING"

A Most Wonderful Cure of Locomotor Ataxia, Paralysis and Kidney Trouble

Ten Days' Use Proved Its Worth

It is with great pleasure that I write you concerning my use of Vitæ-Ore, which I consider the greatest remedy made by God or discovered by man. One year ago I became afflicted with Locomotor Ataxia and Paralysis, as well as Kidney Trouble. Sometime during July a friend showed me your liberal offer as published in my church paper, and I sent for a package of Vitæ-Ore at once. I began using it the 1st day of August. I then was suffering intense pain, had no appetite, was very nervous and could just drag my feet across the floor, by supporting my weight on the back of a chair. I was also very despondent, as that was the fifth time I had lost the use of my lower extremities. Within ten days' time after using the Vitæ-Ore I could eat, sleep well, and was free of despondency. To-day I have good use of my limbs, can work and life seems worth living again. Words fail me to express my thanks for what Vitæ-Ore has done for me.

JAMES L. MELOY,
R. F. D. No. 1, Syracuse, Ind.

HUSBAND AND WIFE BOTH BENEFITED

The doctor said I had Kidney and Bladder Trouble, and it was with me for four years. I took lots of medicine of different kinds, but got no relief until I obtained and used Vitæ-Ore. I had lost all hopes of being cured, rented my farm and given up. But thanks to Vitæ-Ore I now feel like a new man. My wife has been troubled with Rheumatism for several years, and when she saw what Vitæ-Ore was doing for me she commenced its use also with very satisfactory results. B. T. CONLEY, Bryan, Okla.

NOT A PENNY UNLESS BENEFITED

☞ **This offer will challenge the attention and consideration, and afterward the gratitude, of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but only ask your investigation, and at our expense, regardless of what ills you may have, by sending to us for a package. Address:**

FARMERS JUBILEE 1905

THIS YEAR Farmers will come entirely to the front never more to be put in the rear, and the speculator and grafter parasites that have always been on the farmers' backs, will be thrown off forever.

This farmers' movement in the American Society of Equity is different from any other. Other plans were wrong, this one is right. Harvey Jordan, President of The Southern Cotton Growers Association, said: "Mr. Everitt is the leader of them all. Other plans to help farmers may be tried, but they will fail if they ignore Mr. Everitt's ideas and plans.

The ideas and plans are explained in "THE THIRD POWER" book. Read this book and the scales will drop from your eyes, the fog will lift from your mind and you will at last live and work on the farm in the noon-day brightness of the sun of Equity.

There is no other plan on earth to bring farmers to the front and keep them there; no other plan to elevate agriculture and hold it the equal, or superior, to any other business. Quit depending on congress, or legislatures, or capitalists, or farm papers, or even on Providence and depend on yourselves. "The Third Power" will tell you how. When you help yourselves as this book teaches you, *then* all other people, classes, institutions and Providence will help you. What I say is true.

All the old bridges on which you hoped to pass to better things have been burned. There is no chance for you to retreat. There is no salvation for farmers, or farming except through the A. S. of E. You may as well understand this now, and the quicker you get on board the ship of "Equity" the better it will be for you.

If you have not ordered your book yet do it now. If you have not done something to bring your neighbors around do it now. Fire the Coupons on this page among your acquaintances. The whole world is watching the farmers and wondering what they will do. If *you* are true to yourself, your family and your interests, we will show the world that farmers are not hayseeds, mossbacks ar chumps. Remember "The Third Power" teaches all. Help me to get it before the peopie. J. A. EVERITT, *Prest. of A. S. of E.*

REVIEWS OF THE THIRD POWER.

In the last few issues of Up-to-Date Farming were printed newspaper reviews of "The Third Power." They were the strongest ever written for any book. Now we are going to print some extracts from farmers' letters and others. We want you to read them carefully:

A BOOK THAT WILL CARRY CONVICTION TO THOUSANDS WHO NOW DOUBT.

This book is ripe fruit—it is without chaff. * * * It is logically, forcibly and suggestively written. The manner of treatment is bold and original, with new and valuable thoughts scattered all through.

The one open question—that of united action and consequent success, is laid down at the farmers' feet, and the road is pointed out with no uncertain hand. It shows plainly *that a mighty effort is being made to get the force on the farm in line for the great victory that is within their grasp, when they shall rise up as one man, and planting themselves squarely in the highway of inequity, shall stand there as a great tower of strength*—the greatest power on earth, the grand and new, the third power. A power that shall cause the parting of the ways; that shall obtain equity for the farmer because it is his by right. A power that shall cause injustice and inequity to recoil upon those who would perpetrate it, and which shall strengthen social and the commercial conditions of the country by first strengthening the foundation—the source of original production.

THE THIRD POWER is a book that no one can do full justice in a short review. It is a book that must be read to be fully appreciated. It does not beg favor of any class, nor does it threaten any one. It is clearly and cleanly written—a work that invites inspection and criticism from those who may differ with the author, and carry convictions to tens of thousands who now doubt. It may be set down now, and here, however, that THE THIRD POWER—the power of the producers united, is a power that will eventually revolutionize trade conditions as they now exist, by putting the farmer in control of the products of the farm, to be disposed of at an equitable price, both to the producer and consumer, and not at rates fixed by non-producers in Chicago and New York.—HENRY B. GEER, Nashville, Tenn.

I LIKE THE SPIRIT IN WHICH IT IS WRIT-

I have read "THE THIRD POWER" with pleasure and profit. I like the spirit in which it is written; and the showing you make in behalf of agricultural organization should, and no doubt will, command the attention and consideration of that most important, but hitherto neglectful, and it may be added, neglected class—the farmers.—M. H. CHAMBERLAIN, Pres. McKendree College, Lebanon, Ill.

"IT IS THE THOUGHT AND PURPOSE OF A

MAN OF AFFAIRS AND A PATRIOT AS WELL.

"THE THIRD POWER." Here is indeed a great book for farmers, and for all people who are interested in social problems from the farmer's point of view. The author has come to be widely known as a champion of the best industrial interests of the agricultural classes, and an ardent advocate of co-operation. The book is ably and forcibly written, displays an intimate acquaintance with the agricultural conditions of the country, displays the cruel and disheartening facts, but it itself never disheartening but full of a strong, sane hope of better things, and a program for their attainment. It is the thought and purpose of a man of affairs and a patriot as well that reveal themselves in these pages. The book ought to do much toward stirring up our American farmers to a sense of their power and responsibility as citizens of a republic and conservators of our liberties. As a believer in the method of industrial co-operation, I most heartily recommend the book to farmers everywhere.—RALPH ALBERTSON, Lewiston, Me.

"IT WILL CREATE A NEW MIND."

"THE THIRD POWER" is being read by our association which now numbers 22 members, and they prize it as the book of all books—coming next to the Bible—and unapproached for its benefits to mankind. It is just the book that furnishes the knowledge that the masses of people are now seeking for, and also teaches the classes how they should deal with the masses so equity will be secured to all. Again I say it is ahead of all other books because it will create a new mind in the reader.—W. P. BRYANT, Corona, Cal.

I have read with great pleasure and profit, your book "THE THIRD POWER." It shows much thought and work along natural co-operative lines.—D. W. WILSON, Elgin, Ill.

I have read your book, "THE THIRD POWER," and value it more than ten times its cost. Its doctrines are plain and explicit; its objects are noble and just; its truthfulness cannot be disputed. In is a book that should be in every home in the country.—H. F. MARCUSON, Harpers Home, Va.

"THE THIRD POWER," I think, is a very able production. If all farmers could read it, I think a new interest would be awakenedd in your plan of co-operation by farmers. * * *I hope you may succeed in this effort to teach the farmers co-operation even beyond your fondest hopes.—W. W. STEVENS, Salem, Ind., Chairman of Committee on Agriculture, Louisiana Purchase Exposition.

A LEGACY FAR SUPERIOR TO DOLLARS AND CENTS.

"THE THIRD POWER" is worth its weight in gold to the farmers of America, and should and certainly will immortalize you in the estimation of this and future generations. It is the only book I ever read, in which I could not detect some selfish motive, exaggeration or untruth. Could the important facts contained in this volume, be impressed, not only upon the average, but upon those who consider that they are and have a fair business education, the so-called agriculturist's millenium would develope into noonday. I would not be deprived of the valuable information contained in this "Gem of the Library," for any money consideration, as I have boys now merging into manhood, and in this, if I can leave them nothing else, I will at least leave them, if they will study their own legitimate interests already worked out, a legacy far superior to dollars and cents, misapplied.—J. M. DUNLAP, Vicksburg, Ky.

I have just finished reading "THE THIRD POWER," and heartily concur in the statement therein contained. I believe it is the most thorough and complete analysis of the present industrial condition, and in my estimation it proposes the most reasonable and practicable remedy for correcting the evils that now exist, industrially, politically and economically, of anything I ever read.—R. R. SMITH, Howell, Mich.

There is nothing I can criticise in "THE THIRD POWER." In fact, it is the only exact presentation of the actual conditions of the farming class ever written, and the only regret a person can have after reading it is that it is not possible to put the book in the hands of every farmer.—W. C. PITTAM, Hillyard, Wash.

I have read the book, "THE THIRD POWER." It is a very strong and masterful portrayal of the benefits to be derived by the farmers through co-operation. I hope every American farmer will read it.—HON. GEO. G. WINANS, Hamburg, Mich.

I have your book, "THE THIRD POWER" upon the proposal that the farmers of the land shall stand for a minimum price for wheat, etc. I see no more reason to object to this than a minimum price fixed and enforced for coal. It is simply a phase of self-protection.—REV. M. W. STRYKER, Clinton, N. Y., Pres. Hamilton College.

3.00 The 3.00

American Society of Equity

INDIANAPOLIS, INDIANA

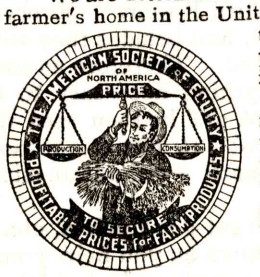
THIRD POWER BOND

For a Million United Farmers

THIS BOND is worth Three (3) Dollars cash, in gold or its equivalent subject to the cond tions printed below.

Each of the Coupons attached is worth Seventy-five (75) Cents as payment on a cloth bound copy of the third edition of The Third Power book containing 320 pages. The person who possesses this bond is authorized to sell the Coupons at a special price of **Twenty-five (25) Cents** and retain all the money. The amount will be Three Dollars ($3.00) if all are sold. Or if not convenient to sell all of them, sell what you can. Or if preferred, they may be given away.

We are determined to place a copy of **The Third Power** book in every farmer's home in the United States and Canada. All that we ask you to do is to fire 12 shots for better conditions on the farm by placing these 12 Coupons with good people and urging them to use them. They will do no good if not used.



Don't lose this bond, don't transfer it, don't give it away. It is worth **Three Dollars,** which we are willing to pay you for services rendered. Keep it in your pocket. You can sell a coupon or several of them almost anywhere at any time, which in turn gets a "Third Power" book and it will make a member for the A. S. of E. In this way farmers will come completely to the front.

The American Society of Equity

THIRD POWER BOND

Do You Want to Make $3.00?
Do You Want to Help Farmers?

YOU can do both. You want farmers to come to the front. You want uncertainty of prices of farm crops to end. You want agriculture to be as certain for profit and as pleasant a business as any in the country. All farmers want these things to come about. They will come to pass when enough farmers know what to do. The things to do are taught in the wonderful book, "The Third Power." Everything is made so plain that anybody can understand, and besides they will see that everything they are to do is to their interest. Therefore as soon as a farmer reads this book he wants to do everything necessary to bring above things about, *because it is to his interest*, and he then sees that if he don't do them *he is standing against his interest*. For this reason we say: "The working of the A. S. of E. is automatic—without an effort on the part of the members.

If you will work to help your neighbers to get good prices, etc., you are entitled to pay, as you help them just as much as you help yourself. If Mr. Everitt will sell a $1.00 book to any of your friends for 50 cents and give you 25 cents for helping him it is entirely legitimate. That is what this means, you can make 25 cents on each book, or if you want to waive your commission you may give the coupons away, then the holder can get the book for 25 cents.

Read the other side also.

A bond worth $3.00 in gold (or its equivalent in cash) will be sent to the person who sends in this coupon with 25c for a THIRD POWER book.

This Coupon when accompanied by Twenty-five Cents (25c) will be accepted in full payment for one, one dollar ($1.00) copy of the great book The Third Power.

The third edition, revised and enlarged, 320 pages, cloth bound. Sent by mail postpaid, for this coupon and 25 cents.

This book should be read by every person--especially farmers.

LETTER FROM DAVID DOBETTER

Number 50

Near Williamsport, Ind., Feb. 15, '05.
My Dear Mr. Everitt:—

It has been pretty good winter weather since I sent you my last letter, and of course we have had to suit our farm operations to the season. But we have not been denning up, like bears, as I used to think a man must when cold weather came on. This is just the time of year to do some kinds of work that we could hardly find opportunity to do later when other business presses. We had a big wind not long ago that did a great deal of damage to the wood lots of this section. It came just after chore time one Sunday evening. Whew! How the wind did howl. I was sitting in the west bay window with Little Sweetheart in my arms when the great black cloud peeked up over the horizon. Someway I did not like the looks of it from the start. But none of us had any idea what it was going to be like after all. It struck the house with terrible force when it came. The old pear tree at the west corner of the house was split down and one part flew straight toward the window where Sweetheart and I were sitting. The glass came in all over us and I sprang back just in time to escape a big branch that was thrown into the room. I tell you it frightened us all, more than any such thing that ever came to us before. Mother hurried around and got the big moulding board that she rolls out the pie crust on and such other work and fastened it up at the broken window. In a minute more the rain came down like a perfect river. It was all over in a few minutes and then we went out to see what had been done. We found a few of the little fruit trees broken off and a lot of fence down.

But it was when we came to go down to the woods the next day that we found the worst. It was really enough to make a man sick at heart to see the fine trees lying there on the ground, broken off and turned up by the roots—ruined forever. There is something sad to me in the sight of a tree that has been fallen anyway. I never cut one down that I do not feel as if somehow I have dealt a blow to one of my best friends. It takes so long to grow a tree. We may set it out when we are young men and it will only reach its full growth when we have become men grown, well on toward the shadowy side of life .

But there they were, and the question was how to make the best of what was, at the best, a bad situation. We decided to go right at it and cut the timber before it began to decay. And that has busied us all our spare time this winter. Everything that could be turned into lumber we cut the proper length and hauled away to the mill. We shall keep some of the best boards and sticks for use on the farm. Lumber is getting so scarce that we must save every bit we can to mend our broken fences and farm tools. It is trying to be compelled to see things go to pieces just because we have not a few odd pieces of boards to patch them with.

Then, as there was a good deal of timber that could not be turned into lumber, I made up my mind that I would get a wood mill and work everything workable into wood. We have worked at that a good many days this winter, and you would envy us the fine pile of wood we have at the door all split and ready for the stove and fireplace. Some of the finest pieces we have put aside for the fireplace. As I write, the light from some of these comes flickering back into the room, turning everything into gold and driving the cold away. Around this hearthstone we have had some of our best hours. And I never have been sorry we put the fireplace in the house. I think a great many farmers make a mistake in leaving out of their houses the old-fashioned fireplace. Once in a while we come across men who say they don't want any fireplace. They were brought up by a fireplace, they say, and have had enough of them. It seems sometimes as if they were ashamed of everything that links them with the old days. I am sorry for such men. They are really to be pitied. Some of my most comforting thoughts are connected with the days gone by. And I am glad we have not outgrown our fireplace. Of course, we do not depend entirely on that for warming the house. We have some good up-to-date stoves, and these keep the cold out, but the fireplace is just for comfort. Comfort? I guess you would think there is comfort in sitting before it these days and nights when the mercury is looking for some place to crawl into to get away from old Jack Frost! Chipper and Sweetheart bring up a big dishful of apples every evening—Greenings, North Spies and Kings, with the roses all fresh and bright on their cheeks, just as when we brought them in from the orchard. And Tom gets down the corn popper, with its long handle made on purpose to reach out over the blazing logs and still not burn the one who holds it, and shells about two quarts of popcorn to go with the apples. Mother knits a while and I finish up my paper. Then we all put everything else out of the way and just lay in for a good time.

Comfort! Go away with your kings and emperors! I wouldn't change places with that poor, miserable Czar of Russia for all the world. Right here on the farm is a good enough place for me. By the firelight we plan out our work for the coming days. Here we dream of the children away working to make men and women of themselves. Here we think and talk about all that has been going on in the world outside. Here we call up the old days and compare them with the present. And how pleasant it all is! The stock is all out there snug under cover. Not a creature is left uncared for. Nobody can come and say, "Tomorrow you must pay your rent or get out of this house!" Our little world is all free from debt or other claim. We are monarchs! Hold on! That is not the right word. There are no monarchs in this little beauty-spot of creation. We are all equals here—friends, brothers, united under one common banner, the banner of love.

So the delicious apples and the crisp popcorn, with the bright shine of the hickory logs from the woods light up our lives and drive care away.

I don't know but you have noticed that we at Four-Leaf Clover Farm place a good deal of stress on the fruit trees and the apples. That's right; we do. We all love the trees and the apples, and we are not ashamed of it. The first letup there is in the other work we intend to go around and trim the little trees again . Every season so far since they were set out we have done this. When we began, none of us knew very much about how that kind of work should be done. But I have been studying the matter up and have learned something in that direction, as well as some others. Our trees are all well trimmed, that is, to suit me. The tops are open to let in the sunshine, they do not reach up to the sky as some do, and they are as thrifty as you would want to see. Some of the little things begin to look quite like apple trees. One in particular that Chipper and I have dug around and kept well manured every spring, really looks as if it might have some fruit on it not long hence.

I wish you might come out to the farm, Mr. Everitt, and see us. Can't you? I will meet you at the station any day you may set. And I will drive you out in as good a rig as you can find anywhere in the county, too! Just as sure as my name is

DAVID DOBETTER.

Now, wouldn't we like to drop everything here in this noisy, smoky, hurry-scurry city and get out there to Mr. Dobetter's, beside that bright fireplace, within that charming circle of love and hope, to enjoy those delicious apples that blush at their own beauty and sweetness; and also that popcorn which so cheerfully leaps to its final destiny. Destiny! That's it. Destiny has placed us here in the city, and here, amid many things to be thankful for, we must fill our mission and work out our destiny. At least until summer comes. Then we shall see. We may give David a chance to use that rig when the flowers bloom again. —Editor Up-to-Date Farming.

If it were not for the revenue we receive from advertisers we could not publish this paper for the price we do. Friends, show your appreciation by patronizing our advertisers in preference to others. If they don't do just as they say, report to us.

The "Cabbage Snake"

The disturbance created last fall by the so-called cabbage snake had a wider range and was more intense than those who do not know could imagine, and we deem this an opportune time to speak of it, as many who always raise cabbage as a part of their "garden truck" will not raise it at all this year if they still regard it as they were taught to regard it last fall.

There is no doubt that there was an "insect" in the cabbage heads between the leaves in quite large numbers last fall—a minute white worm with a dark head, a very snake-like worm that had movements like a snake. It had no doubt been there in other years, and the wonder is it had not before attracted attention. It must have appeared last year in greater numbers than usual. While humans may not care to make a diet of these "snakes," and we saw them in such numbers last fall that the cabbage eater's diet must necessarily be partly of them, they are not poisonous. and all reports of deaths and sickness from eating them were untrue, the trouble being evidently from some other cause.

They are what is known as a parasite of the grasshopper, that is, an insect which lives upon the grasshopper as lice and ticks live upon animals. Why they were in such numbers in the cabbage last fall we have not seen explained, nor are we able to explain it. Dr. S. A. Forbes, State Entomologist of Illinois, and a very high authority, says they are not at all injurious to the cabbage, and that they cannot be to humans who might take them with their food; that reports of injurious effects on thei raccount from eating cabbage have been traced to their source and found erroneous. The readers of Up-to-Date Farming may safely continue to raise cabbage.

Why the Cherries Fail

There are few adult persons living in farming regions who cannot recollect the annual cherry pickings; how the boys and girls, even women and men, carrying baskets and tin pails, climbed the red burdened trees and vied with each other in the harvest of the luscious fruit.

These cherry pickings in most sections are now things of the past, and the rich pies and preserves once so plentiful are now a treat. Where several bushels were formerly taken from certain trees, not one quart of perfect fruit can now be obtained, although the blossoms were in great profusion, and the promise of a large crop seemed assured; yet after a few weeks the ground was strewn with immature fruit and that bearing the mark of the cherry tree fly, and the crescent of the curculio, while the scattering cherries remaining upon the trees until time of ripening seemed immature, were mishapen and most inferiior in quality. and large orchards, once a considerable source of revenue, have been sacrificed through ignorance of their requirements. These conditions have been greatly deplored by growers who have become accustomed to them, however, and lack the energy to look into the cause, or combat the enemies of a favorite fruit.

That food for the needs of the tree is required becomes evident by the dropping of immature fruit, bearing no mark of insects, and of the immature condition of that remaining until time for ripening.

As in the case of trees, there is really produced annually a double crop, that of the leaves and later the fruit with its seed, which must necessarily consume great quantities of the natural soil, hence where this process goes on year after year, exhaustion of the elements of plant life must result.

Added fertility is seldom considered in connection with the fruit trees of the farm, and cultivation of the soil is neglected which becomes each year more infested with insect pests which prey upon the poor efforts of the starving trees.

From the time of setting the young trees until of full bearing age good, vigorous growth should be maintained. The plowing under of clover or green crops usually will furnish sufficient nitrogen unless lack of good color or growth of young wood shows its need. A larger quantity is not required than given in the following formula, which is a good one: Two per cent. nitrogen, 7 per cent. available phosphoric acid and 9 per cent. actual potash. Application should be made of from 8 to 16 pounds per tree (depending upon size) in the spring and worked into the soil.

If hogs or poultlry are kept in the orchards, the insects which infest the soil through the stung and fallen fruit may be largely eradicated.

In the cool parts of the day the full-grown beetles may be captured by jarring the trees under which sheets have been stretched.

Cherry trees which were considered worthless have been restored to abundant bearing by proper fertilization and the controlling of destructive insects. E. A. SEASON.

Free Seed Distribution

The premium potatoes I received from you last spring did fine, and so did the rest of the seeds that came with them.—Arta Adams, Easton, Kans.

The two premium potatoes I got from you last spring, I planted the last day of June, making 26 hills of them, but it was so dry that four of the hills did not come up, and the others did no good until the first of July, when we had a soaking rain; then they came on rapidly. I dug them the 20th day of Oct., and had 25 potatoes that weighed 24 pounds, and 50 that weighed 21½ pounds, and 53 that weighed 7½ pounds—128 potatoes in all. It was so dry that the other seeds did not succeed well.—G. L. Huffman, Burkett, Ind.

From the potatoes you sent me last spring I cut and made 10 hills, and raised 45 pounds, nice and smooth. I am very well pleased with them, and also with the product of the other seeds.—J. K. Dodge, Beverly Farms, Mass.

From the seed received of you last spring I raised what is said to be, and no doubt is, the largest pumpkin ever raised in my neighborhood. It weighed 133 pounds, and is now, Jan. 5, 1905, sitting in my sitting-room as sound as a dollar.—W. H. Fowler, Racine, Boone County, W. Va. Witness to weight, G. B. Conley, Charleston, W. Va.

I received from vou last spring half a dozen little potatoes as a premium. I made of them 32 hills and raised three pecks of very nice potatoes. The season was very bad here for all crops. The yard long corn did very well for the season, better than anything else we had.—Ellsworth Latham, Lees Summit, Mo.

Last spring I subscribed for Up-to-Date and received premium seeds, which were all good. But I think most of the potatoes. I raised one bushel of fine potatoes, and the quality is of the best.—A. McBride, Marionville, Mo.

From those two Up-to-Date potatoes you sent me last spring I got 105 on not very rich ground. I think they are truly up-to-date.—W. G. Carry, Marysville, Mich.

The two small potatoes I received as premiums with your paper are the finest I ever saw. They are smooth, nearly round, grow in a cluster in the hill, and nearly all of a size. I made 19 hills and got 75 pounds.—Simon Saunders, Silesia, Mont.

From those premiums you sent me last spring I got from the half pound of potatoes 80 tubers, and from one vine of pumpkins I raised 52 pounds, and the White Wonder melon yielded very well. I am very much pleased with my premiums.—John H. Marshall, Attica, O.

I planted the free seed potato and raised one-half bushel of splendid smooth potatoes. The corn was planted late, but it is fine and has two large ears on each stalk. I am well pleased with Up-to-Date Farming. EZRA GERMOND,
Tribes Hill, N. Y.

[We requet that subscribers give the name of the potato they planted. There were two kinds sent out. First was called "Early Success." When they were exhausted we sent out another under the name Up-to-Date No. 1. We have many more reports to print and would like to hear from others, as these reports are interesting.—Pub.]

DON'T SHOVE
BUT PUSH

This is what you do with Everitt's Man-Weight Machines

Patented in the U. S., Great Britian, France, Germany and Belgium

Showing the Man-Weight Cultivator passing an obstruction, whether a stone, stump, or a plant that you want to save. This easy trick is quite in contrast with lifting the whole machine.

THESE MACHINES abolish much of the drudgery of cultivating the crops and make slow, hard, disagreeable work rapid, easy and interesting. They comprise more combinations than any other line of hand machines made. They embrace plows, hoes, cultivators, harrows, drills, etc., all from one combined machine. The owner of a Combined Man Weight machine has tools for almost every conceivable work that comes up in planting seeds and cultivating crops.

In the Man-Weight Machines, the power is applied from the body — **it is the weight of the body**—which, if not directed against the Machine, is lost on the ground through the feet. You can see how this is. If you lean against a fence there is less pressure on the ground at your feet. The machine is thus propelled by otherwise lost power or weight. Because of this novel way of propelling and guiding the Machine the drag bars are hinged and the hands are free to guide the tools around the plants almost as well as a hoe in your hands. Examine the illustrations and you will understand the great advantage of the Man-Weight Machines. It is evident that the power obtained, the quantity of work that can be done and the quality of work greatly excels any of the old-style hand-push machines. No inconvenience experienced from pushing the machine by the body.

Good Points of Everitt's Man-Weight Machines Not POSSESSED By Any Other

1. Man power is applied from the breast or other parts of the body. No inconvenience is suffered.
2. The power is applied by a natural inclination or lean of the body, as for rest against any object,
3. Hand-cultivating work is done almost without work.
4. Big work is done with ease and comfort to the operator.
5. At the same time he can do more work in a garden or nursery, etc., without a horse than with one.
6. It does better work than a horse cultivator or any other hand cultivator.
7. Both hands are free to guide the tools around the plants.
8. Compared with others, man-power is multiplied many times.
9. Oftentimes double the amount can be raised on a given piece of ground with this machine than with a horse machine.
10. The expense of keeping a horse can often be saved.
11. Plants can be cultivated oftener and hence mature earlier, with a greater yield with this machine than with any other. In this way the machine can be made to pay for itself several times each year.
12. A Man-Weight Combined Machine affords more separate tools and will do more work than any other machine on the market.
13. You can better afford to pay $25.00 for an up-to-date Man-Weight Combination than use any of the old style machines, even though you could get them for nothing. Remember this in making a selection.
14. If time is money and ease of doing work an object, you had better buy an improved Man-Weight Combination at donble our price than take an old style hand-push machine as a gift.
15. You will double or triple the results from each hand employed. You can save its cost quickly in hand hire.

Enclosed find $12.00 for one Man-Weight Combined Machine. We have used these Cultivators and Drills for some time, and this year sold one to Griffith Gartin of Hartford City, Ind. Our principle use for them is in growing stock beets, and this is what Mr. Gartin wishes to do.
J. G. ROBBINS,
HORACE, IND., April 22, 1903.

NEW YORK, May 1, 1903.
Your Man-Weight Cultivator received and put to good use. Find that it is the biggest little machine we have ever used or seen.
A. A. SANDERS.

Your Man-Weight is a great improvement. I find that it largely increases one's capacity. It is as great a help as the improved horse cultivators are over the double shovel. A 120-lb. man can do more work with a Man-Weight than six big men with hoes and do it better. S. LEE COY
OAKWOOD, ILL, January, 1903.

I want one of your Man-Weight Cultivators, as they can't be beat. My mother-in-law (Mrs Blus) got one last spring, and I tell you that she likes it. She was about to place her order for another kind, but I got her to send to you for one, and she told me she was glad of it. W. B. CARPENTER.
CHERRYVALE, KAN., Jan. 20 1903

This illustration shows the Man-Weight Cultivator saving plant that was out of line. Notice drag bar is thrown to the right. Either or both drag bars may be moved to right or left or up or down without changing the direction of the wheels.

This illustration shows the Man-Weight Cultivator in high stuff. Shows push-bar to allow operator to walk beside row instead of astride it.

HARRISVILLE, MO., June 14, 1903.
The Man-Weight Cultivator came today. We tried it long with a ——— ———. All present thought that the Man-Weight was the best. The soil was very heavy, but the machine did excellent work. We tried it in the cabbage, tomatoes, beets, onions and corn. There is one thing the boys like about the Man-Weight; they say that when they are using it they are strictly up-to-date.
Respectfully yours,
WILL G. SPEEDLOVE.

The Man-Weight has come and I think it a grand garddn tool. It beats anything I ever saw.
O. W. HOWELL, New Haven, O.

I took the Man-Weight in my garden and cultivated two acres of peas with it. It did all that you claimed. I am much pleased with it.
E. W. HILDEBRAND, Southport. Ind.

The Man-Weight is indeed a very excellent and practical machine. Saves much labor, doing the work of planting and cultivating with ease and rapidity.
J. B. LEEDOM, Hillsdale Ill.

Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

You Can Laugh About It Later

You can laugh about it later,
When the storm has drifted past,
And the lookout sits a-smiling,
Gazing calmly from the mast;
You can laugh about the danger
That has turned the other way,
When you sit within the sunshine
Of a later summer day.

You can laugh about the trouble
That has one time caused you tears;
Half your former heartaches vanish,
Looking backward through the years;
For the mountains seek the valleys
Till a level landscape lies
'Neath the gleaming, golden sunshine
Of some future summer skies.

You can laugh o'er disappointments
Of the years of Fortune's frown,
O'er the heavy griefs and failures
That have often bowed you down;
For God's blessing is upon you—
Time, life's healing balm, He gave
For the wounds that may beset you
'Twixt the cradle and the grave.

—Floyd D. Raze.

The March winds promise softer breezes, just as life's rough experiences should be followed by the calm of June.

If there is a stone, or stump, or other unsightly object in the yard, plant some morning glories, cypress vines, canary flowers and balloon vines (love puffs) around it. You'll be glad it was there before the summer is over.

Do the same way with the mind. If dark, ugly thoughts persist in obtruding themselves, plant flowers around them, and they will disappear.

The child that grows up in a progressive, happy home is very apt to raise children in a progressive, happy home.

The parent that makes the home unhappy is planting seed whose fruit may be gathered long after he or she may have been forgotten.

The boy or girl that is mindful of others, and refuses to take advantage or speak evil of any one, has a name written on flowers that bloom in human hearts.

The man who measures his acts by what the law allows him to do is not so good a neighbor as the one who measures his acts by "Do unto others as you would have them do unto you." The law is made for the first, the second does not need it.

Muslins or other cotton goods rinsed in alum water become much less liable to burn—as slow to burn almost as woolens.

Tarnished silverware may be brightened by permitting it to lie for half an hour or so in sour buttermilk.

To set the cake pan for a few minutes on a cloth wet in hot water makes the cake come out much more smoothly.

We know of no better gifts that can be bestowed upon human beings than cheerfulness. Everybody is attracted to a cheerful face, brightened by a sunny smile. We believe no one is debarred from this gift, but the world is full of people who do not possess it.

Our only object in writing is to benefit people, and we hope what we say will be read with that thought uppermost. So many read aimlessly, with a feeling that the words were intended for somebody else. But, reader, we are talking to you, and we hope some things at least may be useful to you.

Here is a little fact that has been taught many times, and in many ways, but it needs to be frequently repeated, that humans need sunshine as much as plants do. The body needs sunshine, literal sunshine, and so does the soul, spiritual sunshine. And the home needs it; let it in.

Here is something nice called corn puffs: To the contents of one can of corn (corn cut direct from the cob will do as well or better) add the whites and yolks, beaten separately, of four eggs, and mix gently; add salt and pepper to season, and just enough flour to mix well. Drop in spoonfuls into a buttered pan and fry. Serve hot.

This dish is called potato souffle. It requires nothing but what is readily at hand in any farm home: Boil four good-sized mealy potatoes, pass them through a sieve; scald in a saucepan half a teacup of sweet milk and a tablespoonful of butter, add to the potato with a little salt and pepper, and beat to a cream; add one at a time the yolks of four eggs, beating thoroughly; put a small pinch of salt into the whites and beat them to a stiff froth, then add them to the mixture, beating as little as possible; have ready a well-buttered baking dish large enough to permit the souffle to rise without running over; bake twenty minutes in a brisk oven, serve at once in the same dish in which it was baked. It is nice to serve with meats that have gravies.

Many who would otherwise like to use dried peaches refuse to do so because they have not been pared. Try this method: To a pound of fruit allow a heaping teaspoonful of soda, and cover with boiling water. Let stand 15 or 20 minutes. The skin will rub off easily, and the peaches will be as nice as if pared before drying.

Here is a nice little cake to be served hot: Beat two eggs to a froth, then add one-half cupful of sugar. Into one cupful of sour cream stir one-half teaspoonful of soda dissolved in boiling water, add eggs and sugar, with a pinch of salt, and flour enough to make a stiff batter as for griddle cakes, and bake in gem pans.

These small ginger cakes are good: Four tablespoonsful of sour milk, three of butter or lard, one beaten egg, one teaspoonful each of soda and ginger, add sufficient molasses and flour to make a stiff batter. Bake in gem pans in a slow oven.

Carpets in the Living Rooms

The writer of this article grew up on a bare oaken floor, his early years being spent upon an old-fashioned, back-woods puncheon floor—puncheons split from the trunks of large trees, the rougher places being chipped off with a broad-ax, but which had never been touched by saw or plane.

But I do not think this fact is responsible for my prejudice against a carpet on the floor of the living room. It is the dust, the filthy dust, the germ carrying, disease breeding dust, that will gather in the carpet, and that will fill the room every time a person passes through, no matter how lightly that person may walk. And then when two or three or four children play upon it! If you wish to know how full the room is of dust, how laden the air that every member of the family is constantly breathing, admit a ray of sunshine into the room, and note the universe of little moons that are constantly whirling through "space," and giving back to you the borrowed rays of the sun, which enables you to see them. Every portion of the room is just as full of these particles as is the portion through which that pencil of light passes, and each member of the family is taking in myriads of them with every breath drawn!

If you do not like to see bare floors, linoleum, in its various figures, makes a cheap and tasty covering, and one that will not catch and hold the dust, and may be easily cleaned every day. But it is cold, almost always cold to the touch.

If you must have carpets, let us suggest a plan which we have never seen suggested—put them down in sections, and without stretching or fastening, in sections that may be lifted and shaken, dusted, every day or two, like rugs are treated.

We know the objection that will be urged, but if they be nicely fitted, there need not be so much annoyance in getting out of place as one would think. All will soon learn to step and to move things about the room so as not to disturb them. And then the unavoidable dust you can every day give to the winds outside, instead of to the lungs of the dear ones that every day gather in the room! The portions under the permanent furniture need not be so frequently moved.

Many persons and firms would like to see their advertisements in Up-to-Date Farming, and would pay big prices to get them there, but we cannot guarantee them to our readers, and they can't get in.

This is Reduced Cut Actual Size Six Inches Long.

FREE To Ladies

To introduce our **Solid Yukon Silverware** into every home in the land and to prove our claim that it is the most beautiful and durable table flatwear made, we will give away a solid

Yukon Silver Sugar Shell Free

to every lady sending us her name and address. Yukon Silver is one of the most remarkable products of the 20th Century, and is unquestionably superior to anything heretofore produced for the manufacture of knives, forks and spoons. Practically it is **BETTER THAN STERLING SILVER** and costs only one-sixth as much. Same color, harder, will wear longer and not tarnish as quickly. It is the same beautiful metal through and through—no plating to wear off, and it is as bright and lustrous as burnished coin silver

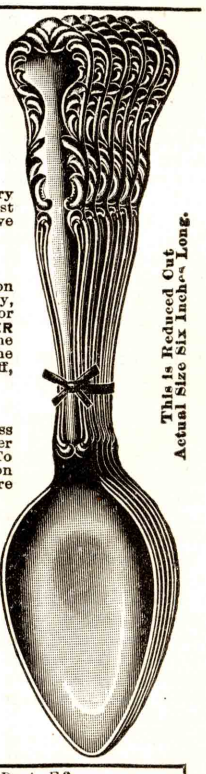
Warranted For Twenty-Five Years

OUR REMARKABLE LIBERAL OFFER:—Send name and address on blank below, and we will send you, postpaid, a Solid Yukon Silver Sugar Shell, same pattern as cut, **Absolutely Free of Charge.** To give you an opportunity to procure a set of our Solid Yukon Silver Teaspoons, also without a cent of expense to you, we are willing to send a set of six teaspoons to match, along with the Sugar Shell. Secure orders for two sets like them at $1.15 per set, and the sample **Set of Teaspoons as well as the Sugar Shell will be yours without costing you a cent.** If you fail to sell two sets, return the sample set at your expense (6 cents postage) and keep the Sugar Shell as a gift for making the effort.

We Want No Money In Advance

but will ship you the goods and give you thirty days to collect and remit. You can get orders among your friends and neighbors in only a few minutes to earn the sample set. We will also send you catalogue of our Yukon Silverware and list of handsome premiums for large orders. Send today, before you forget it. **Remember,** you don't have to ask your friends or neighbors for money in advance. **We ship the goods and give you 30 days to remit.** A fairer offer could not be made. If you fail in your effort to get orders you have a beautiful Sugar Shell worth 50c. free.

RAYMOND MANUFACTURING CO., Muncie, Ind.



This is Reduced Cut Actual Size Six Inches Long.

RAYMOND MFG. CO., Muncie, Ind. Dept. F 3

As per terms of your offer, send me postpaid, one Solid Yukon Silver Sugar Shell, and a set of teaspoons to match, I agree to try faithfully to sell at least two sets of teaspoons like those you send me provided you send me the goods without any money in advance, and give me 30 days to collect and remit. If I fail to secure these orders, I agree to return the sample set of teaspoons by mail, postpaid, within 30 days after receiving them and keep the Sugar Shell as a gift

This order must be Signed by an Adult and not by a Child.

UP-TO-DATE Gardening and Flowers

HOW TO GET BEST RESULTS AND BEAUTY

"You think I'm dead,"
A soft voice said;
"Because not a branch or root I own!
I never have died,
But close I hide
In a plumy seed that the wind has sown;
Patiently I wait through the long winter hours;
You will see me again—
I shall laugh at you then
Out of the eyes of a hundred flowers."
—*Selected.*

Britain boasts that the sun never sets on her flag. We have much the same feeling when we come to write of gardening in Up-to-Date Farming. We can scarcely reach a month in all the year when some of Our People are not making garden. We are writing in central Indiana in February, with the chill winds of winter blowing around us, with icicles hanging from the roofs of the houses, and the gardens in the country frozen as hard as the pavements of the city. What we are now writing is to be read the first of March. At that time the breath of the Winter King will sill shake the naked branches of the trees here, and the frost will still hold the garden soil in his firm grasp, but Our People in the South will have their gardens made, many of them with early vegetables already on their tables, graced with bright bouquets of early flowers, while in the Dakotas the Winter King has not yet commenced to pack up preparatory to moving farther north. Therefore, when we write of gardening in Up-to-Date we have a large field to cover, some of it bright with flowers and some of it white with snow. What can we do? Take the middle ground, and write for all by adapting ourself to the great central zone.

March 1. We repeat advice previously given, get the well-rotted manure to the garden.

Let us repeat a little more; if you haven't your seeds already, don't delay a moment in getting them.

Plant a greater variety than you have been accustomed to do—not so much of a kind, perhaps, but more kinds.

An old favorite that has been long neglected may well be brought into favor again—the parsnips.

Texas is doing a big thing in onion culture; the Bermuda does well in that State, and is proving profitable.

For the first planting of sweet corn you will most likely want the Extra Early Adams, which, if planted in good, warm soil, may be ready for use in 60 days. Then may come the Early Adams, a little larger but not quite so early. Crosley's sugar is also a very excellent early variety. For main crop, especially if you raise for canning, you want Everitt's Early Mammoth or Stowell's Evergreen.

The young people will not neglect the rows of popcorn. The Boys' Favorite is a new red kind, but it pops large and white. Mapledale Prolific is a great producer, sometimes producing as high as 18 ears to the stalk, averaging from four to six. The market is seldom fully supplied with popcorn, and field culture is quite profitable. For this purpose White Rice commends itself.

Early Russian cucumber is perhaps the best for earliest planting, and for later use and pickling the Improved Early White Spine and Chicago Pickling are both good. The Long Green is an old favorite, which has been improved lately, comes on early, and is splendid for table use or pickling. If you want something extra large, try the Giant Pera. A few hills of the Everbearing and of the Climbing Japan cucumber will surprise you. Those who grow for market will plant largely of the Everbearing.

I have often been surprised that egg plant is so seldom found in country gardens. There are two varieties, White and Purple. This is a semi-tropical plant, and the seeds are slow to germinate. They should be started early in a hot bed, and they should not be moved to the open until the soil is warm and all danger from cold nights is past. The Pearl White and the Improved Large Purple are the leading varieties.

Horse radish is not grown in the country so much as it used to be, nor so much as it deserves to be. Grated horse radish root in vinegar makes one of the best of relishes, and it is healthful—semi-medicinal. Propagate by roots and set in deep, rich soil in May.

Of course, every garden has its lettuce, and everybody knows how to grow it, except that some still sow it in beds, and afterwards try in vain to keep it clear of weeds. We don't remember any youthful reminder we dreaded more than, "John, it is time to weed the lettuce bed!" Plant in rows and produce two crops—good lettuce and pleasure in cultivating it. It should be planted very early. I would like for you to try Everitt's Everlasting.

The melons, of course, belong to the fields, but try a few hills of the Jenny Lind musk melon in the garden, or of the Emerald Green or O. K. Netted Gem. There are all early, small and delicious. For the boys to plant in the field get Indiana Sweetheart.

Of course you will have all the regulation flowers, but try a mixed bed this summer; it will be a novelty in the neighborhood, and the effect is very pleasing. There need be no regularity in the planting; there should not be. Mix the seed and plant. Have kinds that bloom early, medium and late, so as to keep it up all summer.

The autumn garden or yard is dull without asters, and they may be had in such great variety. They are very hardy and never disappointing, but the seed must be sown early.

As a beautiful novelty,—it is very common in some places,—try the Canary Bird Flower. It is a rapid climber, attains from 10 to 15 feet, covers trellises thickly, and bears hundreds of bright, pretty yellow flowers that look like canary birds with wings extended. Plant as soon as the ground is in good condition. If you mix cypress vines with them, you will have something beautiful.

Cannas are favorites with everybody, but persons living where they cannot get roots find difficulty in starting them from seeds, but this is no difficut matter. We have started them without the loss of a seed in sweet potato beds—hotbeds in which sweet potatoes are planted to start the slips. Pour hot water upon the seeds in a vessel, if the water be boiling it will not hurt, and let them soak for 12 or 24 hours, then plant in the potato bed after the potatoes are planted. To do well cannas must have a very rich place in which to grow. We have seen them growing magnificently in piles of rotting manure. They require plenty of moisture.

A garden without carnations lacks something. One of the most beautiful ones, Marguerite, will bloom from seed in four months, and succeeds alike in the open garden and in pots or boxes. It is of a vigorous, dwarf and erect growth, and requires no supports. It is very double and exquisitely sweet. Plant early in well prepared rich soil.

Don't you want to try those new potato seedlings? The man that started the Early Rose, the Early Ohio, the Old Peach Blow and other such well known varieties had a fortune. They were started from just such tubers as we are offering as a premium, and there is no telling what these may make. They need no other treatment than cultivation and development, the hybridization is already done.

Mules are sellers; money makers. Some fine jacks advertised in the Business Exchange.

It is all in the seed

The profit from your farm depends as much on the seed you plant as your skill in cultivating it. It is an easy thing to gain from $5.00 to $15.00 an acre by wise choice of seed. Start right—the best farmer on earth can't raise a big crop from poor seed. The same truth applies to vegetable and flower gardening.

Our Northern Grown Seeds

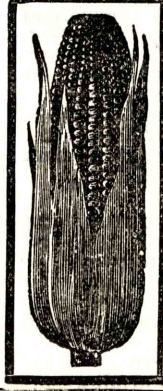
are best for all soils and climates. They possess the vigor peculiar to all Northern plant life. Over 20 years of effort in seed breeding have been successful because we have kept constantly in view the most essential point—YIELD. Our latest and a very sensational introduction is **Peep'o Day Sweet Corn, *earliest, tenderest, juiciest.***

For 16 cents, stamps, we will mail you 300 seeds Peep'o Day Sweet Corn—enough for 60 hills; also our 1905 Pictured Catalogue of Northern Grown Farm, Vegetable and Flower Seeds. If the corn is not wanted, we will send our 1905 Pictured Catalogue Free. It contains special trial offers.

NORTHRUP, KING & CO., Seed Growers, 66 Northrup, King Bldg. MINNEAPOLIS, MINN.

PURE BRED, FIRE DRIED

SEED CORN.



Do you change your Seed Corn and plant Pure Bred varieties, or are you still in the same old rut, planting the same corn on your farm year after year? Every year thousands of farmers are finding that they can increase their yield from 5 to 20 bushels per acre by planting Armstrong's Pure Bred, Fire Dried varieties. Our catalogue will show you why this is, and how you can do the same thing. For the next 30 days we are going to send four large packages of Pure Bred Seed Corn, ***FREE,*** to every farmer who answers this advertisement. Send us your name and address on postal card ***TODAY.*** Don't wait until tomorrow. Send your neighbors' names, too; we want to send them free catalog and samples. Write. Write now—today. Address, Drawer 45.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

"You think I'm dead,"
The apple tree said;
"Because I have never a leaf to show;
Because I stoop,
And my branches droop,
And the dull gray mosses over me grow!
But I'm all alive in trunk and shoot;
The buds of next May
I fold away—
And in the autumn you'll see my fruit.
—Selected.

Fertilize the orchard.

A lye or soft soap wash is good for the trees.

We insist that the dead and injured branches be taken out.

Have you a spraying outfit? Better get one. But don't depend on spraying alone; feed the trees.

I would rather have orchards pruned in February, but if still neglected, it may be done in March. It will pay to paint the raw places where large branches are taken off.

The last of March and April are the times to graft. Of course it may be done early in the South. Any one at all "handy" can do the work successfully.

Prof. Hoover, of Warrensburg, Mo., is in favor of teaching more of horticulture in the schools. There is a growing disposition to cut out much of the old and unused, and substitute things of actual value in everyday life.

A. T. Nelson, of Lebanon, Mo., says it is as necessary to trim the roots of trees before setting as the tops. He would leave no roots longer than five or six inches, and he would be careful to take out entirely all bruised or injured roots. Above ground he takes off the forks and broken limbs, and then he does not prune any more for three or four years. He favors cultivating the young orchard to corn, first cultivating as near the young trees as he can without injury ,and each year dropping a row, so as to bring him further and further from the trees. Good plan. Then run in clover or other legumes.

The Western Fruit Grower says April is the preferred time to set strawberry plants. The plants are much surer to live just after the leaves start, and before the blossoms appear. Have a good bed prepared. For family use 300 plants make a very good bed. Set the perfect blossomed. There are some, you know, that won't bear at all unless some other kind is set near them. Every farm should have a strawberry bed.

Prof. J. C. Whitten, of the Missouri Agricultural College, after experimenting for five years, recommends the following peaches: For commercial orchards, Mountain Rose, Crawford, Elberta, Family Favorite and Salway. For home use he recommends Connett (Southern Early), Thurber, Lewis, Carmen, Champion, Crosby and Gold Drop. These varieties ripen in the order named and are hardy enough to fruit when others fail.

Bee keepers should have a thought of pasturage for their bees. We know of nothing better than buckwheat, as it furnishes excellent honey, and valuable grain also. White clover may be considered a natural bee pasture in all the Central States.

Readers of Up-to-Date Farming constitute OUR PEOPLE, and thus shall we know them.

Going to buy a buggy this spring? Write to our advertisers of buggies, and save money.

Prospects for Fruit

Orchardists are all anxious about the fruit prospects the coming season. No one can yet tell with certainty, certainly not at the time of this writing, which is considerably in advance of the date of publication. So far as we have been able to examine, and as we have reliable information, the prospect is very favorable, but the opinion is based upon external conditions rather than upon known facts.

There are some conditions, however, which may be taken as fair indexes almost any years. Orchards that are well kept and thrifty are much more liable to bear than those that are neglected and starved on ground too poor to insure a healthy growth. Trees that were heavily laden last year, and exhausted much of their vitality in trying to mature an overload, are not so apt to bear as those which had a season of comparative rest last year.

But these are only general propositions, and must be taken as such. There are so many contradictory facts in fruit production that positive statements are of doubtful safety.

It is safe, however, to keep the orchard in good condition, with plenty of plant food in easy reach, and by mulching conserve the necessary moisture to make the plant food available. Where these conditions are present, the prospect for a good crop of good fruit is very favorable. And the prospect for good prices are equally favorable, provided means be found to market them in such a way as to meet the demand without a glut.

Grape Cuttings

To propagate grapes from cuttings, the cuttings should be made in the fall, from wood of that season's growth, and packed away in sand (some prefer dust) and kept in a suitable place through the winter. But cuttings may be made now from last year's growth, and put at once in the ground, with reasonable prospects of success. The cuttings should be about eight inches long, and should have not less than three joints. Cut off close to the lower joint, but leave about an inch of stem above the upper joint. Insert the cutting in the ground, perpendicularly or at any angle desired, leaving the top bud about an inch above the surface. Be sure that the soil is carefully packed tight to the cutting its full length below the surface. The most fruitful cause of failure is in leaving air spaces along the cutting below the surface. The ground about the cutting must not dry out, and if the place where it is inserted is quite sandy favorable results are more certain.

Forcing Peaches

One would scarcely expect the peach to become a fruit for forcing, yet William Turner tells the Florists' Exchange that he has so grown peaches with very great success. It is not at all likely to become practicable on account of the house room required, but Mr. Turner thinks it may, and that peaches fresh from the trees may be had every month in the year. On a single tree of the Thomas Rivers peach he grew 225 peaches, he says, with an average size of 12 inches around, and that they were highly colored and of excellent flavor.

For an early potato I think it is not at all out of place to recommend the Early Six-Weeks. This is not a new potato, but the seed Mr. Everitt offers this year is essentially new, as it is grown direct from pedigreed seed from th originator, who is constantly improving it by the most careful selection. It WILL produce good, usable and salable potatoes in six weeks, if planted when the ground is in good condition to stimulate prompt growth. If planted in cold, wet ground, of course it cannot be expected to do it. For main crop, the new White Mountain cannot be excelled. Both these potatoes, and many others, are fully described in Mr. Everitt's new catalogue, which may be had for the asking.

GRAND CONTEST! BIG PRIZES FREE!

TWO PIANOS! CASH! GASOLINE ENGINES, INCUBATORS, CREAM SEPARATORS, BONE CUTTERS, &c

IF YOU CAN COUNT AND PLAN YOU CAN WIN

How Many Dots in Ohio?

SUCCESSFUL FARMING will give to those who can count the dots in Ohio correctly or nearest correctly, the following list of prizes:

Two Elegant Pianos, one to a lady and one to a gentleman.
2nd. An elegant Cabinet grand six octave Organ.
3rd. $150 cash, 4th. $100 cash, 5th. $50 cash.
6th. Weber Gasoline En ine.
7th. DeLaval Cream Separator.
8th. Elegant Top Buggy.
9th and 10th. Each a first-class 100 or 150 Egg Incubator.
11th. Empire 6-hole Steel Range.
12th. F. W. Mann Bone Cutter.
Next 20, $5. Next 25, $2 each

CONDITIONS: Every count must be accompanied by subscription. 50c pays for one year and one count. $1.00 pays for two years and three counts. See conditions below

Do not fail to get counts in at once. Our complete list of prizes contains six Pianos; five Ertel Incubators; five Old Trusty and five Sure Hatch Incubators; five harrow carts; five Empire steel six hole ranges; Hoover-Prout Potato Digger; Smith Manure Spreader; Star Mfg. Co. Feed Mill; Parlin Orendorff Corn Planter; Osgood Scales; a $175 DeLoach Sawmill oufit; Deere & Co. Cultivator; an Electric Handy Wagon; Campbell Fanning Mill; Tower Cultivator; Kaestner Feed Grinder; Milne Stump Puller; Stearnes' Bone Cutter; Carriages; Hapgood Plow; five C. A. S. Farm Forges; Woven Wire Fence; Wilson Bone Cutter; Two Gasoline Engines; Potato Planter; Silo; Harvesters; etc,, etc., besides many other premiums.

Send in counts and subscription as above and get our complete premium offer. Never did you have such an opportunity before. Don't delay, you want some of these premiums. Now is your chance.

WIN! WIN! WIN! You Can If You Try.

The list of prizes is large. They are worth working for. You have a large number of chances. You are as likely as anybody to get first, but if you don't there are lots of other prizes worth having. It all depends upon you. If you can count and think up a good plan you can win.

CONDITIONS—50 cents pays for one full year's subscription to SUCCESSFUL FARMING, and entitles you to one free count; $1.00 pays for two years and entitles you to three counts and makes you eligible for the special $50.00 prizes.

AWARDS will be made as follows—The person giving correct or nearest correct count will get first prize. Next nearest correct, second prize, etc, In case of a tie for any prize it will be awarded to the person giving best plan for counting the dots, State whether you enter ladies' or gents' contest, as one piano goes to lady sending best count or plan, the other to gentleman sending best count or plan. In the event more than one person should submit the same plan and this was considered the best plan by the judges, each person so tieing will be asked to tell in 50 words how best to improve Successful Farming. The one making best suggestions will be awarded first prize, next best next, etc. Understand this is only in case of tie in plan, which is not at all likely.

TIME PRIZE—We feel early counters should be rewarded and will give $50 to person sending best count or plan by Feb. 28. If you send best count or plan before Feb. 28, you get $50 extra.

$50 PRIZES—We believe everybody should have three counts so they can have one each side of what they think is correct to be more sure to hit it. To encourage this we will give $50.00 extra to winners of 1st prizes if they have three counts Remember if you have one count you get 1st prize only, but if you have three counts you get $50 extra.

JUDGES—The awarding of prizes will be wholly in the hands of disinterested judges. We have chosen bankers, ministers, public officials, etc., to act as judges in our contests. Ex-Governors, Mayors, Treasurers, etc., have acted as judges. We are bound our contests must be absolutely fair.

OUR FINANCIAL RESPONSIBILITY—As to whether we are abundantly able to do as we say, we are glad to refer to Des Moines Savings Bank and Central State Bank. Our offer will be carried out to the letter.

Nobody connected with our paper will be allowed to compete. Contest closes Apr. 30, but get your counts in at once. See about Time Prize above Anybody having three counts entered may enter additional counts at 25 cents each. Be careful to give your plan of counting, as the best plan used will decide all ties.

PRIZE WINNERS IN PAST CONTESTS.

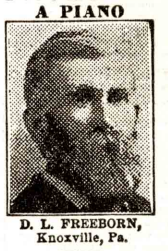
A PIANO

MRS. L. W. NOTT, Marion, Iowa.

A Piano for $1.00. Surely people may enter your contests knowing that they will receive fair treatment. How glad I was to win a piano for so small an amount and wholly unexpected. The paper alone is worth all I paid. MRS. L. W. NOTT, Marion, Iowa.

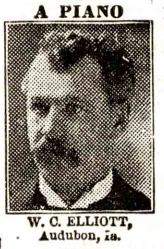
A Piano for Illinois. An Elegant Piano for a Dollar! That is what I got and anybody who thinks your prizes are not awarded fairly don't know. There can be no favorites or I would not have won. I had to make affidavit contest was fair on my part before I got my prize. I am recommending you to all my friends.
MIRA E. FURSMAN, Panola, Ill.

A PIANO



D. L. FREEBORN, Knoxville, Pa.

A PIANO



W. C. ELLIOTT, Audubon, Ia.

A Piano for Pennsylvania. Easiest way I ever saw to get a piano and you people are surely fair. Friends laughed at me and said friends received the prizes. Now they are sorry they did not enter. Will never be without your paper.
D. L. FREEBORN, Knoxville, Pa.

He Won a Piano. Refer people to me if they want to know whether you are honest. I got a piano for a prize and never heard of you until I answered your ad. Your paper is worth twice the subscription price.
W. C. ELLIOTT, Audubon, Iowa.

$100.00 CASH

AMY R. BARNES, Van Horne, Ia.

$100.00 Prize. I got my $100.00 and it was the easiest I ever earned. The dots are hard to count but I know the prizes go to those who win them fairly.
AMY R. BARNES, Van Horne, Ia.

$50.00 CASH

EUGENIE FOURNIER, Matane, Quebec.

Piano for Most Counts.
To Whom it May Concern:
I won piano for most counts in last contest. I was much surprised. I asked Successful Farming to pay me cash instead of piano and they sent me check for $350.00. I want to vouch as to their fairness to any and everybody. I got $350.00 cash money as my prize. They are surely fair.
JOHN A. GOODWIN, Akron, O.

$50.00 CASH

NEWTON RARICK, Ligonier, Ind

$50.00 NEWTON RARICK, Ligonier, Ind.

$50.00 For Canada. Why, up here in Canada I won $50.00. Never knew there was such a paper until I answered ad. Now I will never be without it again.
MISS E. FOURNIER, Matane, Quebec.

J. A. EVERITT, Seedsman, Inc., Indianapolis, Ind.

Shirt Waists

A writer in the Housekeeper for February says this is going to be a season for shirt waist suits, that all the shops show them in ginghams, percales and other fabrics. That reminds us. The effect of these shirt waists can be doubled by using sets of tasty and refined floral buttons. The very wealthy realize this and use costly, hand-painted ones. The discovery of a new and wonderful process enables these buttons to be made with the most perfect hand-painted effect, equal in appearance to the costly hand-painted article, but at a price that enables those of moderate means to wear them. Indeed, Mr. Everitt is offering the most beautiful ones as a premium with just such flower seeds as are needed at every home on the farm. They are finely illustrated on the last page of his 1905 catalogue, which, if you have not already, you should send for at once.

Making Soap

A few years ago the ash hopper was an adjunct, if not an ornament, of every home on a farm, and a part of the spring work was making the year's supply of soap. During the winter the hopper was filled with wood ashes (if from hickory or ash the housewife was happy), and the soap grease was saved at "killing time." As warm weather approached, water was poured up and leached through these ashes, and came out lye, which was boiled with the grease and made into soap, large families requiring a barrel or more.

This is not done so much now as it used to be, but still soap is made in the country and thus grease substances are utilized which would otherwise go to waste. By buying the lye, though, it can be made with much less labor than formerly. We give the following recipes for making soap with prepared lye. Banner lye is mentioned in the recipes, because they come from the Banner lye people, but any good concentrated lye will do perhaps as well:

Hard Soap—Dissolve the contents of one can of Banner lye in 3½ pints of cold water and set the solution aside to cool; the chemical action heats the solution. Then melt 5½ pounds of clean grease in an ordinary stewing kettle. When the grease is entirely melted, set it aside to cool, and when it becomes cool enough to be comfortable to the hand (not before) pour the dissolved cool Banner lye solution into it and stir thoroughly until the mass thickens.

Put it in a warm place and let it stay for 24 hours, or until the soap is entirely set and hard. Keep it covered from dust.

If preferred, the soap can be poured while soft, into a small wooden box lined with heavy greased paper, and when it becomes hard, can easily be removed from the box. You can then cut up the soap into blocks or cakes with fine wire or twine. Larger quantities of soap can be made by observing the above proportions.

Soft Soap—Take one pint of the soap made by the above process before it cools and boil it with eight quarts of water for a few minutes. The result will be the very best of soft soap. Larger quantities can be made in the same proportion, and one can of Banner lye will make twenty gallons of soft soap.

For those who prefer the old-fashioned boiling method—though it is not necessary—take 5½ pounds of clean fat, tallow, or lard, free from salt, and melt in a kettle that will hold five gallons, then add the contents of one can of Banner lye and pour in two gallons of water. Boil for thirty minutes or until the soap is formed, which you can tell by the thickening of the mixture.

In Pilgrim's Progress, all the Giant could do as Christian passed was to grin and bite his nails. It is the same way with the trusts and boards of trade. All they can do is to frown and scold as the A. S. of E. farmers make their own prices.

Seeds, seeds, seeds! Orders are now pouring in for seeds. Our People are determined to have the best of everything for 1905. And those seed premiums, novelties that are not for sale, are still on tap. More than ten thousand of Our Friends have already ordered them with subscriptions, and we want all to try them.

It Is Up to the Farmers

It is with great pleasure that we copy the following from the Cotton and Cotton Oil News, of Dallas, Tex. It shows that the more progressive of the press is becoming aroused to the situation. We must remark, though, anent the last part of the article, that it is not necessary for ALL to hold. If enough hold to keep the market hungry, the effort cannot fail:

One thing is as sure as fate. If the farmers continue to get together and to stand their ground faithfully, it will be merely a question of time before they will be in position to demand a fair price for their cotton. It rests with the holders of the cotton. If they preach ever so loudly about withholding their cotton, and then proceed to sell it secretly and to violate the general compact, the express or tacit agreement not to sell, then the price will remain low, and the bales now held will go off gradually at a low price. If on the other hand, the holders will hold as they are advised and promise others to do, Cotton and Cotton Oil News will guarantee a fair price for every pound of it.

The recent increase in the price of futures is unimportant in itself, but, coming at the present time, it is most significant and encouraging. It proves that the voice of the cotton farmer has been heard, that the resolutions to hold cotton off the market have been read, that the power of the man with the hoe has been felt already. The increase may be gradual, or it may fail to keep up, just as the holders of the cotton may themselves determine. It rests with them. If they will ALL hold the trick is easily turned. If many of them slip out and sell so as to supply those who must have cotton, then the success of the man with the hoe will be only partial at best. Right here the matter rests. It lies with the farmers whether they will bring cotton up to 10 cents a pound. They can do it, if they will all stand together.

Here is another nice way to treat popcorn: Put into an iron kettle one tablespoonful of water and a teacupful of white sugar; boil until ready to candy, then throw in three quarts of corn nicely popped and stir briskly until the candy is well distributed over the corn. Remove the kettle from the fire and stir until each grain is separate and crystalized with the sugar. Don't let get too hot, as it scorches easily. Nut meats may also be mixed in.

A friend gives this method of making salt rising bread; no better bread can be used: Take a pint of new milk, set on the stove and stir in corn meal and let heat, not boil, until thick as mush. Set in a warm place over night. In the morning it will be light. Put a gallon of flour in the bread bowl, pour in the mush, and mix with warm water, add a teaspoonful of sugar, salt and a pinch of soda. Make a stiff batter, cover and keep warm. In an hour or two it should be light. Work in flour to make dough, mold in loaves, put in greased pans, let rise, and bake.

Measles begin like a cold, with sneezing and watery redness of the eyes. It is not very dangerous unless complications arise—cold, pneumonia, etc. Such complications often lead to the determination of the disease to certain parts, as the eyes, lungs, etc., with bad results. It is very contagious through all of its stages, but is less so after the eruptions disappear.

Plant everything in rows extending the full length of the garden. If you don't desire as much of any one thing as an entire row, put different things in the same row. Gardens planted in rows are so much more easily cultivated. The old gardens of beds and patches are out of date .

The world is full of humbugs, no one pretends to deny that; but all patent medicines are not humbugs. Many of them are carefully prepared standard remedies, and are used by physicians themselves. It is, therefore, legitimate to advertise them in the public press. While Up-to-Date Farming guarantees that its advertisers will do what they agree to do in their advertisements, we do not guarantee the specific performance of all remedies advertised. The effect of remedies depend much upon conditions and compliance with directions. Advertised remedies will fail oftentimes. So do resident doctors' prescriptions. We think it is the part of each individual to be his own judge in these matters.

Guaranteed advertisers are the kind to buy from, and that is the kind that advertise in this paper.

RHEUMATISM

Wonderful New External Remedy Curing Thousands. Any Rheumatic Sufferer May Try It Without Cost.

Send Your Address and Get A Dollar's Worth FREE.

I have a sure, quick and lasting cure for Rheumatism. I cure it by means of Vibro Discs, a wonderful new appliance which is used exter-

nally and draws out the poison from every part of the system. It is the wonder of the age, and a godsend to Rheumatic sufferers. There is nothing like it, and nothing equal to it. It banishes pain as if by magic, and conquers this dread disease in all its cruel forms and stages. It is safe, simple and convenient for home use and roots out the acid venom so thoroughly that no relapse or fresh attack can occur. Prove these claims yourself by testing the remedy at my expense. I will send you, absolutely free, four of these Vibro Discs—

a full dollar's worth—if you simply send me your name and address. This is an absolute gift, and I shall neither ask nor accept pay for it now or in the future. Can you afford to continue in pain and misery when you can get this marvelous new and guaranteed treatment simply for the asking? Write me to-day and I will send you the treatment at once and with it an elegant illustrated book on Rheumatism, all free and prepaid. Don't send any money—not even a postage stamp—but send your name and address THIS VERY DAY.

PROF. S. M. WATSON, Dept. 19. Battle Creek, Mich.

FOR 70 YEARS A HOUSEHOLD REMEDY

DR. MARSHALL'S CATARRH SNUFF

(Relieves at Once and Cures Absolutely)

One quarter actual size.

It should be used by all sufferers of Catarrh, Cold in the-head, Ringing in the Ears or Deafness (due to Catarrh.) It gives instant relief,—cleans the head at once by reaching the inflamed parts. Contains no cocaine, morphine, or other dangerous drugs.

25 cents *per bottle at all druggists, or by mail prepaid.*

A complete treatise on Catarrh. free by mail. Write for Book C6

F. C. KEITH, Prop., Cleveland, Ohio

70 YEARS A HOUSEHOLD REMEDY

FITS CURED I wish every one suffering with **Fits, Epilepsy or Falling Sickness,** to send for one of my large sized 16 oz. bottles **FREE**

My Remedy Has Cured, When All Others Failed.

DR. F. E. GRANT, Dept. 16, Kansas City, Mo.

Arrest It—$50 Reward

A small sample bottle of Ec-zine will be sent free to every reader of Up-to-Date Farming who is suffering with any kind of skin disease or eruption—Eczema, Blind or bleeding Piles, Blood Poison, Fever Sores, Cancer, Rheumatic Pains, or any other Germ disease or sore of any name or nature.

$50 reward will be paid for any case of Eczema that is not promptly cured with Ec-zine. Ec-zine will heal any sore or cure the worst skin and make it look like velvet. Thousands cured daily. Never mind what you have tried; forget the failures made by other remedies, and send for free sample of Ec-zine which always gives relief and permanent cure. A $1.00 bottle often cures the worst cases. If your druggist does not have Ec-zine send direct to us. The Ec-zine Company, M. Kupermeier, Sales Agent, 112 Dearborn St., Chicago, Ill.

Delays sometimes unavoidably occur. There are busy people at headquarters, but they are putting in full time industriously. Still sometimes work piles up in spite of us. So we must ask our friends, if they do not get returns as promptly as they wish, to be patient, a quality we often have to exercise ourselves.

The Southern Tobacconist and Model Farmer is a monthly farm magazine well adapted to the needs of the tobacco farmer in the South and contains many helpful articles and suggestions for the southern farmer. Is the official organ of the Inter-State Tobacco Growers Association.

Up-to-Date Farming has arranged to send both the Southern Tobacconist and Up-to-Date Farming to new subscribers, for the price of one—50 cents per year. No commissions or premiums can be allowed to persons accepting this offer, as we have cut the subscription price of each half in two.

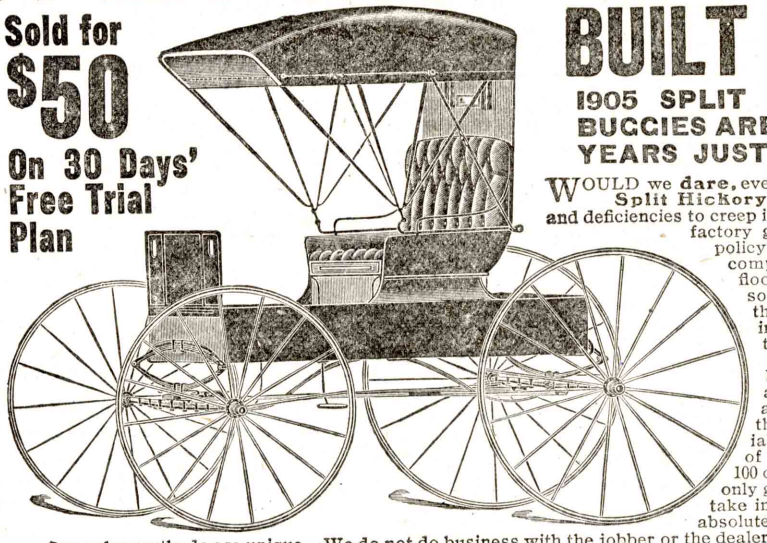
SPLIT HICKORY BUGGIES

Sold for $50 On 30 Days' Free Trial Plan



BUILT "ON HONOR"

1905 SPLIT HICKORY SPECIAL TOP BUGGIES ARE GUARANTEED FOR TWO YEARS JUST FOR THAT REASON.

WOULD we **dare**, even were we so inclined, slight the construction of **Split Hickory Special Top Buggies** and allow flaws and deficiencies to creep in, when each and every buggy goes out with a factory guarantee good for two years? No! Such a policy would be ruinous to our business, for within a comparatively short time letters of complaint would flood our office and the profits on our business would soon be swept away. It's because we **know** that every stick of timber that enters into the making of our vehicles is **split hickory** (not sawed) thoroughly seasoned and with the wear of iron in it, and that all other materials used are the best that money can buy, that we give this guarantee. It's because we employ the most skilled and competent workmen in the carriage trade that we guarantee workmanship as well as materials. Our buggy bodies have a 16-coat foundation of paint, oil and lead, and all woodwork is carried 100 days in pure oil and lead before priming. This only gives you an idea of the almost infinite pains we take in every part of our immense factory, to insure absolutely perfect results.

Our sales methods are unique. We do not do business with the jobber or the dealer. We have no agents. We deal with the people direct, through advertising in reliable publications, and give **them** the benefit of the wholesale price. We have the powerful influence of the editors back of us, who reinforce our guarantee with their own, affording their readers double protection. During all the years that we have been selling to the users direct through advertising, not one editor has received a complaint from a subscriber, that Split Hickory Buggies were not as represented. It is a record to be proud of, because we've earned it by fair dealing.

Our 1905 Split Hickory Special is in a class by itself. Here are some of the exclusive features that place it there:

Long Distance Collinge collar axles, quick shifters, Padded Patent Leather Dash, Rubber Padded Steps, Roller Rub Irons, Full Length Storm Apron, No 1 Best Quality Leather Quarter Top, all Wool Headlining, 16 ounce Green Broad cloth Cushion and Back, Spring Cushion and Panel Spring Back, Boot, Full Length Velvet Carpet, Arched or Dropped Axles, Choice of any width of Body, Either Three or Four Bow Top. Reinforced Shafts with Heel and Corner Braces.

We also manufacture a full line of Buggies of all styles, Driving Wagons, Runabouts, Phaetons, Stanhopes, Surreys, Carriages, Spring Wagons, Carts and Harness. **Our Split Hickory Catalogue for 1905** has 192 pages and is by far the handsomest we have ever issued. It explains fully our liberal terms of sale, quotes absolutely lowest wholesale prices and is elaborately illustrated. Sent free on request. Write us at once.

MADE HIS PIGS 4½ MONTHS OLD WEIGH 200 POUNDS.
CURED HIS CALVES OF SCOURS.

INTERNATIONAL STOCK FOOD CO. ELGIN, NEBRASKA.

DEAR SIRS:—We have just received one of your books and a picture of Dan Patch. We were reading what some have to say about ***"International Stock Food."*** We will say that it is the finest thing ever fed to stock. We had a litter of pigs the second week of July; we took good care of them and fed ***"International Stock Food,"*** and when four and one-half months old they weighed 200 pounds. Everyone says they are just simply fine and they think my pigs are March pigs instead of July pigs. The pigs were weaned only three weeks when we sold the mother, weighing 350 pounds. It would take something besides corn to come up to that. My calves had the scours so bad they passed nothing but blood. I fed ***"International Stock Food"*** and never lost one of them. My neighbors lost a great many calves last spring, and we not one, so I just laid it to feeding ***"International Stock Food."***

Yours truly,
ED. BATIE.

Largest Stock Food Factory in the World.

Make Your Opportunities

A thoughtful writer whose name we have lost says it is not the farm, not the soil, location or market that brings success, but the man on the farm. A few years ago a young man of my acquaintance came into possession of a good farm, well stocked and unencumbered. He met with no drawbacks through sickness, crop failure, or otherwise, yet in less than two years borrowed money to pay his taxes.

On the other hand some of the best farmers that I know labor under difficulty, either poor location or soil. What their success would be under more favorable circumstances can only be imagined.

Certain opportunities come to all farmers in common. By this I mean the chance to make yourself known for the superior quality of your products. It may be beef, butter, some particular breed of cattle, etc., but every farmer worthy of the name should strive to build up a reputation for his product that will insure a steady demand and increase profits.

The young men and women on the farms have many opportunities for taking up pleasant and profitable work along different lines. One young man in particular became interested in the cultivating of improved varieties of potatoes. At first he was laughed at but persevering made a name for himself and is today at the head of a large seed establishment. It is your failure to become interested in the life around you that causes discontent and restlessness and a desire to leave the farm. Right at hand, perhaps, lies an opportunity for you. Brush away the thoughts of what you might do if you were differently situated.

Farmers' Interest Corn

A WHITE DENT VARIETY

THE BEST IN THE COUNTRY

This corn has won more prizes than any other variety in the country. It won Gold and Silver Medal at Paris World's Fair in 1900. First Prize at St. Louis in 1904. State and County prizes almost beyond number.

The Standby with Thousands of Farmers. Many thought they had the best CORN before, but FARMERS' INTEREST almost invariably proves that they were in Error.

We have sold this grand Corn 8 years. Our customers reside in all parts of the country, from Michigan to Georgia, from New Jersey to Colorado, and no variety of Corn could more completely fill the requirements for a profitable sort. It is early enough to mature in the latitude of Southern Michigan and large enough to be profitable to grow in the South, where it comes weeks ahead of their late sorts and outyields them, making it an ideal Corn for Kentucky, Tennessee, Georgia, Virginia, Missouri, Arkansas, etc. Tens of thousands of corn-growers would plant largely of this Corn this year if they just realized the true merit and would increase their crop from 10 to 50 bushels per acre.

Farmers' Interest Grows in Popularity Every Year.

EVERY FARMER knows that it pays to plant good seed. **Every Farmer** should know that there is **a great difference in seed.** If by changing seed to a better variety you can increase the yield **10 bushels per acre,** it means the payment of the rental of the land over and above your regular crop. An increase of **15 to 50 bushels per acre** is not at all impossible. The plowing, preparing, fertilizing, planting and cultivating are practically the same whether you raise 30 bushels or 100 bushels per acre. You can not raise the maximum crops unless you have the right seed.

Farmers' Interest White Dent is

one of the most valuable varieties of corn in the country. A strong growing variety, sending its roots out in all directions in search of food. Withstands drought well; stalks are strong, close-jointed and leafy. A fine grower. Produces mammoth ears, of which the illustration on this page is a fair representation. Grains are very deep, ranging ½ to ¾ of an inch in length in middle of the ear. Color, white; firm and good texture; cob, medium size. The ears frequently shell one pound of corn to the ear, and cobs from one bushel of ears weigh from eight to ten pounds. Ears 18 to 20 rows. Rows straight, and ears of this variety are well filled out at the ends.

As the introducers of this fine Corn we desire to appeal directly to the good, sound sense of corn growers. **The Corn will speak for itself from the time you receive the seed we will ship you until it is finally stored in the bursting cribs.** We want the better class of intelligent, **up-to-date farmers** and those who are seeking for improvements in their crops, as our customers, and count on an order from every **pushing son of the soil** who wants to plant wisely and reap abundantly.

Study This Illustration

The average weight of corn ears is not more than eight ounces. If an increase of two ounces to the ear can be secured, there would be added to the yield per acre one-fourth. And if there be four ounces added to the weight of ears, then the yield will be increased one-half. Illinois plants each year about 8,000,000 acres of corn. If an increase of 10 bushels per acre can be obtained by planting better seed, the total increase will be 80,000,000 bushels. Corn-growers should keep these things in mind and start with the very best seed possible, and that is the **Farmers' Interest Corn**

READ A FEW REPORTS.

Thousands could be printed. The publishers of FARM JOURNAL know these are genuine, but we cannot advertise our customers' corn by giving full address.

KENTUCKY — I planted a field of your **Farmers' Interest Corn** last spring and the result was a revelation to me and my neighbors, when we found we could send to Indiana and get seed corn that excelled our native varieties. We thought we grew good Corn, but your **Farmers' Interest** is yielding 110 to 120 bushels per acre, and surpasses the best of other Corn by 25 to 30 bushels per acre.
C. W. W., Breckenridge Co., Ky.

INDIANA — Farmers' Interest Corn is yielding 95 to 100 bushels per acre. Four of my neighbors, who are also growing it, are all getting over 100 bushels per acre. These are not exaggerated reports, but actual facts. C. A. B., Indiana.

Farmers' Interest Corn is yielding 100 to 120 bushels per acre all over my fields. Nothing like it ever seen in this section before. L. B. C., Indiana.

I grew 50 acres of **Farmers' Interest Corn,** and the yield over the whole field was 90 to 105 bushels per acre, a total of 4,948 bushels on the field. It matured very early, ears mammoth size. It surpassed all others. C. A. HELM, Indiana.

ILLINOIS—I planted a field of your **Farmers' Interest Corn** last spring and it has astonished us farmers all through the season, in rapid, strong growth. I topped it when ripe and such a field of mammoth corn ears I never saw before. It is good for over 100 bushels per acre. I don't think there can be a better.
W. P. R., St. Clair Co., Ill.

KANSAS—In a visit to my brother in Kansas, he showed me a field of your **Farmers' Interest Corn.** I must say I never saw its equal in Indiana, nor on the way to Kansas and return. The ears were arms of giants. He wrote me the yield was 114 bushels per acre. I would have guessed it at more, if it was possible for more corn to grow on an acre.
A. M. T., Knox Co., Ind.

IOWA—Twenty-eight acres of **Farmers' Interest Corn** yielded 2,430 bushels of the finest White Corn grown in this section. C. F. PEARSON,—Co., Ia.

MARYLAND — Farmers' Interest Corn has taken our section by storm. It is the greatest ever seen here. S. B. O., Prince George Co., Md.

TENNESSEE — Farmers' Interest Corn is the largest, heaviest and best White Corn I ever grew. On a test 50 ears made a bushel. The cobs weighed 12 pounds. J. W., Maury Co., Tenn.

MISSOURI — Having seen a crop of **Farmers' Interest Corn** grown from one ear, I write you early to save me four bushels of it for seed, and quote your price. It is the greatest corn I ever saw. A. R., Miller Co., Mo.

OHIO—A heavy cropper on medium soil. Best I ever raised. WM. LANCEY, Preble Co., O.

Farmers

If You Grow Corn We Urge You to Plant a Field or More of Farmers' Interest. There is a Great Difference in Varieties of Corn. This Variety Will Show the Difference and Surprise You.

PRICE. By mail, pkt., 10c.; large sample ear, 30c.; 1 qt., 40c.; 3 qts., $1. By freight or express, ¼ bu., 60c.; 1 bu. $2; 2½ bu. in 1 Bag, $4; 5 bus. or more, $1.50 per bu.

The Cost to plant an acre is about 25 cents and your own seed is saved. The gain per acre will be many times as much. **Remember, Farmers' Interest Corn** has stood the test of time. You cannot afford to risk your crop on an untried variety.

Have You Our Beautiful 160-Page Catalogue of O. K. Seeds? It is Free.

We want to sell to every FARM JOURNAL Reader.

Very Special. To each person who orders 1 bu. or more of corn from this advertisement we will send free a 320-page cloth-bound book that will teach you how to get profitable prices for every crop you grow. This book is worth everything to any farmer. Should be read by all—farmer, wife, son and daughter.

Address, **J. A. EVERITT, Seedsman, Box 3, Indianapolis, Ind.**

Raising Castor Beans

Mr. George W. Knese, Cedar Creek, Mo., asks for information as to the growing of castor beans, where seed can be obtained, location of mills for making oil, and average market price.

The castor oil bean (Ricinus communis) is a semi-tropical plant, but it has become thoroughly acclimated and is hardy as far north as St. Louis, and has been grown successfully even further north. It does well, and at one time was quite a prominent crop in Southern Illinois, where it is still grown to some extent, but the grasses (meadows) have pretty well crowded it out there.

Good corn land is also good castor bean land, and the preparation of the ground, and time and manner of planting are very much the same for both crops, except that it is better to check row the castor beans, about three and a half feet apart each way, whereas corn in later years is being extensively drilled. The amount of seed planted, three to four beans to the hill, also corresponds well with corn, but the beans should be thinned out to two stalks—if there could be one vigorous stalk in every hill the yield might be better than the ordinary stand of two stalks.

The plants are rather tender when they first come up, and if the ground becomes dry and crusted about them they will not grow; or if there come a cold, wet spell, they turn yellow and refuse to grow. It is well for the first cultivation, though tedious and old-fashioned, to be with the hoe, scraping and loosening the ground around the tiny stalk, to prevent the crusting and a start of weeds in the hill before the plant is large enough to admit of the use of the plow. The after cultivation is very much the same as for corn.

The harvesting is altogether different. A floor or yard must be prepared on which to "pop" out the beans. Scrape off the surface from a level piece of ground from 50 to 100 or more feet square, set forks all around it, place poles in the forks and set up boards, four or five feet in length, letting them lean back against the poles; these are for the beans to strike and fall back into the yard. Clearing off a larger space would save the beans perhaps more cheaply, but on a hot day they will jump quite a distance. The above is the exact plan employed by the writer's father 50 years ago.

After the beans begin to ripen, the field must be gone over at least twice a week. The beans are borne in bunches of pods, each pod containing from three to four beans, generally four. The pods nearest the stalk or branch that bears it (the plant is a very branching one and grows from four to ten feet high) ripens first, and whenever a pod shows signs of cracking open, the entire bunch is ripe and ready for cutting, and if not cut then the beans soon begin to pop out and are wasted. The usual method of harvesting is with a horse and small sled, on which is placed, say a ten bushel box. To prepare for this every fifth row should be skipped in planting, or a space left where every fifth row would come wide enough for the horse and sled to pass. Two hands then can take two rows on a side, cutting the ripened pods and throwing them into the box. When a load is obtained they are drawn to the popping floor and spread out upon it, and the sun does the rest. After being popped out the stems are forked or raked off, the beans passed through a screen or riddle to take out the hulls, then through a fanning mill to take out the dust, and they are ready for market. There must be some means of sheltering them in case of rain, for if they get wet it darkens them and reduces their value. They should begin to ripen in July or August, and continue to bear until frost, yielding from ten to eighteen bushels to the acre, and bringing from one to two dollars a bushel.

There are mills for the manufacture of castor oil in Belleville, Ill., and St. Louis, Mo., unless quite recently suspended, and seed may be obtained from St. Louis seedsmen. There are several mills in the East and one at Decatur, Ill.

With Our Up-to-Date Writers

Our very first letter this time is from a thinking, progressive, really up-to-date lady. who resides in far away North Dakota. Though her country is understood to be cold, her heart is evidently warm towards her people. She sends for the full 24 copies of the Third Power, which she proposes shall be circulated for the people's good in her neighborhood, and writes:

Editor Up-to-Date Farming.

I feel grateful to you for the good work you have done. This Up-to-Date Farming paper is the best paper I ever read, and I would not do without it for four times the price. I have got over $1 a bushel for all the wheat I have sold, and I thank you for it. When it drops below $1 I keep it at home. I will send my renewal in a few days, and hope to get some others to send with me.—Mrs. Clarissa Oaks, Park River, N. D.

"Others to send with me." That is the sentiment that helps this work and blesses mankind. If all of Our People who appreciate the work we are doing would adopt that sentiment, and get others to send with them, what an impetus would be given to the movement.

Strange though it may seem, our next letter comes from almost the opposite side of this great country, and is from another well-pleased friend and customer. But we will let him tell it:

Editor Up-to-Date Farming.

As you remember, in February, 1904, I sent you my name and that of Lewis Zirkle as subscribers to Up-to-Date. We received the paper and we are well pleased with it. It is the best paper I ever saw. We also received your premium seeds, and they proved wonders. The corn was the finest we ever raised, the potatoes were far beyond our expectations and the watermelons could not be surpassed—they were the best we ever saw. I was so well pleased with the results last year that I am now sending with my renewal a club of subscribers that I have made up among my neighbors.—A. D. Zirkle, Belington, W. Va.

That is what we call faith coupled with works, which is the kind that is promised the blessing.

Why not vary these letters from farmers by a brief one just received from a prominent manufacturing concern. Here it is:

Editor Up-to-Date Farming.

You have a great paper and it is doing lots of good, and we wish you every success in the world.—The Sure Hatch Incubator Co., Clay Center, Neb.

Brief, but to the point, and shows that successful business people appreciate what we are doing.

Here is a letter from the wife of a West Virginia merchant, and she is one of those great souled ladies who know a good thing when they see it, and wish that others may also have the benefit of it:

Most assuredly every farmer, I don't care on how small a scale, should read Up-to-Date Farming and become up-to-date. There is not a single copy of the paper but what alone is worth the subscription price for a year, and the seeds you give as a premium are also worth the 50 cents the paper costs. Wishing you abundant success, and to aid you in getting the million subscribers, I send you ten separate lists from ten different postoffices, 130 names, of the best and most up-to-date farmers of this section of West Virginia, whom I hope you will give the benefit of your offer.—Mrs. O. F. Hodges, Overfield, W. Va.

Mrs. Hodges will please accept our thanks. It is through such means our work is spreading, and that we are enabled to accomplish what we are doing.

This man, who is a Virginian, has been reading, and he reads to learn. He not only renews his subscription, but he becomes a member of the A. S. of E. also:

Editor Up-to-Date Farming.

I don't see how any one can get along without this paper, for it is the best farm paper I ever read, and I take three others, but Up-to-Date is worth more to me than all the rest combined. I give mine to neighbors as soon as I read it, and I wish I could get every man to take it.—Charles H. Wright, Lowesville, Va.

All right, pass the paper around; but it is so much better for each one to have his own paper, and know that he is doing a man's part to relieve men of great wrong.

Here we go away to the sunset now, and welcome an old friend from the Centennial State, who sends in four new members. He says:

Editor Up-to-Date Farming.

Up-to-Date Farming is immense. Every number seems better than the one preceding it. I am sending names of four friends of mine who wish to become members of the A. S. of E., and will send more in a few days. We are almost ready to form a union.—Clarence Blyler, Ft. Lupton, Colo.

So it grows east and west, north and south.

Here is a very sensible letter from Kentucky:

Editor Up-to-Date Farming.

I believe it is important that the tobacco growers be warned against planting too big a crop this spring. I note with dismay the preparations that are being made already. I know we argue that it is all used, but a large crop will demoralize us, hence I suggest preaching on the subject through your columns. I do not advocate limiting any other crop, for all the rest are useful and can be managed other ways; but in the case of tobacco I would impress the readers with the advantages of diversified crops, so that if we have to hold our tobacco, we may have potatoes, beans, etc., to help tide us over.—S. B. Lott, Lewisport, Ky.

Up-to-Date Farming has been very slow to advise a curtailment of acreage, but Mr. Lott's reasoning in regard to tobacco is good. If those who grow tobacco can cut out that crop, or a part of it, and grow something more profitable, or that their families may live upon, they may be better off, and the world lose nothing.

Another jump brings us away up to the Peninsular State, and we learn of a new local union being organized there:

Editor Up-to-Date Farming.

I want to say that Up-to-Date is warmly welcomed in this country. I addressed a good meeting at McVille recently, and organized a local union of 17 members. There was much enthusiasm when I explained the plan of this movement. They plainly see it is the remedy for their troubles; it meets all conditions, practically and economically. It appeals to the farmers' common sense, and you might as well try to stop a cyclone as to stop the spread of this movement for better prices. The movement that Up-to-Date is promoting is the best one that has ever been made for the farmers. May God speed you in your good work.—George Roe, Lone, Mich.

That is what they all say, and we are glad to be engaged in a work fraught with such beneficent possibilities.

Let us "cross the line," and give a letter from Canada. Of course we do not wish to give the names of the papers he mentions, but they are leading American papers, well known all over this country:

Editor Up-to-Date Farming.

I have cut off my subscription to * * * after having been a subscriber for 14 years. I commenced with the * * * monthly, until the publishers decided to divide it into three issues. As a paper for general information concerning farming, I have no fault to find with it; but when it comes to the essence of the business it is not in it. If a majority of readers would stop their farm papers, and plump for the only one that is trying to lift them into a position of independence, there would soon be a stir as to which could work the hardest for this cause.—Thos. Colson Leech, MacGregor, Manitoba, Canada.

We thank Mr. Leech, and gladly assure him that the leaven of controlled marketing is beginning to work even in so hard a lump as the agricultural press, especially in the South.

Let us give you this from Thomas S. Johnson, President of the Lakeland Vegetable and Strawberry Union, Lakeland, Florida:

Editor Up-to-Date Farming.

I am heart and soul in the work with you. The times are ripe for the movement. Education and inspiration are all we need, and see the mighty hosts as they fall in line to stand by the flag of Equity in human society. I shall take the field. From the Atlantic to the Pacific, from the Great Lakes to the Gulf, let the orders be, Forward, march! Rest assured your name will go down to future ages as one who labored to bless humanity.—Thos. S. Johnson, Pres. and Bus. Manager L. V. and S. Union, Lakeland, Fla.

We thank Mr. Johnson, and assure him that such words stimulate to still greater effort.

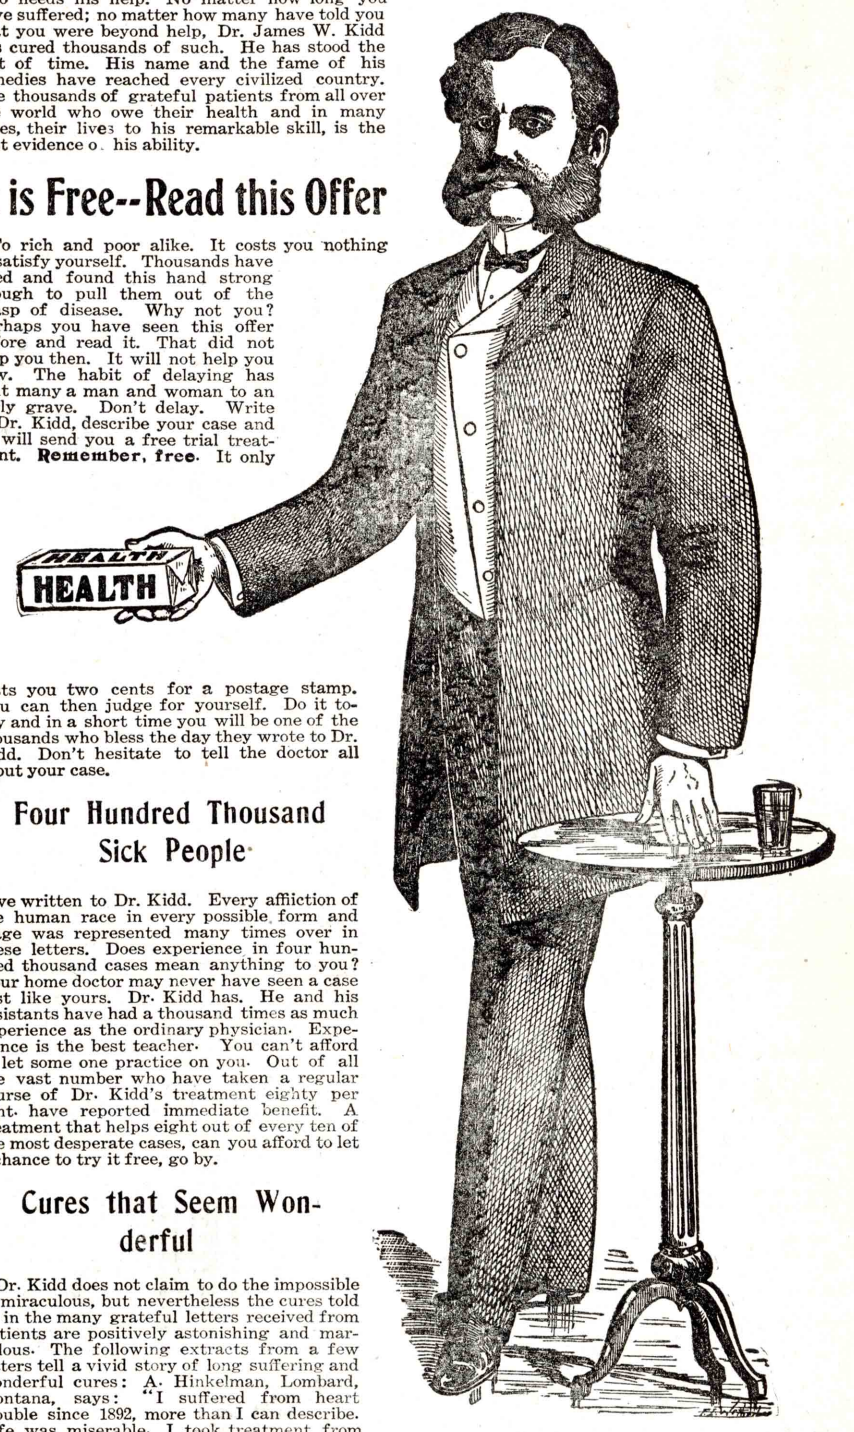
The Henryetta, Indian Territory Free Lance informs us of the organization of a local union at that place, with M. Sowers for president and C. J. Hill for secretary. The paper speaks very highly of the Society.

We scarcely find a sentence in Up-to-Date Farming but what is so true, so forcible, so convincing and so directly to the point that we want to copy it into The Journal so that our readers might enjoy it and profit by it, too.—Farmers' Journal, Abilene, Texas.

Tell Me How You Suffer I Will Send The Cure

The Remarkable Offer Made By A Famous Doctor

To sick, afflicted and suffering men and women, young and old, rich or poor, everywhere, this offer is made. It is made by a man who has probably cured more sick, discouraged and hopeless people to regain their health than any other man in the world. He is willing to help every reader of this article who needs his help. No matter how long you have suffered; no matter how many have told you that you were beyond help, Dr. James W. Kidd has cured thousands of such. He has stood the test of time. His name and the fame of his remedies have reached every civilized country. The thousands of grateful patients from all over the world who owe their health and in many cases, their lives to his remarkable skill, is the best evidence of his ability.



It is Free--Read this Offer

To rich and poor alike. It costs you nothing to satisfy yourself. Thousands have tried and found this hand strong enough to pull them out of the grasp of disease. Why not you? Perhaps you have seen this offer before and read it. That did not help you then. It will not help you now. The habit of delaying has sent many a man and woman to an early grave. Don't delay. Write to Dr. Kidd, describe your case and he will send you a free trial treatment. **Remember, free.** It only costs you two cents for a postage stamp. You can then judge for yourself. Do it today and in a short time you will be one of the thousands who bless the day they wrote to Dr. Kidd. Don't hesitate to tell the doctor all about your case.

Four Hundred Thousand Sick People

have written to Dr. Kidd. Every affliction of the human race in every possible form and stage was represented many times over in these letters. Does experience in four hundred thousand cases mean anything to you? Your home doctor may never have seen a case just like yours. Dr. Kidd has. He and his assistants have had a thousand times as much experience as the ordinary physician. Experience is the best teacher. You can't afford to let some one practice on you. Out of all the vast number who have taken a regular course of Dr. Kidd's treatment eighty per cent. have reported immediate benefit. A treatment that helps eight out of every ten of the most desperate cases, can you afford to let a chance to try it free, go by.

Cures that Seem Wonderful

Dr. Kidd does not claim to do the impossible or miraculous, but nevertheless the cures told of in the many grateful letters received from patients are positively astonishing and marvelous. The following extracts from a few letters tell a vivid story of long suffering and wonderful cures: A. Hinkelman, Lombard, Montana, says: "I suffered from heart trouble since 1892, more than I can describe. Life was miserable. I took treatment from doctors in all parts of the United States without a particle of good. To-day I am as well, healthy and sound as any man could wish to be, and I owe it all to Dr. Kidd." Mrs. James Ash, Chestnut Mound, Tenn., says: "I had rheumatism about thirty years. I could hardly get out of a chair. Fifteen day's use of your treatment cured me."

E. J. Mills, of Woodbine, W. Va., sixty-two years old, a sufferer for ten years from kidney, bladder and stomach trouble, tells of a remarkable cure: "When I began your treatment I could hardly turn myself in bed; I was nearly paralyzed in my left side. I am entirely cured." More remarkable still is the case of S. V. Corley, Kestler, Ala., who says: "My condition was such that the case baffled the skill of local doctors, and I was given up by my friends and family. After seven day's treatment, I am able to eat heartily, ride horseback, perform manual labor of any kind. I know that I am cured and I thank Dr. Kidd for my recovery." Hundreds of letters of this kind from men and women cured of rheumatism, kidney trouble, heart disease, partial paralysis, bladder troubles, stomach and bowel troubles, piles, catarrh, bronchitis, weak lungs, asthma, chronic coughs, nervousness, female troubles, lumbago, skin diseases, scrofula, impure blood, general debility, etc., prove the doctor's remarkable ability.

Free to All

The doctor's generous nature, his sense of fairness and his faith in his remedies are clearly shown by his liberal offer to send a free treatment. Nothing that he would say, the highest words of praise from others could not possibly convince every sufferer. But when he offers absolutely free, to every applicant a trial treatment, this should remove all doubt. If you are afflicted, sick or suffering in any way, give him a chance to cure you. Don't delay because you think your case incurable. He has cured hundreds of such cases. You can't afford to doubt. You can't lose anything. You have everything to gain. Write to-day and give the doctor a description of your case, or tell him what you want to be cured of. You will receive the free treatment by return mail, postpage paid. Address,

Dr. James W. Kidd, Box 201, Fort Wayne, Ind.

DO THIS NOW

And I Will Give You a Pair of my Handsome

Gold Spectacles

Just send me five names of spectacle wearers and I will do this:—First, I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test), I will mail you a

perfect-fitting five dollar family set of Spectacles for only $1, which will include a pair of my handsome Rolled Gold Spectacles, absolutely free of charge. This set will last a family a lifetime. I have never sold this family set for less than $5 and you could not buy spectacles anywhere near as good as these, even for $10 a *pair*. I am really charging you nothing for them now, as the dollar I will ask you to send with your test is only to help pay for this announcement. This very remarkable but honest offer (to send a five dollar set of spectacles for only $1) is open to everyone (my old customers also), but only for a short time, as I am just doing this to prove to every spectacle wearer in the world the following two very important facts: *First*, that my Perfect Home Eye Tester is positively accurate and reliable and with it you will be able to give your own eyes a perfect test in your own home and thereby I fit you with absolutely perfect fitting spectacles *by mail*, which could not be improved on even if you had undergone a personal examination in any occulist's office, at a cost of $10 or more. *Second*, and most important of all, that on account of my latest improvements, my spectacles have become known the world over as the "Dr. Haux Famous Perfect Vision Reading and Sewing Spectacles" and they are now greatly superior to all others on the market. With them you will be able to thread the finest needle and read the smallest print, day and night, with perfect ease and comfort, just as you did in your younger days, and this, even if your eyes are so very weak now that you cannot read the largest print in this paper. In fact the large number of physicians who have for years and years used and recommended my spectacles to their weak-eyed patients will tell you that they are the most perfect fitting, clearest and best in the world today, and I will give you your dollar back and let you keep the five dollar set of spectacles also, if *you yourself* don't find them to be the finest, clearest and best you have ever bought anywhere at any price. I can only send one set to a family at this price, and this only for a short time, so write me *right now* for my free Perfect Home Eye Tester, and address my company as follows:—

DR. HAUX SPECTACLE CO.,
Haux Building, ST. LOUIS, MO.

I WANT AGENTS ALSO And any man or woman (also store-keepers), without any previous experience whatever, can fit the weakest eyes with my Perfect Home Eye Tester, which is so simple that any one can work it and easily earn from $25 to $100 weekly selling my famous spectacles, either in their own homes, travelling or in stores. My agents need no license anywhere as I furnish the necessary documents with the Agent's Outfit.

NOTE:—The above is the largest mail spectacle house in the United States and perfectly reliable.

This $1.00 box SENT ON TRIAL

STOMACH TROUBLES CURED!

I will send a $1.00 Box John's Stomach Tablets, enough for one full month

Before You Pay

They cured me of stomach troubles. Try them at my expense. Pay when satisfied. They are the best remedy for dyspepsia, gas on stomach, heartburn, heart palpitation. A trial will prove it. For your own health's sake you should send for them today. Address **JOHN MORROW, Chemist,** 138 **Forrest Bldg.** **Springfield, Ohio.**

CANCER 30 years experience enables us to scientifically treat and effectually cure cancer and tumors without the knife. 78 page book sent free. Address **Drs. GRATIGNY & BUSH, 7 Odd Fellows Temple, 7th & Elm Sts. Cincinnati, O.**

Brooks' Sure Cure FOR RUPTURE

Brooks' Appliance. New discovery. Wonderful. No obnoxious springs or pads. Automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lymphol. No lies. Durable, cheap. Pat. Sept. 10, '01.

SENT ON TRIAL.

BROOKS APPLIANCE CO., Box 908, MARSHALL, MICH.

WHAT IS BEING DONE

Gleanings From the Press

Everybody likes to know what others are doing, especially in their own line. Farmers cannot take all the papers, and they would not care to if they could. Besides so many of them are so unfriendly that they give distorted views. They are like concave and convex mirrors, make things large or small as best suits their fancy or predilections. From our standpoint we have a constant view of the entire field, and it is a part of our business to know what is taking place all the time and everywhere. What can we do better than to give our readers a brief glimpse of what the people are doing and the papers are saying of our efforts for reasonable prices. For instance, the first item that attracts our attention is a dispatch in the Louisville, Ky., Times from Owensboro, Ky.:

Five hundred farmers are here today attending the county meeting. They have raised $60,000 to make advances on the tobacco crop, of which the society controls three million pounds. Two factories have been rented, where the tobacco will be handled.

That sounds like business. We think it is seldom necessary to raise money to accomplish our purpose, but when it can be done as in the above case, it ought to work a great relief to those in straightened circumstances.

Next we quote from the Little Rock, Ark., Democrat:

An effort is being made to perfect the organization of branches of the American Society of Equity in Arkansas. Mr. H. B. Sherman, the national organizer, is now in the State, explaining to the cotton men just what his organization will do. He claims that the present organizations of cotton growers are not following the right lines. The American Society of Equity will not be affected by the anti-trust bill on account of the fact that it buys nothing, sells nothing and does not control the price of anything. The work of the society is to gather this information and let the people know just what the actual condition is and thus prepare them for the coming change.

We have other and fuller reports from Mr. Sherman's work in Arkansas. He addressed the members of the Legislature, making a splendid impression, and reports that the governor of Arkansas is a member of the A. S. of E., and wears the badge.

Read this from the Lexington, Ky., Herald. It is a dispatch from Owensboro, and refers to the same event mentioned in the dispatch first quoted, but it shows that the work of the farmers is widely known:

The American Society of Equity has contracted for two tobacco factories and will prize and hold three million pounds of tobacco for a year. They have raised $30,000 among themselves for the purpose of making advances.

The following, under the display head "Popular Farmers' Organization Starts Out with Bright Prospects," is from the Republican, Benton, Ill.:

Persuant to a call from the National Union of the American Society of Equity, Indianapolis, Ind., the officials and delegates from Benton No. 1, Parrish No. 1 and West Frankfort No. 1, met in the County Superintendent's office in Benton, Wednesday, Jan. 18, to form and organize a county union of the A. S. of E.

By motion and second, after the necessary busines was transacted under temporary organization, E. J. Avis, Sr., was chosen president for one year; Chas. M. Dixon, vice-president ,and Frank Moore, secretary. Officials of locals present E. J. Avis, C. M. Dixen, L. E. Simmons, Mr. Clark and Frank Moore. Several more members and visitors were present. The society will meet quarterly in the future. Next meeting, April 15, 1905. All persons who will join are respectfully invited by the board of officials.

The above-named persons will receive subscriptions for membership and the official paper, Up-to-Date Farming.

The Kentuckian, of Hopkinsville, calling attention to a meeting to organize a county union in Christian county, says:

Every member of the society in the county is expected and urged to attend. This organization covers 28 States and there have been 92 local unions organized in the last 30 days.

In almost every direction we turn we we find something encouraging. Note the following from the Owensboro, Ky., Messenger:

Delegates from all the locals of the American Society of Equity in Daviess County met in a called meeting at Panther on Saturday for the purpose of considering the tobacco situation and many important steps were taken. A series of resolutions was adopted that pledged every member of the A .S. of E. to plant only at the rate of 10,000 hills of tobacco to the hand for the year 1905 to every hand working in the tobacco in the dark tobacco district.

A similar plan is being worked up in McLean County and a meeting will be held at Calhoon on Saturday for the purpose of perfecting it.

The Nocreek Local held a very important meeting on Thursday night and several talks were made.

This is interesting, though reaching us late, from the Rochester, N. Y., Herald:

A convention of the branches of the American Society of Equity will meet at Jacksonville, Thursday, January 26, for the purpose of perfecting a county organization. The State organizer will be there and deliver an address at the afternoon session.

Take this pointer from the North. We clip it from the Press, of Jackson, Mich.:

The meeting of the bean growers and farmers of the county, which was called for yesterday at the court house, resulted in the organization of a county union of the farmers' organization known as the American Society of Equity, the purpose of which is the securing of profitable prices for farm produce. The meeting was called by a committee from Livingstone County organization. J. P. Lockwood, of Osceola, Livingstone County, addressed the farmers present.

A director from each township was appointed, who will organize locals in the townships.

Read this from the Republican, Boone, Iowa:

The farmers of the south part of Boone County and the adjoining counties have joined the organization known as the American Society of Equity. The work has been carried on quietly but vigorously, and during the past twelve months thousands of members have been secured for the organization. The object of the society is "to secure for the members profitable prices for farm products."

Over four hundred farmers living within a radius of six or seven miles of Madrid have joined this organization and are taking an interest in its welfare.

Again we quote from the Owensboro, Ky., Messenger:

The Masonville Society of Equity met last night and held an interesting meeting. All of the members were present except two. The application of five for membership was favorably acted upon. The tobacco growers of the Masonville neighborhood are thoroughly aroused, and as one of the members expressed it, "have gone in for business."

Let us get back to Michigan. This is from the Saginaw Courier-Herald:

The American Society of Equity will hold an institute at Frost's hall on Jan. 24, beginning at 10 a. m. Several prominent speakers are expected to be present.

We clip this from a Jan. 21 issue of the Herald, Metropolis, Ill. It is good reading even in March:

While we are about it we want to remind our farmer friends that they owe to themselves to push the American Society of Equity hard this winter. This institution will be of immense benefit to the farmers in so many ways, that we could not possibly enumerate them in a single article.

First, however, it promotes sociability and good fellowship among people whose interests are one and the same.

Again, these meetings promote intelligence among farmers on subjects in which they have vital interests. This particular topic has in it meat for a book, yea, for many books, let alone a short newspaper article.

The matter of the supply of farm products, prices, etc., furnish a never-ending topic for discussion. We sometimes wonder if our farmer friends are really and truly awake to their own best interests.

Let us give one more dispatch from the Little Rock, Ark., Gazette:

The farmers in the vicinity of Dardanelle, who attended the recent meeting of the American Society of Equity at Russellville, participated in a parade which marched across the pontoon bridge at Dardanelle to the depot. The parade was headed by the Bohemian brass band, followed by a team of mules drawing a wagon on which was a bale of cotton bearing a large placard, on which was inscribed, "10 cent cotton."

It may not be in the best taste to repeat the good things that may be said of one, but we cannot regard Up-to-Date Farming as a personality, hence we take it that what is said in its favor is more in support of the cause we advocate than as a compliment to ourselves. This is our excuse, and we think a sufficient one for republishing the following, which we clip from the Independent Farmer, published at Durant, Indian Territory. It is one of the ablest papers that reach us from the New West, and a zealous advocate of farm price-making through controlled marketing:

Up-to-Date Farming, a semi-monthly, sixteen to twenty-four page, four-column journal, edited and published by J. A. Everett at Indianapolis, Ind., is one of the greatest farm journals published in America. To Mr. Everett is due the credit of having conceived and promulgated the plan of controled marketing. By co-operation and systematic marketing and by forcing the demand to seek the supply the wheat growers of America have been enabled to force the price of wheat up from 63 cents to $1.15 per bushel. There are few men engaged in journalism today who wield a more powerful pen than Mr. Everett; no one with whom we are acquainted who has accomplished so much in moulding opinion, and no one who has done more to encourage the farmers to stand firm in their demand for profitable prices. Independent Farmer acknowledges its appreciation of Mr. Everett's work; and many of the papers representing farmers' organizations give him credit for having furnished the best thought on controled marketing, that has yet been brought forth, and if more of our papers representing farmers' organizations would concentrate their efforts in urging the farmers to agree upon their plans of controled marketing, we are of the opinion that this apparently complexed and difficult problem would soon be solved, the speculator and gambler swept out of existence, and the producers enthroned independent sovereigns, instead of remaining hewers of wood and drawers of water.

Here we have a bird'seye view, sufficient, perhaps, for one issue. It is unmistakable proof of activity and results, and members should feel kindly toward papers that treat us thus cordially and assist us in our work. And not only so; they should call attention of local papers to what they are doing, and send us clippings of what their local papers say, being sure to give us the name and date of the paper the clipping is from.

Texas Farmers No Fools

Editor Up-to-Date Farming.

I find many, many good things in your paper. I hope to see the time when the farmers, north and south, will be co-operating on the principles you set forth in Up-to-Date

As you know, we are having a struggle with the cotton speculators, but I do believe that if the tenacity of purpose exists throughout the cotton belt that is manifest here in Erath County, Texas, prices will come or cotton will rot on the farms. When you see old farmers harness their mules, go to the cotton yards, and come wagging back home with cotton they carried off away back in October, November and December, don't you know it means something? I do.

I see where you advise against a reduction of acreage. I believe like you, if farmers would stick close enough, but I believe the reduction will stimulate the farmers and induce them to make something besides cotton, and thereby improve their lands and increase their supply of corn and feed, which will give them better stock, more hogs to bacon, more milk, butter and poultry products. And I know the children will be glad to escape picking so much cotton.

J. A. FORD.

Stephenville, Tex.

Coiled Spring Fence.

Because of the scarcity of timber, wire has become the accepted material from which to construct farm fence. That there are a multitude of styles of woven wire fence goes without saying. It is also apparent that much of it is made to sell rather than render service. By the way, it is no little matter to build a fence combining perfect service with long life. It must have strength, compactness, durability, provision for contraction and expansion, and a multitude of little attentions to make it of value and service. The fence that becomes loose and baggy under variation of temperature necessarily gives the owner needless trouble to keep it at proper tension. The only solution for this trouble is the coiled wire, made from high carbon coiled spring steel, and which accommodates itself to any degree of temperature. This style of fence was originated by the Coiled Spring Fence Co., of Winchester, Indiana, and is the most important achievement in fence construction that has been wrought in years. When erected at proper tension it remains upright and rigid, and without tugging and pulling on posts at every change in temperature. It is worth while for fence buyers to give this feature of fence construction careful consideration, and they can do so by securing their catalogue which they mail to any address upon request. They sell it direct to the farmer at wholesale prices and prepay the freight, therefore, our readers have the opportunity to buy as the business man buys.

Our friends will do well to read carefully every notice in the Business Exchange. May find there the very thing you want.

Try the New
Majestic Tomato

The greatest vegetable novelty of the season. By all odds the largest, finest flavored and most productive in existence. Thousands of our customers who received small trial packages last spring wrote us in the fall that it surpassed all other sorts and produced 100 lbs. to 147 lbs. of fruit to the plant. Many reported single tomatoes, weighing 3 lbs. to 5¾ lbs., each. Just think what this kind of a crop would mean on an acre of ground. The fruits are not coarse grained and poor like other large sorts, but are smooth, solid, have few seeds, and are unsurpassed in quality. Of fine shape and beautiful color. Last year the seed sold at 40c per packet of 100 seeds, but this season, we have reduced price to 15cts, and in addition to this we are offering

$100.00 in Cash

prizes this year for the largest tomato grown.

Our large illustrated catalogue describing the above and many other choice novelties will be sent free if you mention this paper.

AN OBJECT LESSON IN BEANS

Another Victory for the A. S. of E.

Less than a year ago the bean growers of Michigan and New York began to organize in the American Society of Equity, determined, by controlled marketing, to put a price upon their beans. At the proper time the Society named $2 per bushel as the minimum price for the crop of 1904, based upon the Detroit market, which would mean from $1.50 to $1.60 per bushel on the farm.

The buyers and speculators were determined that the farmers should not get their price, and put up a bitter and persistent fight from the beginning. The crop liar, as usual, was in evidence in every bean growing center, and the farmers were assured everywhere that the price of beans would go to a dollar before spring. But bean growers are not children. When they set out to do a thing they do it. They held their beans just as the wheat growers did, and as the cotton growers and tobacco growers are doing now.

The result was as it always must be. On the 15th of February Detroit quoted

BEANS AT $1.90 PER BUSHEL.

Consider this summary of results: The wheat crop of 1903, went from 70 cents per bushel to the minimum $1, and passed it.

The wheat crop of 1904 went from 80 cents to the minimum $1.20, and passed it.

The tobacco crop of 1903 without a minimum fixed, and with only the beginning of an organization, was held off the market until the price rose from 20 to 40 per cent.

The tobacco crop of 1904, with a minimum fixed by a general convention of the A. S. of E. at Lynchburg, Va., has been and is being held by the farmers until the price is rapidly approaching the minimum, and in some cases has actually reached it in sales on the farms.

The cotton crop of 1904, under the stress of influences more powerful than ever existed before to pull down prices, has, through the power of agitation and education rather than of organization, been kept off the market to the extent of saving the trade from demoralization, and it is now slowly but surely rising to the minimum price fixed by the Society.

And, as has been said above, the bean growers have been organizing but a short time, yet their determined co-operation and practical, common sense methods, have already brought their product within ten cents of the Society's minimum.

Other advices are to the effect that the A. S. of E., by its teachings and the work of its members, has favorably influenced the prices of all crops whose producers are even partially organized, and it has clearly demonstrated that the great problem of all problems for farmers, the pricing of their products, may be solved by controlled marketing.

In the language of a prominent Michigan organizer, we say: "When you can get your price, sell; when you can't stop marketing."

From the President of Bright Tobacco Growers' Association

Editor Up-to-Date Farming:

In lookin g over your paper of Feb. 1 I note that you are slow to credit reports from market in the old belt that prices are satisfactory to the farmers. You are right. Those reports are entirely misleading, and they are sent out from different markets as advertisements to mislead the farmers. The fact is not one farmer in fifty is satisfied with prices. Only two grades of our tobacco (and these grades represent only a small percentage of the crop) are selling at a fairly reasonable price, very common and fine wrappers. Prices prevailing at present are not better than last year at this time.

It costs farmers in old bright belt 10 cents per pound to raise tobacco, and present, and past prices for a number of years, are on a basis that entails a loss to the producer. This all intelligent farmers realize. Hence they are rapidly organizing to control prices by controlling marketing. This idea, so ably advocated by your paper, is taking firm hold of the producers and will certainly bring about a revolution as to price of farm products. Our association is considering plans of uniting growers and factories to handle our crops.

Red Oak, Va. S. C. ADAMS,
President Tobacco Growers' Association of Old Bright Belt of Virginia and North Carolina.

Bankers Help Cotton Growers

Editor Up-to-Date Farming:

The A. S. of E. in this county is beginning to make great strides forward. As soon as the weather opens we are going to start the campaign and push forward with more vim than heretofore. Our county organization will soon be perfected. There are now nearly 300 members in this county and we intend to have 1,000 before next crop is harvested. We are co-operating with the cotton growers association. Our bank will now advance $30 instead of $25 per bale on cotton and has over $18,000 now out at $25 per bale.

Best wishes for you, for Up-to-Date, the best paper yet, and for the A. S. of E.—Chas. E. Cole, Co. Sec., Dardenelle, Ark.

"One Thing Thou Lackest"

Editor Up-to-Date Farming.

Having taken your paper on a three months' trial, and having read it carefully, I find everything in it is excellent. Your plan of controlled marketing is the completest and sensiblist that has been brought before the farmers. After reading your plan it makes me wonder why it has not been brought up sooner. There is not a bit of uncertainty in it. If the farmers will only take hold—in fact, they don't have to take hold; it is simply hold to what you raise until you get a profit. We have the soil; we have the strength and abiltiy to till it; we raise the products; we feed the world. And we have been taught by many farm journals how to cultivate and rotate our crops; how to fertilize, subsoil and build up our land, and what sort of stock is best suited to our thin lands and our rich lands, and what grade of stock is suitable to this climate or that climate. But I have not found in a single one of them equitable prices mentioned. The most important thing in the whole list is left out.

We are all familiar with the incident of Christ and the young man who wished to know what to do to be saved. The Savior enumerated a great many good things, which the young man said he had done all his life. "One thing thou lackest," said the Lord.

So of the farm papers. We may give them credit for many good things, but we are compelled to say to them, "One thing thou lackest!" And many farm organizations, all of which I like, and belong to some, but when they leave out price and controlled marketing, we have to say, "One thing thou lackest!"

And many of us farmers lack one thing, which is to take Up-to-Date Farming, read it and heed its teachings, and hold our products, that we may inherit equitable prices for what we raise.

GRANVILLE HEARD.
Thompsonville, Ill.

Have Good Programs

Editor Up-to-Date Farming:

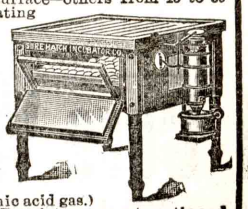
We have just returned from a joint meeting of Breckinridge and Hancock Counties and were very enthusiastic, fully believing that we will get "three 8's" for our tobacco. We heard some splendid talks at Cloverport. We have elected the following officers of our local for the ensuing year: W. B. Paul, a tireless worker, president; A. B. Orum, also a faithful worker, vice president; George H. Newman and W. T. Mason, secretary and treasurer respectively: Ed Goatly, lecturer; Joseph Russell, sergeant at arms; T. M. Bates, Thomas Goatly and A. F. Newman, executive committee. We have 23 members and expect to have as many more in 60 days. We meet twice a month and always have an interesting program after the regular business is disposed of. We have speaking, songs, recitations, selections, and a paper we call Equity edited and read by one of the members.

GEORGE H. NEWMAN,
Mattingly, Ky.

Money Can't Buy
A Better Incubator than the OLD RELIABLE
SURE HATCH
Read the Reasons—Here are Some

The **Sure Hatch** is built of straight grained California Redwood, the best material known for incubators. California Redwood will not shrink or swell, warp or crack—other woods will.

The **Sure Hatch** Water Heater has 138 square inches of heating surface—others from 15 to 30 sq. in. Abundant heating surface is absolutely essential to economy of operation.



The **Sure Hatch** Ventilator keeps pure, warm air in circulation among the eggs all the time. Other "ventilators" skim off the air from top of egg chamber, leaving eggs surrounded with foul air (carbonic acid gas.)

The **Sure Hatch** Regulators are automatic and keep the temperature at the proper degree. You don't have to "stand guard" over the regulator to be sure it regulates. **Sure Hatch** Egg Chambers are asbestos lined.

Tens of thousands of **Sure Hatch** Incubators are hatching more chicks to the 100 eggs that live and grow than any other incubator made. Think of this before you buy.

The **Sure Hatch** terms are exceptionally liberal—60 days trial, freight prepaid east of Rocky Mountains, and money back if not satisfactory.

The **Sure Hatch** $100,000 Guarantee, good for five years from date of purchase, is our own pledge of good faith.

The **Sure Hatch** Catalogue of 1905 is now ready and will be sent free on request. Write at once. Address office nearest you.

SEARS, ROEBUCK & CO., CHICAGO, ILL.

FARMERS - GARDENERS - TRUCKERS

Do not miss this Opportunity to buy seed early from the introducers of the famous

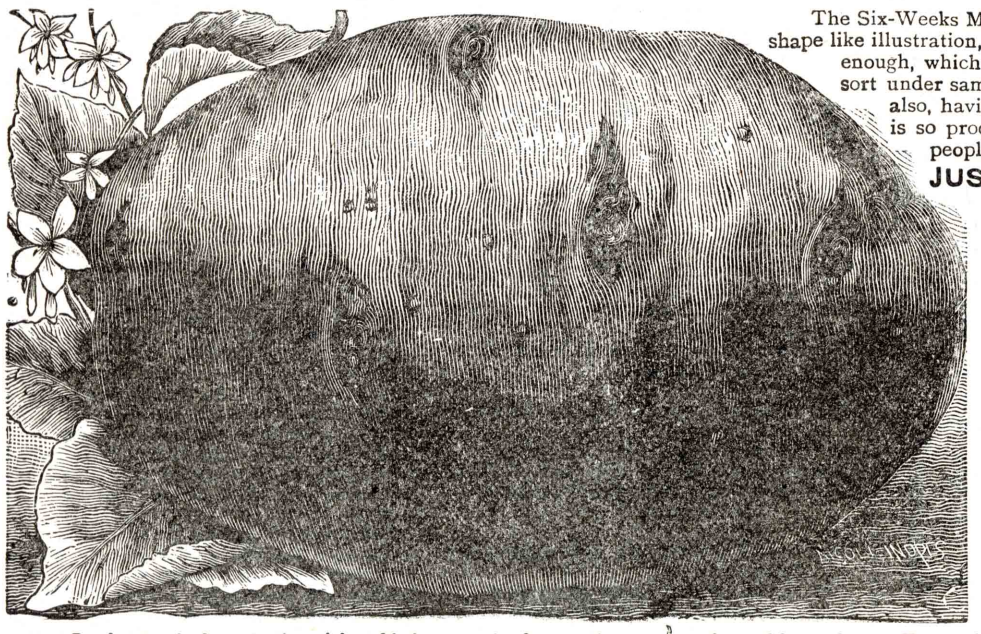
Improved Early Six-Weeks Market Potato

Not one season in all our experience have we had enough of this famous potato to supply the enormous demand. Also by waiting for late shipping they frequently arrive late and defeat your plans for early table potatoes or markets.

You can be sure of getting them to plant early by ordering now. Also the price is less than it may be later.

If you want to beat all your neighbors with new potatoes to eat or market, plant the **Six-Weeks Market.** If a market gardener you cannot plant anything that will make you more money than this potato.

This potato does beat all other kinds and produces fine tubers in 6 weeks from planting, with favorable weather. If you know this to be a fact would you not want some of them Read the testimonials.



The Six-Weeks Market potato is nearly white—(a little pink), shape like illustration, grow fine size, cooks mealy as soon as large enough, which is two weeks or more ahead of any other sort under same conditions. It is wonderfully productive also, having yielded 400 bu. and 600 bu. per acre. It is so productive and such a good keeper that many people grow them for early and main crop.

JUST THINK of one variety of potatoes combining such extreme earliness, good table qualities, good keeping qualities, fine size and shape, and great productiveness. This is the IMPROVED EARLY SIX-WEEKS MARKET POTATO.

From the time you receive the seed we send you until the crop comes on the table or goes to market you will be surprised, delighted and profited by your investment in this potato.

The most remarkable potato since the Early Rose was introduced

We named and introduced the Early Six-Weeks Market Potato several years ago. We have sold them to thousands of customers but there are tens of thousands of people who have not got them. Every family that grows potatoes for their own use should plant this variety. Every farmer, gardener or trucker who grows for market loses money every season he does without them. There is no other variety that can take their place.

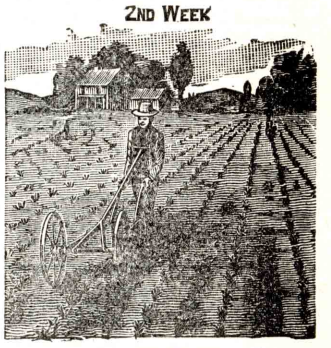
This season we are proud to be able to offer the

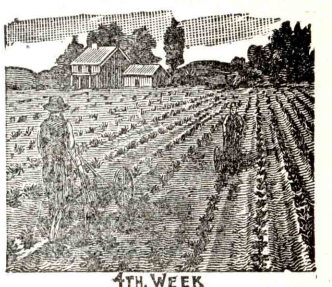
Improved Six-Weeks Market Potato

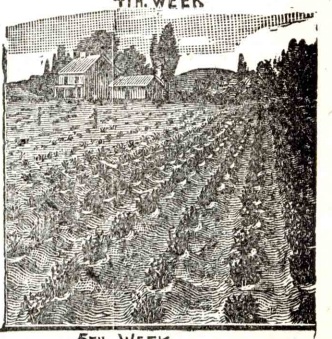
raised from seed obtained from Mr. De Vore, the originator of the variety. Mr. De Vore has been carefully growing the potato and improving it from the time we bought his original stock. He has cared for it as carefully and guarded it as jealously as a dear child. He has yields as follows: One year 420 bu. per acre, next year 380 bu. per acre, and two years after 600 bu. per acre. **The Improved Early Six-Weeks Market** that we now offer is better than the original. Therefore all our old customers should get new seed, and every person who takes pleasure in seeing what good crops, what large yields and how early they can grow potatoes should get seed. They will admit that they never saw, raised, eat or marketed finer or better potatoes than the **Improved Early Six-Weeks.**

CAUTION Since we introduced our renowned Early Six-Weeks Market Potatoes some other parties has offered Potatoes under various names, "Early Market," "Five-Weeks Potatoes," "45 Day Potato," etc., or attached their name to it. Some of them use our description of Early Six-Weeks, others claim their potato is as good as our "Six-Weeks." We wish it distinctly understood that we named and introduced this unequaled variety, and are headquarters for the genuine seed.

SHIPPING We can ship any month in the winter to southern points as we load in warmed cars. We advise early orders however.







PRICE

—OF—

Improved Early Six-Weeks Market Potato

Small Lots By Mail Postpaid

1 lb.	25c

J. A. EVERITT, Seedsman, Inc., Indianapolis, Ind.

Agents and Dealers wanted to sell this great Potato

Nothing like them anywhere. If you doubt, send 25 or 50 cents for a liberal sample by express, with Catalogues and beautiful colored hangers. Farmers, gardeners and truckers can make splendid profits selling them

Read extracts from testimonials We have received tens of thousands of reports like these.

I have grown them of size for table in six weeks and matured in 72 days. I consider them the earliest potato in the world, the finest table variety and a cropper. J. W. SHANKS, Athens, Co., O.

I raised at the rate of 395 bu. per acre of the nicest potatoes I ever saw. They are ready to use in six weeks and mature in 72 days. They come so soon the bugs have no chance.
ELIZABETH WASHBURN, Athens Co., O.

From I pound I raised 147 lbs. They are fine, sound, smooth. Ripened in 75 days and were marketable size in 6 weeks. They are the most valuable potato ever introduced.
R. TAYLOR, Ashland Co., Wis.

First class in every respect.
E. Hartman, Sutton Co., W. Va.

They did fine. I could sell a carload for seed if I had them.
John B. Cochran, Jefferson Co., O.

You have got it this time. I mean the earliest and best early potato in existence. We had them for table use in six weeks from planting. They also outyield all others.
August Broehner, Allegan Co., Mich.

Ten dollars per bu. would not buy my six weeks market potatoes if I could not replace them. They are the earliest of all and very heavy yielders. They should be universally grown by market gardeners. Jac. R. Stilson, Onondaga Co., N.Y.

Are as early as represented. Sound, smooth, best quality, heavy yielder. They are very valuable.
C. E. Ward, Sullivan Co., Ind.

Best yielder and earliest potato I ever had. N. Nyedan, Marion Co., Ind.

Planted May 3rd, we dug new potatoes from them and used June 20th. They are the earliest we ever saw.
Daniel Donovan, Carroll Co., Tenn.

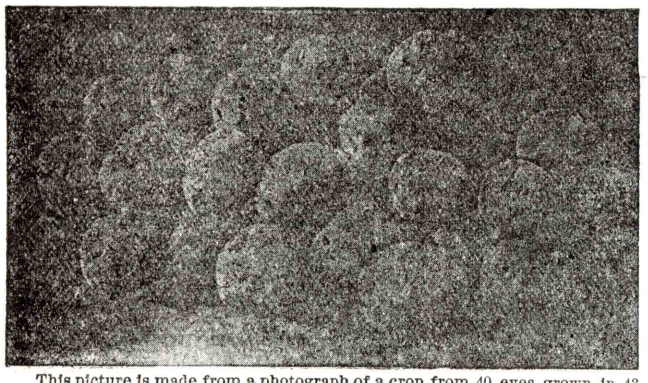
They are the earliest to make market size and earliest to mature that I ever saw. My crop could not be bought for any price. John Gilbert, Meek Co., Va.

Twenty hills of six weeks potatoes yielded a heaped bushel. They bear out your claims for earliness, quality and productiveness. Emil Laurance, Worcester Co., Mass.

The early six weeks potato can be put on the market two weeks ahead of any other sort which means hundreds of dollars profit to a large grower.
W. H. Morris, Cuyahoga, Co., O.

It is now six weeks and five days since I planted the six weeks market potatos. They did not sprout very quickly but they have nice large tubers on them. They are the earliest potato for this climate I ever saw.
C. L. Ricel, Armtrong, Co. Pa

The best table potato and yield abundantly. Benj. Gemberling, Licking Co., O.



This picture is made from a photograph of a crop from 40 eyes grown in 43 days. The letter accompanying the Photograph is as follows:

Mr. J. A, Everitt. Dear sir—I send you to-day by freight the product of forty eyes of Six-Weeks Potatoes. They were dug last night and this morning and grew in forty-three days. They were grown from one-eye seed. I have just begun farming on my own land, and am not fixed yet for pushing a crop of early potatoes. They were covered with a breaking plow and given very ordinary treatment. Think I can beat it next season. Several people who saw them were astonished. I expect to exhibit at our county fair.

Write today. **SEARS, ROEBUCK & CO.,** CHICAGO, ILLINOIS.

Der Dumper

Who vos dat man mit de ragged pants,
Vere de chair sets hardest on dem?
Mit der knees all oud, und der elbows, too,
Und der shoes mit no blackin' on dem?
Der dumper.

Who vorks so hard mit der field all day,
Where de veeds beat der corn a-growin'?
Where de sun beats down on der sweatin' brow
Of der him who's doin' der hoein'?
Der dumper.

Vot man got up mit three o'clock,
Und loaded der vagon for market
With der cabbage und corn, und der apples, too,
For der price dot vas made by der merchant?
Der dumper.

Who vorks his vife und children, too,
Like mules mit der field a-plowin',
For to get der cash big crops must grow,
So der bapers und schools do tell him?
Der dumper.

Who gits so crazy like der leedle bug
Vot get in der bed mit der summer,
Und who vent like mad to der market town
Ven der price went down ker flumix?
Der dumper.

Who sells his wheat, his cotton und corn,
At der price made by city broker,
Und den goes home mit face forlorn,
A chronic und miserable croaker?
Der dumper.

Who vos dot man mit de mortgaged farm,
Mit holes in der house roof open,
Who schvears der farmers von't hang on,
Den growls und keeps up his croakin'?
Der dumper.

—M. .W. T.

Mistakes in Marketing

Mr. Frank Hagenbarth, president of the National Live Stock Association, in his address at Denver, admits that the cattlemen's greatest mistake is in their method of marketing. He said:

Our method of marketing is unscientific and crude. Often neither time nor place of shipment is considered, the result being excessive or unequal distribution of supplies on the various markets. We ship, as some railroads make rates, by "instinct." This evil results from ignorance on the part of the shipper. He has no data or comparative information for his guidance at hand, and ships when he gets ready and where his instinct may determine.

Mr. Hagenbarth doubts if the traditional "car shortage" is not a benefit to the cattlemen. He believes if cars were available all the time "every freight engine in the country would be busy hauling live stock, stockyards facilities would be paralyzed, packers totally unable to kill or sell our stuff, the markets demoralized and many of us bankrupted."

The shortage of cars, he says, compels them to make a fairly even distribution of their shipments in spite of themselves, and thus maintain comparatively steady prices.

The point that strikes us is the admission that prices may be made by withholding shipments, and he goes still further in declaring that the remedy for the evils is in a "proper organization of each and every live stock interest; an organization so big, so broad, so impartial, that criticism will be dismissed and honor and obedience follow its every dictum."

That is the doctrine of the A. S. of E., which is "so big and so broad" as to not only take in every live stock interest, but every other agricultural interest also. In this respect it commends itself to every thinking farmer and business alike.

Ten to one you'll find the very thing you want by reading the advertisements in this very paper. If you do, you will get it right.

When a Page wire fence is made it is finished—finished for life. You never have to replace anything but the posts.

Awakening to Their Duty

Editor Up-to-Date Farming.

The people here in the South are in a great struggle defending the right to say what their own property is worth. It is the first time as farmers we ever stepped out to demand fairness in price. We have long slept upon our rights, but we now realize what the word spoken by Mr. Everitt means. Business here is virtually at a standstill. Hon. Harvie Jordan, of Georgia, joined his voice with that of Mr. Everitt recently. That was a great convention, 3,000 strong. The bankers and merchants promised to finance the farmers, and that means much. Talk about a surplus. Give the farmers equitable prices, and they will consume everything the mills can put out; put the price of farm products down, and there will not be much of anything consumed. The mills, in trying to force the price of cotton down, are simply cutting off their own noses.

I know the people of the cotton belt ought to have as much energy as those of the wheat belt. They held for fairness and got it. I think we cotton men will do the same.

H. H. WILLIAMS.

Walker, La.

Big Presents Free

On page 25 of this issue our readers are given an opportunity to earn some most valuable prizes. The complete list of prizes offered by Successful Farming includes among other things six pianos, fifteen incubators, half dozen guaranteed 17-jewel gold watches, buggy, harness, elegant bed room furniture, complete set of parlor furniture, besides many other valuable articles and a large list of cash prizes.

Successful Farming is a most handsome agricultural paper and is as instructive as it is handsome. The publishers are perfectly responsible and our readers may depend upon their offer being carried out to the letter. We would like to see our readers win a large number of these prizes and they can if they count and plan better than others. Look up the offer on page 25 and send in your counts at once. This is really an opportunity you should not fail to take advantage of.

The winter season just closing has been characterized by much activity. Do not let the call to spring duties lead to a slackening in organization work. The feeble efforts made by well meaning people to organize in special lines and the broad sweep of our work have proven that the organization that takes in all productive interests is the one to solve the problem, and that is the A. S. of E. Push it! Push it!

There is much in the cotton market to encourage those who are holding cotton. Speculators are becoming restless and trade conditions are improving. The fact is, the cotton must be had and the only way to get it is to buy it from the growers. If the growers hold it for a reasonable price they cannot fail to get it.

Stockmen are looking for good things from the courts and lawmakers. We hope they will get them, but out faith is not strong. Two words bob up whenever we think about it—Technicality and Evasion. But the next six months will teach some mighty good lessons.

LATEST FROM COLORADO

A Million Dollar Corporation of That State Apparently Throws Money Away

Corporations as a rule are not expected to throw money away recklessly but out in Colorado such seems to be an actual fact.

Recently several well-known capitalists of Colorado joined forces and organized an immense publishing company with a million dollars capital, all paid up. One of the first acts of the new company was to invest $100,000 in the purchase of that wonderfully successful publication the Rocky Mountain Magazine, now in its third year with a circulation world-wide. By some of its readers the magazine is considered worth $3 per year. It publishes dozens of fine views of scenery, stories of love and adventure and sketches of how great riches are often acquired so quickly. To cap the climax, dividend shares in the company are issued to subscribers, the latter sharing in the profits. Last year the company paid twenty per cent and will likely pay much more this year.

The company has appropriated ample cash with the object of securing a million new readers this year. To accomplish their object they are offering to send the magazine each month for a whole year for the nominal sum of ten cents, 3 years for twenty-five cents; or, clubs of six names for fifty cents, postage stamps taken. As this is a limited offer there's no time to waste, so send at once and tell all your friends. Money promptly refunded if you are not more than pleased. Mention Up-to-Date Farming when you write. Send all subscriptions to the Rocky Mountain Magazine, Sta. 64 Denver Colorado.

MY BOOK IS FREE

IT WILL TELL YOU

how to tell a good investment; how to choose between real estate and stocks; how to choose your partners; how to protect yourself in case you should not care to hold an investment indefinitely; how to invest small sums and a hundred and one other things which, no person—man or woman—that is now investing small amounts or that can invest, should miss reading.

My book is not an advertisement of any particular investment. It is a veritable guide book to safe and profitable investments of all kinds. It is entitled, "How Money Grows," and is based on my personal experiences and observations. If you can save a few dollars each month, you will want to know all about it. You can become, through me, a partner in an old established and highly profitable business by paying in a small sum each month for a few months.

The past two years this business has paid 17 per cent. in dividends and I expect it to be at least that this year. You can secure an interest in this business that will entitle you to a voice in its management; to know at all times how its affairs are being conducted, and to realize your full percentage of profits which the business earns.

I would like to send you free, complete information concerning this business, its management, sales, finances, etc. I do not want you to invest a dollar until you have the complete story of the business and my reason for offering this stock for sale. Along with the information, I will give you an abundance of additional proof. I will send you letters I have received from several hundred people who have been stockholders in this company for several years.

If you are in the least interested, you should write to me to-day, even if you cannot take advantage of this particular offer. You will want to invest your money some day, and so will want to read, "HOW MONEY GROWS."

Suppose you sit right down and write me a letter now. Simply say, "Send How Money Grows."

BEAUTIFOL CHINESE CINNAMON VINES

The Pride of the Flowery Kingdom. Easiest grown, most rapid climber for all American Homes

THIS Oriental Gem is a native of the Far East where such marvels of beauty are not so rare as in America. It is perfectly adapted, however, to grow anywhere in the United States and Canada

The Cinnamon Vine Roots

When planted 5 inches apart will quickly cover a veranda and surround your windows with a wonderful profusion of vines, covered with beautiful, glossy heart-shaped leaves and sweet, cinnamon scented flowers, making them perfect bowers of beauty.

They Are Entirely Hardy

and thrive anywhere. When once planted will come up year after year, increasing in strength and will last many years.

Every Person

who wants to make their home more beautiful at a trifling expense should plant these splendid vines. When once planted they will require no more care and attention.

It Always Pays to Make Home Beautiful

- Beautiful Leaves
- Dainty Flowers
- Exquisite Perfume
- Once Planted Last Forever
- Grow in Shade or Sun
- Succeed in Wet or Dry
- No Insects Ever Trouble
- No Winter Harms
- Grow 25 to 40 Feet
- Once Planted Will Grow a Lifetime
- Every American Home Needs Some
- Agents Wanted
- Easy Money in Every Neighborhood

REMEMBER

The Cinnamon Vines **ALWAYS** grow and are **SURE** to succeed for everybody. The roots should be planted about 5 inches apart.

OUR PRICE The price of strong Cinnamon Vine roots, every one guaranteed to grow and succeed, is as follows:

Each, 5c.; one-half dozen, 25c.; dozen, 50c.; 25, $1.00, 100, $3.00. OUR SPECIAL OFFER with Up-to-Date Farming.

For 50 cents, a year's subscription to this paper, we will give six roots free or we will give 5 yearly subscriptions and 30 roots for the price of four, $2.00. The subscriptions may be new, or renewal, or the papers and roots will be sent to different addresses.

Agents Wanted

Do you want to make easy money and lots of it? Every family having a home in country, village or city will buy some of the Cinnamon Vines if you show them this beautiful illustration and attractive offer. We want you to introduce them. Write to us for our CONFIDENTIAL OFFER. It is to your interest. Will we hear from you?

COLORED PLATES OF THE VINES WILL BE SUPPLIED TO EVERY AGENT.

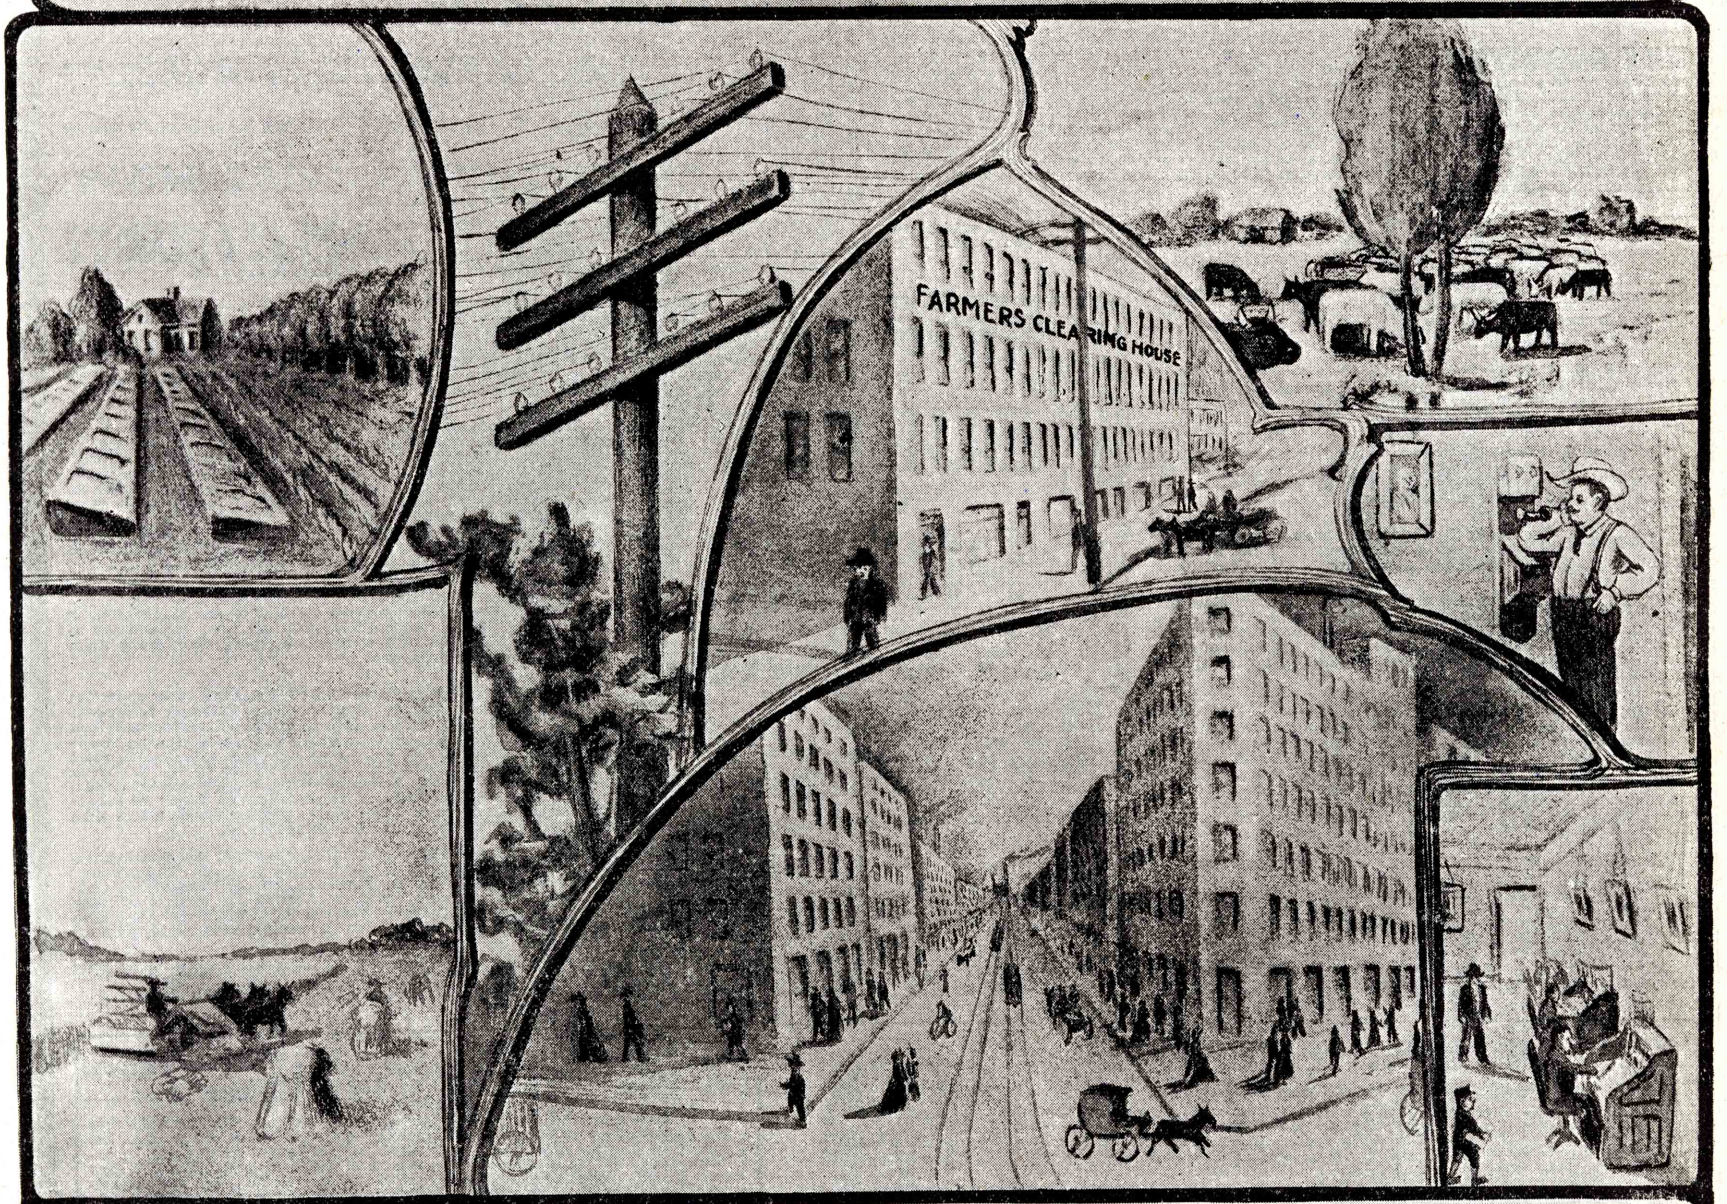
UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT *Our Object,* EQUITABLE PRICES FOR ALL PRODUCTS *Our Plan,* CONTROLLED MARKETING

INDIANAPOLIS, INDIANA. MARCH 15, 1905.



Mr. livestock man, fruit man, trucker, dairyman, poultryman, grain grower, potato grower, tobacco and cotton planter and all others who produce the stuff on which the people and animals live and from which they are clothed; how would you like to be connected with a central head for all your business, which in turn has its fingers constantly on the pulse of the market? How would you like to take the receiver of your telephone down any morning and be told whether to sell, and where to ship, and what price to take? And some millions of your brother farmers would be told the same thing. Oh, yes, it can be done. Won't this start you to thinking and acting, because the day of your complete triumph is not far away if you want it to come.

CO-OPERATING FARMERS OF AMERICA

FREE FOUR SAMPLES

NOTICE— We don't send you an "offer," we send THE GOODS

WILL YOU LISTEN TO REASON?

AS A THINKING MAN YOU WANT TO KNOW

REX CONDITIONER is not a "Stock Food." It does work no stock food can do. We positively guarantee Rex Conditioner to please any stock owner better than any "Stock Food," **or it costs nothing.** It is fast taking the place of all "Stock Foods." Rex Conditioner does successfully what "Stock Foods" are generally fed for but **cannot do.** It is fed for less than **one-half the expense** of "Stock Foods." It is guaranteed to expel worms from horses, hogs and sheep. It is guaranteed to make all animals thrive better. No matter how stunted or "wormy" or "out of condition" any animal may be, Rex Conditioner is guaranteed to expel the worms, cleanse the blood, loosen the hide, tone up the appetite, improve digestion, regulate the bowels and liver, and give new vigor and life to every part of the animal system and make them thrifty.

FOR HORSES When horses or colts are "wormy" or "hide-bound" or "stunted," or subject to colic, or "out of condition" in any way, it is not a "Stock Food you want. It is the original and guaranteed Rex Conditioner.

FOR HOGS When hogs or shoats are "wormy" or "stunted" or "unthrifty" or "out of condition," it is not a "Stock Food" you want. It is the original and guaranteed Rex Conditioner.

FOR COWS When cows are "run down" or "out of condition" or don't eat, digest and give as much milk as they should, or don't "clean" after calving, it is not a "Stock Food" you want. It is the original and guaranteed Rex Conditioner.

FOR CALVES When calves are scouring or "stunted," or have poor blood or poor digestion, poor appetite or bad fermentations or gases, it is not a "Stock Food" you want. It is the original and guaranteed Rex Conditioner.

FOR SHEEP When sheep, lambs or goats have worms or are unthrifty or "out of condition," it is not a "Stock Food" you want. It is the original and guaranteed Rex Conditioner.

Rex Conditioner is much stronger, is made of a higher class and the best quality of ingredients, is fed in **smaller** amounts, **costs less than half as much to use** it and gives results that "Stock Food" cannot give, and it proves to the entire satisfaction of every stock owner that it is exactly the right preparation for the special and general needs of all stock owners.

When preparing or feeding hogs for market, one small feed of Rex Conditioner each day mixed in the swill, drink or feed, gets the worms all out of them, gives a good, strong appetite, greatly improves the digestion and assimilation, keeps the blood in perfect condition, and makes them gain much faster and gives you more money out of all the grain. You feed about one-fourth as much of it as you would of "Stock Foods" and you get much more and better results. Rex Conditioner not only removes the worms, but it also removes the conditions which bring the worms.

Rex Conditioner is the best known prevention against sickness or disease among hogs.

Worms and fevers kill a hundred times more hogs than "cholera." Everything is called "cholera," but if you keep your hogs free from worms, their blood, stomach, bowels and liver in good, healthy condition, you need have no fear of cholera. Prevention is better than cure and Rex Conditioner is a guaranteed preventive.

If your hogs are already diseased, isolate them, shut them entirely away from corn and wire us for special information. Meanwhile get a package of Rex Conditioner and feed according to directions. It will cure those that have not already reached fatal stages where the vital organs have given away. The more you starve your hogs when they are diseased, the better success you will have in stopping the disease.

Every hog raiser should be supplied with Rex Conditioner. It is worth ten times its cost to hog-raisers.

HORSES When preparing horses for the market, two or three feeds of Rex Conditioner each week keeps them free from worms, their appetite, digestion and assimilation good, and makes them sleek and glossy, and gives them a fine "finish."

When feeding steers, cows, bulls, calves or sheep for market, the first part of the feeding period is very important. When you feed, fatten and crowd for market, you make a manufacturing "machine" of each animal's system. You should get every one of those "machines" in first-class working order, or expensive grain feed will be wasted, and in large, expensive amounts.

A small amount of Rex Conditioner (about one pound for 30 steers or cows, or for 60 calves, or for 100 sheep) mixed in the feed once a day for the first week or two, will get the blood, appetite, digestive organs, liver and bowels in good condition, and you will find that during the entire feeding period each animal will feed better, do better, digest more thoroughly, blood will circulate better and each animal will gain faster and "finish" better.

If for any reason the steers, cows, bulls, calves or sheep should get "off their feed" during the feeding period, or should "scour," there is a cause for it and the trouble should be overcome quickly as possible. Sometimes it is caused by too sudden change of feed or water, sometimes a fall of snow over their feed will cause it, sometimes feeding at irregular hours and varying the amount of feed, sometimes a sudden frightening or being chased by a dog, and frequently it is caused by "gorging" or overeating, which causes detrimental fermentations or gases and an insufficient supply of the different digestive juices, followed by sour stomach.

Regardless of what causes it, the amount of feed should be **reduced.** Mix Rex Conditioner with the feed once a day for three or four days to overcome the bad fermentations, sour stomach and to promote a copious flow of the digestive juices, then bring them back onto feed very gradually.

Stock owners all through the United States and other countries are adopting its use, and every stock owner should keep a supply of Rex Conditioner on the place. It costs but little to keep and feed it to stock. **It is expensive business to be pouring or feeding grain, hay, etc., to animals that do not use their feed to advantage.** One unthrifty animal will eat up the profits on several thrifty animals. Rex Conditioner is a guaranteed protection against the losses coming from unthrifty or wormy or out-of-condition stock, and with its use you can fatten stock in less time with less feed, at less expense, and get better "finish" and better market prices.

Rex Conditioner is guaranteed to make you more money out of your stock, or it costs you nothing. It is also guaranteed to please you better and make you more money than any "Stock Food" or it costs you nothing. It is used by such people as Armour Packing Co., Swift Packing Co., Cudahy Packing Co., express companies, and by the largest and most successful owners of stock throughout the entire country. All our dealers are authorized to sell Rex Conditioner on a spot cash guarantee, with the understanding that if it does not please the customer the money paid for it is to be refunded.

N. B. Where we have no dealers we shall be glad to open an agency and will offer terms so advantageous that dealers cannot well afford NOT to accept.

THE BURDEN OF PROOF IS UPON US

OUR CLAIMS SUBSTANTIATED BY PROOF

THE ARMOUR PACKING CO. SAYS:

Rex Stock Food Co., "Gentlemen: We have been feeding Rex Conditioner to our horses used on our city delivery wagons. One of them was subject to periodical cramps or colic, and another was out of condition from some unknown cause, but after careful feeding with Rex Conditioner a number of worms were expelled from the out-of-condition horse and the horse troubled with cramps or colic had no more trouble of that kind. All horses in our Omaha stables are getting Rex Conditioner now and will continue to get it, for constant dry grain feeding needs such help as Rex Conditioner gives. Armour & Co.
"F. G. Beaton, Mgr. Omaha Branch."

A PROMINENT STOCK RAISER SAYS:

"We have fed 300 pounds of Rex Conditioner to our 150 horses and 100 hogs, and it brought the worms by the handful. It's the best stuff we ever got hold of.
"Platte Valley Farm and Cattle Co., A. M. Allen, Prest., Gothenburg, Neb."

U. S. EXPERIMENTAL STATION'S ENDORSEMENT

"Arkansas Agricultural Experiment Station, Fayetteville, Ark.
"Gentlemen: I have been using Rex Conditioner for over a month, and am much pleased with it. I have used it for horses, mules and hogs. At the time, our mules were off their feed. The Conditioner, after a few day's use, improved their appetite so they would eat the other feed with avidity. They are constantly improving with its use. I have found great value in Rex Conditioner with our hogs and pigs. The conditioner was especially beneficial to the sows with young pigs, and I can report it as a successful preparation. Yours truly,
"W. G. Vincenheller, Director of Experiment Station."

MANY OTHERS We have thousands of endorsements equally as strong from the leading and MOST intelligent stock raisers and others who make it their business to KNOW exactly what results are obtained. All of whom pronounce Rex Conditioner the ONE that can be given with assurance of satisfactory results in every case.

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher

JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR

Foreign Subscriptions $1.00 a Year.

5 Subscriptions $2.00. Any offer we make may be taken on the same basis, viz: 5 for the price of 4.

Membership in The American Society of Equity, $1.00, including a year's subscription.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞ Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee tbat they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizihg and sustaining organized effort for improved conditions. Look for the LABEL.

NATIONAL UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	-	**$ 1.20**

$1.00 FOR 1905 WHEAT

No matter how large the crop is. If a short crop it will be higher. Keep this in mind.

Persistent effort—substantial victory.

Circulate the Third Power and thus crystalize the third power, the power of the farmers.

The farmer has a right to aim high. He is not shooting AT any interest but FOR his own. Aim high—be calm—shoot deliberately—hit the mark.

Organized wealth is the first power, organized labor is the second power, and organized farming is the third power. The third power is, or may be, the greatest of them all. And it ought to be, because the others could not exist without it.

Mr. C. A. Boland, of Sacramento, Cal., writes that they are organizing a Farmers' Protective Association in that State on the precise lines of the A. S. of E., and that he hopes we may meet and co-operate on the crest of the Rockies, or any other place where we may chance to touch elbows. To be sure, but would it not be better if we were all under the broad banner of the A. S. of E., working with the same impulse and always with the same information?

How can any set of farmers justify a reduction of acreage of any crop before they know a surplus exists. Because the buyers, who want to get the crop as low as possible, say there is a surplus, does not make it so. If they make the price they will make it low as long as they know another pound or bushel will follow the former one to market.

Diversity of crops is always wise if your land is adapted to grow them. Read in this issue "Curtailing Production and Diversified Crops." There has been much said and written along these lines, particularly in the cotton and tobacco sections, and a variety of opinions are held by different people. In the above named article the A. S. of E. clearly expresses its views and submits them to the thinking farmers.

Readers of our editorial in this issue "An Empire Within a Republic," may think we are not consistent in criticising the Standard Oil Co., while organizing the farmers which will be a greater power. There will not be the danger, however, from the farmers organization. Its tendency will be for good to all people and classes and to the Government. This is made very clear in The Third Power book. We have not space to clearly show the difference here, therefore we urge a reading of that book while it can be obtained on the very favorable terms as offered in this paper.

Every fair minded farmer and friends of farmers are referred to the article in this issue, "The Grange and Its Snobs." While the heading of this article may tend to give offence to our esteemed brethren in the Grange we assure them that the article was not written to offend, but rather to enlighten them of a condition that their leaders strive to keep from them. The rank and file of the Grange is made up of the best and truest farmers in the country, but they may be deceived by their leaders just as they sometimes are by political leaders. The article will cause them to think and investigate. When any set of people do that on their own account they cannot be long deceived nor led far astray.

The A. S. of E. was started to accomplish certain objects and among these objects not one of them is to injure any person, class, institution or ligitimate business. It is willing to co-operate with all organized farmers where the main object is controlled marketing and profitable prices, regardless of what may be their creeds or manner of performance. Quite in contrast, however, have been the spirit and acts of some other farm organizations, institutions and farm papers. We rarely refer to these matters, depending on the good sense of farmers themselves to know who are their true friends and who are their pretended friends.

Organization and Consolidation

This must be the order of business for the A. S. of E. in the future. The 150,000 present members must be bound together in a bond of self interest through certain benefits they secure. These benefits must also be such as will induce all other farmers to join.

To give certain and sufficient benefits at all times the machinery of controlled marketing must be enlarged and perfected so as to be sufficient for all the special farm crops, such as live stock, fruit, poultry, vegetables, etc., etc., as well as for the staple crops like grain.

To accomplish this a national system of telephones and telegraph is needed. The farmers on one side and the markets on the other side must be connected up with the farmers' headquarters or clearing houses (of which there should be four in this country and one in Canada), so that a complete understanding may be had at all times of the supplies on the farm and the demands in the markets. Also then supplies may be equably pro rated with all markets, preventing gluts or scarcities in any kind and insuring a larger consumption.

There are about 40,000 farmers' homes in Indiana with telephones. Throughout the country we might estimate there are greatly in excess of a million. The present companies will co-operate with the society, so no particular delay need occur in putting the system in operation. With such an incentive, the development of rural telephones will be tremendous.

More will be said about this step in future numbers. If it appeals to stockmen, fruit men, truckers and others, they should write to headquarters and make arrangements to carry forward the work in their neighborhood.

This is not a new idea. It is a part of the original plan of the A. S. of E., as formulated and announced by Mr. Everitt. In the evolution of the movement the time has now arrived to put it in operation.

And what good reason can there be for not equipping agriculture with a national telephone and telegraph system, and every other feature that will operate to put it on as sound and certain a basis as any other business? If a single railroad company can afford to maintain an army of 30,000 people and all its expensive executive machinery to properly conduct its business, why would it not justify the farmers to organize their business, even though it meant the employment of 50,000 people, which it will not? If the Standard Oil Company finds it the part of wisdom to employ 25,000 people and great offices and refineries, railroad cars, 30,000 miles of telegraph wires and a great system of telephones to handle and market one of the products that comes out of the earth, why are the farmers not justified in employing, if necessary, an equal number of people and as much equipment to care for and market ALL THE PRODUCTS THAT GROW ON THE EARTH?

They are abundantly justified in doing these things, because they represent an industry immensely greater, measured by any standard, than any other business on earth. Yes, than many of them combined.

Don't you think farmers are going right ahead and organize until they are several million strong? Don't you think they are going to systematize their business under the guidance of Up-to-Date Farming, and on the plan of the American Society of Equity until agriculture is the best business and farming the preferred profession?

$1.00 FOR 1905 WHEAT

No matter how large the crop is. If a short crop it will be higher. Keep this in mind.

The article published in last issue of Up-to-Date Farming on the telephone has elicited much thought and no little comment. The idea of connecting all producing localities with all points of consumption through a central medium of communication, is a great one, and its advantages are too apparent to need argument. The great development already made in the use of that convenient instrument, shows that the employment of the telephone for such purpose is entirely practical, and that no great length of time need elapse before it can be brought about.

The plan of the A. S. of E. is perfect, or as nearly so as human agency can attain. No one any more attacks the plan; it has stood the test and come out victorious. The method and form of organization is a different thing. It may be possible for that to be improved. Some think it could be, and features added which would give us strength and facilitate the work of organization. All improvements in these lines will have respectful and earnest consideration, and if found desirable will unhesitatingly be adopted, not lightly nor hastily, but deliberately and calmly, for the good of the cause and the perfection of its work.

The potato market shows less regulation than any of the leading crops. There was a great crop produced in 1904, and prices in the centers of production are held low, but in the centers of consumption they are held well up. There is too great a difference between the producer and the consumer. Quite a bulk of potatoes were destroyed during the late severe freeze—some in imperfect storage and some in transit. These losses, mostly in the hands of buyers, while they diminish the supply, make the buyers hold out more persistently for low prices in the hope of recouping their losses. We still look for improvement in prices.

We have been printing a special edition of Up-to-Date containing a tobacco department, on the ground that possibly those who do not grow tobacco might not be interested in what the tobacco growers are doing, but every farmer is interested in the work of every other farmer, and no one should be deprived of a knowledge of the good things the tobacco growers are doing, or of the benefit f the example they are setting. Hence the tobacco department in future will run through the entire edition. That department is in charge of Mr. C. Hayes Taylor, who gives it special attention, and the peculiar situation of the tobacco growers and their commendable activity call for special recognition; but what we do for one we do for all. Mr. Taylor came from Virginia and is working at headquarters.

The right to life, liberty and the pursuit of happiness shall not be abridged except for crime. And every citizen shall be protected in his person and property. So says the fundamental law of society and government, without whose observance neither society nor government, civilized and free, can exist. Are these fundamental laws observed when more than half of the people of the United States, by artificially created conditions, are compelled to surrender their property at prices fixed by the buyer without consulting the owner or seller? We are in favor of a re-enactment of the Bill of Rights, more sacred than any custom or arbitrary rule of trade, and of the application of its principles to the farmer and his products. Dare any one vote Nay?

The sentiment at headquarters is that the A. S. of E. cannot stand still, and it shall not go backward. It must, therefore, go constantly forward. The world is virtually converted to the doctrine that farmers can put a price upon their products and secure it through controlled marketing. Having accomplished this, we must not sit down and wait for something to happen. We must push on and perfect the means which shall give us direct communication so as to successfully direct the marketing of the more perishable products. Such a thing is very much needed at this moment, for the benefit of the potato crop. There are localities where potatoes are bringing but a few cents a bushel; there are others where they would be gladly taken at a fair price. These people must be brought together.

A 320-page, cloth bound book, price $1.00, and 10c extra for postage, all for 25 cents, postpaid. See coupons in former paper.

Curtailing Production and Diversified Crops.

Is This a Good Policy?

The opinion is quite general among cotton growers that their most efficient means to secure profitable prices for their product, is to reduce the production of cotton by a reduction of the acreage devoted to that crop. This is the position taken by the leaders of the various cotton organizations in the South, and the idea is quite generally accepted by the people.

The same notion as to tobacco is quite prevalent among the tobacco growers, though among them, it does not seem to be so generally accepted, quite an element in the tobacco districts not favoring the plan.

The position of Up-to-Date Farming on the subject of reduced acreage is quite well known. While we claim the right for the farmers to control the output, as well as the price, we do not believe the time has yet arived which makes this heroic measure necessary. It is one that should be resorted to only after the necessity has been clearly demonstrated. So far as the tobacco interest concerned, we can do no better than to quote from a letter recently written by President Everitt on this subject to a tobacco grower in Kentucky:

"We have not said much in favor of decreased acreage in the official paper, because we do not believe in doing foolish things, and propcsing to carry out something that is impossible or impracticable. In the present stage of organization among the tobacco growers we feel that it would be very unwise to make any general attempt to reduce acreage, or to agitate this matter to a great extent.

"Besides it is very unwise to attempt to reduce the acreage of any crop before it is known that there is a surplus of that crop. As regards the tobacco crop, it could not be known that there is a surplus until after midsummer this year, or until next autumn. My understanding is, and it is backed by the government reports, that the 1904 crop was really below a normal or average crop. If this is the case, we may safely argue that there is not a surplus of tobacco ,and if the holders or growers will have due patience, they will dispose of their entire crop or holdings at the equitable price. Nothing can be more certain in human events than that this theory is correct.

"But suppose later it is found that there is a surplus. Nothing could be better for farmers than to hold a fourth or some other percentage of their crop over for a year. Such an act would be a display of sagacity we might expect of the up-to-date farmer. If later in this year it should develop that there is a surplus of tobacco of the 1904 crop, let this surplus be held over until next season, and if 1905 produces another surplus, the following year, 1906, will be the time to reduce the acreage to correspond with the known surplus. And by that time the tobacco growers will be so well organized that they can really and truly secure the reduction."

Much of the above applies with equal force to the coton situation. There is yet no proof of a surplus of cotton. Admit that the reported yield is correct (and we think there is every probability that it is too large), the demand for consumption is still problematical. That the needs were great at the beginning of the marketing of the crop of 1904 is conceded, because it was proven by the early buying, but just how great it still unknown, for the Government report and the slump in speculative prices naturally checked buying.

It is also admitted that consumption is on the increase, just how rapidly cannot be estimated by the usual rule of averages, because the general prosperity claimed for the country increases the buying power of the people to a greater extent, perhaps, than it has been increased in former years.

Therefore, let us waive the conceded possibility that the agitation to reduce acreage may result in an increase rather than a reduction, because the not over conscientious may plan to take advantage of those who reduce by increasing their own output so as to personally have a greater crop to market at the higher price which it is claimed the effort to reduce will bring about. It is admitted that this is a possibility under the meager organization as yet effected among the cotton growers.

But waiving all this, there is another feature in the cotton situation to which we have but very slightly referred heretofore, because we did not care to start that agitation. But at this stage we feel justified in referring to it.

While the Southern States of the American Union hold the vertual monopoly of cotton production that they have held since there was a general demand for that staple, and which the American cotton growers cannot now, or at any other time afford to surrender, they are under moral obligation to furnish the world with cotton, not at an unprofitable price, of course, nor at an exhorbitant one, but at a price equitable and fair to both producer and consumer. Whenever they fail to do that the world will be justified in seeking a supply elsewhere.

European and Asiatic manufacturers take full two thirds of the American crop. These manufacturing centers would be glad to get their supplies on their own side of the ocean, and for years have been agitating organized and even governmental effort to increase cotton production in Europe, Asia and Africa. These efforts have not met with very great success, it is true, but they have developed possibilities which should not be ignored. The reason why a vigorous prosecution has not led to greater results is that America has always stood ready with a supply at a reasonable price. This has neutralized the efforts at development on the other side of the sea and guaranteed the American planters their supremacy.

Let America once refuse to produce cotton, no matter on what account, but worse than all, with an avowed purpose to increase the price, the sympathy of the world will at once turn to the efforts to grow cotton in other lands, with the very greatest probability of success. Once success is achieved in those lands with their cheap surroundings, and the American states thus lose their supremacy, they can never regain it, because the real sympathy of two thirds of the milling consumption is with the other fields, which will, in fact, be their own fields. This is no scare-crow. We are but speaking the words of truth and soberness.

This is a risk the American states cannot afford to take until there is a known surplus; and that there is a surplus cannot be known until the remains of one crop laps over upon the first output of the succeeding one. In that case, Mr. Everitt's remarks concerning tobacco, quoted above, are entirely applicable to cotton.

Besides, as we see it, a reduction of crop is not the only way, not even the best way, to secure an equitable price. Far better that the grower have the cotton and be able to say: "Yes, gentlemen, we have an abundance of cotton to supply your and the world's needs, and it is freely at your service at our price, which is equitable and fair both to us and to you." The world's sympathy is then with the American grower, giving him a moral strength which cannot be overcome.

But let our position be understood. We do not contend that because a farmer cultivated 20 acres of tobacco or 50 acres of cotton in 1904 he must do the same in 1905. Not at all. If a farmer believes he can do better in 1905, or any other year, by leaving off cotton or tobacco, or by cultivating less of these crops, and more of something else, let him do so; he would not be a free man else. This paper is an earnest advocate of diversified farming. It is difficult for a northern farmer to conceive of a farm on which only one crop is grown. Our southern breathren would undoubtedly do better to grow crops for home consumption. If to do that they must cut out a portion of their usual cotton or tobacco crop, do so by all means. We can think of no more cheerless life than the eternal grind on a single crop. Then consider the brain-racking doubt and uncertainty connected with it! When but one crop is grown, a failure of the crop is a failure of all, low prices for the crop is low prices for all. The farmer cannot be independent whose whole dependence is a single crop, we care not how certain or attractive that crop may be. So, you see, it is the organized, specific reduction of the acreage of a staple crop, whose wisdom we question, and not such reduction as may be necessary to let in diversified farming. In the latter case there is no question but the supply of the staple will be continued, the world's approval secured and the farmer, himself, be put in better shape to take care of the crop and compel the equitable price.

"They Will Get What They Are After"

Ex-governor Van Sant, of Minnesota, has faith in the power and influence of the farmers, and he is not at all averse to the accomplishment of their purposes in securing reforms to lead to a betterment of their condition. The following is reported as the sentiment of an address recently delivered by him before the Corn Belt Meat Producers' Association, an organization in the northwest:

"If the farmers and feeders of the State of Iowa and the corn belt get together on the railroad proposition, or any other abuses that they may desire remedied, they are destined to get what they are after."

Such words are fittingly spoken by those who have been elevated to high places by farming people, but so many forget the lever that raised them. Well done, Gov. Van Sant. Put your shoulder to the wheel and help the farmers on, as they have put their shoulders to the wheel and helped you on.

THE GRANGE AND ITS SNOBS

NEW YORK STATE GRANGE SO AFFLICTED

The Patrons of Husbandry, more familiarly known as "The Grange," was the pioneer of farm organizations, and every subsequent organization of farmers, no matter for what purpose, is indebted to the Grange, at least for having blazed the way. The Grange, too, has accomplished much. The first agitation for the legal control of railroad rates was a Grange movement, and the laws enacted as a result thereof were universally known as Granger laws. So of Rural Free Delivery of the mail. This was advocated for years by the Grange before its possibility was admitted in official and law-making circles. As an uplifting influence and a promotor of progress and sociability among the rural population, the Grange has set the pace for all other rural organizations, and as such it merits full mead of praise.

It is still a power for good in many lines, but in many quarters it manifests the conservatism and pettishness of age. It is but a repetition of history that old organizations will neither meet nor accept new conditions. This seems to be eminently the case with the Grange, but we cannot treat this phase of the situation so well as it is treated in this issue of Up-to-Date Farming by Mr. J. B. Whiting, past lecturer of the State Grange, in a letter written to the present Master of the New York State Grange. See page 21.

The trouble is, the very best human institutions become at times burdened with snobs, and the New York State Grange happens to be in that condition now.

The American Society of Equity was born of conditions entirely unknown at the time of the birth of the Grange. In the later years the farmers' chief oppressor, the absorber of his profits, in many cases of his products, was the giant combines effected to exploit the products of farm labor, by speculation and gambling in prices, resulting in the most shameless spolition and veritable plunder. The A. S. of E. came into existence to rescue the farmer from these shameless wrongs, by reclaiming for him the right through organization, co-operation and controlled marketing, to place a price upon his own property, the product of his hands, a right the world never thinks of denying to any other class of producers or manufacturers. At the request of prominent members of the Grange the National Union of the A. S. of E. sought to take this matter up with that organization and, if possible, secure its co-operation. But no emisary of the A. S. of E. was sent into the Grange. On the contrary, one of its own most honored and trusted members was commissioned to take it up with the State Grange of New York, no less a personage than Mr. J. B. Whiting, past lecturer of the State Grange, and still an honored member. What he has done for the Grange and his standing therein, may be gathered from the following, which, accompanied by Mr. Whiting's picture, we clip from the American Agriculturist:

" A prominent and well known patron is J. B. Whiting ,of Seneca county. He was elected lecturer of the State Grange in 1882, which position he held for eight years. He was general deputy from 1890-3. Mr. Whiting holds the banner record of having organized over 200 granges in 19 counties. This is a record of which he can well feel proud. It is doubtful whether it can or ever will be equaled by an individual patron of the Empire State. In 1881, when the State Grange met at Utica, Mr. Whiting was general deputy. The grange had then a cash balance in the treasury of $665.13, with a debt hanging over the organization largely in excess of this amount. Twelve years later, when the state meeting was held at the same place, the account showed a balance, with all debts paid, of $12,995.35. This was due largely to the results of the missionary work done by this enterprising patron."

J. B. WHITING

The reception this venerable man received at the hands of Master Norris is best told in his own words in his report to the National Union of the A. S. of E., February 12, 1905:

"That I was unable to accomplish what we desired, you will readily see after you have read State Master Norris' annual address. He would not even give me an audience, nor admit that he had received any communication from you whatever. Therefore any explanation on my part was impossible, while he endeavored to intensify his prejudices and make them general with the entire membership. Mr. George A. Fuller, of Philadelphia, N. Y., who occupies second place as an official in the New York State Grange, showed me every courtesy, and listened with attention to an explanation of the workings of the A. S. of E., and expressed himself heartily in sympathy with the movement."

Mr. Norris's reference to the A. S. of E. is as follows:

"There is a society 'who' claims a head center at Indianapolis, Indiana, known by the name of the American Society of Equity of N. A. This society is evidently intended to take the place of the Farmers' Alliance, which is nearly defunct. Its aim is to organize the farmers into unions, to co-operate along lines of trade. I am not going to criticise their motive, but I do not think the members of the Grange should become involved in their work. The Grange can and will do for its members all that any society can do, and we believe that we are caring for our members in a conservative manner, that is proving advantageous and safe to all concerned.

"It is much easier for societies to organize on paper and talk of what they can do than to put their organization into practical working form. The old motto, 'Let well enough alone' is a good one, and every member of the Grange can well afford to let it be their guiding star."

One would naturally expect some official dignity in a Master of a State Grange, but of course not in a snob. A man that would even refuse to talk with one of the most venerable and venerated members of his own order, would not be expected to display much dignity or courtesy toward other organizations. In the first place, if he knew anything about the A. S. of E., (and he did, for he had been communicated with from headquarters), he knew that this Society did not only "claim" but that it had headquarters at Indianapolis; he knew that it was not intended to take the place of the Alliance; he knew that its aim was to secure profitable prices for farm products, not merely to co-operate along lines of trade. If he did not know he should not have dishonored his great society by putting his declarations in the positive form as though he did know what he did not know.

We honor the Grange, and we suppose it is not responsible for its snobs, only as it elevates them to official position, but we wish to call its members attention to one assurance their State Master gives them, that it will care for them in "a conservative manner that is proving advantageous and safe to all concerned." The most important thing now before the farmer is the pricing of his products, and so long as they are denied the privilege of even considering this question in their organization, they are evidently proceeding in a manner entirely safe to the speculative price makers who are robbing them as no people were ever robbed before, but we suppose Mr. Norris regards this as "well enough," and should be "let alone."

That is exactly what every trust, combination, speculator and exploiter in American would say.

To prove that the better sentiment of the Grange is in harmony with the A. S. of E. and its purposes, we could publish many very kindly letters; but we need only to refer to Mr. Whiting's letter to Mr. Norris published elsewhere, and to the following excellent letter from that venerable patron, Mr. W. T. Hildrup, who was a charter member of the second Grange ever organized:

Raleigh, N. C., Jan. 30, 1905.

Mr. J. A. Everitt, Indianapolis, Ind.:

Dear Sir—Enclosed please find $1 for membership in the American Society of Equity, including one year's subscription to Up-to-Date Farming. I see in your movement the possibilities of great good to the farmer, if heartily taken hold of and put to work with ordinary business sense.

I have seen in my lifetime of 83 years so great results from very humble beginnings that I predict large good from your efforts. I feel I ought to give you the aid of my subscription, being probably the oldest (for the longest time) Granger in our country .

During the fifties William Saunders, now deceased, being then in charge of the national experimental garden in Washington, in connection with some friends, originated the grange movement, and organized the first Grange. An associate started out to organize granges, Mr. Saunders having several acquaintances, made through association at agricultural and pomological societies at Harrisburg, Pa., sent him there to organize the first Grange next to the parent Grange. I, with some eight others, joined that Grange, and I am now the only living member. This impresses me that I ought to be a member of your society ,and give it hearty approval. There is great business merit in it. That, and the able manner in which you are presenting it ought to make an instrument of great usefulness.

Very truly yours, W. T. HILDRUP.

With this we may very well dismiss Brother Norris, and "leave him alone in his glory."

Be Sure to Send Your Renewal this Month

Wonderful things will be done for farmers this year and Up-to-Date Farming will announce them.

Encouragement for Bean Holders

We clip the folowing from a leading market paper:

In view of the rapidity with which bean prices in this market have been mounting upward the past week the following statistics, compiled from official sources by one of the largest bean handling houses in New York, not only make interesting reading, but would seem to indicate the source of the market's strength.

The Michigan crop for 1904 was approximately 575,000 bushels less than for 1903, the total production having been 3,000,000 bushels and 3,575,000 bushels, respectively, or a shortage of about 22 per cent. There are 105 active shippers of beans in this State. Reports from 88 shippers made the average yield for 1903 15.42 bushels, and for 1904 12.1 bushels. For the same years the New York crop showed a shortage last year of 44½ per cent. Wisconsin raises very few beans, but the crop last year was 10 to 15 per cent. less than for 1903. California is recognized as a bean-producing State, and harvested last year not over 95 per cent. of the previous year and 33-1-3 per cent. of these were so badly damaged by weather during harvest as to make them practically unfit for commercial purposes. The Canadian crop was 20 per cent. less than in 1903, and 75 per cent. of the crop has already been shipped out, the remainder being required for home consumption. Last year over 200,000 bushels of beans were imported into this country from Canada. Lastly, the bean crop of Europe last year was practically a failure, and there are to-day not to exceed 10 carload of foreign beans in American bonded warehouses, as against 400 carloads in February, 1904.

Summarizing, there was a total shortage of bean supplies in 1904-5 of 25 per cent., with less than one-third of the 1904 crop left in the country. Prices on February 1 were 20 per cent. lower than in 1904, and consumption is equal to or greater than it was a year ago. In view of the above showing a prediction of higher prices is superfluous.

In addition to the above we have from a private reliable commercial source the following additional faces:

The 1904 bean crop of the United States was from 20 to 25 per cent. below the crop of any of the last five years, and the New York prices at the first of each of those years was: 1900, $2 per bushel; 1901, $2.17½; 1902, $2; 1903, $2.35; 1904, $2.05; while at the first of 1905, with a less supply than at any of the other years, the price was only $1.75—an abnormally low supply and an abnormally low price.

We are assured from the same source that the 1904 bean crop in Europe was a practical failure, and that the bulk of the Canadian crop has been already exported through American ports to France, England and Germany, and Canada now has little more than sufficient for her own provinces.

There are not now, says our informant, 3,000 sacks of foreign beans in the United States, whereas at the same time for the past three years the bonded warehouses of Atlantic ports contained thousands of sacks. The stock of foreign beans in New York warehouses, February 15, 1904, was nearly 100,000 sacks. Present low prices, says the authority we are quoting, are caused by liberal sales by the growers who accept such prices, a ringing endorsement of the A. S. of E. doctrine of controlled marketing, for, if the growers had not sold they would easily have got the minimum price, and those who are holding are sure of their reward.

Minimum Price for Next Wheat Crop

The following very excellent letter from a Kansas farmer, shows a keen insight into market conditions with a clear sense of what injures farmers and what is necessary to secure for their products equitable prices:

Mr. J. A. Everitt, President:

I deem it advisable that our order determine a minimum price for the 1905 crop of wheat earlier than it was determined last year, for the reason that Kansas and Oklahoma thresh a large portion of their wheat from the shock, and dump it on the market. We are in the southern wheat belt, and that is our principal crop. The speculators depend upon us to "bear" the market, as is evidenced by Chicago futures. There would not be a difference of 20 cents in cash wheat, and July futures if we in the Southern wheat belt were not depended upon to sustain the "bears" by dumping our wheat from the shock. We are considered an easy prey, and we hurry to market our wheat before the drop comes, for under old conditions we know it will come, not because the demand is supplied, but because it is known that we can be depended upon to supply the wheat at their price, and why should they pay more?

This is not all. We thus "bear" the future market by sustaining the speculative price, and all futures are

borne down until the bulk of the wheat is in the hands of the speculator or the mills.

I fear we are not sufficiently organized out here, nor that enough read Up-to-Date to do much, but it is worth an effort, and we will do what we can. Our wheat is in good condition except late sowing, much of which is not up yet. We have had the coldest winter we ever knew, but wheat has been well protected by snow.—John Myrtle, Arkansas City, Kan.

We thank Mr. Myrtle for that very sensible letter and assure him and the farmers of the southern wheat belt, that while it will be sometime before the National Union can have sufficient data upon which to base a minimum price for the crop of 1905, we know enough to say that, no matter how large the crop, the minimum price will not be below $1 per bushel based upon the Chicago market, and not a grain should be sold for less than a price so based. Should the crop prove short the minimum will be higher, and it will be announced as soon as reliable data is obtainable Meanwhile we urge the growers to stand for their rights.

An Empire Within a Republic

The Standard Oil corporation is little less than an empire within the Republic of the United States. It exercises the governmental functions of a despotism. In a nation whose corner stone is freedom, it rules with the iron hand of a tyrant. Where the spirit of the government is equality before the law, it knows neither law nor equality. Where individual effort is thought to be abridged it absolutely destroys individual effort, ignores the ordinary citizen's means of communication, monopolizes one of God's most universally used gifts to man and, without form of law and in defiance of law, taxes citizens of the republic to pay its beneficiaries and to recoup its losses.

This a strong arraignment, but public information is at fault if it is not a true one. In a recent issue of Up-to-Date Farming we gave the Standard Oil's method of making prices, substantiated by official documents. We are now enabled to give from undisputed dispatches in the public press, its method of conducting its business, privately, safely and aribtrarily, so that those whom it plunders may not know what it does nor how it does it—a veritable empire within a republic. We give in full from the public press the following account of the Standard Oil's telegraph system:

The telegraph wires of the Standard Oil Company follow the pipe line and the man at the pumping station in Caney or Bartlesville or Cleveland, O. T., can sit at his table and get his orders direct from the big building at 26 Broadway, New York. The message does not pass through the hands of a single Western Union or Postal telegraph operator. Every hand that touches it is a Standard Oil hand; every key which clicks it off is a Standard Oil key, and every wire which carries it is a Standard Oil wire. That is why there are so few leaks in things concerning the Standard. It trusts its own employes implicity. It will not hire a man it can not trust, but trusts nobody else in the handling of its business.

WIRES FROM KANSAS CITY.

The Standard has in service more than 30,000 miles of wires in the United States. There are four wires from New York to Chicago. There are wires from the big refinery at Bayonne, N. J., to New York, and there are wires from all the Pennsylvania towns, such as Titusville, Bradford, Pittsburg, Harrisburg, to New York. There are also wires to and from Cleveland, O., Lima, Findlay and all the Ohio oil and gas towns. There are two wires from Kansas City to Chicago and one wire from Kansas City south through Humboldt, Chanute, Cherryvale, Independence, Coffeyville, Caney, Peru, Sedan; Bartlesville, Muskogee and Cleveland, O. T. Wherever the Standard builds a pipe line the wire goes. When it established a pumping station in Paola, a short time ago, the telegraph wire began ticking when the pumps began chugging. When the pipe line reached Cleveland the wire was there to tell about it.

HAS ONE THOUSAND OFFICES.

One of the wire men of the Standard, talking the day the station was established in Paola, said that the Standard owns all its 30,000 miles of telegraph wire. He called attention to the fact that all of the cities east of the Mississippi are reached by the wire and that the system is spreading into the West. He was speculating on what would happen if the Standard should ever take a notion to give the Western Union and the Postal a whirl. He said:

"The Standard has more than 1,000 offices of its own already working ,and its operators are all of the highest class. Whenever you find a Standard operator you find a crackerjack. It does not hire any other kind."

This telegraph system has enabled the Standard in the past, and enables it now, to transmit correspondence almost solely by wire when the occasion demands, and keep the contents of the message as close as if they went by mail. It is this secrecy which makes every movement of the Standard a mystery. No Standard employe ever tells. He reports promptly, however, and frequently a conversation on the streets of Chanute at night is on the desk of the head of the proper department in New York before breakfast the next morning. The telegraph service is conducted so quietly that not one in ten persons, even in the oil fields, knows how extensive it is. The line does not follow the railroad right-of-way, but the right-of-way of the pipe line.

Saying nothing of the facility with which such a power, controlling a necessary article of constant use, may plunder the people, is it safe for a republic that such a power be built up and exercised within it?

In Clinton County, Mich., not long since, as we are told by the public press, Verna Stowell, of St. John, was severely burned by an explosion of kerosene which contained an excess of gasoline. Her father, who was also severely burned, brought suit for damages against the Standard Oil Company, and recovered $2,000. Instead of paying the judgment, as an ordinary citizen would have had to do, the Standard appealed the case and added a cent per gallon to the price of oil in Clinton County to pay the expenses of the suit and make good its losses!

But why did not the people of Clinton County refuse to buy the oil and patronize some one else? There is no one else to patronize. No matter where they buy, it is Standard Oil. In the grasp of such a monopoly the people are helpless, and this incident is but a sample of what might be done every day, and is done, in spite of law, order, and reason. Should a Standard Oil magnate wish to make an investment, to go on a journey, to risk a few millions in a game of chance, or should he meet a series of losses, a few cents added to the price of oil, and the free people of the United States promptly furnish the means! Not a monarch of the old world would dare thus to tax his most enslaved subjects!

The State of Kansas has stepped to the front, and proposes to measure swords with the Standard Oil. Kansas has rich oil fields, and because the Standard could not control them as it wished, it proposed to drive them out of business by discrimination. The Legislature of the State enacted a law carrying an appropriation for a State refinery, and proposes to furnish its people with oil independent of the Standard. The rest of the country will watch the effort with keen interest.

We call attention to these things as an important matter of education, and because they emphasize the necessity for the farmers to organize. The rural people suffer most and are most helpless before such a power, when they act as individuals as they have through all the years. But organized so that they may speak with one voice, even the Standard Oil Company, the beef trust, the private car lines and the railroad combines, as well as the speculative price makers, may be compelled to hear them. Or if these still remain deaf, the State and National Governments, whose administrators are dependent upon the votes of the people, must hear and heed.

A Question of Policy

It seems that the annual agricultural appropriation bill, passed some time ago by the House, carries an appropriation of $204,660 for an increased development of the tobacco industry. This seems like a large amount of public money to be devoted to this special purpose. If it is to benefit the tobacco growers, and will really do so, then we are inclined to withhold any criticism that might still be justified. But it seems to us this line of policy on the part of Congress and the Department of Agriculture is decidedly questionable. If the object is anything beyond the expenditure of two hundred thousand dollars, it is an increase of tobacco production—the improvement of culture in regions where it is now grown and the opening up to that plant of districts that do not now produce it, even extending to "Cuba, Sumatra and other tobacco producing countries."

In view of the fact that American tobacco growers are even now suffering from what the buyers call an over-production, and that they are compelled to organize to get a living price for what they produce now, a part of their avowed purpose being a decrease of acreage and production to save them from the over-production with which the buyers taunt them,, an expenditure of public money to secure an increased production seems directly contrary to the best interests of the growers. Indeed this entire line of policy is of very doubtful benefit to those who need relief, and who pay their proportion of the money thus expended.

Whenever the growers produce a crop, whether large or small, the tobacco trust stands with open hands and insatiable maw to gather it in at the lowest price they can force the helpless producers to take. When Providence is kind and the season proves favorable, and a large crop is produced, the trust is then in its glory, the crop liar is in full feather, and over-production is sung from A to Z in every tobacco district in the Union. The growers have felt themselves helpless under such conditions, and have been compelled to accept whatever price the agents of the trust have offered.

Since increased production is the harvest of the tobacco trust and the distress signal for the growers, who is most benefited by the efforts of the Department of Agriculture to increase production? Evidently the trust, and not the grower. Yet it is not the trust's money that is used to secure this increased development, but the money of the people.

The Department of Agriculture should look at this side of its work, and so direct its efforts as to enable the grower to secure better prices. We take it that the Department is honestly desirous of increasing the income of the producers. If so, an increase of price, or the assurance of a reasonable price, is far more important than an increase of the crop. To increase the crop and leave the price-making in the hands of a selfish combination of buyers is to give the increase to the trust, and leave the producers in a worse condition than they were before.

And this is not true of the tobacco crop only, but of all the crops whose prices are made by a purchasing combine. We once more appeal to the Department of Agriculture to consider this phase of the question.

A Suggestion

Preachers, lawyers, doctors, merchants, bankers —all approve of the A. S. of E. when they understand it, because it is right, just, reasonable, equitable and progressive.

Former farm organizations may have been somewhat prejudiced against these classes, and, as a very natural result, these classes may have been somewhat prejudiced against the former attempts at organization. There is no occasion for prejudice on either side, and it would not be there if each understood the other and knew that our purpose is for each to attend to his own business. With the classes we have named favorable to and supporting the farmers' organization, what an obstruction would be removed, and what a power would be added to the organization!

To this end we would be glad if every preacher, every lawyer, every doctor, every merchant and every banker in the United States could be induced to read The Third Power and Up-to-Date Farming. We would be glad to send these publications to them, but taking into account the vast amount of missionary matter we are constantly sending out free, we cannot do it entirely at our expense; but the organized farmers in their local unions could contribute to this purpose and never feel the cost. If any local union or individual member will order The Third Power on the coupon plan sent to any preacher, lawyer, doctor, merchant or banker, we will send it direct from this office and inscribe within the book the fact that it is a present from the local union or person ordering it, with their compliments, and a request that the person receiving it give it a careful reading. In case of persons or local unions thus ordering Up-to-Date Farming sent to such persons one year, the publisher will accept 25 cents for six months' subscription, and he will send it the other six months free. We make this suggestion not because these people are not able to pay for their reading matter, for they are, and more so than are the farmers, but we want to convert them into powerful friends of the farmers' movement to secure better prices for farm products, and it will pay the farmers to help us do it. Be sure to give plainly the name and address to whom the book or paper is to be sent; also his calling or profession, and the name and address of the person or local union ordering it.

Those premium offiers! Did a people ever before have such a chance to get something for nothing? Those grand novelty seeds given with a subscription! Those beautiful roses given with a subscription! Those trial potato tubers, embodying the chance of a fortune in the development of a new potato, given with a subscription! Of course only one premium can go with a subscription, but each of Our People may get them all by renewing in advance, or by getting new subscribers. You will get the premiums, we will get the subscribers and the public will get Up-to-Date and lessons worth more to farmers than all the papers they ever read. March is the time to push it. See great offers in our great March 1st issue.

Two years of Education farmers have had. The future is for consolidation and business, and Up-to-Date Farming will lead you.

No Drawback After All

Reports from Washington are to the effect that the Senate has overruled the decision of the Attorney General concerning a drawback of the tariff paid by northwestern millers on imported Canadian wheat. It seems now that those who import wheat into the United States in competition with wheat grown in this country, must pay the tariff, and that it must stay paid. The wheat growers only ask to be treated as others who are protected by a tariff are treated. If the tariff that protects them is to be returned under conditions, let the tariffs that protect others be likewise returned. Fortunately the Senate took this view of the matter, and overruled Mr. Moody.

Millions Know

That Liquozone Does What Medicine Cannot Do. A 50c Bottle Free

There are at least three million homes in America which know from experience the value of Liquozone. Some of those homes use it simply to keep well, as we do. But tens of thousands have lives that were saved by it.

Yet some remain sick with a germ disease while all of those millions know that Liquozone cures. Some still cling to drugs for what drugs never can do. They are wronging themselves. Their own friends—their own neighbors—can tell them the way to get well.

We ask those sick ones to write us. We will buy for each one the first bottle of Liquozone, and pay the druggist ourselves for it. Each is welcome to try it at our expense, then let the results decide about using it afterwards.

Don't try to kill inside germs with drugs, for you cannot. Don't cling blindly to old methods of treatment, used before germs were discovered. Let us prove what this new way means to you.

Not Medicine.

Liquozone is not made, like medicine, by compounding acids and drugs; nor is there any alcohol in it. Its virtues are derived solely from gas, made in large part from the best oxygen producers. The process of making takes 14 days, and requires immense apparatus. At the end of two weeks, we get one cubic inch of Liquozone for each 1,250 cubic inches of gas used. The attainment of this product has, for more than twenty years, been the constant subject of scientific and chemical research.

The main result is, to get into a liquid, and thus into the blood, a powerful, yet harmless germicide. And the product is so helpful—so good for you under any condition—that even a well person feels its instant benefit.

This is the product which in the past two years has sprung into worldwide use in the treatment of germ diseases. It is now used by the sick of nine nations; by physicians and hospitals everywhere. It is daily used in millions of homes in America.

We Paid $100,000.

For the American rights to Liquozone and the rights to other countries have sold for proportionate sums. We mention this fact to indicate the value of Liquozone—the value to you. Men have never before paid such a price for any discovery used in the cure of sickness.

We need not tell you that we proved Liquozone well before buying it. For years it was tested through physicians and hospitals, in this country and others. It was employed in every stage of every germ disease; in all the most difficult cases obtainable. With thousands of sick ones, considered incurable, we proved that it did what medicine could not do. Then, and then only, did we pay the price.

Since then we have spent nearly $2,000,000 to make Liquozone known. We have bought the first bottle and given it free to every sick one we learned of. These people told others, and the others told others. The result is that Liquozone is now more widely employed than any medicine ever was. And no one can doubt that it is doing more for sick humanity than all the drugs in use combined.

Kills Inside Germs.

The greatest value of Liquozone lies in the fact that it kills germs in the body without killing the tissues, too. And no man knows another way to do it. Any drug that kills germs is a poison, and it cannot be taken internally. For that reason, medicine is almost helpless in any germ disease.

Liquozone is a germicide so certain that we publish on every bottle an offer of $1,000 for a disease germ that it cannot kill. Yet it is not only harmless but of wonderful benefit—better than anything else in the world for you. No one is so well that he cannot be helped by it.

The reason is that germs are vegetables; and Liquozone—like an excess of oxygen—is deadly to vegetal matter. To the human body Liquozone is exhilarating, vitalizing, purifying—the most needful, the most helpful thing possible. But to germs it is certain destruction; and these facts are true of nothing else in existence.

Germ Diseases

These are the known germ diseases; all due to germs or to the poisons which germs create. These are the diseases to which medicine does not apply, for drugs cannot kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding Nature to overcome the germs. But those results are indirect and uncertain, depending on the patient's condition. A cure is always doubtful when drugs are used, and some of these diseases medicine never cures.

Liquozone alone can destroy the cause of these troubles. It goes wherever the blood goes, so that no germ can escape it. The results are almost inevitable. Diseases which have resisted medicine for years yield at once to Liquozone "Incurable" diseases are cured by it. In any stage of any disease in this list the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anæmia	Leucorrhea
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Piles—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goitre—Gout	Varicocele
Gonorrhea—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer accomplishing what no drugs can do.

One Full-Size Bottle Free.

If you need Liquozone, and have never tried it, we ask you to send us the coupon below. We will then send you an order on a local druggist for a 50c bottle, and will pay the druggist ourselves for it.

We have already done this with 2,000,000 people, and it has cost us over one million dollars to announce and fulfill the offer. Don't you realize that a product must have wonderful merit when we spend $2,000,000 just to let the sick try it?

That is our only method of making Liquozone known. We publish no testimonials; we tell you of none it has cured; we use no physician's endorsement. We prefer to ask you to try it, at our expense. Then judge for yourself what it does.

If you have already used Liquozone, this offer, of course, does not apply to you. But if you have not used it—if you don't know its results—please send us this coupon to-day. Do that in justice to yourself. The acceptance of this offer places you under no obligations; and it will introduce to you a product better than anything else in the world for you.

Liquozone costs 50c and $1.

CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to The Liquozone Co., 458-464 Wabash Ave., Chicago.

My disease is .....

I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

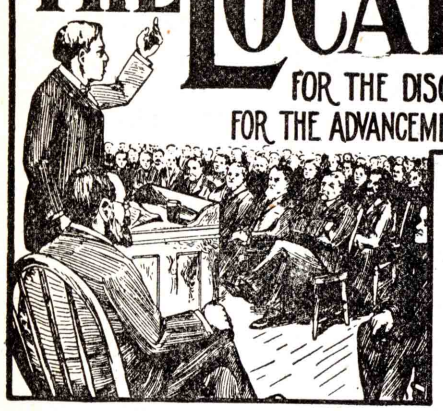
M 115—3 Give full address—write plainly

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

THE LOCAL UNION



FOR THE DISCUSSION OF ALL FARM PROBLEMS FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc. It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Mr. Whiting is making his influence felt in New ork.

The bean growers are reaping the benefits of organization.

In 1905 farmers will come to the front, never more to be put in the rear.

Cotton is holding its own, and so are the growers of it.

Note the article concerning the bean market in another place in this paper, and hold your beans for the minimum price at least.

Help one another. Be fraternal. This is the spirit of co operation and equity, and it is the spirit of Christian fellowship.

Local unions can organize other local unions easier and cheaper than organizers can. See to it that a new local is organized at every point where one is possible.

Business Exchange

We have many inquiries from subscribers about where to find good markets for their surplus and from others where to buy this or that. To all we will say, try the "Business Exchange" columns. It is maintained for just this purpose.

Uncle Threadbare thinks it would not pay him to advertise in our Business Exchange. Perhaps not; his stuff is not the kind Our People want—the best.

But the Thrifties advertise in it. That's why it has grown to be such a big thing already. Costs little; brings business.

"Successsful Agriculture," a magazine published at Bandon, Manitoba, Canada, in asking Up-to Date to exchange, says: "We know full well the value of a publication such as yours as an exchange."

Mr. C. O. Drayton, of Greenville, Ill., Vice President for the state, wishes to help organize every county in that state where three or four locals have been organized, and set them to work to organize their counties.

Much inevitably depends upon the local unions . They are the connecting link between headquarters and the public, and we must look upon them as the means of gathering the people in and making the organization solid.

Mr. Everitt undoubtedly did a great thing for agriculture in getting out that new edition of The Third Power, and putting it at a price so remarkably low. What can we say to induce each member to get a copy while they may be had at so low a price?

The price of the new third edition "Third Power" book, 320 pages, in cloth cover, is $1.00. It is worth more to any farmer than the best agricultural college education he can get, but we will send you a copy, postpaid, for only 25 cents. See coupons in this paper.

A responsibility rests upon deputies. They are the John the Baptist of this movement, the forerunners of great things. Their opportunities are great, and theirs will be the honors of accomplishment. But suppose they are sluggards and lagards? They must not be.

Have you sent your renewal of subscription? If you are not a member of the A. S. of E. make the remittance, $1.00, and become a full member. You will value the members manual badge, etc., and besides your money will help us to carry the work forward for other members. Don't put off your renewal any longer.

"Music hath charms," etc. There is in press a beautiful Equity Song Book, words and music, that will be out in a few days. Set the young folks to singing, and you old folks help them. Sing the truth as well as talk it, read it, and speak it. Price 25 cents per copy, $2.40 per dozen by mail postage paid.

Are you pulling for the 20-thousand March push? Read Mr. Whiting's letter to the Master of the New York State Grange, and you will see that what is done the A. S. of E. and Up-to-Date must do. The other people will not help. Give us the new 20-thousand for March. The first half of the month has done a little more than its part. Swing in with the last half.

"If supply and demand were not interfered with," says Farm and Ranch, "the farmers of this country would be more independent than any other class of people on earth." Sure, but under the old system of marketing supply and demand cuts no figure in price-making, and no people can be independent in a country where others may price their property and take it.

Why not each member take a sheet of those coupons, and clip and distribute the coupons among the neighbors, urging each to send for a book. Every farmer who has The Third Power has the means of becoming posted on every phase of the price-making question, so that he may readily answer every argument that may be urged against it.

In the proceedings of the local unions cultivate parliamentary practices . Farmers are not expected to move off with the precision of legislative bodies, but they can observe the simpler rules of decorum and make constant advancement. Some of the strictest parliamentary meetings we ever enjoyed were meetings of farmers.

Let us still urge local unions to keep up this agitation. The firm establishment of farm price-making of agricultural products would remove every element of doubt from farming as a business, and it would make every other business steady and successful. The stake we are playing for is a great one, and it is surprising that anybody should play against it.

We are informed that an Ohio Farmers' Institute manager ruled recently that it was contrary to the laws of Ohio for farmers to discuss the price and marketing of farm products in a farmers' institute. What do you think of that? We may have something more to say on this subject in a future issue. Some institute claims are bidding strong for a shake-up, and they don't all live in Ohio either.

We must still urge the local unions to meet regularly. Make the meetings interesting. Have good programs, and induce every member to speak. Farmers are natural orators; that is, they can tell what they believe, in plain, common words, it may be, but in words the people understand. All they need is practice and development, and it is a part of the work of the local unions to develop them.

The sale of The Third Power average over 250 daily and is increasing. Wherever it goes, new minds are created in farmers and their families. No mortal man can accurately estimate the influence this great work will have on future agriculture and throughout the world.

SUBSCRIBE now. RENEW now. Up to-Date Farming will be a power in 1905.

I think Up-to-Date Farming is published for a mighty good cause. I am with you heart and soul and glory in your spunk. You are on the right road now, and if you arrive at your intended destiny you will be the greatest benefactor of all time.—SILAS MORIN, Orleans, Neb.

DO YOU WANT CASH

If you want Cash for your Farm, Home or Business . . . . . I CAN GET IT
No matter where your property is located or what it is worth

If I did not have the ability and facilities for promptly disposing of your property at a good price, I could not afford to spend $100,000 a year in advertising that I can do so.

Every one of my advertisements places on my list a number of new properties. I quickly sell them, and so am able to pay for the advertisement and make a good profit besides.

My office is a veritable clearing house for real estate and properties of all kinds and my whole energies are centered on finding people who want cash for their real estate or real estate for their cash.

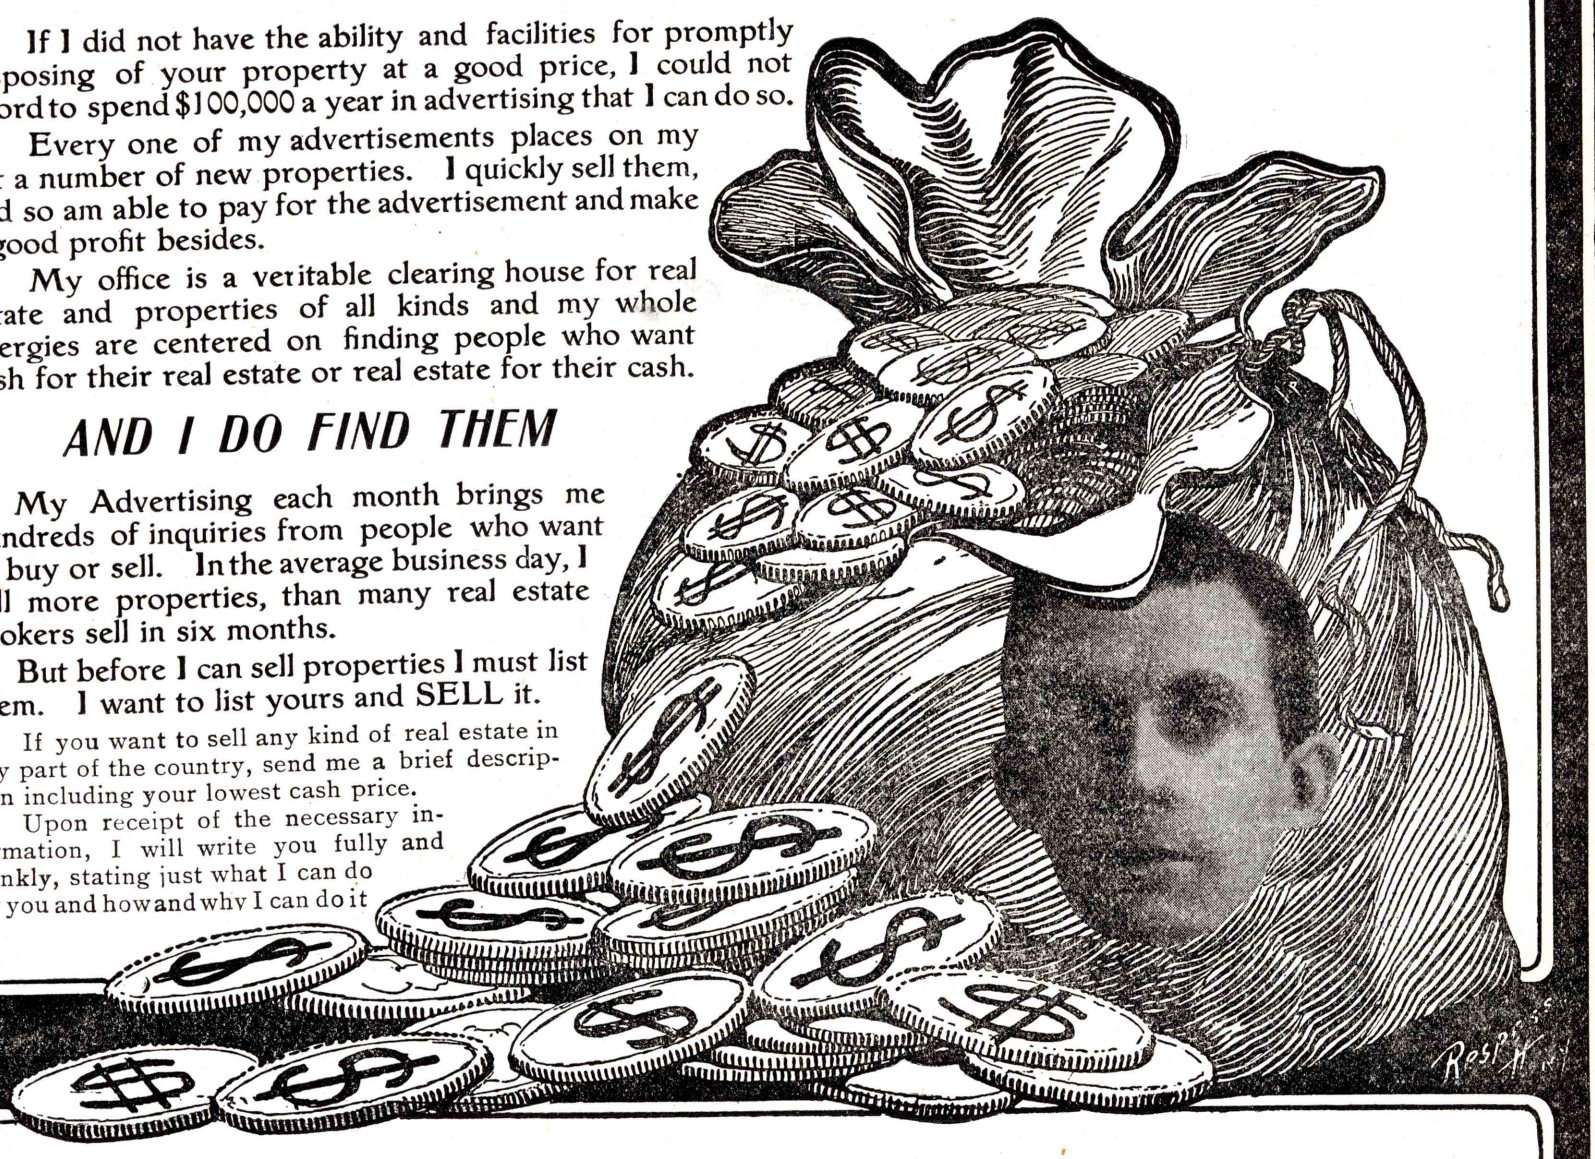
AND I DO FIND THEM

My Advertising each month brings me hundreds of inquiries from people who want to buy or sell. In the average business day, I sell more properties, than many real estate brokers sell in six months.

But before I can sell properties I must list them. I want to list yours and SELL it.

If you want to sell any kind of real estate in any part of the country, send me a brief description including your lowest cash price.

Upon receipt of the necessary information, I will write you fully and frankly, stating just what I can do for you and how and why I can do it



If you want to buy any kind of a farm, home or business in any part of the country, tell me your requirements, I will guarantee to fill them promptly.

THE LOCAL AT THE CROSSING

We had some fun at our last meeting. Sue Lambert recited "Der Dumper," that was printed in March 1st Up-to-Date, and the way she twisted her tongue around those half Dutch words would have tickled a calf. Sue is a good girl, and she speaks pieces well.

* * *

Bill Smith has gone up north.

* * *

Daddy Oakley was on hand again. He says he missed many good things by not joining the society sooner, and he declares he likes these "dinged meetin's because they are real farmer meetin's, and not run by lawyers and sich outen town."

* * *

Pat Murphy talks of moving south. He got a finger frosted during the blizzard, and he says he wants to get to "a warmer counthry." Jim Denny, in his long, drawling way, reminded him that if he'd wait and didn't mend he'd get to a place by and by that would be warm enough, even for an Irishman.

"Not till you've got there and cooled it off!" replied Pat, and the President pounded on the desk for order.

* * *

George Bowers—Mr. President, I've been thinking lately of the vast work that has been done within the last two years by this society. There has been wrought a veritable revolution in public thought on the subject of farm price-making and marketing. Two years ago everybody thought it an impossibility, and felt that it was foolish, if not wicked, to discuss it. Now every one who has studied the question knows it can be done, and that organization and controlled marketing will accomplish it. And that the good resulting from it will be shared by all classes. But there are still many who have not studied it. How can we induce them to do so? How do the railroads do when they wish the people to study any particular phase of their business? They circulate literature. How do the manufacturers do when they wish to induce the people to buy their implements? They circulate all sorts of dodgers, posters, pamphlets and circulars. How do the political parties do in campaigns when they wish to get the people to vote for their candidates? They circulate documents by the car load.

We must learn something from these people. I have been reading the new edition of The Third Power. It is the most convincing document that was ever circulated for any purpose. Besides the solid argument of the first edition, it contains some of the very best articles that have been printed in Up-to-Date, and whoever has it needs nothing else to enable him to down every opponent of our movement.

I would like, Mr. President, for the Treasurer to tell us how much money there is at present in our local treasury.

The Treasurer—$7.85.

George Bowers—Then, Mr. President, I move that $4.50 be appropriated to the purchase of 25 copies of The Third Power, and that, when they are received, they be sold at the regular price, 25 cents per copy—and that the money received for them be again turned into the treasury. In this way we shall lose nothing and do some good missionary work.

Joe Riley seconded the motion, and said that after the money was back into the treasury we could so appropriate it again, and thus start an endless chain that would do, perhaps, an endless amount of good and not cost the local union a cent.

The motion was adopted, and that accounts for the accompanying order for 25 copies of The Third Power.

Wasn't March 1 Up to-Date a hummer? Well, that is what we could make every issue if we had enough subscribers. And not only so; we could make it like that every week if we had sufficient support. Considering the importance of the questions on which we have stacked everything—the importance to the people more than to us—we ought to have it. Don't you think so? What can you do to help secure it?

The silliest thing an intelligent person can do is to return to the publisher a paper that that person does not care to take. It seldom carries either the name or the address of the subscriber, and the publisher can neither stop the paper nor communicate with the subscriber, because he cannot find the name even if he knew on a list of perhaps hundreds of thousands. Send a postal card asking the publisher to stop the paper, giving the name and address to which the paper is coming. The name can then be found, and the paper will be promptly stopped as per request.

How badly do the potato growers need communication with the potato eaters, and such communication is just as badly needed by the potato eaters. We often have letters telling us of the ridiculously low offers for potatoes, and perhaps the same mail brings letters telling us how badly potatoes are needed in other places. Why don't we put such parties in immediate communication? We do, but such letters never call for car load lots, and neither growers nor users can afford freight in any other way. Car loads could be taken in hundreds of localities were there a means of receiving and distribution. Here is where the difficulty lies. Better organization, better communication, authorized distributors—these will solve the problems.

SONGS OF EQUITY

64 Pages and Cover Words and Music

"Let's Sing the Farmer to the Front"

SONGS OF EQUITY is an Equity song book in every sense of the word, not cheap and trashy in any particular, but every way worthy of the cause it is intended to promote. It will be a valuable aid in entertainments, will add life to local union meetings, and spice to parlor gatherings in the homes.

Friendly Talks With Up-to-Date Writers

A good, kindly, encouraging letter is almost like a warm hand clasp with a long-absent, but recently returned, friend. Especially is this true when the hand that penned it laid down the implements of the farm to do so. Cheering also are kindly words from business men. If the farmers' problems are to be solved it must be by business methods, methods that have met the shrewdest counter-plans and have been successful. Hence letters of approval from business men—successful business men—who have tested what it takes to win, are specially reassuring and encouraging. Such is the following:

Editor Up-to-Date Farming:

I have received your favor of the 3d inst., enclosing "Farmers' Problems No. 3," which I have read with great interest, and I certainly would like to see you succeed with the good work you are promoting, even beyond your highest dreams of success. The farmers of this country, standing together, shoulder to shoulder, can make a greater power for needed political reform, than any other of the country.

YOUR THEORY IS RIGHT AND YOUR PROPOSITIONS ARE SOUND. The only thing that remains, then, is to convince the farmers, and this I think you are doing in a way which ten years ago would have been thought impossible. Let the good work go on. Every business man in the country ought to be interested in the success of your movement, as most of the nation's wealth, distributed among many farmers, means a healthier condition of trade than when the mass of the wealth of the country is accumulated in the hands of the few.

With best wishes for the ultimate success of your work, and with the highest regard for Mr. Everitt personally, though a stranger to me, believe me—Otto Barth, for Sure Hatch Incubator Co., Clay Center, Neb.

If all business men would view this movement as Mr. Barth does, undoubtedly the correct view of it, for every addition to the farmers' income is an addition to the country's general trade, it would not be long until our objects would be accomplished and a prosperity secured, both for agriculture and trade, that was never enjoyed in any previous age.

We are glad now to print a letter from an Oklahoma farmer who knows a good thing when he sees it and has the grit to get the benefit of it:

Editor Up-to-Date Farming:

I want to tell you what the A. S. of E. has done for me. You told me to hold my wheat for a dollar. I did so, and got it, making $45 clear. You also recommended holding broom-corn, and I am still holding mine, and the price is coming up. My neighbors sold at from $10 to $35, actually dumping it on the market. The price is now ranging from $40 to $55 at our station, which would indicate from $60 to $75 at Chicago, as the freights we have to pay in this territory are out of reason. So you see reading Up-to-Date and following your advice has made me O. K.—I. J. Teeters, Greenwood, O. T.

Mr. Teefers acted wisely, and he has the dollars to show for it. The broomcorn raisers were gouged mercilessly last fall, but we did all for them we could. Had they disregarded the crop liar, and held their product, it would have paid them.

Almost any person can talk, but it takes a wise one to say the right thing at the right time, and never say the wrong thing at the wrong time.

We can and do sell a high grade class of work at a great saving to the purchaser, and our liberal guarantee carries with it abundant evidence that prices are not offset by reduction of quality. We absolutely refund money to any dissatisfied customer who purchases a carriage or harness from us and pay freight both ways. Write for free catalogue showing styles and explaining our plan. We have thousands of testimonials from satisfied customers.
THE COLUMBUS CARRIAGE & HARNESS CO., COLUMBUS, OHIO.

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

SPECIAL MEETING OF TOBACCO GROWERS

To Be Held on April First by Each Local Union

We are strong enough now in the tobacco districts to do something toward putting our department on a business basis. We feel that with the increased prices we have obtained for tobacco during the past 10 months we should take some of the burden of expense of the shoulders of Mr. Everitt, who has borne them readily and cheerfully, having full faith in the ultimate success of the society. It is time for us to help in completing the organization.

We particularly desire to organize each county in the United States that produces more than 1,000,000 pounds of tobacco. If we can do this we will have control of more than 85 per cent of the entire production. There are only 139 such counties, and a large part of them are already organized. Organization is going on rapidly in many of the remainder. There yet remains a few counties in which organization has not been started. We want every one of these counties represented in the next national convention, to be held in Owensboro next October. With a little aid from all our local unions we will accomplish this.

We have a plan whereby our local unions can aid in this work and not feel the expense. The plan is new, novel, interesting, and each of the local unions can carry it out. It will be fully explained in a special letter from headquarters which will be read at the meeting by your secretary on April 1. The letter will be a personal letter from Mr. Everitt, and will contain the latest news from the tobacco fields and will unfold a plan for future work.

Prices on all grades of tobacco have advanced from 25 to 75 per cent during the past 10 months. This means that tobacco is worth from $1 to $5 per 100 pounds more than the last crop sold for. In view of these facts do you not feel well repaid for your membership in the A. S. of E.? And still greater benefits are to follow.

With encouragement obtained from the gratifying results of the past it is fitting that we meet on a day set apart for that purpose and review the work that has been done and consider new plans for the future. We are depending on you to meet. Do not disappoint us, for you will but disappoint yourself more.

TOBACCO FIELDS OF AMERICA

Some Interesting Figures Compiled by the American Society of Equity

Tobacco growing is no small industry. About 300,000 men are engaged in its production. Over 660,000,000 pounds were produced in 1904. It is grown in 34 states. Yet the larger part of the entire crop is produced in a few counties of three states—Kentucky, North Carolina and Virginia. And the largest part of the crop outside of these states is produced in a few counties of Wisconsin, Ohio and Pennsylvania. The balance is grown in small sections of other states. Taking it all together, the tobacco crop of America is produced on territory about the same extent as the states of Ohio and Kentucky, and the majority of it is produced in well-defined areas which together would occupy about as much space as Tennessee alone, and is under the control of less than 100,000 planters.

The American Society of Equity has now enrolled fully 30,000 of the necessary 100,000 planters to control the marketing of tobacco, and there are at least 20,000 planters in the various smaller organizations. That makes fully half of the requisite number already on the rolls. There are many large tobacco-producing counties in which no organized effort has been made, and these counties will be thoroughly canvassed this summer, so the tobacco growers seem to have about reached that point when they will be able to create a tobacco scarcity at any time they so desire. It will be interesting to watch their progress, to say the least.

Quantity vs. Quality

The price of no other farm crop depends so much on quality as tobacco. Some tobacco finds slow sale at three cents a pound. Other tobacco finds ready sale at twenty cents a pound. And there has seldom been an overproduction of good tobacco.

The quality of tobacco depends much on the quantity that the planter produces. We do not mean in number of pounds, but in number of hills. We have known men to plant 30,000 hills and obtain a yield of 600 pounds to the acre, worth five cents per pound, market price. We have known other planters to plant but 10,000 hills, the same season, and by proper cultivation, judicious use of fertilizer and care in curing would sell a crop that averaged 1,500 pounds per acre at the market price of ten cents per pound. The large planter secured a crop of 4,000 pounds, costing him at least $150 and selling for $200—a net profit of but $50. The small planter produced a crop of 3,750 pounds, costing him perhaps $225 and selling for $375—a net profit of $150. Every tobacco grower who has been a close observer of tobacco markets has seen the same results. The records in every tobacco warehouse will give proof of these statements. Moral.—The more tobacco per acre you can produce, the higher the price per pound; and the smaller the area cultivated, the larger the average yield.

A Fact and a Query

According to the Western Tobacco Journal Mr. J. L. Carter, of Henry County, Kentucky, shipped eight hogsheads of tobacco recently, four going to Louisville and the other four to Cincinnati, and were sold the same day. Mr. Carter says that the tobacco shipped to the two markets was of the same quality and that he shipped in this way to test the markets. In Louisville he obtained $6.50, $5.90, $5.50 and $4.70. In Cincinnati the same grades brought him $8.75. $7.35, $7.15 and $6.35. In the two markets, not more than 100 miles apart, the same tobacco sold on the same day at prices averaging $5.65 and $7.40 per hundred pounds. If tobacco buyers pay for tobacco according to its actual worth, why this difference?

One Planter's Opinion

"The Virginia planter will never get a fair price for his tobacco so long as he continues to dump his crop on the warehouse floor to be sold at auction to the highest bidder. The buyers divide the offerings and make their own prices. We must put out tobacco in hogsheads and keep it until offered a fair price."—Virginia Subscriber.

"Subscriber" might have added that bidding on tobacco sales is little more than an appearance of competition, kept up to hoodwink the farmer by making him believe he is getting all his tobacco is worth. Why should a buyer make more than one bid if he is willing to pay the worth of the crop? Few piles of tobacco were ever sold at their actual value, and no farmer ever knew a tobacco buyer to make his first bid at what he was willing to pay for the tobacco. Is not this an indication that the buyers expect to purchase the crop as cheaply as possible? It does not appear that this system of competition is of much benefit to the afrmer. However, it seems that tobacco will be sold on warehouse floors for some time to come, but the farmer should put his price on the tobacco first, and if this price is not accepted he should put the tobacco in hogsheads for safekeeping until such time as the buyer will accept his figures.

The Outlook

A most interesting condition exists in the tobacco districts at this time. The organized farmers are holding their tobacco with a tenacity of purpose and a determination surprising to buyers. Stocks in the leaf market are growing short, and according to the Western Tobacco Journal the demand for nearly every class of tobacco is growing stronger every day. Buyers have not been able to purchase as much as usual for two reason: First, there is a known shortage in the 1904 crop of nearly 100,000,000 pounds. But the chief reason that supplies are short at this time is the fact that nearly 150,000,000 pounds are being held by the farmers. This amount, with the shortage in the crop, makes a total shortage in the markets of nearly 250,000,000 pounds, or one third an entire crop.

In 1903 the total number of pounds of tobacco leaf used by domestic manufacturers was 443,353,679 pounds. The total number of pounds of leaf exported was 316,325,914 pounds. The total number of pounds imported was 32,997,923 pounds. Subtracting the imports we find that the United States required 726,681,670 pounds of home-grown tobacco to supply the demand. From a careful study of the statistics of tobacco production, manufactures and consumption, it appears that at the end of the year 1903 there was a surplus of about 60,000,000 pounds of unmanufactured tobacco in the hands of the tobacco companies. From the Government crop reports we find that there was produced in the United States but 660,000,000 pounds in 1904. Adding this to the surplus we find that the total amount of tobacco in the United States at the present time is but little over 720,000,000 pounds. Before another crop can be placed upon the markets every pound of the present crop and every pound of the surplus held by the tobacco companies will be needed to supply the demand, if it but equals the demand of the year 1903. But the demand is steadily increasing, and there is sure to be a shortage in the tobacco supplies.

One reason why the prices have not advanced more is found in the fact that buyers have been busy buying up the crops of unorganized farmers, and waiting for warm weather, when they believe that the farmers holding their crops will be forced to sell. Their hope of buying the larger part of the unsold tobacco lies in this belief. But the majority of farmers are still holding, and will continue to hold, knowing full well that their tobacco is needed, and firm in the belief that the minimum prices established by the American Society of Equity will finally prevail. Buyers are hugging the delusion that the cold weather alone has enabled the farmer to hold his crop, but when they learn that an equitable price must be paid before the farmers will be induced to part with their tobacco, then prices will advance to a point where the farmers who held will be well paid.

It begins to look like a "fight to the finish," with all the points in favor of the farmer. The buyers are making a strong effort to break the combination of farmers, but the planters go serenely on, gaining in strength every day, and it brings the time that much nearer when the manufacturer must have tobacco, and adding to the number of planters who have decided not to let the trust have tobacco unless a fair price is forthcoming. They declare they will put their land in other crops, if necessary, rather than give the buyers the sole right to price the crops. They can get along without tobacco much easier than the manufacturer can. They know it, and so does the manufacturer. Therefore, their victory is sure.

What farmer can read the above proofs of the planters' determination and ability to stand by each other in a demand for fair treatment without feeling a desire to help win success? What farmer can read the evidence of small receipts and advancing prices without being convinced that our plan is the right one and will be successful? What tobacco grower will refuse to join and aid the society that has increased the prices $3 per hundred? Buyers give the cold weather the credit for small supplies and advancing prices, and expect large receipts with warmer weather. They are surprised that farmers have held together so long as they have. They have another surprise coming in the near future. The farmers mean business.

Plug and Fine-Cut

No tobacco grower should fail to read the chapter on tobacco in Mr. Everitt's book, The Third Power.

Don't forget to talk over the coming national convention at the special meeting of April 1. Whom are you going to send?

"Local buyers have advanced the prices of tobacco $3 per 100 pounds in this section, but few farmers have sold at this price.—C. L. Davenport, Cisney, Ky.

Do not fail to prepare for the meeting of members on April 1, and do not forget to attend it yourself. Be ready to discuss methods and means of grading, storing and holding the crop of 1905.

If there is any overproduction of tobacco, why are buyers taking all they can get at prices fully 50 per cent higher than the prices of last year? Why do they want it at all? Will some tobacco grower please answer?

"The tobacco trust tells us that the reason we cannot get the cost of our production for tobacco is because there is too much of it. Let us take them at their word, furnish them half as much and then charge them three times as much for it."—W. S. Ball, Hardinsburg, Ky.

You say to your people that we are in this fight to win. Every bridge is cut behind and our legions are solidly united to wage the fight as fierce as ten furies until the victory is ours. We ask but an equitable price, and we are going to get it."—D. T. Hamil, District Organizer, Guthrie, Ky. (Mr. Hamil has organized a district of Tennessee and Kentucky that is holding back its crop of many thousands of pounds.—Ed.)

The Wheels and Running Gear of a Split Hickory Buggy

IF you could examine closely the wheels and running gears of some of the bargain-counter buggies offered at $26.79 or lower you would not have the buggy at any price. They cannot afford to use in the manufacture of a buggy at this price anything but the cheapest, shoddiest and most imperfect material that can be secured. **Split Hickory Buggies** are not sold at bargain-counter prices and the material used in their construction is, every piece of it, carefully selected, thoroughly tested and **guaranteed for two years.**

Our Price of Our Split Hickory Special Top Buggy is $50 and We Give You $75 Worth of Value.

The wheels and running gear are the best selected split hickory, the workmanship, painting and upholstering and every part of it strictly first class in every way as a first class buggy should be built.

OUR 30 DAYS' FREE USE PLAN

gives you an opportunity to closely inspect every part of our buggy. Our from-factory-to-user plan saves you the jobbers' and dealers' profits. All of this is explained in our **Free 1905 Catalogue** of Vehicles and Harness:—now ready for distribution. Write for it today. It is a money saver for you.

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

Spring in the Fields

There's a concert in the marshes,
And a concert in the trees;
There's a ripple in the fountains,
And a hum among the bees.
They're the voices glad of springtime,
As all nature smiles and sings,
While the plowboy walks the furrow,
And his ax the woodman swings.
—J. P. S.

When farmers have their own clearing house with which they are all connected by telephones through their local unions and county unions and representatives on all leading markets. Supplies will be regulated to meet the demand. Boards of Trade will have to engage in some other business than gambling and no man or crowd can make prices.. Then the farmers can break up any corner, hence it will not be attempted.

Begin with good tools in good order.

Middle of March—freezes and thaws—sow clover.

March is clean-up month. Get all the plow ground ready.

Break fallow lands and sods early and deep. Give time for the vegetable matter, both roots and stems, to decay. Humus and good crops.

Those who have shivered in the severest of the cold waves will break the mellowest ground this spring. Freezing lifts and makes more porous the soil.

Some don't believe it, but there is such a thing as planting corn too early. It is no benefit to put seed in ground that is too wet and cold to sprout it.

In sowing clover on timothy that was sown last fall, for a mixed meadow or pasture, sow nearly as much seed as if you were sowing for clover alone.

Sow red clover seed about a bushel to eight acres. If perfectly distributed a bushel will do for ten acres, but it is a mistake to expect a crop without putting seed on the land.

At every step in the farm work keep in mind what you are doing it for. So many people work aimlessly. They work hard all day without ever a thought as to why they are doing it. It is customary to do just such work at that time, and they do it "according to custom." Every performance should have a distinct object, then note whether the object is being accomplished.

Here is a thought: The farmer will plant what he pleases this spring, and he will raise just such crops as suits his fancy or meets his judgment. He is about the only man that is thus absolutely his own boss. Isn't it strange that he has so long allowed the dependent world to put a price on his property and take it? Come to think of it, the bootblacks and bill posters of the cities don't do that. They have their price, which you must pay or do without their service.

Objeet in Plowing

The principal object in plowing and cultivating ground is to put the surface in condition that it will not long stay too wet and will not get too dry. It is a fact that soil made porous by being stirred and pulverized will permit excess of water to pass away quickly, and yet it will hold moisture in its open capillaries much longer that what has not been purverized. Killing the weeds is but an incident of cultivation, a very important one, however.

It follows, therefore, that deep pulverization before planting is best for all crops, unless it be crops that grow best in very wet ground—marshy land. But if the surface soil is thin and you turn the land deep you are liable to plant the seed in a bed de void of fertility, and what fertility there was on the surface is covered too deep for the young roots to reach it. The result, of course, is bad, and this has often brought deep breaking into disrepute.

What shall be done with such land? to leave it as it is, and continue to skim it on the surface, is exhausting what little fertility it has and is not bringing good results at best. Three things may be done: 1. Break it deep in the fall and then the winter freezing and thawing will assist in pulverizing and mixing it. 2. Turn it deep in the spring as early as it will work; let it lie until time to plant; work it down well; give it a good dressing of fertilizer and plant it. 3. Treat it as last above, and if you don't want to apply the fertilizer plant legumes, peas, soy beans or something of that kind; pasture down slightly ,and turn under in the fall. This treatment may make a great change in an old field in a single year.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Always mention Up-to-Date Farming's Business Exchange when you write to advertisers under this head.

Agents Wanted

Agents wanted by Weeks' Scale Works, Buffalo, N. Y. The leading scale at moderate cost. Send for free catalogue and prices.

Agents wanted for best agents article on earth. Mend-a-Rip does all kinds of light and heavy stitching and riveting. Agents make $3.00 to $15.00 a day. J. U. Foote Foundry Co., Fredericktown, O.

Agents who want a meritorous article to sell should handle C. & F. Wonder Knives—nine tools in one. It is a handsome pocket knife, light, convenient and has no more parts than an ordinary three bladed knife. Contains strong wire pliers and wire cutter that will easily cut barbed wire fence. Also leather punch, swedging awl, alligator wrench, hoof hook, screw driver and screw bit. Don't you think you can sell an article like this? Price each $1.25. One dozen delivered for $11.00. If not satisfactory your money will be refunded. Now if you will trust us (and the publisher of this paper who guarantees advertisers) send for a dozen. We refund your money if you want it. That's fair. Don't forget to write us—better do it now. Cooner & Fortune Co., Indianapolis, Ind.

Free farm right for the best gate. Send only 50c for set of gate castings and farm right worth $10.00 will be given you. Agents make 500 per cent. profit. Thorpe Broom Co., Wapella, Ill.

Osgood Scale Co., wants local agents. Beautiful catalogue free, Good business. Osgood Scale Co., 24 Central St., Binghamton, N. Y.

Farm Lands

Farms Wanted. In exchange for Hardware, Implement, Drug, Grocery, General Merchandise stocks, Mills, Hotels, Livery Stables, City Property, etc. If you have anything to trade, write us. We can match you. Northern Iowa Land Co., Independence, Iowa.

Arkansas For good cheap farming lands on Grand Prairie. Write for one. List and map free. C. O. DeVore, Carlisle, Ark.

Household Supplies

Stoves of any kind for cooking and heating. My superior location and facilities enable me to sell a better stove at $10.00 to $20.00 less than others. Cash or payments. Six months trial. Freight paid. Complete catalog free. Chester D. Clapp, 204 Lynn St., Toledo, O.

The washboard wears out cloths. The "Water Witch" cleans without wearing. Sent on on one month's free trial. I pay freight both ways. Send today for particulars or have the machine sent for trial. B. F. Bieber, 403 Henry St., Binghamton, N. Y.

Free On trial. We are willing to send our Standard Washer on trial for 30 days free. We know it to be the best washing machine made, but you don't, so we will do this to convince you. We pay all charges and deliver it direct to your door without asking a penny in advance. Keep it 30 days and if it is not the best washing machine you ever saw and you do not want to keep it, send it back at our expense. It don't cost you a cent. LEARN FROM LEWIS.

Bee keeping is exceedingly profitable as well as highly interesting. With a small expense to begin, it brings returns which an uninformed person could scarcely believe were possible. The work is light and pleasant. With a few colonies of bees out in your yard or orchard, you can spend many happy, contented hours.

And remember this—

HONEY IS MONEY.

There will always be a ready market for your product. ***You Don't Have to Pay the Bees.*** They are better than a dozen hired men. The new illustrated Catalogue G which has just been published, tells everything you want to know about Bees and Beeware. Every appliance known in the keeping of bees is pictured and described.

Catalogue G also contains a most excellent lesson on Bee Culture, telling how to buy bees, move them, find a suitable location for the apiary, care for the little workers, prepare the honey for market—and countless other things which you probably would like to know. Don't wait until to-morrow to write. Now is the time.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

The goose that laid the golden egg,
Is only fabular at best;
But that the common, cackling hen
Lays golden nuggets is no jest.

For a change let us ask you to clean out the poultry house.

The Leghorn is now strictly in the "line of her duty."

A single night by a broody hen on a nest of eggs makes them not good for food.

Poultry raising is not hard work, but it is exacting—requires almost constant thought and attention.

It is entirely practical to keep from 50 to 300 hens on ordinary farms without disturbing the other business of the farm.

The satisfied hen is the best layer. Try to keep the entire flock moving on "the even tenor of its way." Avoid scares and disturbances among the fowls.

Keep the eggs clean. They look so much better. The merchants would rather have them so, even if they do not pay any more for them. A cloth wet in warm water cleans them easily. If a few drops of vinegar be added to the water it is said to be better.

Set the first hens in a warm, cozy place, and keep feed and water near them; what is better, have a certain time each day to take them feed and water. Don't set any hens early that you can't handle at pleasure. Remember, the early pullets are for the winter layers.

We have often spoken of the low percentage of chickens raised to the number hatched. This percentage should be increased, for upon it largely depends the profit of poultry keeping. The great mortality among young chicks depends much upon their early treatment and feed. Some people have not the knack of caring for young chicks; such people cannot be successful; what they make out of poultry is "luck." Others have no conveniences, no aids; what they make is in spite of conditions.

These few general directions may be given: The early life of the chick should be passed in a dry, comfortable place with plenty of sunshine (but not all sunshine; in hot weather there must be shade), and it should be a place dieffrent from the parent nest; if kept in the same place, the nest, box and all should be removed, if removable, everything thoroughly cleaned up and new litter furnished. The chicks should have access to clean, flinty sand that they may scratch and pick among. They should be fed regularly, and at first often: the first feed need not be given for some hours after hatching. Hard-boiled egg yolks, finely crumbled, with a very little corn meal sprinkled with it, is good for the first few feeds. To pepper about as one would pepper it for eating, is, perhaps, well. The first few days, two or three, the chicks should be fed thus every two or three hours, gradually increasing the time between feeds and the amount of meal mixed in the feed. Clabbor milk made into a cheese as dry as possible and crumbled fine is a good variation for the feed. After each feed the chicks should have access to clean water, not too cold, but they must have it in such a way that they cannot get into it. Fill a shallow dish with clean gravel—little stones of irregular shapes, the size of hazel nuts and smaller—fill with water until the water shows up between the little stones. This is an ideal way to water young chicks. They will run all over the dish, scarcely getting a toe wet, and they will drink from between the stones with every demonstration of happiness. Coarse corn, or, better, finely crumbled corn bread, is a good feed as the days advance; then cracked corn and the finer grains—wheat, rye, barley, etc. Don't indulge in wet feed. A great many feed corn meal dough. If you do, the dryer it is the better. As the chickens increase in size coarser gravel should be in reach of them. In their earlier stages a little powdered charcoal in the feed is good, later, crushed charcoal is better. In the earlier days feed the chicks and the mother hen separately. We believe this method, followed with persistance and good judgment, barring accidents or violence, would bring to maternity 90 per cent of the vigorous chicks hatched.

Preserving Eggs

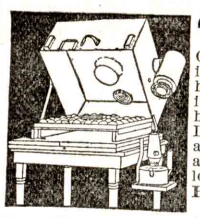
The price of eggs is so well maintained of late years, even through the spring and summer, that their preservation is not so important as it was a few years ago, when the price went so low during the laying season. But we have so many requests for information on the water-glass process that we have decided to repeat that instruction as we gave it in Up-to-Date Farming for June 1 of last year. The instruction as given is from the Year Book of the Department of Agriculture for 1902, page 848, and is as follows:

"For the farmer and the small dealer the use of water glass is to be recommended. It is commonly sold in two forms; a sirup-thick liquid, of about the consistency of molasses, and a powder. The thick sirup, the form perhaps most usually seen, is scmetimes sold wholesale as low as 1 3-4 cents per pound in carboy lots. The retail price varies, though 10 cents per pound seems to be the price commonly asked. A solution of the desired strength for preserving eggs may be made by dissolving 1 part of the sirup-thick water glass in 10 parts, by measure, of water. If the water glass powder is used less is required for a given quantity of water. Much of the water glass offered for sale is very alkaline. Such material should not be used, as the eggs preserved in it will not keep well. Only pure water should be used in making the solution, and it is best to boil it and cool it before mixng with the water glass. The solution should be carefully poured over the eggs in a suitable vessel, which must be clean and sweet. If wooden kegs or barrels are used they should be thoroughly scalded before packing the eggs in them. The packed eggs should be stored in a cool place. If they are placed where it is too warm, silicate deposits on the shell and the eggs do not keep well. It is best not to wash the eggs before packing, as this removes the natural mucilaginous coating on the outside of the shell. One gallon of the solution is sufficient for 50 dozen eggs if they are properly packed."

The gallon of the solution referred to in the last sentence is a gallon of the water-glass solution as purchased, which is to be mixed with 10 gallons of water, making a solution of 11 gallons for the 50 doezn of eggs. The eggs must be entirely covered with the solution, and they should be stored in a cool, dry place.

Speaking further on this process of preserving eggs, Farmers' Bulletin No. 103 of the Department of Agriculture says:

"It was found in these experiments that a 10 per cent. solution of water glass preserves eggs so effectually that at the end of three and one-half months, eggs that were preserved the first part of August still appeared perfectly fresh. In most packed eggs, after a little time, the yolk settles to one side, and the egg is then inferior in quality. In eggs preserved for three and one-half months in water glass, the yolk retained its normal position in the egg, and in taste they were not to be distinguished from fresh, unpacked eggs. Again, most packed eggs will not beat up well for cake making or for frosting, while eggs from solution in water glass seemed quite equal to the average fresh eggs of the market."



"Don't buy an Incubator"

Get a "New Thought" hatching machine and take off a hatch every 10½ days. No, it's not an incubator. It hatches and the CHICKENS LIVE. It is all metal—good as gold to people who want a business Machine. Catalogue No. 2 ready, get it.

WINTER EGGS PAY. DO YOU GET THEM?

If not, you have the wrong breed, or else no breed at all like Peter Tumbledown's hens. If you want winter eggs—hens that are hardy, good foragers and the leaders in market for broilers and fryers, I have them for you. **They are Prize Winners, also.** I keep them for profit and breed with these points in view. My strain "The Bird for Business" is a money-maker. You will have to place order early to insure delivery at time you say. Orders booked now for immediate or future delivery at $2.00 for 15; $5.00 for 45; $10.00 for 100. **A. R. TUBBS, Weston's Mills, New York**

Harvester Talks to Farmers—No. 2.

The Steel and Iron Used in the Champion, Deering, McCormick, Milwaukee and Plano Harvesting Machines.

IN buying a harvesting machine—or anything else for that matter—the problem which confronts you is to secure the *best* machine for the money you pay—best not only in convenience, but in durability, in strength, in long service and substantiality.

The problem confronting the manufacturer who wants a *permanent* trade is how to produce an article of the *highest quality* and yet sell it at a reasonable price. He must keep his price *down* or his trade suffers; he must keep the quality *up* or his reputation suffers.

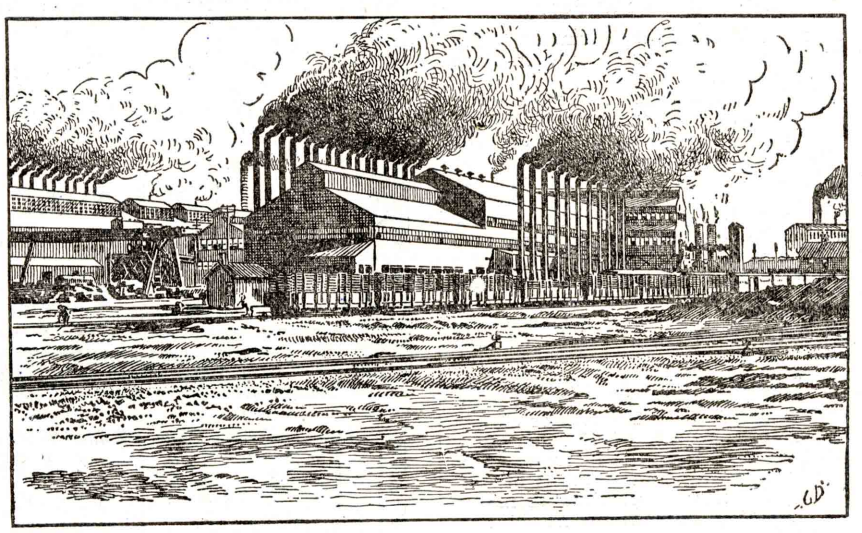
This is especially true in dealing with the American farmer, for he is the most discriminating buyer in the world. He will not pay an extravagant price for anything; he will not take a shoddy article a second time, at any price.

Separately, the manufacturers of the Champion, Deering, McCormick, Milwaukee and Plano machines could not afford to own the facilities for supplying the materials in a raw state for their product, for such facilities can only be operated economically on a large scale. The combined product of these plants, however, is sufficiently large to justify the ownership by the company of the sources of supply of raw material, and it was largely for the purpose of such ownership that the International Harvester Company was organized.

Take the matter of steel and iron as an illustration. The modern harvesting machine contains a good proportion of steel and iron, and in the past few years the price of these commodities has varied greatly. In times of commercial depression stocks of merchandise made of steel and iron in the hands of merchants throughout the country are allowed to run down to the lowest ebb possible, then when times improve these stocks must be replenished quickly. This sudden and enormous demand overtaxes the facilities, and because of premiums paid for quick delivery the prices of iron and steel go abnormally high. At times steel soared so high in price that numerous small establishments were forced out of business, and even manufacturers who had the spot cash to pay for the goods were often unable to obtain steel and iron at the times they most needed them. Owning its own supplies of iron and steel in the raw state the International Harvester Company is thus independent of such conditions, and cannot be forced to pay these exorbitant prices, but will have these supplies at the cost of producing them. This cost will not vary except to the slight extent that the cost of labor varies from year to year.

The coal mines owned and operated by the International Harvester Company consist of 21,532 acres in Harlan County, Kentucky, producing 15,000 tons of coking coal to the acre—a good 50 years' supply.

The iron mines operated by the Company are in the Hibbing district of the Mesabi range in Itasca and St. Louis Counties, Minnesota, and in the Central Falls district of the Menominee range in Sauk and Iron Counties, Wisconsin. They produce high grade ore of both the Bessemer and non-Bessemer grade—a supply of 35,000,000 tons.



The International Harvester Company's steel and merchant bar mills are in South Chicago, Ill. They cover an area of 50 acres, employ 1,500 men and have a capacity of 900 tons daily. The accompanying illustration gives a partial view of this big steel plant. It consists of two complete blast furnaces, a converting mill, a blooming mill and a merchant bar mill.

When the ore is received from the mine it is first smelted, then converted into steel, cast into steel ingots, reduced to steel billets and rolled into various sizes of rods, flats and ovals required in making harvesting machinery.

This immense plant is admittedly one of the best equipped steel plants in the United States. It has every facility for producing steel and iron of the highest grade. It is manned by skilled and expert workmen and every step in the production of the metal parts of the International machines is under the constant and careful supervision of those who are most interested in maintaining the high quality of the company's product.

This plant and its success is a striking illustration of the old proverb, "If you want a thing *well* done, you must do it yourself." The factory superintendent at the Champion, the Deering, the McCormick, the Milwaukee or the Plano plant, *knows for a certainty* that every pound of steel and iron that goes into the machines he manufactures is *right*, absolutely right, of the highest grade and free from flaw or defect. He knows also that it is laid down in the factory under his care at as low a price as it is possible to produce good steel and iron, for the cost of its production has not been affected by the speculative fluctuations of the market and every labor-saving, money-saving, quality-improving device known to the art of steel-making has been employed in its production.

This is only one example of the manufacturing policy of the International Harvester Company. The constant aim is to *improve the quality* of its product in every possible way. Not only its steel, but its lumber and other materials are produced at first hand.

We contend that this policy means much to the farmer who uses harvesting machinery, for it makes possible, and it is the only way in which it is possible—the production of a machine of the highest quality at the lowest cost.

And that is what you are looking for. You cannot afford to overlook **this** question of quality, durability, strength, long-life.

You can get this *only* in the International line, for the International Harvester Company is the only company having complete facilities for manufacturing under modern conditions.

The fact that 90 per cent of the harvesting machines sold in this country are of the International Harvester Company's manufacture—the fact that this percentage is increasing every year, is pretty good evidence that the wide-awake, keen, discriminating American farmer is *satisfied* with its product.

His endorsement is worth something to you.

At any rate, we ask every reader of this little talk to do this:

Call on the dealer in your locality for catalogues and full information relative to the Champion, the Deering, the McCormick, the Milwaukee or the Plano in your own locality. Each dealer understands thoroughly the one line he sells, and carries a complete stock of repair parts. He'll be pleased to show you his particular line.

The International Harvesting Machines,

Champion, Deering, McCormick, Milwaukee and Plano

are used by 90 per cent of the grain and grass growing farmers of America. They are **satisfied** because they have received full value for every cent spent for their machines. Their endorsement is worth something to you. They have received greater value than they could get elsewhere because of the superior facilities for manufacturing and the common sense policy of the International Harvester Company.

Remember, The International Lines are Represented by Different Dealers. See them for catalogues.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

March is blowing chill and cold,
But April showers must follow;
And then will come the toothsome grass,
On hill, in field and hollow.
—J. P. S.

Don't depend on the grass too soon.

If you are feeding cattle grain, don't neglect to have some hogs with them.

Stock that is too slow throwing off their winter coat may need a mild tonic.

Get the pastures ready, but you will hardly turn the stock on them for some time yet.

Hogs intended for the June or midsummer market should be in pretty good shape now.

The spring lambs must not be neglected. Ten to one the ewes are not giving them enough nourishment. Plan to feed them.

The colts should be handled as regularlk as the old horses now. They will son be out of reach on the pasture.

See that the harness fits, epsecially the collar and hames. Many farmers are very careless in this regard, considering the amount involved in it.

Tobacco tea is a good wash for stock infested with lice. An ointment of coal oil and lard mixed is also good. Coal oil alone will take off the hair.

Uncle Threadbare watches the mills for faulty, chaffy, musty grain for poultry feed, and he is always watching the drugstores for chicken medicine.

Of course it is not necessary to urge farmers to see to the sows that are to farrow this spring. Don't feed them too much corn, and yet don't let them hustle around among the other stock for a living. Have a dry, comfortable place for the pigs; the cold rains of March and icy winds, the freeizng and thawing are as bad as winter snows.

We advise farmers to breed their available mares. It takes years, you know, to get a horse ready for use or market, and the supply is under, rather than above, the demand.

Harden the shoulders of the teams before pushing them too hard. Frequent bathing in salt and water, or alum water, is good. Do this as you take off the collar.

Cattle that are to be pastured through the summer and fed next fall should have some grain now, and for some time yet. In fact, it is well to give them a light ration of grain all through the season.

Put in an acre or two of millet and harvest it for the poultry, though you may have no other use for it. Sell the seed next winter by the dozen instead of by the bushel—eggs.

Hogs and Cow Peas

Two writers in the Farmers' Voice give interesting experiences with hogs and cow peas.

Mr. C. M. Schelton, of Iberia, Mo., sowed 10 acres of whippoorwill peas at the rate of a bushel to the acre in June, and when the first pods began to ripen he turned his hogs in. He fed a little corn at the start, as a kind of introduction to the peas, and increased the corn as the hogs grew and the peas were eaten down . When the peas were all gone he fed corn alone for 10 days, and sold his hogs at a premium over prevailing markets. He declares: "That ten-acre field of cow peas made me more pork than any 10 acres of corn on my farm, and at a very small fraction of the cost of growing and feeding 10 acres of corn."

Mr. Henry Punke, of Neasho, Mo., prefers to drill the peas in rows, as it takes less seed and may admit of one cultivation, and will produce as many peas. Another advantage he claims is that when the hogs are turned in they will travel between the rows and not trample down and destroy any vines. He also likes to sow oats with the peas at the time of the slight cultivation he gives them. He then turns the hogs in when the oats are about six inches high, and says the hogs will not disturb the peas until the pods begin to ripen.

Large or Small Cows

A reader wishes to know whether we would prefer large or small cows for dairy or milk-giving purposes. To make a short answer, we would prefer the sow that would give the most and best milk and would keep at it longest. The object in view should always be kept foremost . If you have a sow that is just such a milker as you wish, she is the best cow without reference to her size.

If the purpose, however, is to buy a dairy herd, the fact that there are special dairy breeds must not be ignored, and these are mostly small, though the Holsteins come in of fair size. But if the idea is to get cows for the farm, where it is desirable to raise calves as well as to get milk, size should be considered. In that case we advise getting a medium to large cow of a well-known milking strain..

Our fathers would have thought it strange had we talked of feeding hay to hogs, or laying in a supply of hay as a winter feed for hogs. But this is done now in many places as regularly as laying in hay for feeding the horses and cattle. Cow pea and alfalfa have been proven good feed for hogs, not only as pasture feed in the fields, but as dry feed in winter.

If you have a mule colt to put on pasture this spring, don't try to make him stay in the pasture by himself. He just won't do it. He'll find some way to get out, and after that no fence will bother him much. Give the mule colt or colts company. A good dispositioned old horse is good, but a gentle old gray mare is the very best company for mules.

Sharples Tubular SEPARATORS

The Only Modern Separator Bowl

Why buy a separator filled with bottomless cake pans, punched and bent sections of stove pipe, or other complicated parts?

The only modern bowl has no contraptions; is as simple, light and easily handled as any woman could wish. The illustration shows it.

Write for catalog K-136 and learn about the best and most attractive separator ever built—the Tubular.

The Sharples Co. Chicago, Ill. P. M. Sharples West Chester Pa.

CREAM SEPARATORS

The advantages of the Centrifugal Cream Separator have come to be so universally recognized that nobody longer questions the importance of having a separator if they have cream to separate.

It has become simply a question of whether they are going to purchase the best separator, get the most value for their money, and be sure of the best possible results in the handling of their milk, or whether they are going to be induced to put their money into some second or third class machine making attractive but largely false claims "on paper."

This is the problem which confronts every intending purchaser of a separator. He can make no mistake if he puts his money into a De Laval machine. He must make a greater or less one by buying any other.

The St. Louis Exposition gave the Highest Award to the De Laval machines, as has every international exposition before it. 98 per cent. of the creamery butter of the world is made with De Laval machines. 600,000 users, or ten times all others combined, have bought them. Each of these facts is conclusive of itself.

The De Laval was the original cream separator and for twenty-five years has made every new improvement. Would-be imitating machines simply utilize the construction, which expired De Laval patents, leave free to them. New patents still protect all later improvements.

If you have use for a separator BUY a De Laval NOW. Don't delay making so profitable an investment another day. Send for a De Laval catalogue at once giving all separator information in detail and for name of nearest local agent.

Bone Spavin

Know it by the lump and the limp—a hard, bony growth on the inner side of the hock joint, usually low down and a little forward of the center of the leg—a quick hitch with the sound leg, and a stiff movement of the lame leg, bearing the weight on the toe, most noticeable in starting.

New cases, old and bad cases, the very worst cases, cases where firing has failed, are cured by

Fleming's Spavin and Ringbone Paste

Guaranteed to cure the lameness for good—may or may not take off the lump. Easily used by anybody, and a single 45-minute application usually does the work—occasionally two required. Write for Free Horse Book before ordering. It gives all the particulars, and tells you what to do for other kinds of blemishes.

$8.50 A Month For Life

By Investing $10.00 A Month For 20 Months

A postal card written TO-DAY will bring our handsomely illustrated FREE prospectus which tells all about our novel method of co-operative fruit growing.

Write the postal now or write a letter, or sign, tear out and mail us the coupon at the bottom of this advertisement, while you have the matter in mind, before you turn the leaf.

We realize that our statement—$8.50 A MONTH FOR LIFE MAY BE SECURED BY AN INVESTMENT OF ONLY $200—is so extraordinary that hardly any one will believe it until we have proven it.

We do not expect that any one will believe our mere statement that this can be done. We expect to furnish overwhelming proof—a hundred and one kinds of it—in every case.

Wonderful Possibilities

We believe the greatest money-making possibilities anywhere in the Western Hemisphere to-day are in the scientific growth of tropical fruits especially bananas.

The demand for bananas is so great that it is practically unlimited. The magnitude of the banana industry is beyond human comprehension. Ten times as many bananas could be marketed here in the United States if the banana growing companies would produce them.

A New Kind of Competition

The various steamship companies which buy bananas right on the plantation and bring them up (from Honduras and other banana-growing countries) are in competition with each other. Not in selling the fruit, but in buying it. This condition makes the banana-growing industry more and more profitable to banana growers.

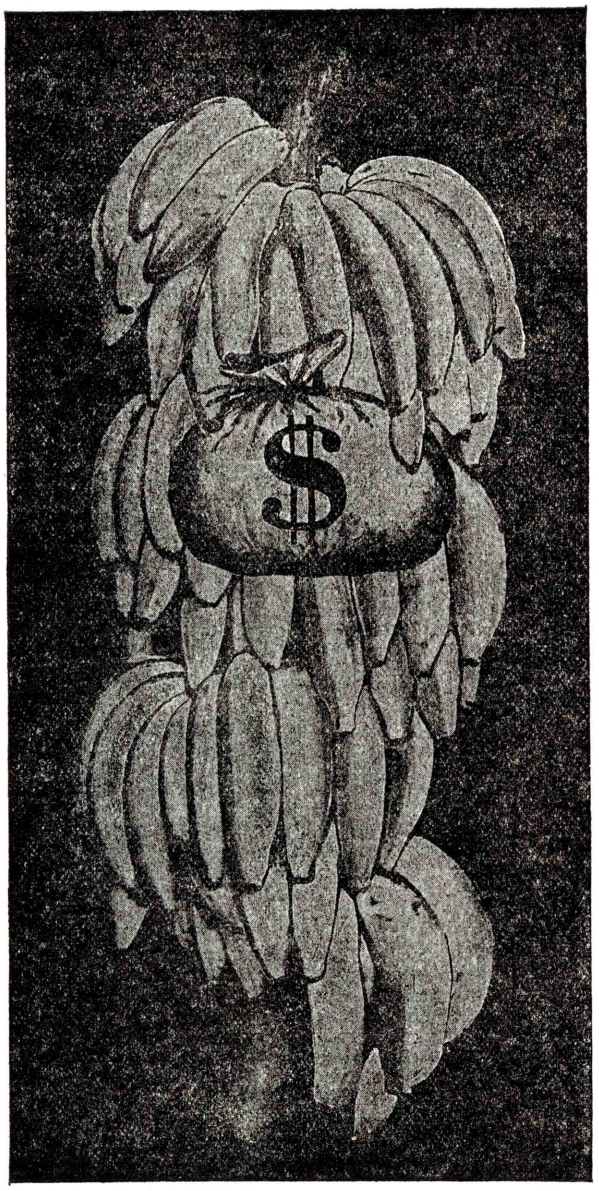
Safety

We have a large plantation (the best banana land in the world) and are making a lot of money, and making it easily, and we are just as sure of our big profits from month to month as you are of your 3 per cent., or your 4 per cent., from your savings bank. Banks are all right if you are satisfied with a very small rate of interest. If, on the other hand, you want the largest possible income without risking your capital, it will pay you to investigate the banana business by a careful study of our prospectus.

What We Are Doing.

In addition to our plantation, we have a large tract of unplanted banana land adjoining. We are planting this out of the profits from our banana acreage, but the tract is very large and all our available capital and all our profits for some time to come will not enable us to plant the whole tract.

We want to plant the whole tract without delay, because the larger the plantation the better the terms we can make with the steamship companies.



What We Can Do For You

Therefore, we make the extraordinary and liberal offer to plant some of this land for you—as much as you want if you apply at once—and let you pay us on small monthly installments.

It will pay you at once to write, or mail the coupon, and get our interesting and instructive pamphlet to look into the matter thoroughly. It is a wonderful chance to secure a life income. By a life income, we mean an income, not only for the period of your life, but to your heirs or assigns afterwards.

It is the best kind of Life Insurance

The British Foreign Report No. 385 (and government reports are always conservative) gives the average income per acre as $250. But we aim to be even more conservative. We figure only on the low average of $100 per acre.

Based on this estimate :

$10 a month for 20 months should net you, at least, $8.50 per month for life.

$20 a month for 20 months should net you, at least, $17.00 per month for life.

$50 a month for 20 months should net you, at least, $42.50 per month for life.

$100 a month for 20 months should net you, at least, $85.00 per month for life.

The vast majority of people will take it for granted that this offer is too good to be true, and they won't look into it at all. Those who do look into it will be the thrifty people, who are not going to be in poor circumstances or live on relatives in old age.

The writer of this advertisement is actively engaged in the management of our Company. He didn't condemn the enterprise because it looked too good to be true. He investigated it thourougly, before he offered any opinions. He knows that his FREE prospectus concerning the banana business in general, and our plantation in particular, will interest you. Write for it, or sign and mail the coupon now.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

I love to see the swelling buds
A rosy blush begin to show;
I know that when the autumn comes,
That blush on luscious fruit will glow.
—J. P. S.

"We want to organize and have a representative of our own on the New York, Boston, Providence and Philadelphia markets. Then we believe we can get fair prices for our truck.—New Jersey Truck Growers. Add to this a central clearing house and telephone system reaching every producer and fruit growers will find their problem working out. This is the A. S. of E. plan.

What the Eyes See

Let's take a walk. Into the orchard, of course. There is a drooping branch that should be cut back. Yonder are two limbs crossed and rubbing; one of them at least should be taken out. See that tall, slim sprout that runs up through the top of the tree? It is a water sprout, a great eater that never pays its board; take it out. I see a great many little thorny branches up near the stem of the tree; they are very little use, and they prevent a free circulation of wind and sunlight; take them away. There were a few limbs broken last year that now hang like ragged knees; take them away, too; the tree is better without them. Ah; here is a branch that is partly dead; take it away by all means. And those ragged old nests that may be seen occasionally show that there were some tent caterpillars in here last year. They are very liable to appear again with the leaves, or a little after. Take them out as soon as they are visible. Those little leafy webs that hang from the tips of twigs are most likely the work of some of the "sackbearers;" not very harmful, but they are better away. Those shriveled looking branches that have grayish specks upon them may be something pretty serious, possibly the San Jose scale, but most likely the oyster shell scale, more common and less harmful. Cut out the branches and burn them anyway. There are several last year's birds' nests—robbins, jays and red birds, most likely. All right; let them build again this year, and if a few boxes are put up here and there for blue birds, insects you don't need will feed them. This orchard is about ready for spraying. The first spray should thoroughly moisten the bare branches and trunk from the ground up; its object is to destroy fungus spores rather than insects.

Fruit Tree Bark Beetles

A. F. Conradi, Acting State Entomologist of Texas, give the following good instruction regarding the "shot hole" beetle. The range of this insect is very wide, and one may seldom enter an orchard without finding more or less of its "sign," which consists of little round holes, much like a load of shot had been fired into the tree:

"The adult insect is a small beetle of uniform black color, except the tips of the wing covers and portions of the leg, which are dull red. It was introduced from Europe, and is known as shot borer, orchard scolytus, and fruit bark beetle. In early spring the females enter the bark, feeding as they go, thus making galleries at short intervals small cavities are gnawed, and in these little pockets the eggs are deposited. The little grub upon hatching starts a little burrow of its own at right angles to that of the mother. When examining a piece of infested branch the two kinds of galleries can be easily distinguished, except in cases where the insects are so numerous that it is impossible to distinguish individual galleries. The insect pupates in the galleries and upon emerging bores its way out, leaving the "shot hole" at the place of exit. It completes its life history in from four to six weeks, thus making a number of broods possible during a single season.

"In combating this pest, clean culture is the prime requisite. Little good can come from the other measures recommended here without keeping the orchard pruned. The brush wood and other remnants of orchards serve as centers of infestation. When infested trees are dying it is useless to attempt to save them, and all dead and dying parts of a tree should be pruned out and burned. Such destruction serves as a protection to the other trees. A tree of vigorous health is rarely attacked."

Salt for Pear Blight

Mr. Beechley, President of the Johnson County (Iowa) Horticultural Society, gives the following experience with salt as a remedy for pear blight:

"I have had experience with pear blight. My trees all died by one that was affected by blight and as it was in the way and of no account, and having some pork-pickle (salt) and thinking to kill the tree to get it out of the way, I poured the salt water on that tree. This was in March. That spring I took a sprinkling can and sprinkled this tree with a strong salt solution. It still grew finely. I now got other trees, some of which I treated in like manner. Of those thus treated all are doing nicely. Those of the same lot not so treated blighted, and that is all there is to it. I am satisfied the salt is a success and shall follow it up."

W. A. Schrier, Interlaken, N. Y., says put equal parts of turpentine and coal oil into a bottle, soak in it sound wheat grains; put a grain down the throat of chicks that have gapes. He says it is a certain cure. We are sceptical. The wheat goes down the thoat; the gape worms are in the windpipe.

Nothing yet to hurt the grapes, because they make fruit on the growths of this spring. So do the blackberries and raspberries. Though intense cold sometimes kills the canes, as, indeed, it also does grape vines sometimes.

Don't discourage anything new, for the possibilities of development seem to be limitless; but don't get wild over the seedless apple. Try it if you wish to, but don't invest much money in it.

Southern fruits were badly damaged by the February freezes. It is not yet known to what extent the hardier northern fruits were injured.

That mid-February freeze was no doubt a microbe killer, but it was not a friendly visitor in the orchard; may have killed many fruit buds.

Michigan orchardists are convinced that spraying is necessary to prevent scab in apples.

Strawberries that were well mulched were prepared for the blizzards.

Our friends will do well to read carefully every notice in the Business Exchange. May find there the very thing you want.

Did you ever see 5 straight or circular rows of Pansies side by side, each a different color? If so, you know that the effect is charming. Did you ever see Childs' Giant Pansies, marvels in beauty and true to color? If not, you have not seen the best.

As a Trial Offer we will for 10 cts. mail 5 Pkts. Giant **Pansies, Snow White, Coal Black, Cardinal Red, Pure Yellow, Azure Blue;** also Five Pkts. **New Giant Sweet Peas** for **10 cts.,** White, Pink, Scarlet, Blue, Yellow; also Five Pkts. new early flowering **Carnation Pinks** for **10 cts.,** Scarlet, White, Pink, Red and Striped—

or All 15 Pkts. for 25 cts.

It is all in the seed

The profit from your farm depends as much on the seed you plant as your skill in cultivating it. It is an easy thing to gain from $5.00 to $15.00 an acre by wise choice of seed. Start right—the best farmer on earth can't raise a big crop from poor seed. The same truth applies to vegetable and flower gardening.

Our Northern Grown Seeds

are best for all soils and climates. They possess the vigor peculiar to all Northern plant life. Over 20 years of effort in seed breeding have been successful because we have kept constantly in view the most essential point—YIELD. Our latest and a very sensational introduction is **Peep'o Day Sweet Corn, *earliest, tenderest, juiciest.***

For 16 cents, stamps, we will mail you 300 seeds Peep'o Day Sweet Corn—enough for 60 hills; also our 1905 Pictured Catalogue of Northern Grown Farm, Vegetable and Flower Seeds. If the corn is not wanted, we will send our 1905 Pictured Catalogue Free. It contains special trial offers.

NORTHRUP, KING & CO., Seed Growers, 66 Northrup, King Bldg. MINNEAPOLIS, MINN.

UP-TO-DATE Gardening and Flowers

HOW TO GET BEST RESULTS AND BEAUTY

A garden was the happy place
To the new-created man God gave,
And every one of Adam's race
A bit of Eden still may have.

Of course you are getting ready for the garden.

Onions are a healthful vegetable, fried or raw. Have a good supply of them.

Speaking of onions, try the White multiplier. They are very productive and great bunching onions.

Wait till the ground is in good condition. No use to work in the cold, wet earth.

The multiplying or potato onion is about the most profitable one to grow. Should be set out in the fall and mulched for the winter.

Our mothers used to burn a little pile of brush somewhere and make an early lettuce bed there. May have a few messes a little ahead of time that way.

Did you try the Gold and Carmine bean last season? It is an entirely distinct variety, very productive and attractive. Those who raise green beans for market cannot beat it.

Whether you raise mellons or not, let the boys try a few rows of Good-Enough musk mellons. It is the result of 15 years' careful development, and perfection of flavor is certainly reached. It runs in weight from 15 to 35 pounds.

Try the Big Heart watermelon. The three illustrated in Mr. Everitt's 1905 catalogue weigh respectively 98, 99 and 100 pounds. It is oval in shape, very dark green in color, flesh deep red, quality exceptionally fine—good bearer and melons uniformly large.

But the bed of "winter onions" is where you'll get the first green stuff of that variety. Every farm garden should have a bed of winter onions. In the catalogues they are called Egyptian or ePrennial onions.

You have undoubtedly grown the Cinamon vine. If not you have missed one of the vining beauties that is laden with oriental fragrance—a real gem from the Flowery Kingdom, as China calls itself.

Lets talk about flowers. You can't well get along without a bed of sweet peas, can you? They are grown so easily, as easily as garden peas or any other vegetable, and then there is beauty and fragrance! And they bloom so abundantly and so continuously.

Those Rambler roses. The humblest cottage may be made more beautiful than a king's artist could paint his palace. The deep Crimson ,the bright Yellow, the clustered Philadelphia and the clear White—these combined may be trained into a living, constant bouquet!

Celery is one of the most healthful vegetables grown, but it is seldom seen in farm gardens. It is not difficult to grow. Try it this spring. Once you get to growing it you will never be without it. Try the Winter Queen, illustrated on page 14 of Mr. Everitt's 1905 catalogue. It may be kept the year round.

Have we called your special attention to Everitt's Mammoth Butterhead lettuce? Its merits justify special mention. The heads are almost like small cabbage heads, and not so small ,either. A single head sometimes makes a fair meal for an average family. As a market lettuce it ourselves anything else. The Unrivaled is also an excellent lettuce.

There are spots about many homes where a large, luxuriant plant or a small tree, would be an ornament. You cannot grow a tree in a season, but the giant caster bean, growing from 6 to 15 feet high and with great tropical leaves sometimes two feet across, all growing in a single season, beats any tree. The red podded variety, Ricinus Sanguineus is very ornamental.

The sunflower is quite a popular crop in portions of Illinois, and it is considered a fairly profitable one. The soil required, the planting and culture are very similar to that for corn. When ripe the heads are cut and the seeds knocked out and passed through a fanning mill. The price is from one and a half to two and a half cents per pound, and the production should be from 800 to 2,000 pounds to the acre.

A great many like a very early cabbage, one that will come into use ahead of the cabbage worm. To such we recommend the Early Spring, illustrated on page 10 of Mr. Everitt's 1905 catalogue. It is the earliest round head cabbage and yields much more than any other extra early. It makes a small, round, firm head, has few outside leaves and may be planted much closer than the larger sorts. Everitt's Early Eureka is a very early kind, too. It is of the flat-head variety, and while it comes early when planted early, it is good for a main crop when planted at the proper time for that purpose. It is an excellent cabbage, very profitable for market. For late cabbage you will want to try the grand large-headed Houser and the new Russian variety, the Volga.

The pumpkin should be spoken of in the department of Field Crops, but we wish to mention it here while we think of it. It is wonderful to what an extent so useful a plant is neglected. It is said of the seal in Lapland, "Its flesh is used for food, its oil for burning and its skin for making clothes, tents and canvas." The pumpkin may stand. for almost as many uses. It is good feed for horses, hogs, cattle and poultry, and it may be prepared in many ways for human food. It is one of the hardiest and easiest grown plants, generally being conduced to play second fiddle to some other crops on the same land. It deserves having a home entirely its own. If you want to take all the pumpkin premiums in your county, and "astonish the natives," plant some of the King of the Mammoths. The Golden Globe is another magnificent mammoth pumpkin from France.

This musical instrument can be played without instruction or practice by young and old. It furnishes good dance music; can be used in street parades, or any place where music is desired. Nothing better these long winter evenings for a little entertainment around the fire and in the house. It is made of strong material and is not liable to injury. Full printed instructions with each ZOBO, 6 inches long. Get a dozen and sell them to your friends. We will send one for 10c postpaid. A dozen postpaid for $1.

S. E. FERRY, *842-844 N. Capitol Ave. INDIANAPOLIS, INDIANA*

YOU'RE NEEDED

From St. Louis, Hannibal or Kansas City to Galveston or San Antonio via the Missouri, Kansas & Texas Ry., is a stretch of over one thousand miles of territory, capable of sustaining double the present population. A thousand industries, a fertile soil, a wonderful produce of plants and crops, oil, gas and minerals are to be found. Peopled by eager, pushing, wide-awake citizens who believe in the future and see the virtue of encouraging enterprises of every description and getting more and better facilities, the opportunity is apparent.

The Southwest needs workers. More men are needed—**you're needed.** There are vast areas of land not yielding the crops of which it is capable. The same thing is true of the towns. Few lines of business are adequately represented. There are openings for mills and manufacturing plants, small stores, newspapers and lumber yards. The oil and gas fields of Kansas, Indian Territory and Oklahoma are practically new and offer wonderful opportunities for developement along commercial lines.

With its present needs and opportunities, the prospects are brighter and the future more hopeful in the southwest than in the older and more densely populated states. Why not investigate conditions and satisfy yourself?

AN EXCEPTIONAL OPPORTUNITY

On March 7th and 21st excursion tickets will be sold to Kansas, Indian Territory, Oklahoma and Texas at

LESS THAN ONE FARE FOR THE ROUND TRIP

Take advantage of this opportunity and see the Southwest for yourself.

We are in possession of all sorts of information valuable alike to the investor and homeseeker. If you are interested, tell us what you want, how much you have to invest and we will gladly furnish the information.

1905 Catalog now ready for mailing south.

Garden, Field and Flower Seeds.

J.A. EVERITT, Inc., Indianapolis.

DO THIS NOW

And I Will Give You a Pair of my Handsome

Gold Spectacles

Just send me five names of spectacle wearers and I will do this:—First, I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test), I will mail you a

perfect-fitting five dollar family set of Spectacles for only $1, which will include a pair of my handsome Rolled Gold Spectacles, absolutely free of charge. This set will last a family a lifetime. I have never sold this family set for less than $5 and you could not buy spectacles anywhere near as good as these, even for $10 a ***pair.*** I am really charging you nothing for them now, as the dollar I will ask you to send with your test is only to help pay for this announcement. This very remarkable but honest offer (to send a five dollar set of spectacles for only $1) is open to everyone (my old customers also), but only for a short time, as I am just doing this to prove to every spectacle wearer in the world the following two very important facts: *First*, that my Perfect Home Eye Tester is positively accurate and reliable and with it you will be able to give your own eyes a perfect test in your own home and thereby I fit you with absolutely perfect fitting spectacles ***by mail,*** which could not be improved on even if you had undergone a personal examination in any occulist's office, at a cost of $10 or more. *Second*, and most important of all, that on account of my latest improvements, my spectacles have become known the world over as the "Dr. Haux Famous Perfect Vision Reading and Sewing Spectacles" and they are now greatly superior to all others on the market. With them you will be able to thread the finest needle and read the smallest print, day and night, with perfect ease and comfort, just as you did in your younger days, and this, even if your eyes are so very weak now that you cannot read the largest print in this paper. In fact the large number of physicians who have for years and years used and recommended my spectacles to their weak-eyed patients will tell you that they are the most perfect fitting, clearest and best in the world today, and I will give you your dollar back and let you keep the five dollar set of spectacles also, if ***you yourself*** don't find them to be the finest, clearest and best you have ever bought anywhere at any price. I can only send one set to a family at this price, and this only for a short time, so write me ***right now*** for my free Perfect Home Eye Tester, and address my company as follows:—

DR. HAUX SPECTACLE CO.,
Haux Building, ***ST. LOUIS, MO.***

I WANT AGENTS ALSO And any man or woman (also storekeepers), without any previous experience whatever, can fit the weakest eyes with my Perfect Home Eye Tester, which is so simple that any one can work it and easily earn from $25 to $100 weekly selling my famous spectacles, either in their own homes, travelling or in stores. My agents need no license anywhere as I furnish the necessary documents with the Agent's Outfit.

NOTE:—The above is the largest mail spectacle house in the United States and perfectly reliable.

UP-TO-DATE Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

Where Home Is

Home is not the stately palace,
With its acres stretching far;
Home is not the cottage under
Those outspreading branches yonder— ..
Home is where the loved ones are.
Home, when all the tasks are ended,
May be on some distant star,
Or it may be where the clover
Scents the breezes blowing over—
Home is where the loved ones are.
—Selected.

The home is the dearest, the most sacred place on earth, but it is a short-lived institution—very rare indeed that it extends beyond 50 years!

In the midst of such a rush for flower seeds and roots for ornamental purposes that have gone by mail into all portions of this wide country, I am sure the Homes on the Farm will be prettier this year than ever before. And as they are made prettier, let us hope and trust that they may be happien also, and more prosperous. This is sincerely the earnest wish of the Editor.

Nearly all young people have an ambition to appear well, to be thought well of and to accomplish something in the world. Here are a few hints that may be of benefit to such young persons: Don't make remarks about the food at the table. Don't talk much about things that no one in interested in but yourself. Be careful not to interrupt others while they are speaking. Never speak lightly or complainingly of your home, or its inmates to outsiders. Don't say smart things that may hurt the feelings of others. Never be rude to those who serve you either at home or elsewhere. You may not be entirely pleased with the service, but you can make it known civilly with better effect than rudely.

This leads us to say, don't be afraid of a little fun at home. If it take a slightly boisterous turn sometimes don't worry. Teach the children, of course, not to be rude, but do not place too many shackles upon their exhuberant spirits.

It is a mistake to excuse the sins of boyhood because "boys must sow their wild oats." This is a pernicious saying that has come down to us from the more reckless days of the past, and it should never be repeated in these brighter days of the present. It may be natural to go wrong, a thing this writer doubts, but it certainly is not necessary, and it should not be encouraged by excusing wrongs on the ground that they are impelled by nature.

How to Do Things

Anything that is greasy may be easily washed in hot soda water. The alkali turns the grease into soap and does its own cleaning.

To loosen the top of a frnit jar, invert the jar and place the top for a moment in hot water. The top may then be removed easily.

It is a beautiful practice to slowly sip a cup of hot water before going to bed. It relaxes the system, improves the circulation and supplies the body with needed water in the best possible way. Persons who habitually suffer from cold feet may find almost certain relief in this way.

This recipe is given for rice pudding: Boil half a pound of rice in milk until it is quite tender, beat it well with a spoon (wooden preferred) to mash the grains; add three quarters of a pound of sugar and the same of melted butter; half a nutmeg and six eggs; work into a paste and bake.

The Healthy Home, a publication devoted to home interests, says camphor is one of the best remedies for a cold. When the eyes begin to water and the throat to tingle, accompanied by sneezing, sure precursers of a cold, place three drops of spirits camphor on a lump of loaf sugar in the mouth and let it dissolve gradually. Repeat if the symptoms continue.

A nice dish of rice and tomatoes: Cook rice in a double boiler, or in any vessel, being sure it does not scorch, until tender, then place in a baking dish, dotted thickly over the top with bits of butter. Put a can of tomatoes through a colander, season with salt, pepper and a slight dash of sugar; stir thoroughly and pour over the rice until it is covered. Set in the oven and bake for 15 minutes.

Catarrhal discharges from the nose into the throat should be thrown out, if possible, as should phlegm and other secretions raised in coughing. Harm may result from swallowing them. But when "water rises in the mouth," as it is called, as in case of heart burn, it is better that it be swallowed. It is saliva given off by the sallivary glands, and it is needed in the stomach to correct irregularities there.

Good raising cake: One egg, one cupful of sweet milk, one cupful of granulated sugar, two and a half cupfuls of flour, one tablespoonful of butter, two heaping spoonfuls of baking powder and one heaping cupful of seeded raisins. Beat the egg until foamy and add it to the sugar and butter that have been previously creamed, then add milk and flour, to which has been added the baking powder. Mix thoroughly, flavor with extract of lemon and add the rasins, having first dredged them with flour. Bake slowly.

We read almost all the culinary recipes that are now published for the benefit of work in the home kitchen, and it is amazing how many of them introduce wine or some other form of spirits in the cookery. Such should be immediately discarded. No dish should go upon the table that contains spirits. Those housewives are wise who are discarding the alcoholic flavoring extracts. Not one of those who sit around the table will ever become a drunkard unless the taste for spirits be encouraged in some way. Avoid the appearance of evil. Take no chances. The stake is too great.

$525 IN CASH

AND OTHER

VALUABLE PRIZES GIVEN AWAY

This picture, when correctly arranged, is the name and likeness of the best known real estate advertiser in the U. S. You have seen his face and read his advertisement in all the magazines hundreds of times.

In order to quickly get thousands of new subscribers to our big illustrated magazine, **"The American Queen,"** we have cut its subscription price of 50c. in half and make you this liberal offer.

Cut out this picture, arrange it correctly, paste it on a sheet and mail it with 25c. for one year's subscription to the **Queen.**

To the person who sends the neatest picture, we will give $100 in gold. For the picture next neatest, we will give prizes as follows: 1 prize, $50; 1 prize, $25; 5 prizes, $10 each; 10 prizes, $5 each; 50 prizes, $2 each; and 150 prizes, $1 each. This contest will close on July 1, 1905. The names of the prize winners will be announced in **The American Queen.**

Special Prize: To every person who arranges the picture correctly, we will send absolutely free a beautiful reproduction of a Gibson drawing, all ready for framing. Gibson is the most famous pen and ink artist in the world. We paid him $500 for the original of this drawing.

The American Queen is a magazine for the whole family. It contains good stories, illustrations, articles, home helps, cooking recipes and the latest fashions and practical patterns for women and children. The latter feature alone is worth the price we ask.

Better send 25c. to day, while you are thinking of it. If it is not convenient to send a coin send 13 two-cent stamps Be sure to write your name and address plainly.

THE AMERICAN QUEEN, Dept. H, 125 E. 23d ST., NEW YORK

AS A STALWART GRANGER SEES IT

An Open Letter to the Master of the N. Y. Grange

E. B. Norris, Master New York State Grange, Sodus, Wayne Co., N. Y.:

Dear Sir: I regret that the attitude assumed by you at the last State Grange makes it necessary for me to address you in this manner. Your studied effort to prevent the introduction and discussion by that body of one of the most important subjects ever preseted to the American farmers, to wit: Market controlling, or the organizing of the farmers of this country for the purpose of establishing profitable prices of their products, was, to say the least, lacking in that liberal spirit which I have ever given you credit for possessing. Your attitude in relation to this subject was positive proof that you saw in this movement a rival that you feared, or you would not have employed such strenuous measures to prevent the subject from coming before the State Grange.

J. B. WHITING

There are some facts in relation to this matter that I deem essential for you to know. The subject of controlled marketing has taken hold of the minds of the farmers as no other theme has ever done. I became acquainted with this movement about a year ago, studied it in all its details, and was convinced that the plan is simple and practicable, and became a member of the National Union long before a single local was formed in this State. With my certificate of membership came a deputy's commission, and I entered the field as an experiment to ascertain if others partook of the same view as myself. As a result of such effort seventeen unions, in four different counties were organized without a single failure. In my travels among the farmers I often met with members of the Grange, and the question was asked, "Why does not the Grange endorse this movement?" Having a full knowledge of its history and laws, and being familiar with its declaration of purpose, I could see no reason why the Grange could not endorse these principles and incorporate them in its rules of action, without violence to any of its laws or usages.

This idea I suggested to the National Union, using this argument, that if the Grange would adopt controlled marketing, much time and labor would be saved, and the ends sought be hastened, and at the same time introduce into the Grange a vital principle which would insure renewed growth and permanency, and create an element of self-interst which would be the means of great prosperity independent of any foreign organization, and be in entire harmony with the declaration of purpose as promulgated by the founders of the Order.

I was appointed by the National Union of the American Society of Equity to visit the State Grange and lay this matter before that body. That I was denied a hearing before the State Grange you alone was responsible. Your triumph will be brief, for—

"Truth crushed to earth will
rise again;
The eternal years of God
are hers."

In speaking of the Grange I have not one disparaging word. The best efforts of my life have been devoted to building it up in the State of New York. It has been of inestimable value to the isolated farmers and their families, in bringing them in close touch with each other along the lines of social and intelectual development. It has had a broadening and elevating effect, and I firmly believe that no man or woman who attends regularly the subordinate Grange, and takes part in its varied exercises, but are better and more inteligent citizens for so doing.

But in looking at this matter from a business standpoint, I fail to become impressed with the belief that, under the presnt working of the Order, financial sucess for the farmer will ever be achieved. We must remember that nearly a half century has passed since the Grange was instituted under very different conditions than that prevail today. Then the value of farm products was largely determined by the law of supply and demand, and the farmer had little to complain of as to the markets. But in the distribution of farm suplies the farmer was often the victim of ruinous extortions, and it was along the lines of co-operative buying that the National Grange directed its greater efforts; and this feature has been almost wholly relied upon in conferring financial benefits upon its members.

But as years passed, Grange co-operative trade became less satisfactory, and instances are not few where cheapness was secured at the expense of quality, and the confiding granger became the victim of gross imposition. Besides, this feature antagonized every busines interest of the country, and led inevitably to the decay of the Order. Counties, and even States, where granges were numerous and strong in membership, dwindled until the number left was insignificant.

Through co-operative fire insurance, however, the Grange revived and made good savings to the members over the old line insurance companies with whom they had formerly done business. Where the by-laws of the co-operative companies made membership in the Grange necessary to secure a policy, those counties are strong in Grange membership, and are prospering, but where co-operative companies have issued policies to outsiders, as has been done in numerous cases, the Grange is in a state of decay.

But I cannot close this already long letter without reminding you of the current reports that are repeated by some of your friends and admirers, that your antagonism to the American Society of Equity was in consequence of an arrangement you are said to have entered into with the agricultural press to oppose this movement, as it was claimed its success would increase the circulation of the official paper, Up-to-Date Farming, which they regarded as a competitor with them in journalism! Whether these reports are true, and you have thus surrendered your manhood and the best interests of the producing classes to become the tool of the enemies of progress, you alone know.

Yours truly, J. B. WHITING.

Past Lecturer of the New York State Grange.

HAVE YOU ORDERED YOUR THIRD POWER BOOK?

It is worth more to any farmer, stockman or fruit grower, than a college education. After you read it then you can apply learning, before you cannot to any certain good advantage.

We have one for you, 25 cents and the below coupon will get it.

THIRD POWER BOND Coupon No. 1 **75c**

The American Society of Equity, of Indianapolis, Ind., will accept this Coupon for *Seventy-Five Cents*, as payment on a Third Power Book. Subject to the conditions as printed on the back hereof.

J. A. EVERITT, *President.* No. 9

A bond worth $6.00 in gold (or its equivalent in cash) will be sent to the person who sends in this coupon with 25c for a THIRD POWER book.

This Coupon when accompanied by Twenty-five Cents (25c) will be accepted in full payment for one, one dollar ($1.00) copy of the great book The Third Power.

The third edition, revised and enlarged, 320 pages, cloth bound. Sent by mail postpaid, for this coupon and 25 cents.

This book should be read by every person—especially farmers.

Here is a letter from a very interested farmer, who is inclined to complain at his neighbors, when, perhaps, much of the fault lies at his own door. He wishes others to write. Who is better qualified than he? Example is more likely to be followed than precept. But as he finally steps to the front all is well:

Editor Up-to-Date Farming:

I had hoped some reader of Up-to-Date in this vicinity would occasionally write a letter to the most valuable paper in the world, but it seems there is no one sufficiently interested. I think this silence a great mistake, for the A. S. of E. is one of the best Societies ever organized, and I do not see why our farmers do not come together as they do elsewhere. We raise as much and just as good produce as any other community, and we are getting less for it than farmers who are organized. I have not joined the Society yet, but I mean to do so very soon. Too long I remained out. Many local unions in the State are doing much good, and I am sure they would do so here.—W. L. Radcliffe, Duff, Ind.

Isn't it entirely reasonable to assume that Mr. Radcliff's neighbors have been waiting upon him, just as he has been waiting upon them, and now that he has made the start may we not trust him to push the matter forward? Dubois is a splendid county, and the farmers around Duff are not averse to organization and they are hustlers. Take it up, Bro. Radcliffe, take it up.

Equity Song

BY G. RANDALL, ELSIE, MICH.

Down the lane to the old homestead,
'Neath rustling leaves of the elms o'erhead,
With songs of birds and droning bees,
And clouds aglow o'er the towering trees,
Where the tinkling bells at the pasture gate
Are heard; while the cows come trooping late
Up, past the spring lot, to the old, old barn,
I say, God bless it! Hurrah for the farm!

Chorus.

Hurrah for the man with the hoe,
Hurrah for the farmer strong,
Hurrah for the banner where'er we go,
Hurrah for Equity' song!

Hurrah for the field's of golden grain,
Whence the sound of the farmers' glad refrain
Comes echoing up from the fertile soil,
Where he garners the sheaves of his honest toil,
There the pride of earth stands bold and free,
And provides for the millions and millions to be.
All honor then to his sinewy arm,
Again I say, bless him, and God bless the farm!

Chorus.

Hurrah for the man with the hoe!
Hurrah for the farmer strong!
Hurrah for the banner where'er we go,
Hurrah for Equity's song!

Holding Cotton

BY L. H. PERRY, BOONVILLE, ARK.

The gamblers' schemes are very rotten,
Who seek to take the farmers' cotton,
And leave them naught for sweat and toil,
For planting seed and tilling soil,
But strength enough to try again,
As heretofore, but all in vain.

But we can't halt. We must advance,
And make the speculators dance
To music of the farmers' band
Who hold their cotton all o'er the land.
To hold our products we've a right,
And thus display a farmer's might.

The bears may growl, the bulls stampede,
But what care we if we succeed?
With equal rights for every one,
And special privilege to none.
The North and South as brothers meet,
For ten cent cotton and dollar wheat.

Yes, You Can

BY C. MC FARLAND, MARION, O.

Hold your cotton! Hold your cotton!
Future's outlook's bright and fair;
You must deal with men of business,
Who your profits more than share
When they can.

See the sun athwart the heavens,
How its light gleams everywhere;
In that light be faithful working
For the profits you should share,
And you can.

Many times you have been swindled,
Do not stop to count them now,
But this time hold to your cotton,
Up-to-Date has told you how.
So you can.

When a buyer talks about it,
And his offer makes you swear,
Tell him ten cents buys your cotton,
For ten cents is only fair—
I know you can.

King Cotton

BY JOSIE BALLOU SHERMAN, KEOSAUQUA, IA.

The government estimate of nineteen and four,
Drove the price of cotton down many points lower,
The growers did something unheard of before,
They burned bales of cotton in front of their door.
And this rash attempt to restore the expense
Resulted in farmers holding on for 12 cents.

Time was when the farmers of the white cotton belt,
Could not hold to their crops to add to their wealth,
But the income resulting before the great fall,
Gave money sufficient to roll on the ball.
The bankers agreed to give aid to the hold,
And the farmers are asking 12c and are bold.

It remains to be seen what the outcome will be,
But the farmer who reads won't climb up a tree;
But will make his own estimate of data and crop,
And will hold on to cotton if the price shows a drop.
He will knock off the acreage for this present year,
But will have enough cotton to last—never fear.

We'll not let the "12 million report" rattle us;
We'll stand by our stuff though they call us a trust;
And then if some things are not in our favor,
We'll follow our forefathers' plan and not waver,
We'll spin and we'll weave our own dresses and pants,
We'll hold on to cotton till they give us 12 cents.

That cotton is king and a substantial old soul,
Is a sure sign he will not be left in the hole;
So if wise legislators and statistical bugs,
Make mistakes in their estimates favoring the "pugs,"
Just hold to your data and get on the fence
And hang to your cotton—hang on for 12 cents.

Have you sent your renewal of subscription? If you are not a member of the A. S. of E make the remittance, $1.00, and become a full member. You will value the members manual badge, etc., and besides your money will help us to carry the work forward for other members. Don't put off your renewal any longer.

Think of it! A 320 page book, cloth bound, for 25 cents, postpaid. It is a book worth more to farmers than any college education they can obtain.

RHEUMATISM

Wonderful New External Remedy Curing Thousands. Any Rheumatic Sufferer May Try It Without Cost.

Send Your Address and Get A Dollar's Worth FREE.

I have a sure, quick and lasting cure for Rheumatism. I cure it by means of Vibro Discs, a wonderful new appliance which is used externally and draws out the poison from every part of the system. It is the wonder of the age, and a godsend to Rheumatic sufferers. There is nothing like it, and nothing equal to it. It banishes pain as if by magic, and conquers this dread disease in all its cruel forms and stages. It is safe, simple and convenient for home use and roots out the acid venom so thoroughly that no relapse or fresh attack can occur. Prove these claims yourself by testing the remedy at my expense. I will send you, absolutely free, four of these Vibro Discs—

a full dollar's worth—if you simply send me your name and address. This is an absolute gift, and I shall neither ask nor accept pay for it now or in the future. Can you afford to continue in pain and misery when you can get this marvelous new and guaranteed treatment simply for the asking? Write me to-day and I will send you the treatment at once and with it an elegant illustrated book on Rheumatism, all free and prepaid. Don't send any money—not even a postage stamp—but send your name and address THIS VERY DAY.

PROF. S. M. WATSON, Dept. 19. Battle Creek, Mich.

I CURED MY RUPTURE

I Will Show You How to Cure Yours FREE

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated on. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you. Write today. Capt. W. A. Collins, Box 672, Watertown, N. Y.

CURE YOUR OWN KIDNEY

And Bladder Diseases at Home at a Small Cost—One Who Did It Gladly Tells You How

Mr. A. S. Hitchcock (clothing dealer), East Hampton, Conn., wishes us to tell our readers who are suffering from any kidney or bladder disease, that if they will send their address to him he will, without any charge whatsoever, direct them to the perfect home cure he so successfully used.

Knowing, as he so well does, the failure of almost every other treatment in stubborn cases, he feels that he ought to place in the hands of every suffering man and woman this simple, inexpensive and withal positive means of restoring themselves to health.

Our advice is to take advantage of this most generous offer while you can do so without cost.

FARMERS - GARDENERS - TRUCKERS

Do not miss this Opportunity to buy seed early from the introducers of the famous

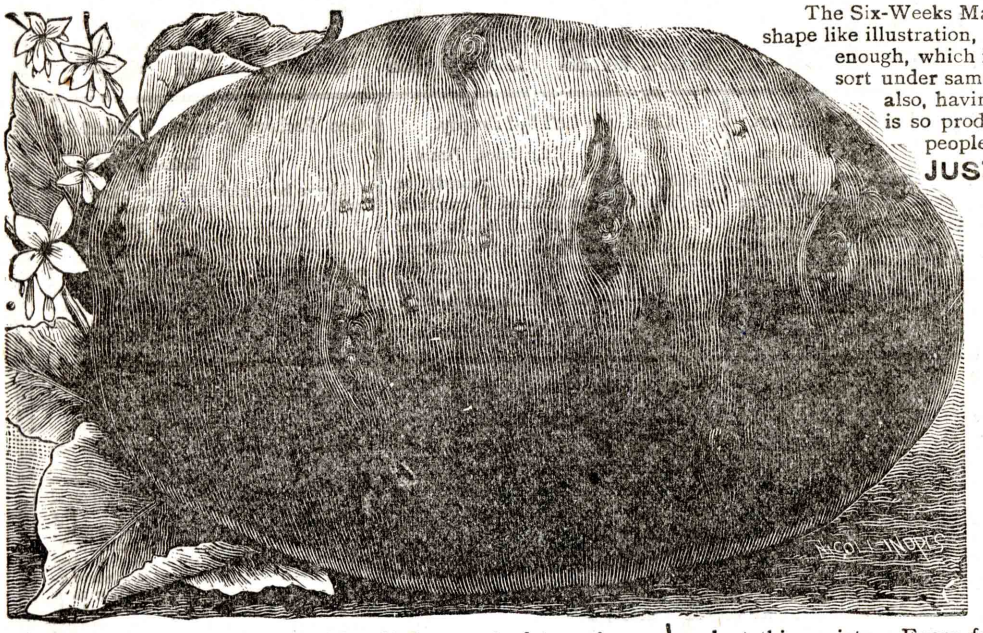
Improved Early Six-Weeks Market Potato

Not one season in all our experience have we had enough of this famous potato to supply the enormous demand. Also by waiting for late shipping they frequently arrive late and defeat your plans for early table potatoes or markets.

You can be sure of getting them to plant early by ordering now. Also the price is less than it may be later.

If you want to beat all your neighbors with new potatoes to eat or market, plant the **Six-Weeks Market.** If a market gardener you cannot plant anything that will make you more money than this potato.

This potato does beat all other kinds and produces fine tubers in 6 weeks from planting, with favorable weather. If you know this to be a fact would you not want some of them Read the testimonials.



The Six-Weeks Market potato is nearly white—(a little pink), shape like illustration, grow fine size, cooks mealy as soon as large enough, which is two weeks or more ahead of any other sort under same conditions. It is wonderfully productive also, having yielded 400 bu. and 600 bu. per acre. It is so productive and such a good keeper that many people grow them for early and main crop.

JUST THINK of one variety of potatoes combining such extreme earliness, good table qualities, good keeping qualities, fine size and shape, and great productiveness. This is the IMPROVED EARLY SIX-WEEKS MARKET POTATO.

From the time you receive the seed we send you until the crop comes on the table or goes to market you will be surprised, delighted and profited by your investment in this potato.

The most remarkable potato since the Early Rose was introduced

We named and introduced the Early Six-Weeks Market Potato several years ago. We have sold them to thousands of customers but there are tens of thousands of people who have not got them. Every family that grows potatoes for their own use should plant this variety. Every farmer, gardener or trucker who grows for market loses money every season he does without them. There is no other variety that can take their place.

This season we are proud to be able to offer the

Improved Six-Weeks Market Potato

raised from seed obtained from Mr. De Vore, the originator of the variety. Mr. De Vore has been carefully growing the potato and improving it from the time we bought his original stock. He has cared for it as carefully and guarded it as jealously as a dear child. He has yields as follows: One year 420 bu. per acre, next year 380 bu. per acre, and two years after 600 bu. per acre. **The Improved Early Six-Weeks Market** that we now offer is better than the original. Therefore all our old customers should get new seed, and every person who takes pleasure in seeing what good crops, what large yields and how early they can grow potatoes should get seed. They will admit that they never saw, raised, eat or marketed finer or better potatoes than the **Improved Early Six-Weeks.**

CAUTION Since we introduced our renowned Early Six-Weeks Market Potatoes some other paties has offered Potatoes under various names, "Early Market," "Five-Weeks Potatoes," "45 Day Potato," etc., or attached their name to it. Some of them use our description of Early Six-Weeks, others claim their potato is as good as our "Six-Weeks." We wish it distinctly understood that we named and introduced this unequaled variety, and are headquarters for the genuine seed.

SHIPPING We can ship any month in the winter to southern points as we load in warmed cars. We advise early orders however.

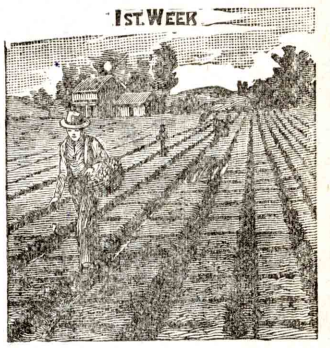
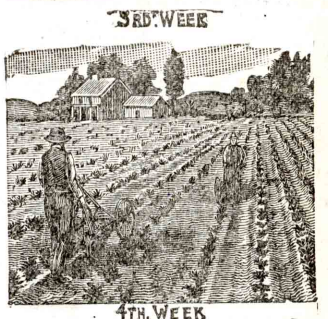
5 bbls.	@ $4.25
10 barrels or more at the rate of	each $4.00





Read extracts from testimonials We have received tens of thousands of reports like these.

I have grown them of size for table in six weeks and matured in 72 days. I consider them the earliest potato in the world, the finest table variety and a cropper. J. W. SHANKS, Athens, Co., O.

I raised at the rate of 395 bu. per acre of the nicest potatoes I ever saw. They are ready to use in six weeks and mature in 72 days. They come so soon the bugs have no chance.
ELIZABETH WASHBURN, Athens Co., O.

From I pound I raised 147 lbs. They are fine, sound, smooth. Ripened in 75 days and were marketable size in 6 weeks. They are the most valuable potato ever introduced.
R. TAYLOR, Ashland Co., Wis.

First class in every respect.
E. Hartman, Sutton Co,, W. Va.

They did fine. I could sell a carload for seed if I had them.
John B. Cochran, Jefferson Co., O.

You have got it this time. I mean the earliest and best early potato in existence. We had them for table use in six weeks from planting. They also outyield all others.
August Broehner, Allegan Co., Mich.

Ten dollars per bu. would not buy my six weeks market potatoes if I could not replace them. They are the earliest of all and very heavy yielders. They should be universally grown by market gardeners. Jac. R. Stilson, Onondaga Co., N.Y.

Are as early as represented. Sound, smooth, best quality, heavy yielder. They are very valuable.
C. E. Ward, Sullivan Co., Ind.

Best yielder and earliest potato I ever had. N. Nyedan, Marion Co., Ind.

Planted May 3rd, we dug new potatoes from them and used June 20th. They are the earliest we ever saw.
Daniel Donovan, Carroll Co., Tenn.

They are the earliest to make market size and earliest to mature that I ever saw. My crop could not be bought for any price. John Gilbert, Meek Co., Va.

Twenty hills of six weeks potatoes yielded a heaped bushel. They bear out your claims for earliness, quality and productiveness. Emil Laurance,
Worcester Co., Mass.

The early six weeks potato can be put on the market two weeks ahead of any other sort which means hundreds of dollars profit to a large grower.
W. H. Morris, Cuyahoga, Co., O.

It is now six weeks and five days since I planted the six weeks market potatos. They did not sprout very quickly but they have nice large tubers on them. They are the earliest potato for this climate I ever saw.
C. L. Ricel, Armtrong, Co. Pa.

The best table potato and yield abundantly. Benj. Gemberling,
Licking Co., O.

This picture is made from a photograph of a crop from 40 eyes grown in 43 days. The letter accompanying the Photograph is as follows:

Mr. J. A, Everitt. Dear sir—I send you to-day by freight the product of forty eyes of Six-Weeks Potatoes. They were dug last night and this morning and grew in forty-three days. They were grown from one-eye seed. I have just begun farming on my own land, and am not fixed yet for pushing a crop of early potatoes. They were covered with a breaking plow and given very ordinary treatment. Think I can beat it next season. Several people who saw them were astonished. I expect to exhibit at our county fair.
JOHN L. SAUM, Paulding Co., O.

We have 7,000 bushels of these potatoes now in stock or contracted and growers will consult their interest by embracing this opportunity to secure them at the favorable prices here quoted.

ADDRESS ALL ORDERS TO

J. A. EVERITT, Seedsman, Inc., Indianapolis, Ind.

Agents and Dealers wanted to sell this great Potato

Nothing like them anywhere. If you doubt, send 25 or 50 cents for a liberal sample by express, with Catalogues and beautiful colored hangers. Farmers, gardeners and truckers can make splendid profits selling them

You Are to Be the Judge!

NOT ONE CENT WANTED!

READ THESE LETTERS

Not an Ache or Pain.

Danvers, Mass.

I have taken nearly three packages of Vitæ-Ore, which has done me a wonderful lot of good. I have been troubled for 25 years with lameness in my right limb, pain commencing near the spine, then to the hip joint and to the fleshy part of my leg. For weeks past I have not felt an ache or pain.

J. Q. A. Batchelder.

Catarrh of the Head.

Mt. Zion, Miss.

My son who suffered with Catarrh of the Head, has found Vitæ-Ore a sovereign remedy for that disease. It has benefitted him more than all the doctors who have treated him and the patent medicines he has taken. He could do no work before he commenced its use, but he can now labor as well as anybody

John L. Polk.

Feet Swollen From Rheumatism.

Spencer, Iowa.

I have suffered much from Rheumatism, but I must say that Vitæ-Ore has given me wonderful relief. My feet were so swollen that I could not walk around the house. After taking Vitæ-Ore the swelling all left my feet and I can walk anywhere with ease. Vitæ-Ore is a grand medicine.

Otto Mickley.

Cured the Child of Dropsy.

Big Foot, Texas.

Vitæ-Ore is the best remedy on earth in my opinion, and I ought to know for I have tested it. It cured one of my grandchildren of Dropsy after the doctor declared he could not live. I thank God for creating it, and Theo. Noel for discovering its use for man's ills.

W. M. Nowlin.

One Package Helped Wonderfully.

Eskridge, Kans.

I have been sick for four years and paid out much money to doctors, but received no benefit. One package of Vitæ-Ore has helped me wonderfully, in fact, almost entirely cured me. I can walk and work nearly as well as I ever could. The doctors said I had Bright's Disease, Dropsy and Rheumatism. I shall continue with the medicine.

Mrs. A. D. Fuller.

Gall Stones.

Kansas City, Kans.

I have been troubled with Gall Stones and did not know what it was to be without pain until I commenced the use of Vitæ-Ore, since which time I have been steadily improving. Vitæ-Ore deserves all the credit for my improved condition, as I have taken no other medicine since commencing its use. Doctors have said that there was no cure for my disease except an operation, but I am now convinced that your medicine will effect a permanent cure. I am 60 years old and am now doing my own work, something I could not do before using V.-O.

Mrs. J. M. Baird,
1225 Waverly Ave.

Was a Physical Wreck.

Medoc, N. C.

I have been using Vitæ-Ore for several months and have found it greatly to my benefit. When I commenced taking it I was a physical wreck, could eat nothing without great pain and suffered when I did not eat with cramps and the pain in the kidneys known as "Kidney Colic." At different times I was treated by six different doctors and they could not help me. My weight before beginning the V.-O. treatment was only 125 pounds, now I weigh 163 pounds. I could not walk any distance but can now walk anywhere and I can work every day chopping and grubbing.

J. A. Harris.

Husband and Wife Both Benefitted.

Bryan, Okla.

The doctors said I had Kidney and Bladder trouble and it was with me for four years. I took lots of medicine of different kinds but got no relief until I obtained and used Vitæ-Ore. I had lost all hopes of being cured, rented my farm and given up. But thanks to Vitæ-Ore I now feel like a new man. My wife has been troubled with Rheumatism for several years, and when she saw what Vitæ-Ore had done for me she commenced its use also with very satisfactory results.

B. T. Conley.

A General Toning Up.

New Ross, Ind.

I first heard of Vitæ-Ore through a newspaper advertisement. At the time I began taking it I was almost helpless, had no appetite, could not sleep and was all run down. I had tried several medicines but they did not seem to benefit me any, so I decided at last to give the V.-O. a trial, although at the time I had very little faith in it. I have now been taking V.-O. for some time and the results have been very pleasing. I am stronger than for several years, and although I am now 74 years old, I am able to be up on my feet all the time and my system has received a general toning up.

Mrs. Angeline Hinkle.

Cured After 25 Years.

Perry, Ohio.

I suffered from Stomach Trouble for 25 years and have tried a great many medicines, but nothing seemed to do me any good until I got hold of Vitæ-Ore. I used three packages and am cured. It has been seven months since I used the medicine and feel no return of my ailment.

Ira M. Dodge.

Lumbago Cured.

Findlay, Kans.

I have given Vitæ-Ore a fair test, and it has done me much good. All last fall and winter I had Lumbago so bad that I could not work or even walk around unsupported. Since using Vitæ-Ore I have gained 15 pounds and have not missed a day's work.

John Lanning.

Threw Away the Cane.

Rochester, N. Y.

I was very badly crippled from the effects of Rheumatism. Was a year and seven months on two canes, used Vitæ-Ore, cured completely from pains, threw away canes, and can praise V.-O. for complete cure.

W. J. Brown,
31½ Richard Street.

Sick Headache and Constipation.

Montgomery, Iowa.

Vitæ-Ore has done for me what no other medicine could. It cured me of Sick Headache and Constipation, for which you may be sure I am happy. My wife also says Vitæ-Ore is the best remedy she ever tried.

C. S. McCormick.

Catarrh of the Head and Throat.

Douglasville, Ga.

I do not need more medicine as I am now cured. I had Catarrh of the Head and Throat, had taken treatment from doctors and they would not allow me to sing or talk. Since I used Vitæ-Ore I can do as I please, as the trouble is gone.

Lillian Burnett.

NOW READ OUR SPECIAL OFFER

TO EVERY SICK AND AILING PERSON.

WE WILL SEND

to every reader who writes us, mentioning UP-TO-DATE FARMING, a full-sized ONE DOLLAR package of VITÆ-ORE, by mail, POSTPAID, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs, or dopes, or quacks, or good doctors, or patent medicines, he or she has ever used. READ this over again carefully and understand we ask our pay only WHEN IT HAS DONE YOU GOOD, NOT BEFORE. We take all the risk; you have nothing to lose. If it does not benefit you, you pay us nothing. VITÆ-ORE is a natural, hard, adamantine, rock-like substance—mineral-ore—mined from the ground like gold and silver, and requires about twenty years for oxidization. It contains free iron, free sulphur and magnesium, and one package will equal in medicinal strength and curative value 300 gallons of the most powerful, efficacious mineral water drunk fresh from the springs. It is a geological discovery, to which there is nothing added or taken from. It is the marvel of the century for curing such diseases as RHEUMATISM, BRIGHT'S DISEASE, BLOOD POISONING, HEART TROUBLE, CATARRH AND THROAT AFFECTIONS, LIVER, KIDNEY AND BLADDER AILMENTS, STOMACH AND FEMALE DISORDERS, LA GRIPPE, MALARIAL FEVER, NERVOUS PROSTRATION, AND GENERAL DEBILITY, as thousands testify, and as no one, answering this, writing for a package, will deny after using. VITÆ-ORE has cured more chronic, obstinate, pronounced incurable cases than any other known medicine, and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescriptions which it is posslbe to procure.

IT WILL DO THE SAME

for you as it has for hundreds of readers of UP-TO-DATE, if you give it a trial. SEND FOR A $1.00 PACKAGE AT OUR RISK. You have nothing to lose but the stamp to answer this announcement. If the medictne does not benefit you, WRITE US SO AND THERE IS NO HARM DONE. WE WANT NO ONE'S MONEY WHEN VITÆ-ORE CAN NOT BENEFIT. Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitæ-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. WE MEAN JUST WHAT WE SAY in this announcement, and will do just what we agree. Write to-day for a package at our risk and expense, giving your age and ailments, and mention UP-TO-DATE, so that we may know what you are entitled to this liberal offer.

FROM THE EARTH'S VEINS TO YOUR VEINS

READ THE TESTIMONY.

Read it again and again. No such words have ever been said or written about any other medicine; no such expression can be commanded by any other treatment. Vitae-Ore is as different from other remedies as is pure milk from chalk and water, or the brilliant sunlight from a tallow candle. It does not take FAITH, does not take CONFIDENCE, does not take BELIEF, does not take even HOPE to cure with Vitae-Ore. It takes only a trial—all we ask. THIS MEDICINE FROM THE EARTH'S VEINS ENTERS THE VEINS OF SICK AND SUFFERIN ; PERSON AND CURES whether the sufferer believes in it or not, whether he wants it to or no. Its elements enter the blood, the vital organs, a d WORK, WORK, WORK—a work that means a cure. Send for IT!

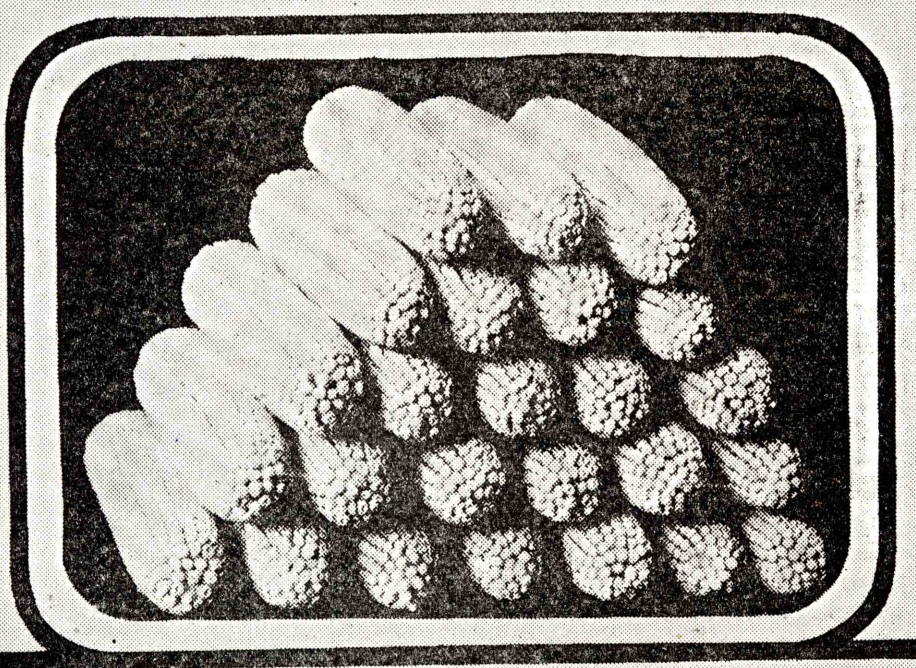
☞This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS

THEO. NOEL COMPANY, Up-to-Date Dept., Vitae-Ore Bldg., CHICAGO, ILL.

UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, APRIL 1, 1905.



Twenty-five ears of Farmers Interest Corn which were sold for $150.00 cash. Read about them in this paper. This corn was named and introduced by J. A. Everitt, Seedsman, Indianapolis, and has been advertised in this paper.

FOR THE
CO-OPERATING FARMERS OF AMERICA

HAVE YOU SENT FOR YOURS?

WE HAVE A COLLECTION FOR YOU.

If you have not wont you please do it now? UP-TO-DATE is going to be a greater power in 1905 than ever before. Don't you see that it is getting better and stronger every issue. It has been the greatest in farm journalism for more than two years. Cannot you say, as does the Editor of The Farmers Journal as follows:

"We scarcely find a sentence in UP-TO-DATE FARMING but what is so true. so forcible, so convincing and so directly to the point that we want to copy it all in to **The Journal** so that our readers may profit by it."

Also we copy from a farm exchange as follows:

"We are anxious for our readers to read Up-to-Date Farming. Its gospel is the gospel of salvation for the agricultural interests as sure as you live."

Can it be possible that you farmers who have read this paper for the past year fail to recognize the Magnitude and Value of the work we are doing? We say no. You surely are not blind and dead to your own interest. We wont believe it. Therefore we now look for your renewal of subscription at once.

NEW SUBSCBIBERS ARE ALSO EARNESTLY SOLICITED. IF YOU CAN TAKE ONLY ONE PAPER IT SHOULD BE THIS ONE. IF YOU CAN TAKE SEVERAL THIS SHOULD BE THE CHIEF ONE.

Your Hands Are Tied when you let the speculators price your crops, but when you price them yourself it is different. No matter how pleasant farming is now, it will take on new attractions when you get the price you ask for your own crops. This is what UP-TO-DATE FARMING teaches. Don't you want to enjoy the benefits?

There Will Be No Guessing when you are a subscriber to Up-to-Date Farming. Then the prices of your crops will be as stable as are the prices of plows, binders, interest on money, taxes, etc. You may need to wait a while now but the price comes.

There Are Many Other Reasons but we cannot give them here. Order this paper to your address for the next year and the truth of all we say in this advertisement will gradually come to you and make a new man or women of you as regards your understanding of agriculture.

Up-to-Date Farming is printed twice a month. It has nearly 150,000 subscribers already, but must have a *million or more.* If *all* farmers knew how valuable this paper can be to them, we would have a million subscribers in two weeks. We know farmers are just like any other class of people—they want opportunities to make money and Up-to-Date Farming makes the opportunities. It has done so for many thousands, and we have their letters stating this fact. It can do as well for *every* farmer.

The Subscription Price Is 50 Cents Each number will do you more real pratical good than a whole year's volume of any other paper, because it tells you the vital things about your business that other papers have not begun to print. These things are of the greatest importance to you and you *will not* get the best results from farming until you know them. You must read Up-to-Date Farming to understand it, appreciate it, enjoy it and profit by it. When you begin reading this paper the possibilities that lie around the farming millions will begin to dawn upon you.

We want you to send your order direct from this advertisement. For fear you will put it off we are going to offer you a valuable premium if you send promptly. Good seeds are as valuable as good teaching and both mean success, Mention this paper and send promptly and we will give you four seed novelties as follows:

1 Large Pkt. **Smith's Prolific Corn.** New hybrid. Greatest cropper. Yields over 100 bu. to acre as easily as common corn yields over 60 bu. Fine appearance. Yellow Dent, ears 10 to 14 in. long. Always 12 rowed. Grains ⅝ in. deep, ½ in. wide, nearly ¼ in. thick. Cob 1 in. diameter. Stalk 8 ft. high, 2 in. thick at base; blades 6 in. wide. Bears often 4 ears to stalk. This is a remarkable variety and one that every corn grower should procure at once. IT IS NOT OFFERED FOR SALE AT ANY PRICE.

1-2 lb. **Snow White Sensation Potato.** A new seeding, and one that will create a sensation. Season medium late. The skin is the whitest of all and the flesh is as white as fine flour. There is no yellow tinge in the flesh whatever. Oblong shape, large size. A most remarkable potato indeed, and will take the country by storm. It outyields Carman and Sir Walter Raleigh, while for handsome appearance and table qualities those varieties will not be wanted when **Snow White Sensation** comes on the market. This potato is not for sale **at any price**

1 Pkt. Cabbage **The Volga.** A new variety from Russia. It is remarkable for perfection of form and solidity of heads. Mr. Allen, the largest grower of cabbage seed in America, says, "Without exception the nearest approach to perfection of any variety we ever grew." It is a late variety and for winter it keeps better than any other. Every gardner will be delighted with this fine fall and winter cabbage.

1 Pkt. Peppers **Mongolian Giant.** Do you love to grow giant vegetables? There is a fascination in having the largest. Grow this pepper and you will have the fruit that will be the wonder and admiration of the entire neighborhood. There is no variety finer for filling with cabbage. The flesh is thick, meaty, solid and pleasant mild flavor. This is truly a mammoth vegetable and one of the greatest attractions for any garden. Bushes grow 1½ to 2 ft. high,

Remember *We don't charge a cent for seeds and potatoes. We offer them to guarantee your prompt subscription because we need it in carrying out our great undertaking. But you need Up-to-Date Farming even worse than we need your subscription. Don't lay this paper aside until you have sent the order.*

Old subscribers may also have this premium when renewing their subscription, if they ask for it.

READ SOME REPORTS ON THE 1904 SEED COLLECTION

If you miss any of our FREE SEED DISTRIBUTIONS you miss some good things. If any of our old subscribers did not get as good returns as here reported, try again as every article in the '05 collection is a gem.

EXPLANATION—The Premium potato was sent out under the temporary name of "Up-to-Date No. 1." But has been named and is being introduced this year as Everitt's Abundance.

Mr Everitt:—I value your paper very much. Of the seeds you sent, the Yard Long Corn is just immense—the largest I ever saw. The Pumpkin and Melon are good and the Potato out yields all other kinds
David A. Bolick, Bloomfield, Ia.

From the ½ lb. premium potatoes I planted 22 hills and raised 147 potatoes, weighing 73 lbs. I took second premium at the Flathead County Fair. I also took second premium on pumpkins from the seeds, first premium on White Wonder Melon and two first premiums on Yard Long Corn—one on best half bushel the other on 6 best stalks.
E. J. Cramer, Chautauqua, Mont

From the ½ lb. Premium Potatoes I raised 45 lbs. I regard this as a large yield. The tubers are large, uniform and shapely. They are very valuable and I thank you for the start.
E. McIntire, Worthington, W. Va.

From the ½ lb. of premium potatoes I dug 172, weighing 55 lbs. (over 100 lbs. to one.) The other seeds were extra good.
W. J. Hylton, Wolverine, Va

From the ½ lb. of premium potatoes I raised 99 tubers, weighing 48 lbs. I would not take the price of the paper for these potatoes.
G. K Arnly, Gamewell, N. C

From the ½ lb. of premium potatoes I raised 53 lbs. of as nice, large, smooth potatoes as I ever saw. I am delighted with them The Yard Long Corn is fine
19 hills of the potatoes yielded 26 lbs. All other seeds a success.
G. W, Millower. Watkins, N Y

This is the Offer: FOR 50 CENTS we will send UP-TO-DATE FARMING twice a month for one year. Also four seed novelties as explained, and a due bill good for 25 cents' worth of packet seed, your selection.

YOURS FREE If you will show this offer to 4 of your Neighbors and get their orders we will send . . **YOURS FREE**

That, is we will send five (5) for the price of 4, or you can keep 50 cents for the fifth order. ¶SUBSCRIBERS ALREADY PAID IN ADVANCE can have their subscription extended another year, OR WE WOULD LIKE if they will make a present of the paper to a friend not now a subscriber. In this way they can get the Free Seed Distribution and we get a new reader.

25c Due Bill We not only want your name but all of your neighbors'. The good that this paper can do is not for a few farmers but for all. Therefore, send us 10 or more addresses on a separate sheet with your order and we will send a **due bill** good for 25 cents' worth of seeds (vegetable or flower) selected from the catalogue of a leading seed house (your choice.) Surely you will now come and help us to get the million subscribers.

UP-TO-DATE FARMING

J. A. EVERITT, Publisher *INDIANAPOLIS, U. S. A.*

MAIL US THE GRAIN OF CORN

Pub. UP-TO-DATE FARMING, Indianapolis, Ind.

Dear Sir: Send me Up-to-Date Farming one year to the following address You will also send the seed premium for prompt subscription as advertised in April 1, 1905, UP-TO-DATE FARMING.

Name.....

P. O.....

County ..... State .....

If you send the list of Names they must be on a sheet separate from order and we will send due bill.

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 227 West Washington Street

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | **INDIANAPOLIS, APRIL 1, 1905** | **Number 7**

UP-TO-DATE FARMING
PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher
JOHN P. STELLE, ASSOCIATE EDITOR

SUBSCRIPTION PRICE FIFTY CENTS A YEAR
Foreign Subscriptions $1.00 a Year.

MEMBERSHIP IN THE AMERICAN SOCIETY OF EQUITY, $1.00, including a year's subscription.

CLUBS: Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 or five $1.00 for $4.00.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and **sustaining organized** effort for improved conditions. Look for the **LABEL.**

NATIONAL UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	-	**$ 1.20**
Corn, No. 2 " " " "		
Until January 1st, 1905,	-	**.50**
From Jan. 1 to Apr. 1, 1905,		**.55**

Hogs, " per cwt.	-	**6.00 to 6.50**
Cattle, " per cwt.	-	**6.00 to 7.50**

Organizations in every State does not necessarily mean that everybody is organized. Let's gather up the loose ends now.

"But this is a people robbed and spoiled; they are all of them snared."—Isaiah, chap. 42, verse 22.

April 1. Foundations for a new crop are being laid.

Teams are getting ready, harness is being adjusted, implements brought out—the machinery of farming, with all its details, is being set in motion in the middle and northern States, which involves the investment of capital and the employment of labor, either the farmer's own or that purchased of others, or both.

This is just about the same in substance as the starting of a factory. Yet what factory ever got up steam, employed its laborers, and set its machinery to work on an output that some one else was to put a price on and buy without consulting the manufacturer as to price? If any did such a thing, how surprised would the world be! And yet that is the thing the commercial world, the boards of trade, the agricultural colleges, the farmers institutes, and most of the farm papers say the farmers must do. And many farmers are stupid enough to say it is the natural and proper thing!

Farmers who believe that of all the world of industrial humanity they are the only ones who should exhaust their energies in production, to have their products priced and taken without being consulted, are unworthy of the high calling that God honored by introducing it into the world and commanding that it be followed.

Farmers are conceded to be the greatest class, the most honorable class, the most useful class—the country's dependence in all emergencies, either of peace or war, and the greatest of wealth producers, but when it comes to disposing of their products they play a smaller game than the manufacturer of the smallest article of commerce!

The farmer does not know his power and seems slow to recognize his importance. These will both dawn upon him one of these days—in fact, he has recognized them already, and then he will take his proper position among the people of the world—will come to the front.

The whole power of the courts is everywhere exerted to sustain the rights of property—to secure ownership in the owner. Can it be said that the rights of property are recognized where the owner is denied the right to put a price upon his property, and, though not compelled to sell, must sell at somebody else's price, if he sells at all, and can get no remuneration for his toil without selling?

Would there be any objection to extending the market reports something like this: May wagons $30; July threshing machines 20 points off. Owing to European cables December overcoats took a slump yesterday. Lowell is having a slow run on shoes, and prices dropped this morning. It is found that the production of calico is in excess of the demand, and prices are cut down. That all reads very silly, don't it? But it is just like the market reports on farm products. Why?

Have you renewed?

Not high prices, but equitable prices.

When wheat is at $1.20 sell. When at $1.19 or less hold.

Let us sing farmers to the front. Get an Equity song book.

Letters that current events have made famous —A. S. E.

The Third Power Book is being read, and the strength of the third power is being felt.

Remember, no difference how large the wheat crop it will not be worth less than $1.00 a bushel at Chicago.

$1.00 FOR 1905 WHEAT

No matter how large the crop is. If a short crop it will be higher. Keep this in mind.

So much of every staple crop is now controlled for price that those who hold will get their price. The world can not do without the controlled part. Farmers be encouraged.

The third edition of "The Third Power" is exhausted, and another edition of 20,000 is now on the press. As long as white paper can be secured we will turn them out, even a copy for every farmer in the land.

Much, in fact, everything depends on present readers of Up-to-Date Farming. Extend its circulation. This is everybody's duty.

1905 has some great problems to solve for the uplifting of mankind. It is not too early for every person to give thought as to the best way to solve them. Up-to-Date has been a leader in thoughts to elevate agriculture and the farmers. It is willing to be the vehicle to express the thoughts of the people at this time looking to the completion of the machine of controlled marketing. If you have thoughts write them to us.

HAVE YOU RENEWED YOUR SUBSCRIPTION?

We don't want to think that any person who has read Up-to-Date Farming for three months or more will refuse to renew when his term expires.

We have been patient in waiting on some of our subscribers, preferring to believe that they intended to renew later at a convenient time. But there is no more convenient time than the winter and spring to renew. Unless we hear promptly from all those who have not yet renewed we must put it down against their indifference and possibly recklessness of their self interest.

If you want the paper to continue please signify it by paying up arrearages and in advance. If you don't want it please say so. We have tried to make a journal worth the subscription price. If any publisher has ever done this we feel we have, and we know we are not mistaken, because thousands of readers have testified to this fact. If we were to remove the names from our subscription list when each subscription expires of those who want the paper, and then replace them again, it would cost us thousand of dollars each year. Therefore our plan serves both reader and publisher best.

We will do much for farmers this year. Some of the things have been referred to in recent numbers. There is going to be a greater movement forward of farmers from now on than ever in the past, and you know Up-to-Date, will lead the procession. For these things you need the paper. Also we want to make improvements in our publishing facilities. Do the best we can we can not get all papers to readers promptly. We regret this. Greater facilities must be provided for printing. To equip a modern up-to-date publishing plant will require the outlay of many thousand dollars. Up-to-Date Farming needs such a plant, because the farmers need this paper exactly on time, and soon they will want it weekly.

We have been looking over our subscription list and see that, if each person who has not renewed this year will send in just 50 cents, and do it now, so we get these many thousands of 50 cents in a bunch, we will be justified in ordering a new press and outfit and have it installed during the summer.

Now, understand us. If each person who has not paid up this year will send 50 cents each you will get a better paper, better service, and by next winter you will get it weekly.

Please don't refuse to respond to this appeal. It is every bit as much for your interest as for any other persons. We expect to have a hard fight to keep price right on some crops this year, but it can be done with a properly equipped publishing plant.

As Up-to-Date Farming has been responsible for farmers making hundreds of millions of dollars extra, why will not this appeal fill every farmer with zeal to help.

Remember this is not a request for a donation, but for what has been earned and is now due.

Send your 50 cents (or more) to-day. Yours truly,

J. A. EVERITT, Pub.

Be Sure to Send Your Renewal this Month

Wonderful things will be done for farmers this year and Up-to-Date Farming will announce them.

"The Farmer man and the Wise Men" is printed in the form of a four-page folder. It has exhausted two 25,000 editions and another has just gone on the press. It is for free distribution. It is a great awakener of the farmers' condition. How many will you distribute?

Up-to-Date is entirely in favor of diversified farming. The independent farmer is he alone who produces all that he needs for home consumption. All cotton, or all tobacco, or all wheat, or all corn, or all any other one thing or two things, is not safe or independent farming.

A seed is of little value until it is put to use. Plant it, feed and cultivate the plant and soon the beautiful and valuable harvest appears. So with an idea. The idea that farmers can regulate the marketing of their own crops will never do them any good if they do not cherish, spread and work out the idea in practical every day business.

Gold in the ground is of no more value to mankind than the merest dross. But mine it, refine it, form it in beautiful shapes or stamp it with its intrinsic value and it is the most beautiful and valuable metal. So the idea that was brought forth by the A. S. of E., if accepted, shaped and stamped by the farmers approval, will prove to be the most beautiful and valuable asset they can possess.

By the time this issue of Up-to-Date reaches its readers we hope to have the "SONGS OF EQUITY" song book ready for distribution. It will be a fine surprise to all our members and friends when they see how splendid it is. It will be a power for good in the farmers' movement. Price, 25 cents, postpaid. Sixty-four pages and cover.

Independent thought is the hope for the future social and economic condition of our country. The growth of independent thought that we see all around us to-day is the most gratifying sign of the times. The people have been helpless in the past because ignorant in respect to these great problems. But this paper and a few others are teaching them, and then they will be all powerful.

Read the article in this issue outlining an interview with people of different callings. That is simply a glimpse at the real situation in the industrial world. Is it not surprising that it should be so? Who is to blame? The farmer alone. The shrewdness of others has made the conditions, and the stolid indifference of the farmers has accepted them. If they be continued the farmers themselves will still be the only ones to blame.

"Songs of Equity" will sound all over our fair land. Mark what we tell you. They will be sung in meetings, in homes, by the farmer and his sons when about their work or in quest of pleasure. The wife and daughters will sing and hum them as they go about their duties. Then will dull care flee away and more brightness, happiness and contentment come into every country home. We believe this is the only collection of songs for farmers and that pertain to his business.

"The Third Power" book should be read by other classes also besides farmers.

One hundred and fifty thousand members of the A. S .of E., several hundred thousand more cooperating farmers who are doing all the A. S. of E. recommends. Nothing can stand against this army when it sets out to accomplish a certain object.

THE greatest problem for mankind to solve is how to guarantee to each individual the equal share of reward, the result of his or her own effort, to which each is entitled.

The hope for solving this problem centers in the American Society of Equity, and the way is clearly shown in that great book, the Third Power.

Out Among the Other People

God bless all who labor. All who work to produce something useful to the human race are honorable, and entitled to the consideration respect and gratitude of mankind, and all who receive benefits from that labor in the use of what the labor produces should be willing to accord reasonable compensation therefor.

Let us make an imaginary journey among these people and see how it fares with them, but let us be sure to present only the actual conditions.

* * *

"Mr. Wagonmaker, you are getting out some very nice vehicles. What do you expect to get for them this year?"

"Much the same as we got last year. Prices of wagons, carriages, etc., are very steady. We used to cut against each other some, but we are now generally agreed among ourselves, and keep our prices the same, being sure that all costs and even losses are covered, and a safe profit for our own compensation."

* * *

"Mr. Implement Maker, you are turning out a splendid line of mowers, reapers, binders, threshers, engines, etc. How will the market for such things be this year?"

"Oh, we are never uneasy about the price; that is the first thing we make ourselves sure of. If we didn't we would not dare to turn a wheel to make a thing."

"But there are others engaged in the same business. How do you manage about the price? Is it not regulated by supply and demand?"

"Several years ago we had some trouble about the price, but we soon learned to do better. We now understand each other, and agree upon prices at which we shall sell the same implements, and if any one breaks the agreement and dumps his articles in competition with the rest of us, we unite dead solid against him, and he is soon glad to make good to us, or we make it so hot for him that he soon finds another business. The first thing we are certain of is the price; we couldn't keep in business without a satisfactory price."

"But I have understood the implement manufacturers have formed a trust, and work some way to each other's advantage. How is that?"

"Well, you may call it a trust, if you wish; we don't care what you call it. It is this way: We estimated what we considered the value of our separate plants, decided upon what we should spend on our different machine, with an ironclad agreement as to price, and then we 'pool our issues,' as they used to say, and divide profits. We would not attempt to do business if we could not make our own prices."

* * *

"Hello, Standard Oil Company, it is wonderful what development there has been in earth oils within the last fifty years. When I was a boy no such thing was known as an illuminating material obtained from the earth; now no home is so poor or so remotely located that it is not lighted with coal oil, and the raw material is drawn from deposits found in many places in this country, and in almost all the countries of the world. How do you manage to regulate the supply to meet the demand?"

"We do not care so much about the equality of the supply and demand. If we get too much we simply hold the surplus over, and wait a time when it shall be needed for use."

"But how do you maage about the price when you get too much of the oil on hand?"

"The price is what we are most careful to look after; it is the most important thing to us, and it is therefore the first thing we attend to. We make the price, and all who handle the oil must observe it ,and all who use the oil must pay it."

"But isn't it fixed by comparing the supply and demand? Does not the law of supply and demand determine the price?"

"There may be such a law as that somewhere, but I have never found it in any of OUR books. Of course we can not say that we own the crude oil, for that is one of God's products, whose whereabouts and quantity are unknown, but we own the machinery that brings it out of the earth, the pipe lines that distribute it, and the refineries that prepare it for use. We know what it costs to operate all these, and we know how many millions we wish to add to our wealth annually, how much we want to spend for pleasure, and how much we wish to give to our pet institutions, and we make the price to cover these matters. If we meet with a loss, or desire to make an extra expenditure, we simply add that much to the price of oil. It is very simple and no more difficult than any other matter of business."

* * *

Well, here is a match factory, just at an appropriate time. "Mr. Superintendent,I would like to talk with you a minute. I have just been talking to the Standard Oil people. You make mighty little things, each considered of very small value, but they are needed by the people everywhere to light their lamps with. There are a great many different match factories all over the world, are there not?"

"Yes, there are a great many in this country, and other countries have them, too, and manufacture their own peculiar kind of matches, though American matches are used almost everywhere."

"While there are so many factories making matches, how do you manage to not have an over production—to not make more than consumption demands?"

"What would be the difference? If we make too many we don't offer the surplus; we simply put them away and keep them until they are needed."

"But when you get too many don t it reduce the price?"

"Of course not. We make the price, and all stick to it. Suppose a streak of lightning should split all the pine trees in the world into matches, if we owned them all and wouldn't sell them for any less than the price, how could it make any difference in the price? The people would have to have the matches; they could not get them from anybody but us, and they would have to pay the price, wouldn't they?"

"Guess they would. I think I'll go. Here's my train."

* * *

"Ah! I see the president of the road is on board. Mr. President, I note you are doing a pretty heavy business this year. The transportation interests are very great, and railroad lines reach almost every part of the country with freight and passenger stations every few miles along them. Rates must be made to and from each of these stations. You are never troubled with an overproduction of cars, are you?"

"No, I never heard such a question as that before. If we happen to have too many cars at any time we draw them into the sheds and let them stand until they are needed."

"But when you have too many don't it make rates lower?"

"No, we just don't use the surplus, and that settles it, and we keep the rates the same."

"But sometimes during a rush of shipments it happens that you don't have cars enough, don't it?"

"Yes, and we get the papers to call it a car famine."

"When you don't have cars enough the demand is greater than the supply, and rates go higher, don't they?"

"Yes, during car famines rates advance, for we are put to extra expense, you know. People understand that and know that its reasonable. This makes car famines convenient sometimes, and I have known them to happen with the sheds full of cars. It is very little trouble to make a car 'disabled.' Only a trick of the trade."

"But the transportation business is scattered all over the country; millions are engaged in it, and many different companies. Business so scattered as that can't fix prices of course, so I suppose those who travel and ship freight meet and decide what they will pay, don't they?"

"Well, if you ain't the —— —— —— ——! The railroads fix the rates, and if the shippers don't want to pay it they can keep their stuff; if the passengers don't want to pay the fares we fix they may stay at home, and if the people want a new depot, or the tracks elevated through a city we put up the rate so they pay for what they get."

Here's my station.

* * *

"Hello, Neighbor; that wheat field of yours is looking well. What are you to get for wheat this year?"

"I don't know. That depends on how much is raised. Wheat is looking well. I'm afraid there will be an overproduction, and the price'll be mighty low."

"I see you are breaking ground for a big corn crop."

"Yes, if the wheat fails or is too low to bring anything we must have lots of corn to make it up."

"Then you know what you are going to get for corn?"

"No, that depends on the crop; the price is fixed by supply and demand."

"That is fine, rich land you are fixing to plant to potatoes."

"Yes, I must have something to fill in the chinks. If the price of wheat and corn is down maybe the potatoes will help us out."

"You make the price on the potatoes then, I reckon."

"Oh, no; but sometimes the crop is short in the main potato countries, and then we get a pretty fair price."

"I notice that big bottom meadow is in fine shape this spring. You are sure to come out of the kinks when your hay goes on the market."

"I don't know. Meadows are reported fine everywhere, and it is likely hay will be very low."

"That orchard on the hill is very full of bloom I see ,and you'll doubtless have a fine fruit crop."

"There's where I have an advantage over most of my neighbors; I have a good orchard. But then there is a good prospect everywhere, and they may not be worth much."

"Don't you know what you are going to get for anything you raise?"

"No, no; that depends on the market."

"Who makes the market?"

"The dealers. The price is fixed by the inflexible law of supply and demand."

"How do you know it is?"

"Everybody knows that. It always was and it always will."

"Now, look here, farmer! Do you know that you are the only —— —— —— (I wish Up-to-Date had type that knew how to say words) laborer in all this world that spends his life or any part of it, making things that he has no idea what he is going to get for when he sells them; the only one that takes his things after they are made and tells the buyer to put a price on them and take them."

"But we farmers can't do anything. We are scattered over the country too much."

"Are not the railroads and stations scattered just as much as the farms are? Is not oil, coal and manufacturing just about as widely scattered? And don't they put a price on everything they make or handle, and don't you have to pay it or do without?"

"Oh, yes, but they have their capital invested and lots of money behind them, while we are nothing but farmers."

"Nothing but— What's the matter with Secretary of Agriculture Wilson? He says there is more capital invested in farms than in all the trusts and corporations combined, and that the annual products of the farms represent a greater value than the ouput of all the factories, mines and everything else combined. And yet the farmers, with all this capital invested, and producing all the wealth mentioned, representing the very necessities of life, take a lower seat than the makers of matches and toothpicks, and let other people fix a price on everything they raise and every lick they strike.

The reader may put in words suitable to the occasion; the editor can not.

Accept Our Plan or Show Us a Better One

We do not claim perfection. Few human acts are perfect, and few human plans are absolutely free from error; but if a class that produces and owns what the world must have or die, will put a reasonable price upon those commodities and refuse to surrender possession of them on any other terms than the payment of the price, the price will be paid, and nether the world nor its legitimate business interests will suffer. On the contrary, all will be benefited, business put upon a more equitable basis, and life itself freed from many annoyances it is now compelled to suffer. We appeal to the calm judgment of every intelligent human being if all this is not true. If not, show us what is.

Show Us the Wrong

Up-to-Date Farming believes it is right. We do not hold that farmers are necessarily better than other people ,or that they are entitled to the superior consideration of society, or of special favors from the lawmakers, but we do hold that they are as good as any, and entitled to as great consideration, favors and privileges as are accorded other classes. This would undoubtedly accord them the right to name the prices at which their products shall sell, a right that may be exercised as easily, as certainly, and with as little possibility of harm to the public as the same right is exercised by all other classes. Those who would not accord farmers this right are too narrow minded to be just, and famers who would not claim it are too weak to be in dependent, too sordid to be prosperous. This is stronger language than we are accustomed to use, but a deliberate analysis of the situation justifies it.

IF he who makes two blades of grass grow where but one grew before is a public benefactor, and if, as Prof. Hopkins says: He who reduces the fertility of the soil so that only one ear of corn grows where two have grown before is a public curse. Then how shall we class the person who puts in operation a plan that enables the producers of grass, corn and every other farm crop to get a fair price for all he grows?

It is true that agriculture is the foundation and support of American industries, institutions and of the Nation itself. Therefore, how necessary that we keep agriculture flourishing. No industry can flourish uninterruptedly that is not free from the machinations of a middle class of schemers who, in the past, have made prices unprofitable at their will.

How to Maintain Prices

We have been asked what the farmers would do to maintain prices if staple crops were extremely large?

To illustrate and reply to this question we will suppose the wheat growers will raise 1,400,000,000 bushels of wheat this year. This would be about twice as much as ever grown in one crop before. It, we will say, is sufficient for two years. With a condition of this kind confronting the farmers the American Society of Equity will recommend the farmers to set half of their crop aside, hold it over until the next year, and rest from growing wheat a year.

Farmers should consider big crops blessings, and make them such instead of allowing them to be curses as they have been under the old system. It costs them little more to raise a large crop than a small one. For this reason farmers are to be envied. With the manufacturer it is different. If he increases his output of goods it is only at so much increase per machine or article.

Farmers, organize, then farm intensively and make every bushel and pound of produce return you a ligitimate profit. It can be done, as there is not a problem in the agricultural book that the rules of the A. S. of E. will not solve.

Farmers' Clearing Houses

Reference has been made to farmers' headquarters or clearing houses for agriculture in late issues of this paper. It is hoped to establish them soon. The object will be twofold. The primary object will be to complete the machine of controlled marketing for farm products. The second object will be give practical demonstrations of government of cities and communities and prepare the way for a strong, pure government throughout the land.

* * *

The American Society is founded on the cornerstones of equity, justice, equal rights, equal opportunities and fair rewards. The dominating influences in our present cities are graft, boodle and political corruption, and the conditions are growing worse year by year. Corruption is everywhere—in politics, finance, business, professions, science, education and religion. The mottoes are, "Do him before he has a chance to do me;" "All is fish that comes into my net," and "Look out for yourself and let the devil take the hindmost." Is it well to keep the headquarters of the farmers' society in such a community? Somebody said "nine-tenths of the good and virtue in the country is with the famers." Shall this good contribute to the perpetuation of the bad conditions existing in all our cities? The fact of the headquarters being established in cities or elsewhere will create much wealth for that place. Shall this wealth contributed by the farmers continue to accrue to the advantage of some old city, and the A. S. of E. be instrumental in assisting to continue the bad conditions? Shall the farmers continue to pay assessments and taxes to enrich the small favored classes who own the utilities which are represented by immensely inflated valuations and watered Stocks. Or shall we go out in God's open country where the blighting, withering hand of greed has not yet touched and there build cities and communities where the golden rule "do unto others," etc., will be the law, and that we hope will be instrumental in compelling other cities to pattern after then on the penalty of being depopulated when the people see and learn how people should live and do business in the spirit of equity and brotherly love.

July wheat was over $1.00, and at this writing is down to 92½ cents. May was over $1.20, and now is $1.13. These are speculative prices. Cash wheat has been around $1.20, above and below, since last September. One interesting thing can be noticed by people who watch the market. It is the fact that when cash wheat goes under $1.20 at Chicago the receipts promptly drop off. Is this anything short of controlled marketing governed by a known price? On the day we write this, March 13, not a single carload of wheat came to the Indianapolis market.

A pretense of resistance was made by the railroads entering Indianapolis against track elevation. We say "a pretense," because why should this expense concern them. They will simply put rates up and the people will pay the bill.

"The Price Would Be Reduced One-Half"

A farm paper that we esteem as highly as any published, and for whose editor we have the very highest regard, speaking of the necessity for and the effects that would follow the invention of a machine for picking cotton, says:

"The discovery of a successful cotton-picking machine would almost at once extend cotton culture so greatly that the world's supply would be doubled, and the price would be reduced one-half, and prosperity would return to the industry."

Knowing the present condition of cotton production in the South, the reading of that paragraph is enough to take one's breath.

The price of cotton was fairly remunerative until the Department of Agriculture of the United States announced that there was an unusually large crop in this country, whereupon the price dropped to a point which the growers regarded unreasonably low, and the most sternuous measures were at once taken to secure a reduction of acreage and a diminution of production in the hope of making the growing of cotton remunerative. It can not be that the editor of the publication from which we have quoted is not advised of these facts. They have been common newspaper topics since last December, and we must assume that he knows all about them. How, then, can we account for his congratulatory anticipation of the doubling of the world's supply and the reduction of the price one-half?

The world has not complained that its supply is short, but, on the contrary, has admitted that it is large, and for that reason it has demanded cotton at a low price. The world has not asked an increase of the supply, but the growers have protested that the acceptance of the price offered would ruin them, and they have demanded, wisely or unwisely is not a question here, that the supply be diminished. This demand can not be dismissed as an ill-advised agitation by "calamity howlers," for it has been endured by the financial institutions of that section, and approved by the clearest headed statesmen and business people there.

Have the cotton producers no right to an opinion of their own? Must not the farmer's judgment and wishes be respected in anything? Must supplies, that he is taught are already in excess, be doubled, and prices that he believes will lead him to bankruptcy be "reduced one-half" for "prosperity to return to the industry?"

It is no relief to say that with the advent of the machine spoken of cotton could be produced more cheaply. If we admit that as true, the wealthy, those who grow cotton by means of hired labor, would get the benefit of it. In what way would it ameliorate the condition of him who must produce cotton in the same old way, to "reduce the price one-half? And what of the laborers whose places are to be taken by the machine? In another place the same paper declares that "it is estimated that upwards of a million laborers are needed to gather the crop within the season of 130 days." What is to become of these laborers, if their work is to be performed by a machine?

Up-to-Date Farming is not averse to labor-saving machines. It stands for propgress in all lines of human endeavor; but when cold steel and nerveless wood crowds out human flesh and blood, we want it to be for the benefit of the flesh and blood so crowded out. And we believe the producers of any commodity should have something to say as to the amount that shall be produced, the method of producing it, and the price that shall be demanded for it after it is produced. This is no captandum sentimentalism; it is simple justice and equity, the doing as we would be done by. If such a machine is produced, for once we want the farmers to realize the benefit, financially. Many of the positions assumed by the agricultural press are inexplicable and a snare to farmers.

Has anybody noticed any reduction in the price of beef since the United States Supreme Court issued its famous restraining order against the Beef Trust?

Although nearly two months have passed since the "knock out" blow was delivered to the Beef Trust, yet the public find them standing as firm as ever to keep up prices to the consumers. The only wonder is that prices have not been advanced to make up the cost of defending the suit.

If this country had fewer laws and all simple laws, and if they were rigidly enforced, the trusts would not pay so much to beat them, which cost is in turn assessed against the consumers.

If equity in business prevailed it would cost far less to market necessaries of life and the consumers would receive the benefit. Every dollar that it costs to beat a competitor, to buy a fran-

It Is Wrong

To Suffer From a Germ Disease. Ask Us for Liquozone—Free

Those who suffer from germ troubles, and who do not use Liquozone, are wronging themselves. You will know how much when you try it. Most of these troubles are so unnecessary—so easily cured—it is wrong to let them continue.

What reason can one find to hesitate? A trial of Liquozone costs not a penny. We will gladly buy the first bottle for any new user, and pay the druggist ourselves for it. Won't you —if you need it—accept that gift?

Liquozone is not unknown now—not untried. It has cured millions of germ troubles—troubles that drugs can't cure. There is no neighborhood —no hamlet so remote—that has not instances of what Liquozone has done. The cured ones are everywhere; doubtless some of your friends are among them.

You will regret these days of waiting when you learn what Liquozone does. You will wish you had abandoned wrong methods and tried the right one sooner. Please ask about Liquozone to-day.

Not Medicine

Liquozone is not made, like medicine, by compounding acids and drugs; nor is there any alcohol in it. Its virtues are derived solely from gas, made in large part from the best oxygen producers. The process of making takes 14 days and requires immense apparatus. At the end of two weeks, we get one cubic inch of Liquozone for each 1,250 cubic inches of gas used. The attainment of this product has, for more than twenty years, been the constant subject of scientific and chemical research.

The main result is, to get into a liquid, and thus into the blood, a powerful, yet harmless germicide. And the product is so helpful—so good for you under any condition—that even a well person feels its instant benefit.

This is the product which in the past two years has sprung into world-wide use in the treatment of germ diseases. It is now used by the sick of nine nations; by physicians and hospitals everywhere. It is daily used in millions of homes in America.

Two Million Dollars

Have been spent to make Liquozone known. We have bought the first bottle and given it free to every sick one we learned of. The result is that one home in five, the country over, has some one whom Liquozone has cured. These homes are scattered everywhere. Your neighbors and friends live in some of them. If you will only ask what Liquozone does there are millions to tell you about it.

And we paid $100,000 for the simple right to make Liquozone—the American rights. The rights in other countries have sold for proportionate sums. We mention this fact to indicate the recognized value of Liquozone. Men have never before paid such a price for any discovery used in the cure of sickness.

Before we bought Liquozone, we had it tested for years, through physicians and hospitals in this country and others. We had it employed in every stage of every germ disease; in thousands of the most difficult cases obtainable. For two years, in many a disease called incurable, we proved that Liquozone did what medicine could not do. That was the reason for its price.

How Liquozone Cures

The greatest value of Liquozone lies in the fact that it kills germs in the body without killing the tissues, too. And no man knows another way to do it. Any drug that kills germs is a poison, and it cannot be taken internally. For that reason, medicine is almost helpless in any germ disease.

Liquozone is a germicide so certain that we publish on every bottle an offer of $1,000 for a disease germ that it cannot kill. Yet it is not only harmless but of wonderful benefit—better than anything else in the world for you. No one is so well that he cannot be helped by it.

The reason is that germs are vegetables; and Liquozone—like an excess of oxygen—is deadly to vegetal matter. To the human body Liquozone is exhilarating, vitalizing, purifying—the most needful, the most helpful thing possible. But to germs it is certain destruction; and these facts are true of nothing else in existence.

Germ Diseases

These are the known germ diseases; all due to germs or to the poisons which germs create. These are the diseases to which medicine does not apply, for drugs cannot kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding Nature to overcome the germs. But those results are indirect and uncertain, depending on the patient's condition. A cure is always doubtful when drugs are used, and some of these diseases medicine never cures.

Liquozone alone can destroy the cause of these troubles. It goes wherever the blood goes, so that no germ can escape it. The results are almost inevitable. Diseases which have resisted medicine for years yield at once to Liquozone. "Incurable" diseases are cured by it. In any stage of any disease in this list the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anæmia	Leucorrhea
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Piles—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goitre—Gout	Varicocele
Gonorrhea—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer accomplishing what no drugs can do.

50c Bottle Free

If you need Liquozone, and have never used it, please send us the coupon below. We will then send you an order on a local druggist for a full-sized bottle—a 50c bottle—and will pay the druggist ourselves for it. This applies only to the first bottle, of course—to those who have never used it.

The acceptance of this order places you under no obligations. We simply wish to convince you; to let the product itself show you what it can do. Then you can judge by results as to whether you wish to continue.

This offer itself should convince you that Liquozone does as we claim. We would certainly not buy a bottle and give it to you, if there was any doubt of results. You want these results; you want to be well and to keep well. Then be fair enough to yourself to accept our offer to-day. Let us show you, at our expense, what this wonderful product means to you.

Liquozone costs 50c and $1.

CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to The Liquozone Company, 458-464 Wabash Ave., Chicago.

My disease is .....

I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

.....

.....

.....

M 115—4 Give full address—write plainly

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

chise or corrupt a court or Congress, is added to the price of the commodity for which the battle was fought, and the consumer pays it.

As long as the trusts and great corporations make their own laws to govern the deamngs of the public with them; as long as they dictate the laws made by our legislatures and congresses, and as long as their paid attorneys and subsidized courts interpret the laws; so long will they be able to compel the public to pay any rate they chose to charge for their goods or services and keep their profits from impairment. However, a better time is coming. A revolution is imminent. If you put your ear to the press you will hear the rumble of discontent against the domination by a small middle class, and the exploitation by this class of the great hordes of producers and consumers. It will be a peaceful revolution, but no less an upheaval that will overthrow inequity and establish equity; that will make special favors impossible and grant to all more equal opportunities. This revolution will come through the farmers, and later they will be joined by the great army of consumers who also seek equity, nothing more and nothing less. Then will the people be trimumphant in this country again. Then they will have thrown off a more galling yoke than was ever inflicted by a foreign ruler; then will this be a government again of the people, for the people and by the people. Hasten the day!

Farmers and Farmers' Institutes

Price is the most important element in remuneration for labor. If the lawyer has no price his services go unremunerated. If the physician has no price his skill brings him no reward. If the official has no price, salary, he must look to some source outside his office for a support. If the mechanic has no price he must close his shop. If the miner has no price starvation will compel him to lay down his pick. If the railroader has no price he can not run his train. If the miller has no price he can not keep up steam. If the farmer has no price his fields must lie idle or be cultivated without remuneration. We appeal to all if every one of these propositions is not correct. The whole question of remuneration of effort, no matter of what kind or nature, depends upon price. The world concedes this in every case but one, that of farming.

The world takes a great interest in agriculture, a greater interest, perhaps, than in any other line of human endeavor, because upon its results civiliezd life depends. The lawyer pleads for the farmer—we do not mean in a professional capacity, for if he does that he charges his price, the same as in case of other clients—but as an advocate of better agricultural conditions. The physician devotes his skill in investigation and analysis to matters pertaining to soil cultivation and productiveness. The railroads do much to encourage the enlargement and improvement of farms along their lines. Officials, legislators, congressmen, devote much of their time to considering agricultural conditions, and enact most liberal laws in the interest of agriculture, establish colleges and universities to teach how to farm, and to bring scientific research to the aid of the farmer. They provide for institutes to bring this teaching to the very doors of the farmers' homes, and give it to thom free, aside from the general taxes paid to support them.

What more could be asked? Pause a moment. Glance over the list of things taught and the topics discussed. One topic is strangely absent, a theme that confronts the farmer every moment does not appear in the curriculum or on the program, the element upon which success in all human effort depends, as we saw above, is ignored if not forbidden—PRICES!

Especially is this so in farmers' institutes those magnificent vehicles for conveying the very latest discoveries in improved methods directly to the farmers. Aside from the general absence of topics that lead to a discussion of marketing and price, many instances have come to our knowledge where these topics were not merely ignored, but were actually rejected when called for; in some cases rejected on the ground that their discussion was forbidden by the authorities. We have in mind a case in point.

In a farmers' institute in Ohio farmers requested that the subject of marketing and prices be given a place on the program. The request, amounting almost to a demand, was reluctantly granted. and the farmers requesting it secured for that topic the services of a gentleman known the nation over as a skillful investigator of that subject, and an able presentor of it. The time came, and the gentleman to whom the subject had been assigned was unable to attend. We quote below from a letter received by him after the institute had been held:

"After knowing what I do, I will say I am glad you did not come, because a majority of the executive committee had laid the wires so as to cut you out of the best part, or greater part, of your speech. You were placed at the very tail end of the program, evidently with the purpose that your topic should be crowded out, for the speaker preceding it was instructed to take all the time he could use. After an hour's painful struggle to interest the people in one of the usual institute topics the preceding speaker closed in response to the manifest weariness of the audience, and as there was still a little time, the subject of marketing and price had to be called. I responded, and fired a few bombs as I had gathered them from Up-to-Date. In a few minutes the president called "time." But the audience would not have it so, and began to ask questions and call for me to continue, but the president refused to recognize them and gave them to understand that THE RULES OF THE STATE OF OHIO GOVERNING FARMERS' INSTITUTES WOULD NOT PERMIT THE DISCUSSION OF THAT QUESTION! There were many voices in the house asking why they might not discuss that question as well as any other, but no satisfactory answer was given."

This brings up a question of no moment to the person who is writing these lines, any more than to any other individual farmer and taxpayer, but it is of vast moment to the aggregate farmers of the country. If price is the most important element in remuneration for human industry, why is this element ignored in all measures ostensibly for the benefit of agriculture? Is it true that the institute rules of the State of Ohio forbid discussion of that question in the institutes of the State? Are there such rules in any other States? Why are they in authority averse to the farmers investigating this one question? If price and marketing is the greatest of all the questions upon which success in farming depends, what good can come from discussing the minor question when the major question which overshadows them all is ignored or forbidden? Some dry bones are to be pretty ruthlessly shaken up in the not distant future.

Leather Adulteration

Adulteration, the mixing of cheaper things with costilier, in order to sell the cheaper at the price of the costlier, has become so common as to be almost recognized as a matter of business. One scarcely expects anything he buys that has passed through the channels of trade to be purely what it is represented to be. But one of the last articles one would expect to be adulterated is leather, and yet leather has been raised to the dignity of an adulterated article.

Australia has been a place of extensive leather production, and has exported leather in great quantities. But the Sydney, Australia, Telegraph tells us that leather exports are rapidly falling off, a single house in Sydney that had formerly exported $400,000 worth annually, exported only $25,000 last year. The reason given is that the Australians have learned to adulterate their leather. The adulterant used is a salt like substance known as "normissa." It is much heavier than leather, and costs very little. By some process the leather is made to absorb this substance, thus making it weigh much heavier, increasing the weight from 15 to 30 per cent. And, what is worse, it ruins the leather. It does not show in the appearance, but it rots the leather, and makes it almost worthless.

A 320-page, cloth bound book, price $1.00, and 10c extra for postage, all for 25 cents, postpaid. See coupons in former paper.

FARMERS' INTEREST CORN

A Premium Crop and the Big Price It Brought

The twenty-five ears of corn shown in the illustration on Page 1 were grown by Mr. J. H. Thrash, of Illinois, and sold to H. W. Riley, of Champaign county, Illinois, for $150 cash.

A bushel of corn at the rate these twenty-five ears brought would bring $388.89.

Mr. Thrash, who is a breeder of Farmers' Interest corn, tells the story of the selection of these twenty-five ears and how they were raised, as follows:

"These twenty-five ears of Farmers' Interest corn were selected out of a field of forty acres, going through the field with a sack, taking two rows at a time and looking at every ear that appeared anything like the type to which I was picking. The ears selected were then taken to a place in which there was no danger of their getting damaged in any way.

"When I was through going over the field in this way I had several hundred ears of very fine quality. I then laid the ears out so I could easily see them all, and began my last selection for the twenty-five ears in the photograph. I should judge I was at least a week in selecting this sample after the corn was gathered from the field.

"The seed I used to plant this field was selected the fall before when the crop was being husked, and was put in a good place to dry. About two-thirds of the ears of this seed were entirely capped over the tips and well filled at the butts and had very little space between rows. Every ear was carefully looked at and tested long before planting time, and when they were shelled for planting the shelling was all done by hand, each ear being carefully selected. The corn was shelled, butts, tips and all, without throwing out any from either end, and all planted as shelled.

"I am breeding corn to get as much oil as possible and to get very heavy and solid ears of medium size.

"The soil in which this corn grew is prairie land, low and black, and has been in cultivation about thirty-five years. It was clover plowed in the spring, about four inches and a half deep, with a twelve-inch gang. May 4 I began work with a solid wheel disk. After going over it all with a disk I harrowed twice with a four-horse slanting-tooth harrow. May 9 to 12 I planted the corn with an edge-drop planter. using a three medium die and planting three feet six inches both ways.

"As soon as the corn was planted it was harrowed, and again as it began to peep through the ground. When the corn was large enough to work, it was cultivated three times with a surface gopher; was laid by the last days of June, when the corn was at least three feet high. The corn grew very rapidly and was out of the way of frost by September 10. Began husking it the latter part of October. The corn was very dry and solid when husked."

KASAS TAKES THE LEAD

Standard Oil Must Fight a State

The following comes to the public through the Associated Press:

Kansas's desire for an oil refinery of its own was realized today when Governor Hoch signed the bill appropriating $200,000 for the erection and maintenance of a State plant, which was passed for the avowed purpose of fighting the Standard Oil Company.

In returning the law to the Legislature after affixing his signature thereto Governor Hoch sent with it a long message, in which he touched on the general question of trusts.

"No greater question," said he, "confronts the American people than the control of these great aggregations of capital. We are all groping in the dark, but we will get out into the light after a while. This Kansas contribution to the solving of this great problem may or may not be a wise one, but it is at least an honest and courageous one."

Governor Hoch said the present legislation was not an attempt to drive the Standard Oil Company from the State, nor to deprive it of its rights; it is not an attempt to establish a monopoly, but an attempt to compel a monopoly already existing to be decent. He said that when normal conditions were again restored the State would be glad to withdraw from the busines of refining oil and leave it in the hands of private competitors, "where it legitimately belongs."

Governor Hoch urged the Legislature to go further and adopt other restrictive legislation to prevent the manipulation of railroad rates by the Standard Oil Company. In reviewing the oil situation the Governor says:

"A timely and significant illustration of the ecercive character of these modern combinations of capital and of their menace to private and public weal, was furnished in the recent tele-telegram of the manager of the Standard Oil Company, petulantly and arbitrarily withdrawing its patronage from the producers in the oil fields. Were that order maintained, thousands of good people would soon be bankrupt and homeless. An economic condition which makes it possible for one man with a stroke of his pen to bankrupt thousands of his fellow citizens is inherently wrong and will not be permanently tolerated by a free and patriotic people, and it illustrates more forcibly than any recent event has done the necessity of a wise solution of this whole trust problem."

The House today, without a dissenting vote, passed the bill making oil pipe lines common carriers. This is the second of the series of bills directed against the Standard Oil Company, and was strongly opposed by the Standard interests. It has already passed the Senate and will be signed by the Governor. Without this bill the refinery plan could not have been carried out successfully owing to the lack of pipe lines owned by the State. Now, however, the State oil can be piped through the Standard's lines.

Insufficient Address Orders

Following is a list of orders received by us since Jan. 1st, 1905, which cannot be filled on account that complete address was not given.

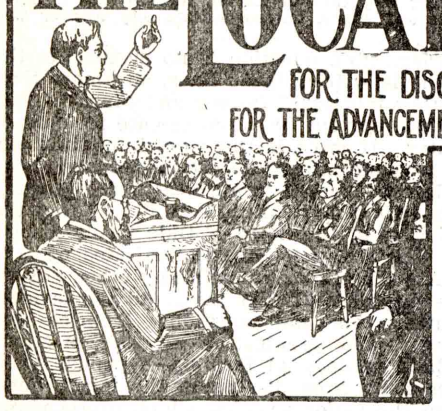
We caution our readers to be sure to give complete address and write very plainly. We are waiting for the proper people to claim the below orders. When writing give amount remitted and a duplicate of orders.

J. A. EVERITT, Indianapolis, Ind.

February 13, 20 cents, Moran, Kansas.
January 30, 23 cents, Gainesville, N. Y.
February 6, 25 cents, Mailed at Kubli, Oregon.
February 11, 25 cents, Mailed at Coopertown, Tenn.
February 17, 25 cents, Peter Wendel, Cohoctah, Mich.
March 1, 25 cents and D. B. ——
March 2, 25 cents, Mailed at Gladys, W. Va.
March 4, 25 cents, Mailed at New Dundee, Ont.
February 13 ,26 cents and D. B., mailed at Hughes Springs, Texas.
March 8, 40 cents, mailed at Francis.
January 9, 50 cents, T. B. Ray.
January 11, 50 cents, Mrs. J. A. Steen.
March 1, 50 cents, Mrayville, Tenn.
March 6, 50 cents, mailed at Mountain Grove, Mo.
March 7, 50 cents .
February 23, 50 cents, Mrs. Ed Chenault.
March 10, 53 cents, mailed at Rushville, Ind.
February 15, 90 cents, mailed at Tamaha, I. T.
February 25, 92 cents, Taloga, Okla.
February 17, $1.00, H. W. Henslee.
March 8, $1.10, mailed at Beach Haven, Pa.
March 6, $1.41, mailed at Henryetta, Ind. Ter.
February 14, $1.93, W. F. Miller.
March 1, $2.55, Jos. J. Miller, Pomeroy.
March 10, $1.10, mailed at Ferguson, Okla.
March 9, $3.45.
March 11, $4.74, mailed at Alamo, Mich.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, onletters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Local Union Charters

OCCASIONALLY we get a report of a local union without the charter fee, sometimes it is through mistake, at other times the union thinks they can get along without a charter.

This is to notify all organized bodies in the A. S. of E. that they must be chartered by the National Union before they have legal existence. The fee is only $1.00. Interested members and officers please take no ice and govern yourselves accordingly.

The National Union of the A. S. of E.
M. W. TUBBS, Sec. J. A. EVERITT, Pres.

Read the letters—be encouraged.

Read the clippings from the press and know that we are being sustained.

Get up fresh programs for each meeting, and keep the ball rolling.

Stand by the prices. The dumper is not admired at home or abroad.

We'll bet a ginger cake the young lady that helps in the local unions has the most worthy admirers.

Give a little prize to the boy and girl that will get up the best recitations for the local union meetings.

The boy that can twist his tongue "around things" can please a local union meeting by learning "Der Dumper" and saying it for a speech.

The A. S. of E. expects every member to be true to the purposes of the Society, and those who are not will not be regarded with favor by other members. But men are only humans, and once in a while one fails to measure up to the true standard; is "weighed in the balances and found wanting." But this is no reason why other members should "have fits." The erring brother is but another example of unfortunate weakness. This is the reason why the A. S. of E. provided for no oaths, pledges or mysterious compacts. It is intended to meet the conditions of men as they are, and its success or failure does not depend upon the strength or weakness of human nature in a few persons. Try to keep everybody firm, but if one "breaks," pity his failing rather than deride his weakness. He may do better next time. But you are under no obligation to trust him until he proves himself worthy to be trusted. This applies to some local unions that have reported weakness in some members in not holding their crops for the minimum prices.

All great movements have their heroes, whose names are lovingly spoken after their labors are ended. But no one is recognized as a hero until he has done something heroic—made himself famous by work for the cause.

Are the old locals becoming a little fatigued? Weary not in well doing. The future depends upon the work of the present. Get up some right lively meetings and enthuse the whole neighborhood. The "Songs of Equity" will help you.

"What encourages me most," remarked Secretary Tubbs, "is so many local unions renewing their subscriptions to the official paper in a body." But quite a good many have not yet renewed. Will the secretaries look after that matter?

A steady pull is what moves the load. Spasmodic efforts, jerks and twists may break a chain or hamestring, but they do not turn the stubborn wheels. It is thus with all progressive movements, particularly with the A. S. of E. In this we must all pull strong and steady, and keep at it.

Aren't there still some people in your neighborhood who ought to belong to your union? Go after them. Talk them over. Single them out. Appoint the right persons to see them and bring them in.

We are very much in favor of diversified crops, of raising as nearly as possible everything the family or domestic animals consume. "A penny saved is two pence earned." Talk this up in the locals, and lay all plans in wisdom and good judgment.

The fair home dealer merits the patronage of his people. He is entitled to reasonable profits just as you are entitled to reasonable prices, and it is a strange sort of merchant that will not stand up for his customers in their efforts to get fair prices, when those fair prices make the customers all the more willing to accord him fair profits. Here is where the A. S. of E. and mutual interests come in.

The president that can get the most and best speeches out of the members, and lead them into the most effective work, is the best president, and he is sure to have the best local.

Home improvement is a splendid topic for discussion in the locals. Up-to-Date is leading in this matter by offering such magnificent flower and seed premiums. If we do not practice what we preach, then we would like to be pointed to a paper that does. Make the farm productive, the crops remunerative and the home beautiful. This is just about the "law and the prophets" of agricultural life. Lend a hand and help us.

Notwithstanding the wide range of this organization, there are many places in this broad country where its influence has not been felt. Those are the places we want to get into, and we want the organized locals to help us get there.

Still push forward The Third Power. There is no selfishness in that book, because it is worth so much more than it costs. No farmer can read it without having a better opinion of himself and his calling.

That premium of potato seedlings is a premium of mystery, because it takes a trial to determine its value. Some one of those little seedlings may have within it the foundation for a fortune, may develop into a potato better than anything that has gone before, and its lucky introducer may have something worth a gold mine. And until the trial it cannot be told which one of these will so develop, nor how many.

Those three roses on March 1 cover added to the ornamentation of the home would greatly increase its beauty and awaken the envy of the neighborhood. And so of the cinnamon vines.

Died

Edmond J. Avis, a devoted member of the A. S. of E. and a lifetime advocate of agricultural progress and justice for the farmer, died at his home in Benton, Ill., March 2, 1905, aged 64 years and 10 months. A letter informing us of the sad event says: "His last work was for the A. S. of E, and no man ever worked harder for a cause than he worked for this." No more splendid obituary could be written.

THE LOCAL AT THE CROSSING

The President—I am glad nearly all of our members and so many outsiders are present on this occasion, for I have to make an announcement which I would much rather there were no occasion to make. One of our members who, of course, is not here to-night, has proven unworthy of our confidence, and after the moral obligation of taking a stand with us to accomplish a purpose, and the actual obligation of a specific agreement to hold his crop with the rest of us to secure a reasonable and honestly fixed price, has sold on the buyers' market at the speculative price, and thus weakened our effort to secure what is justly due us, and, as I see it, brought us all to that extent into disrepute.

Pat Murphy—A dumper, be Jasus.

The President—I need not say who it is, you all know. What action will the union take in regard to the matter?

Several Voices—Turn him out! Turn him out!

Pat Murphy—Faith, an' let's give 'im a dost of coold wather. The crake's full and handy. It's good for a wakeness o' the back.

Why Not Buy at Wholesale?

Over 20,000 different labor saving, money saving articles described, illustrated and priced in our "Low Price Messenger" for 1905. We will send it to you.

It is easy to order for the Home, Farm or Shop if you consult our No. 89 Catalogue. This up to date Buyers' Guide contains everything you can possibly need in Mechanic's Tools, Agricultural Implements, Hardware, Table and Pocket Cutlery, Housefurnishing Goods, Guns and Sporting Goods, Silver plated ware, Watches, Clocks and thousands of things we cannot mention in this space. **Over 20,000** different articles. Opposite every article in the volume is the low price at which we sell it—the **lowest price** for which it can be bought, in any store, in any city, big or little, in this or any other country on the globe.

We will send you this catalogue with its valuable **Supplement of Useful Information.** Write for it. To assure us you are really interested in the goods described and not merely in the Supplement of Useful Information send 10 cents to pay part of the postage. We pay the rest ourselves. **The book costs you nothing.**

We must ask the 10 cents because we could not afford to distribute thousands of copies of this costly book, to the merely curious and maintain our reputation as the best place in the country to get dependable goods at the lowest prices.

You will spend hours of interest over its pages. You will marvel at the wonderful variety. All complete in one book. It makes buying pleasant as well as profitable.

We sell only goods of real merits at the lowest prices for which they can be bought. We guarantee satisfaction or refund your money. Hundreds of requests come to us in every mail for this Complete Catalogue. Write today to Dept. D.

Bert Watson. Such conduct cannot be excused. If we are to allow members to do that way, we'd just as well quit.

Jack Lewis—I'm goin' to quit if such members as he is stays in.

Joe Riley—I don't like to hear you talk so. No one man, no ten men, can prevent the success of his movement, or seriously impair the good work of this local, and I propose to go right ahead, standing shoulder to shoulder with the true members to accomplish our purpose, no matter what one or a dozen may do. But I am in favor of drawing up some strong resolutions condemning all such members, and have them published in our local papers and also in our National official paper, so the world may know just what kind of a man he is and just what kind of men we are.

Jim Denny—That's—what—I—said

Pat Murphy—Dook 'im, and do it before the wather gets warum. So be it alwers to thrators.

George Bowers—Members, these are times when we must keep cool.

Pat Murphy—With plenty of raw crake wather.

The President—The house must be in order.

Pat Murphy—An' take 'im to the crake.

The President—Mr. Bowers has the floor, gentlemen .

Pat Murphy—All right, yer honer.

The President—Proceed, Mr. Bowers.

George Bowers—I was saying in a case like this is when we must keep cool and not lose our heads.

Pat Murphy—Nor reputations, begorra.

George Bowers—True, we must guard our reputations and maintain our integrity. But after all, nothing so very unusual has occurred. Nothing is more natural than that a member should once in awhile fall below our expectations, betray the trust we reposed in him, and lower himself in our esteem. It is one of the weaknesses of humanity, and we are all human. One of the beauties of the A. S. of E. is that its success does not depend upon absolute unanimity. We can succeed in spite of the dumpers, and when one goes back on us let's get ten better men to take his place.

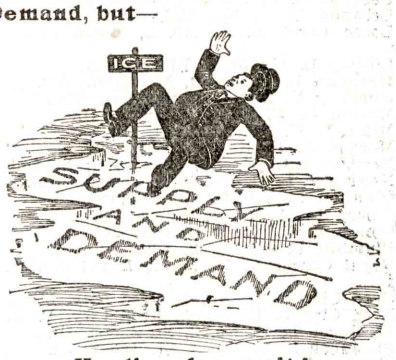
I agree with Mr. Riley that, perhaps in a resolution, we should express our opinion of such action, but not unkindly, for kindness is always a winning card in our dealings with people. And it might be well to ask our local papers to publish our sentiments, not for the purpose of denouncing our weak member, but to show the people here at home who know of the affair that the Society does not stand for such action. But why should Up-to-Date publish it? The more such things are published broadcast the more they will occur. Besides, if all such occurrences were heralded in long resolutions and printed in Up-to-Date, what else would there be room for? And how long would it take you all to get tired of a paper that was half filled every issue with these denunciations and notices of treason in our ranks? And this is not saying there are many such cases ;but this country is big and our organization is strong, and we'd be more than human if such things never occurred. [Very few such cases have yet been reported to this office, a wonderful record.—Editor.] I therefore move, Mr. President, that in a brief but firm resolution we repudiate the course of the member referred to, and express our determination to stand by the principle of controlled marketing and will hold our crops for the minimum price, and that our local papers be asked to publish the same for the benefit of those who know of the circumstances.

Pat Murphy—Mr. Prisidint, I sicind the nomination, wather or no wather, crake or no crake.

The motion carried unanimously, and the secretary drew up a resolution in accordance therewith, after which some of the best speeches were made that have yet been heard at our meetings, and seven new members were added to the roll of the Local at the Crossing.

The Farmers' Journal, Abilene, Texas, has reduced its subscription price from $1 a year to 50 cents. This is one of the brightest little papers published in the South, and it is as true to the cause of real agricultural reform as the needle to the pole. Southern farmers ought to give it a circulation of a hundred thousand during the next six months.

He depended upon Supply and Demand, but—



He slipped up on it!

To the person who will write the best story not to exceed 200 words, of which the above picture shall be the most fitting illustration, and to be received at this office not later than March 15, 1905, we will give $1 cash or three annual subscriptions to Up-to-Date Farming. To the second best we will give one annual subscription. Both stories will be printed in Up-to-Date.

The above appeared in the February 15 issue of Up-to-Date Farming, and the responses have been almost a load of letters, representing as many versions of the man who "slipped up on it," as there are letters. Almost all of them are good, many of them pithy and pointed, quite a large number so close in merit as to make a decision fixing upon the best and second best a delicate and responsible task. The first prize has been awarded to Lellen Viola Chester, Bryantsville, Tenn., and the second to J. N. Sanborn, Argonia, Kan. The prize stories follow, and others will appear in future issues of Up-to-aDte Farming.

First Prize Story

By Lellen Viola Chester

He depended upon supply and demand, but—

"Look here, Mr. Hayes, I believe you fellows could pay more than four and five cents per pound for this crop of tobacco," said farmer Jones, of the "Black Patch," to the representative of a trust company in the spring of 1904.

"Well, it's like this, Mr. Jones. You see for the last two or three years you farmers have been planting both sides of the earth in tobacco, and the market is full up, consequently there is no demand for the present crop. As you suggest, we COULD pay more, but WE DON'T HAVE TO!"

Time went on as it is in the habit of doing, and the following winter the farmers organized in the A. S. of E., and agreed to hold their crops for an equitable price. Of course, the movement was ridiculed, and the buyers started out in high glee, confident of buying all they wanted at their own figures. But to their chagrin and surprise, they found themselves up against a tough proposition. Ride and talk as they might, not a pound could they buy.

Late one afternoon in January, after an unsuccessful day's quest, cold, tired and hungry, Mr. Hayes again found himself in front of Farmer Jones' comfortable home. Tantalizing odors of apetizing viands in course of preparation for the table gretted his olfactories.

"Hello, Mr. Jones!" The old farmer came to the door.

"See here, Mr. Jones, I am very tired and hungry, and I think you might let me have supper and stay all night with you."

"Well, Mr. Hayes," replied Farmer Jones, "we have an abundant supply of grub, and it is just ready for the demand, and the demand seems to be ready for it. We COULD furnish you supper and let you stay all night, but —WE DON'T HAVE TO!"

Second Prize Story

By J. N. Sanborn

John Pierpont started business as clerk in a general store at Mortonville, Mo. He was quick to learn the ways of his employer, and soon bought the leading interest in the business. When eggs, poultry, fruit, grain, coal or wood or any other product was brought in by the farmers the PRICE was promptly fixed by Pierpont, as was also the price of what the farmer bought at the store, always showing a good profit for Pierpont & Co. When the products came fast enough to show a surplus they put the buying prices down lower and lower, but the

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Agents Wanted

Binder Twine. Prices lower than last season. No advance. Cooper Cordage Co. Chicago; Minneapolis; Kansas City.

Agents who want a meritorous article to sell should handle C. & F. Wonder Knives—nine tools in one. It is a handsome pocket knife, light, convenient and has no more parts than an ordinary three bladed knife. Contains strong wire pliers and wire cutter that will easily cut barbed wire fence. Also leather punch, swedging awl, alligat r wrench, hoof hook, screw driver and screw bit. Don't you think you can sell an article like this? Price each $1.25. One dozen delivered for $11.00. If not satisfactory your money will be refunded. Now if you will trust us (and the publisher of this paper who guarantees advertisers) send for a dozen. We refund your money if you want it. That's fair. Don't forget to write us—better do it now. Cooner & Fortune Co., Indianapolis, Ind.

You reader, have something you can profitalbe advertise here. 150,000 farmers and their families read every advertisement here twice a month. Try it.

All for 2 Cents. CROWN CARD CO., Columbus, Ohio.

prices of their goods remained the same.

John felt so secure that he bought out the entire business, so he could run it himself.

But Si Barker had been reading Up-to-Date Farming, and last fall, when Pierpont thought everything was clover and he was in it up to his knees, Si organized a local union of the A. S. of E. It was then found that John's prices were not equitable, and the union put prices on their own things themselves. John's methods at once led to the slipping road traveled by the trade gamblers. He staked his whole business on what the gamblers call supply and demand. The result is shown in the picture. John gathered himself together, joined the A. S. of E., and moved to Kansas, where he could raise wheat at a profit when protected by the A. S. of E.

OUT OF NAZARETH.

BY LELLEN VIOLA CHESTER, BRYANTSVILLE, TENN.

"We've got the brains and money; let the 'hayseed' work and slave
For all the days of his mortal span, till he rests him in the grave.
No soul or intellect looks out of his dim and leaden eye,
And all he knows of life is this—to toil, and eat, and die!
So labor on, ye stolid clods; earth yields a plenteous store;
We'll take it at our market price; you have no need for more."
So spake the solons of the trusts, and forth the fiat sped.
But e'en the sloven worn will turn beneath the wanton tread.
'Twas then the toilers in the fields did what long since they ought,
They put their heads together and they thought as MEN have thought.
This message came from out the South, where sweet magnolias bloom,
And where the fluffy fiber grows that feeds the busy loom:
"We'll not grow cotton for a price that falls below the cost;
We'd rather pile our products up for a fleecy holocaust."
And straight from Nicotina's land, Tobacco four and two;
You're not alone, O, Sunny South, we feel the vampire, too."
From South to North, from West to East, be it for woe or weal,
The plaint came up from sons of toil beneath oppression's heel.
Then, lo, from Nazareth came a word as came from prophet old:
"For eternity unite or die, ye toilers of the world.
Stand man to man, a phalanx strong, and falter not nor swerve;
For still 'tis true that victory comes to those who it deserve.
Move forward, onward, brave and true, such effort can't be spurned;
For those who toil for daily bread must have the wage they've earned.
Soon be the struggle ended; might still must yield to right,
And from the rural landscape roll oppression's cloudy night."

Local Unions (Continued)

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

When Blessings are Curses

A writer with a heart overflowing with love to God for His goodness, put a thought in the follwing words which we found in the Farm Journal:

"Farmers ought to be the most grateful class of people in the world. Every drop of dew, every shower, every ray of sunshine, brings a blessing. What we need most of all are hearts to appreciate His mercies."

With all respect for this writer the above paragraph rings with hollow mockery to us in the tobacco fields. The fertility of our soil, the rains, the sunshine and the dews have all combined to bring us down to poverty and woe. "Can that be possible?" you ask. Aye, worse than possible. 'Tis true. We suffer in the midst of plenty. Our children are neither well clothed nor well fed. We can not educate them, so they must till the soil because there is nothing else for them to do. They work so hard and so many hours that their labor profits them little. We have few comforts, no luxuries and often do without actual necessities. If you will come into our homes you will see the living picture of the truths I tell.

It is true that there are some who have made money by raising tobacco. These men are farmers who have been able to market their crops when prices were satisfactory and to hold when they were not. Or else they are farmers who have been able to produce a special quality that is much in demand. We can not all produce that quality, but we can HOLD FOR PROFITABLE PRICES.

It is not true that we are given all our tobacco is worth. Is not the same grade worth as much in January as it was in October? And yet, if you know anything about tobacco markets at all you know that it sometimes sells for much more than it does at others. But I digress from my subject.

Our poverty can easily be accounted for. We spend most of our time producing tobacco—so much that we do not produce all the grain and vegetables that is needed to feed our families and our stock. And we raise so much tobacco that it is worth nothing to us. We must have food and clothing while we are busy with the tobacco crop. We must have machinery to aid us in its production. We must have fences and barns to protect it. We must buy fertilizer to feed the plants, and hire labor to help us take care of it. We must pay taxes on the ground it grows on. And no matter what price tobacco brings us, we have to pay for these in money. At the end of the year we add our expenses and we find that we have paid in cold cash nearly as much as the tobacco brings us. What have we to show for the long days of hard labor? "A living," you say. Not so, my friend. We make what we live on the same way we make the tobacco—by tilling the soil. Too often we do buy meat and bread and potatoes, and that is what puts us in debt. We toil early and late and once each year turn over to the business world the products of our labor, oftentimes for less than it cost us. This is true, men, God knows, and you know that it is true.

"We raise too much!" The men who buy our tobacco tell us that. The men who use it never say so. And yet the buyers tell us that when we raise so much the people do not want it all unless they can get it for a song that we are compelled to sing. They will not pay us a good price for any of it, but they take it all and use it, too. The rain, the dew, the sunshine and our labor have co-operated to make our harvests so pitifully plentiful that they are worth but little to us.

Suppose we raise a half crop. Then they say they will pay us well. We will receive pay for our tobacco and pay for our time. Our hours could be shorter and our labor lighter. We could have more home-grown produce for our tables. If we would do this a few years in succession they would pay us 25 cents a pound for our tobacco—yes, 50 cent, rather than do without it. But no, we persist in raising full crops and letting the buyers set the price. never thinking that they will take it all at our price as soon as they find that they can not get it at their price.

In the face of these things we find honest persons who are thoughtless enough to deplore the fact that we do not take more time to thank the Creator for our bounteous harvests. I do not condemn them, but I wish they were as desirous to see their fellow men have what belongs to them as they are to have God given the gratitude that belongs to Him. I wish their love for God could find expression in their work for man. I wish their sorrow over our seeming indifference toward what God has done for us would turn into a desire to help relieve the distress of our condition. We know that the rains, dews and the sunshine are given to us for our good, and we are indeed thankful for them. But we want to see a blessing in all the results. Water is a blessing, but sometimes a flood will devastate a valley and take many lives. Roses are sweet, but enough of them could smother a multitude. Fire is a blessing, but it often renders people homeless, and ascending smoke is often the monument of death. Food is a blessing, yet improper nourishment and overeating has caused untold misery. Bounteous harvests may indeed be great blessings, but we have ignorantly and blindly allowed them to become curses instead.

Fellow men, we want our work to bring us blessings. We want our tobacco crops to pay us for our labor. If pople will smoke and chew, and are willing to pay for the privilege, why should we not be paid for the labor it takes to produce the luxury? We want you to help us retain what rightfully is ours. You can not give God the praise that belongs to Him if you are not willing to make man secure in his rights among men. Remember that the Nazarene said, "Even as ye did unto the least of these, ye did unto me." God gave us the opportunity to obtain blessings from the earth, but the greed of man has been stealing them away.

The Burley Tobacco Situation

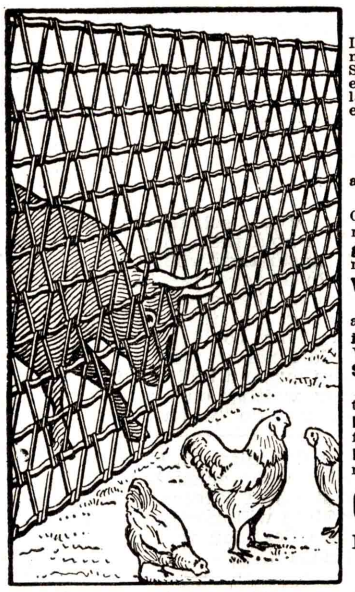
Tobacco growers are determined to do something to sustain profitable price. There is no better evidence of this than the action being taken by the burley tobacco growers of Kentucky and Ohio. Twice they have made an attempt to compel good prices by the enlistment of a large cash capital, and twice they have failed. Defeated, but not discouraged, they are busy discussing plans for the future. Holding a portion of the crop until the present time has so improved the prices that they are beginning to realize the power that is in organization along the line of controlled marketing.

Simple controlled marketing requires no capital and can sustain no loss. It calls for only what the farmers can do themselves. It has advanced the prices on dark tobacco, and has worked successfully in the grain markets. It will not fail the burley tobacco growers if they will give it an honest trial.

Tens of thousands of tobacco growers have pledged themselves to hold their crops for the Lynchburg prices. To enable them to do this they are having their tobacco prized by experienced men and stored away in warehouses. Banks and local tobacco men are advancing enough money on the stored tobacco to enable the farmer to tide over the present. The Louisville Warehouse Company has already advanced about $60,000 to be deposited in the local banks for this purpose. This will enable the farmers who would not be able to hold their crops otherwise to keep them from going into buyers' hands until the price is made satisfactory. The growers who are able to keep their tobacco on their farms will doubtless do so, for the farm is the best and cheapest storage house in the world. Our tobacco growers must provide for this in the future.

The result of this proceeding will prove of great benefit to the farmers if they will persist in carrying out this policy. When tobacco stocks be-

Coiled Spring Fence



STRONGEST AND BEST FENCE MADE.

It is made so good that all requirements of the farm are fully met. So closely woven the small pig cannot "wiggle" through. So strong the Bull cannot "faze" it. CHICAGO FLEXIBLE SHAFT CO.
224 Ontario Street, CHICAGO, ILL.

come low and the tobacco of the unorganized farmers has been secured, buyers will advance prices enough to move the balance of the crop. It may require a year to bring this about, but it is far better for the farmers to grow one crop of tobacco at 8 cents per pound than to grow two crops for 4 cents a pound. With large holdings of tobacco stored away the tobacco grower will not plant as much as usual, knowing that the tobacco he has on hand is increasing in value all the time, and knowing, too, that if a small crop is produced the buyers will pay high prices for all of it.

The growers in the dark tobacco districts have secured results that has more than paid for the time and trouble of organization. The burley growers can do the same.

Solving the Problem

"How to hold our tobacco," is the question that troubles many of our members, and stands in the way of others becoming members. We give below two letters from Kentucky growers. Mr. J. A. Shaver gives his idea of the matter, and following Mr. V. E. Berry shows that this idea is now being carried out in some parts of the tobacco districts. The difficulty in solving the problem is not its solution, but in inducing the growers to take advantage of their opportunities:

* * *

March 8, 1905.

Editor Up-to-Date:

The dark tobacco problem is a knotty one and hard to solve.

I have given it a great deal of study. We are well aware that with tobacco at present prices we cannot wear a suit of clothes decent eonugh for us to go to church.

I have been reading the Up-to-Date watching for an idea of this sort: Why not build a large warehouse in each county as near the center as possible? After the tobacco has been striped, let the farmers bring their tobacco to this house for keeping in good condition, where we could have an expert to weigh, grade and bulk together all tobacco of like grade.

When Mr. C. delivers his tobacco it is covered with insurance. Any bank would be perfectly safe to lone him from three to five dollars per hundred pounds by surrendering his receipts as collateral.

Now, as the warehouse has control of this tobacco let it be graded, priced and sold when the fixed price is agreed upon.

There is no reason why the local buyers should not come to this warehouse and buy such grades as they want, saving a great expense of buyers traveling through the county buying from the farmers.

I also think with this vast amount of tobacco together it would induce large buyers to come to each warehouse.

There are other details we might go into, but this is enough perhaps to put the farmers to thinking. Respectfully,

J. A. SHAVER.

Greenville, Ky.

Editor Up-to-Date Farming:

This may be of interest to you from Daviess county, Kentucky.

We people have plans on foot to keep our tobacco off of the market.

We have made arrangements with a warehouse firm to receive the tobacco as it comes from the farm. They rehandle it, classify it and prize it in English order, and advance 50 per cent. of its value. Many of the farmers can not get along without some money, and many of them do not draw any money on their tobacco. Many of the farmers who do not belong to the A. S. of E. will store their tobacco. They pay interest on the money advanced. They expect to get in control of the available supply of the dark tobacco. It may take them from one to three years to win the victory, but they are willing to go up against it. They realize victory is ahead, and it is only a matter of time until they will win. They will make this year's crop short by planting less tobacco.

We have eleven counties to fight this battle in. We are progressing nicely at this time, but we need plans set on foot by which competent men could be kept in the field to educate the people. Respectfully, V. E. BERRY.

Owensboro, Ky.

Mr. Berry brings up an important point. It is true that many of our tobacco growers are unable to hold their tobacco because they have no suitable storage houses, and they need money. The warehouse plan makes things easy for them.

In course of time we predict the tobacco growers will be able to hold their crops until the recommended price is offered, without financial aid. But even then the warehouses will be utilized as convenient storage houses, especially in case an actual surplus is produced. It will be much better to have this surplus carefully prized and stored at some central point than to keep it in the barns of the growers.

At present the "overproduction scare crow" frightens many farmers. But when the new order is established a bountiful crop will be a blessing instead of a curse. The farmers can dispose of one half of their crop for what the whole would sell for under the old order, and hold the balance over. The following year they would have enough tobacco in storage to yield them the same income that another bumper crop would bring, and they need not grow a plant. They could take time to fix up the old farm, or visit relatives, and do those thousand and one things that is always waiting on every farm, for the farmer to do "when he gets time."

District Organizer N. C. Crawley has been doing some splendid work in the tobacco fields of Wisconsin lately. The Badger State will mostly probably send a strong delegation to the convention in Owensboro.

That convention, by the way, is going to put the tobacco growing business on an entirely new foundation. The best business heads among the tobacco growers will have it in charge, and with the experience of two years in organizing and teaching controlled marketing, there will be no guesswork in what they do.

Mr. J. H. Hodge, who owns a large steam and air drying plant in Henderson, Ky., is in full sympathy with the society, and has been paying the highest prices paid for tobacco this year. He asserts his intention to become a member, and will be a valuable aid to the planters who wish to prize and store their crops.

Is there a more interesting topic for tobacco growers to discuss than ways and means to sell tobacco for enough to secure a good profit to the grower? Do you know of any paper that teaches this in so plain terms as the official organ of the American Society of Equity? Is it not a fact that this paper is the most interesting and profitable publication that a farmer can subscribe for? Then why not tell your neighbor about it and get his subscription?

If we were thoroughly organized in every tobacco growing county that produces more than 1,000,000 pounds of tobacco, we would be in complete control of the tobacco situation. We ought to have 1,000 members in each of those counties, and there are only 139 of them. As soon as we have 1,000 members in a county we will establish a local office and employ a superintendent at a regular salary, and it will be his business to look after the interests of the society to report to the National Union and to receive instructions from headquarters and see that they are carried out. If we can not get the necessary number in one county we will combine two or more counties in a district and employ a district superintendent. We are becoming strong enough now to put our plan in full operation in the tobacco districts.

DON'T SHOVE BUT PUSH

This is what you do with Everitt's Man-Weight Machines

Patented in the U. S., Great Britian, France, Germany and Belgium

Showing the Man-Weight Cultivator passing an obstruction, whether a stone, stump, or a plant that you want to save. This easy trick is quite in contrast with lifting the whole machine.

THESE MACHINES abolish much of the drudgery of cultivating the crops and make slow, hard, disagreeable work rapid, easy and interesting. They comprise more combinations than any other line of hand machines made. They embrace plows, hoes, cultivators, harrows, drills, etc., all from one combined machine. The owner of a Combined Man Weight machine has tools for almost every conceivable work that comes up in planting seeds and cultivating crops.

In the Man-Weight Machines, the power is applied from the body — **it is the weight of the body**—which, if not directed against the Machine, is lost on the ground through the feet. You can see how this is. If you lean against a fence there is less pressure on the ground at your feet. The machine is thus propelled by otherwise lost power or weight. Because of this novel way of propelling and guiding the Machine the drag bars are hinged and the hands are free to guide the tools around the plants almost as well as a hoe in your hands. Examine the illustrations and you will understand the great advantage of the Man-Weight Machines. It is evident that the power obtained, the quantity of work that can be done and the quality of work greatly excels any of the old-style hand-push machines. No inconvenience experienced from pushing the machine by the body.

Good Points of Everitt's Man-Weight Machines Not POSSESSED By Any Other

1. Man power is applied from the breast or other parts of the body. No inconvenience is suffered.
2. The power is applied by a natural inclination or lean of the body, as for rest against any object,
3. Hand-cultivating work is done almost without work.
4. Big work is done with ease and comfort to the operator.
5. At the same time he can do more work in a garden or nursery, etc., without a horse than with one.
6. It does better work than a horse cultivator or any other hand cultivator.
7. Both hands are free to guide the tools around the plants.
8. Compared with others, man-power is multiplied many times.
9. Oftentimes double the amount can be raised on a given piece of ground with this machine than with a horse machine.
10. The expense of keeping a horse can often be saved.
11. Plants can be cultivated oftener and hence mature earlier, with a greater yield with this machine than with any other. In this way the machine can be made to pay for itself several times each year.
12. A Man-Weight Combined Machine affords more separate tools and will do more work than any other machine on the market.
13. You can better afford to pay $25.00 for an up-to-date Man-Weight Combination than use any of the old style machines, even though you could get them for nothing. Remember this in making a selection.
14. If time is money and ease of doing work an object, you had better buy an improved Man-Weight Combination at double our price than take an old style hand-push machine as a gift.
15. You will double or triple the results from each hand employed. You can save its cost quickly in hand hire.

Enclosed find $12.00 for one Man-Weight Combined Machine. We have used these Cultivators and Drills for some time, and this year sold one to Griffith Gartin of Hartford City, Ind. Our principle use for them is in growing stock beets, and this is what Mr. Gartin wishes to do.

J. G. ROBBINS,
HORACE, IND., April 22, 1903.

NEW YORK, May 1, 1903.

Your Man-Weight Cultivator received and put to good use. Find that it is the biggest little machine we have ever used or seen.

A. A. SANDERS.

Your Man-Weight is a great improvement. I find that it largely increases one's capacity. It is as great a help as the improved horse cultivators are over the double shovel. A 120-lb. man can do more work with a Man-Weight than six big men with hoes and do it better. S. LEE COY.
OAKWOOD, ILL, January, 1903.

I want one of your Man-Weight Cultivators, as they can't be beat. My mother-in-law (Mrs Blus) got one last spring, and I tell you that she likes it. She was about to place her order for another kind, but I got her to send to you for one, and she told me she was glad of it. W. B. CARPENTER.
CHERRYVALE, KAN., Jan. 20 1903

This illustration shows the Man-Weight Cultivator saving plant that was out of line. Notice drag bar is thrown to the right. Either or both drag bars may be moved to right or left or up or down without changing the direction of the wheels.

This illustration shows the Man-Weight Cultivator in high stuff. Shows push-bar to allow operator to walk beside row instead of astride it.

HARRISVILLE, MO, June 14, 1903.

The Man-Weight Cultivator came today. We tried it long with a ——— ———. All present thought that the Man-Weight was the best. The soil was very heavy, but the machine did excellent work. We tried it in the cabbage, tomatoes, beets, onions and corn. There is one thing the boys like about the Man-Weight; they say that when they are using it they are strictly up-to-date.

Respectfully yours,
WILL G. SPEEDLOVE.

The Man-Weight has come and I think it a grand garddn tool. It beats anything I ever saw.
O. W. HOWELL, New Haven, O.

I took the Man-Weight in my garden and cultivated two acres of peas with it. It did all that you claimed. I am much pleased with it.
E. W. HILDEBRAND, Southport. Ind.

The Man-Weight is indeed a very excellent and practical machine. Saves much labor, doing the work of planting and cultivating with ease and rapidity.
J. B. LEEDOM, Hillsdale Ill.

PRODUCTION AND MARKETING

APRIL

The winter's white has passed away,
And spring's bright key unlocks the streams;
While o'er the fields the mellow rays
Of vernal sunlight softly gleams.
—*J. P. S.*

The naked earth is beginning to weave for herself a garment of green.

"That which thou sowest is not quickened except it die, * * * it may chance of wheat or of some other grain."

Mammoth clover ripens later than the common red clover, and it is therefore better to sow with timothy for a mixed meadow.

Timothy is better for horse feed than the finer grasses because it is sweeter, requires more chewing (which they seem to like) and is more nutritious.

E. Van Alstyne declares in the Rural New Yorker that pumpkins are worth growing for the value of the seeds in ridding sheep and hogs of worms, besides the food value of the meat.

Did you get the manure all hauled out while the ground was frozen? Slipped another cog in the drive wheel of the farm if you didn't.

Oats cut in the milky stage, well cured and cut fine at feeding time makes a rich and easily digested feed for stock, especially good for work horses.

It is best to sow oats in March in the middle latitudes of the United States, but good crops are often made from April sown oats, especially in the northern part of the middle belt.

It is said that the world needs a two-billion bushel wheat crop every year. The day is far distant when wheat should sell below a dollar per bushel in this country.

It is reported that the government overestimated the 1904 corn crop about 4,000,000,000 bushels. Well, Uncle Sam had a very fair corn crop, any way, and by his improved system of marketing it he is getting a very fair price for it. The revised estimate brings the size of the crop to just about the A. S. of E. estimate.

How does this appeal to you? About five clearing houses in the United States and one in Canada. All of the clearing houses connected by telephones with the leading markets where farmers own representatives will report the demand, and all the farmers connected with the clearing houses through their local or county unions to report the supply. The clearing house would then direct the supply to meet the demand and never allow any glut to appear.

No matter what the contemplated crop, get the ground well pulverized as deep as possible before planting, but be careful not to get the richest part of it too deep below the surface for the roots to get to it. "Well begun is half done."

Clay lands that have been long run to cultivated crops become deficient in humus, and pack or crust after each rain. In that condition plant growth is almost impossible. Hence such lands should be stirred as soon as dry enough after every rain.

Spring subsoiling does not always bring improved results, because there is so little humus in the freshly broken up subsoil that, holding an unusual amount of cold water, it is colder than formerly, and plant growth is thus retarded. It is better to subsoil in the fall.

The common Irish potato is botanically known as solanum tuberasum. It is said a near relative, Solanum Commersonii, has been discovered in Urugay that is so superior as to be likely to drive our common Irish potato out of business. But our splendid new varieties are not expressing much anxiety yet.

Peanuts may be grown in many localities where they are not now grown. Almost any warm, light, sandy soil in the States bordering on what is known as the North and the South produce them, but we advise their trial only in an experimental way.

Crimson Clover

All the clovers are valuable crops, and crimson clover is considered by many as one of the most valuable, though many have tried it with poor success. Most of these failure may be traced to bad seeding.

The time to sow is August or early September, and the ground should be well and carefully prepared, just as it should be prepared for seeding to timothy—broken in good condition, rolled, harrowed and rolled again if necessary. The seed then sowed and very lightly harrowed, or, what we think is better, passed over with a good spring tooth rake. The plants should come up promptly, get a good start for the winter, and come into a full crop very early in the spring. Crimson clover is often sowed with corn at the last cultivation for a winter an dearly spring pasture, but in this way much of the seed is inevitably wasted, and most of the recorded failures come from this method of seeding. This crop does best in New Jersey and the eastern shore countries.

Retention of Moisture in the Soil

It is well known that wet land will produce only a few classes of aquatic or semi-aquatic plants, and yet the success of farming depends upon the retention of moisture in the soil. This apparent contradiction is not very well understood by the mass of farmers. The ordinary farm crops will not grow in soil that contains water—they will not grow in soil that does not contain water. We must draw the line between the sufficiency and the excess. And another marked feature is the fact that generally the excessively wet ground soonest becomes excessively dry.

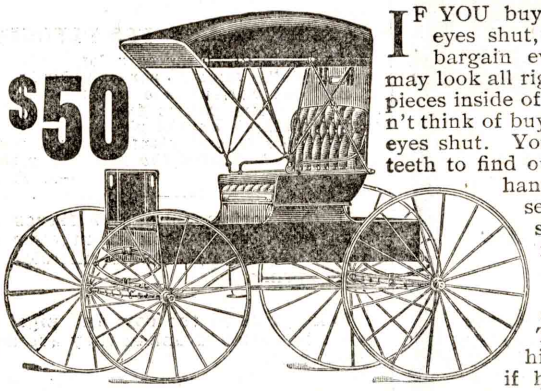
Hence the ideal soil for cultivation and for growing our important field crops is that which soonest throws off all excess of water and longest retains the quantity which we call moisture. The value of underdraining is an aid to this very thing. The fact that there is a channel beneath the surface ever ready to carry off the water after it has percolated through from the surface, keeps all the ground above the drain porous so that the excess of water may readily find its way through to the drains, and, being porous, the particles catch and hold minute drops and thus retain moisture.

Deep plowing and keeping the land constantly stirred has this same effect, and that is the chief value of what we call cultivation. But clay lands that have been long run to cultivated crops lose their humus, decayed and decaying vegetable matter whose particles hold the earth particles apart, and make the ground porous, and such land runs together as a result of each wetting. The moisture then quickly dries out and the crops can not grow.

In such case, it is up to the farmer to restore the humus to the soil and make it porous again as it was originally from the forest leaves and the decaying roots and stems of the plants of ages. This indicates the turning under of green crops, and perhaps the farmer has no surer and better means of restoring the productvity of his fields than turning under a succession of growths whether green or ripened. The object is not so much to add fertility as to restore the humus, to make the ground porous so that it will readily give off the excess of water, but retain with a giant's grasp the small particles that constitute moisture. For this purpose the clovers and all the legumes are the most valuable, but any vegetable growths that will decay within the soil are valuable.

HOW TO BUY A BUGGY

Just as You Would a Horse—Look It Over Carefully and "TRY IT OUT" on the Road



IF YOU buy a buggy with your eyes shut, you will get a bad bargain every time. A buggy may look all right today and go all to pieces inside of a year. You wouldn't think of buying a horse with your eyes shut. You would look at his teeth to find out his age, wave your hands before his eyes to see if he had good eyesight, look him over for spavins and ringbones and "size him up" generally to be sure he was sound. Then you would drive him at a good gait to see if he was wind broken.

Why not be even more careful in buying a buggy? We are selling our famous SPLIT HICKORY Buggies on a new plan, which allows the buyer to "try out" the vehicle as he would a horse, before concluding the purchase. Here is our offer made in absolute good faith to any responsible person.

We Will Ship Our 1905 Split Hickory Special Top Buggy, the Price of which is $50, Anywhere in the United States on 30 Days Free Trial. Guaranteed For Two Years.

We will tell you exactly how it is made, giving complete specifications, so that when you receive the buggy you can go over it part by part, and check up every item. You can compare it with the buggies sold in your neighborhood for nearly twice as much money. You can hitch up to it and use it just as though it were your own and if you do not find it just as represented, you can ship it back to us at our expense and your money will be refunded. *The Fourth National Bank of Cincinnati, Ohio,* will tell you we are responsible for our contracts and agreements and that you may be assured of fair and honest dealing.

Here are some points of merit of the SPLIT HICKORY SPECIAL.

Wheels are made of the very best selected second growth split hickory, with screws through the rims; axles are long distance, dust proof, best refined steel, with split hickory axle beds cemented and full clipped; oil tempered springs, 16 oz. imported all wool broadcloth upholstering; box frame spring cushion; solid polished panel spring back; water-proof top with No. 1 enameled leather quarters and leather back stays; 28 oz. water-proof rubber roof and back curtain; back curtain lined and reinforced; rubber side curtains; full length storm apron; padded patent leather dash; full length velvet carpet; split hickory, fully guaranteed, shafts. Painting, oil and lead process; all wood work carried 100 days in pure oil and lead, 16 coats, every coat rubbed out and dried before the next is applied.

Our 1905 Catalogue, containing 192 pages, is a regular Information Bureau on the subject of Vehicles and Harness. If there's anything you want to know about buggies you will find it there. We send it free and take pleasure in answering letters immediately.

A Bargain Of Great Value to Tobacco Growers

The Southern Tobacconist and Modern Farmer

Published at Richmond, Va., is the official organ of the Va. and N. C. Tobacco Growers Assc. It is a 24 page Monthly filled with interesting reading and pictures for every farmer and his family. Its Editors and Writers are among the best in the South.

SUBSCRIPTION PRICE - - 50c A YEAR.

UP-TO-DATE FARMING. You all know what this paper is. It represents the Co-operating Farmers of America.

SUBSCRIPTION PRICE - - 50c A YEAR.

THE THIRD POWER BOOK. The most powerful book ever written in the interest of farmers. PRICE $1.00.

TOTAL VALUE - $2.00

OUR OFFER For One Dollar we will send all the above by mail postpaid. You will get each of the papers one whole year, and the book by return mail.

Every tobacco grower in the U. S. should embrace this offer. Everyone will, we believe, if they can see it. Show it to your neighbors. Pass it along. Address all orders to

The Southern Tobacconist & Modern Farmer
RICHMOND, VA.

SAVE 20 CENTS PER SHEEP on every sheep you shear with **Stewart's Improved 1904 Sheep Shearing Machine** PRICE ONLY $12.75

The day of the old fashioned hand shears is past. No owner of 10 sheep or more can afford to shear by hand, even though the work be done for nothing. Don't butcher your sheep. Shear with machine and get *one pound of wool extra per head.* It will more than cover the cost of shearing. Send today for valuable book, "Hints on Shearing." It is free and will save you money

CHICAGO FLEXIBLE SHAFT CO., 224 Ontario Street, Chicago.

Sharples Tubular SEPARATORS

The Only Modern Separator Bowl

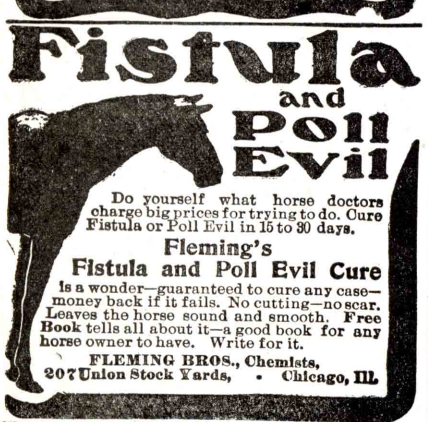
Why buy a separator filled with bottomless cake pans, punched and bent sections of stove pipe, or other complicated parts?

The only modern bowl has no contraptions; is as simple, light and easily handled as any woman could wish. The illustration shows it.

Write for catalog K-136 and learn about the best and most attractive separator ever built—the Tubular.

The Sharples Co. Chicago, Ill. P. M. Sharples West Chester Pa.

Fistula and Poll Evil



Do yourself what horse doctors charge big prices for trying to do. Cure Fistula or Poll Evil in 15 to 30 days.

Fleming's Fistula and Poll Evil Cure

Is a wonder—guaranteed to cure any case—money back if it fails. No cutting—no scar. Leaves the horse sound and smooth. **Free Book** tells all about it—a good book for any horse owner to have. Write for it.

No More Blind Horses For Specific Ophthalmia, Moon Blindness and other sore eyes, Barry Co., Iowa City, Ia., have sure cure.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

SPRING AND ITS PLEDGES

The whining in the barn lot,
And the faint response in kind,
And the anxious moo in pasture,
The hiding calf to find.
Are Nature's annual pledges
That beasts and plants to feed them
Still shall meet the needs of man.
—*J. P. S.*

If the spring colts and claves and pigs are scrubs, look them over and don't repeat the same mistake for next spring.

Take pride in the sow and pigs, and don't be satisfied unless they are doing their best.

Don't think the cattle that are to go on the market next fall can rough it all through the summer. Treat them all the time like you expected to sell them next week.

No matter how well you may treat that prided scrub calf, it will neither weight nor sell with its red shorthorn mate, and dollars to doughnuts it will eat more feed.

And the same remark will apply to those two litters of pigs—one litter sharp backed, long nosed thin through the sides, shaped like a fish; the other flat on the back, short nosed and round as a log. Do let the scrubs go.

Do you milk the cows in the same bucket, and pay no attention as to which gives much milk or little, and as to which one's milk makes the most cream and the best butter? That is neither progress nor up-to-date. A cow is a cow when it comes to feeding, but there is a great difference when it comes to milking and making butter. You are entitled to the best, and you ought to have it.

Let the stock go on the pasture gradually. We have seen Uncle Threadbare shut off full winter feed in a single day, and drive his cattle out on the pasture that was just beginning to show a hint of green. The old man would growl if he were suddenly shut off from a diet of biscuit and ham and eggs, and put suddenly on a diet of corn bread and molasses. He forgets that "the merciful man is mindful of his beast."

Don't be in too big a hurry to dispose of the old sow. There may be danger that the large sow may overlay or injure some of her pigs, but it is worth while to give her a little more attention until the pigs are old enough to take care of themselves, which will not take many days. The practice of raising pigs from young sows all the time weakens the vitality and reduces the size of the hogs. Pigs from a well matured sow are the strongest and best.

In answer to a request for a description of the Ayrshire cow, she has a comparatively small head, a meek and gentle eye, small, crooked horns set well apart, a long, slender neck, seldom with loose skin hanging below, forequarters are large, back straight, udder generally very large, the teats having a tendency to point outward. She is very gentle and easily managed. She is a splendid dairy purpose cow, but, of course ,the Ayrshire is not a beef breed.

Stock growers will never solve their problem of profitable prices until they organize in the A. S. of E. In the development of this movement they can report their supplies to the farmers' clearing house, where the demands on the various markets will be known and the supply so directed and distributed to exactly meet the demand and never overwhelm it.

Many who have handled milk all their lives scarcely realize what an absorbed of odors and bad air it is, or how quickly it begins to decay ,if we may use so strong a word as that, but that word expresses no more than the fact. We will not, under any circumstances, eat a bit of tainted meat, and meat unsalted taints very quickly. Milk is an animal juice, and it is natural that decomposition should set in very quickly after it is taken from the animal. Special provisions of nature assist much in the handling of milk, else it could not be the useful food it is, but this does not minimize the importance of skillful and careful handling to keep it wholesome.

In estimating the profit of the livestock kept on the farm, two items should enter into the account that are seldom considered—the cost of hauling the feed to market and the manure. The feed consumed by the stock is marketed at home with no cost for delivery, and the manure pays a good percentage on it besides.

Nearly all goods is now put up in nice, attractive packages. Why? Goods so put up sell enough better to pay for the packages and a profit on them. The same rule applies to live stock, though farmers seldom think of it. Always have your fat hogs, and fat sheep, and fat cattle, and fat horses done up in neat packages. They will sell better, sure as you live.

We agree with an esteemed correspondent that the Southdown is a very valuable sheep for the farm. As a mutton sheep it has few equals, and it is hardy, a good breeder and a good mother. We have thought the Shropshire has some points of advantage, but the Southdown is a good sheep.

We do much to induce farmers to discard the scrubs and raise only good stock. In this connection there is still some thing more to consider. The fact that a farmer has a thoroughbred is not a positive assurance that he has just what he wants. He must study the breeds. The Jersey stands high as a dairy cow, but she is noted for richness rather than quantity of milk, whereas the farmer may be better served by quantity than by richness altogether. The Angus ranks high among the beef breeds, but the farmer who wishes to raise beef cattle may desire a fair milk supply also. This, of course, points to the well known Shorthorn. So the up-to-date farmer must study the breeds and get what meets his purposes.

Here is a little warning that ought not to be necessary, but it is on some farms. The temptation to turn stock into the orchard as rich grass begins to appear in it in the spring when pastures are scarce elsewhere is so great as to overcome good judgment sometimes. Before turning in the stock, estimate the value of the pasture to the stock and of the orchard to you, for that is just about what it amounts to. You may have either a pasture or an orchard, but you can scarcely have both on the same ground. This, however, does not preclude the turning of hogs and sheep into an old orchard, for these animals may be profitably pastured in old orchards.

Urging the breeding of thoroughbred stock, does not necessarily always mean pure bred. We have known some splendid results from crossing thoroughbreds. Especially so in hogs. Some crosses on the better grades of common stock are good, and we have seen crosses among thoroughbreds that we thought resulted in better farm stock than either parent.

It is easier to improve the hog crop than almost any other line of farm animals, because they increase so rapidly, and one does not have to wait so long to discover and correct mistakes. If a litter of pigs do not come up to your ideal, don't use the same parents next time. There is no place on earth where mind may so completely overcome matter as on the farm, both in the fields and among the live stock.

THE FIFTY MILLION DOLLAR WORLD'S FAIR, ST. LOUIS 1904

Bought by the Chicago House Wrecking Co. Millions of Dollar's worth of material, will be placed on the market for quick sale by us at prices that will mean an enormous saving to purchasers. Now is your opportunity to put into execution your long contemplated improvements.

100,000,000 FEET OF HIGH GRADE LUMBER FOR SALE

The time to buy Lumber is today. Even if you do not need any Lumber today, it will pay you to purchase it now and store it for future use. It's better than money in the bank. Buy quick, because the price at which we will offer this material is bound to sell it as fast as we can make delivery. The finest grades of Lumber were used in the construction of this Grand Exposition. We have everything needed in the construction and furnishing of a building for any purpose.

SEND US YOUR LUMBER BILL FOR OUR ESTIMATE

You can save from 30 per cent. to 50 per cent. if you buy at once. DO THIS NOW

SPECTACLE WEARERS.

Just send me your name and address and I will do this: First I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test) I will mail you a Perfect Fitting Five Dollar Family Set of Spectacles for only $1, which will include a pair of my Handsome Rolled Gold Spectacles, absolutely free of charge. I am just doing this to prove to every spectacle wearer in the world that my Spectacles are the most perfect-fitting, clearest and best in the world today, and I will return your dollar as cheerfully as you send it, if you yourself don't find them to be the finest, clearest and best you have ever bought at any price, anywhere. Address:—

I WANT AGENTS ALSO.

And any man or woman (also storekeepers), without any previous experience whatever can fit the weakest eyes with my Improved Metal Eye Tester, which is so simple that anyone can test with it with absolute correctness. If you are not earning at least $25.00 weekly don't delay another minute as my agents are making from $25.00 to $100.00 every week, selling my famous Spectacles, either in their homes, traveling, or in stores. My Agent's Outfit includes my Latest Improved Metal Eye Tester, a Handsome Traveling Spectacle Case and everything else necessary to start you right, also the necessary documents showing that Agents need no license anywhere.

Write me at once as this is the best time to begin. Address:—

DR. HAUX SPECTACLE CO., Haux Bldg., St. Louis, Mo.

NOTE.—The above is the largest Mail Spectacle House in the United States, and perfectly reliable.

LETTER FROM DAVID DOBETTER

Number 51

Near Williamsport, Ind., aMrch 15.
My Dear Mr. Everitt:

We took advantage of an open spell of weather last week to go through the fruit trees and trim them up a little. I find that there is quite a difference of opinion as to the right time to do this kind of work. One man will say that it should be done in the month of June, and I think myself that shoots that sometimes start out in the spring, if cut off at the season of the year, will be more apt to stay killed than if done earlier. The sap is up in the wood then and cutting tends to destroy the growth. Others say if you cut off in June you lose a good deal of the fruit, as the apples are at that time all set. Something in that, too. But we have taken the early part of March to go through our trees, and as it is more or less of an experiment we will report later.

We found that the mice had worked under the snow some on the smaller trees, and the rabbits above it. That is the way with those pests. Mice get in their work down out of sight and the rabbits on top of the drifts. We have found that the best thing to do to keep the mice out is to stamp the snow down about the trunk hard, so that they will not be as apt to bore through it. But it is all right to put fine wire cloth or heavy paper around the trunks in the fall as a safeguard against both mice and rabbits.

We have started out to keep our trees headed down to a reasonable height. If there is anything that is hard work it is climbing away up into tall trees to pick apples. We used to have a few monstrous trees near our house when I was a boy. One in particular I remember was about nine feet in circumference. It was said to be the largest tree in all that part of the country. And, my, how high it was! To think of it now I believe that tree was not less than thirty feet from root to top branch. No ladder would reach to the top of it. We had to shake the apples off if we got them. Well, now it was as much as a man's life was worth to gather the fruit on such trees. I had enough climbing trees after fruit a good many years ago, and so we are heading ours down, not too much, of course, and still enough to keep them where a reasonable length of ladder will reach up to the fruit.

Then, too, we cut out every dead each other, one or the other of them is cut out. We took out a good many of the branches that shut out the sun from the top. I may be mistaken, but I believe apple trees need the sunshine as much as corn does. You take a tree that is thick at the top and you never will find very large fruit up there in the shadow. The color of the fruit will not be as good, either. It will be pale and lacking in the rosy blush we like to see so well.

I expect to live to see this orchard a source of much revenue to us. I suppose a good many would have thought when they reached my time of life, "Well, I shall not live to eat the fruit, if I set out trees. I will not do it. Let the younger men do that!" That strikes me as a pretty selfish way of looking at it. How many things folks do that they never hope to get any good from! They do these things because they love to do them, and because they want to make the world a little better. That's the right spirit. I want to leave something for my boys and girls and neighbors to think of and to enjoy when I am gone; but I expect, as I say ,to keep on living to pick some fruit from my little apple trees.

We are beginning to plan for the garden again. If nothing happens we mean to make more off of the truck patch this year than ever before. As the city grows, we find our market is better and better. I had more orders last season than I could fill. Doesn't that speak well for us? I do not mean that anyone shall be disappointed this year. We are going to put a wagon on the road to sell direct to the people, besides several to handle the wholesale product. I find that there is a growing disposition on the part of folks in town to buy direct from the man who raises the stuff. That is a good thing, too. If I lived in town I would always buy that way. Then I should expect to get my garden stuff fresh and nice, and good measure. I know the local dealers object to the farmers doing that kind of a trade, because it interferes with their business. In some towns they have had influence enough with the municipal officers to get laws enacted to shut out the farmers from selling from house to house unless they will pay a big license for the privilege.

We took a lot of seeds the other day and began testing them for next season. A good many had trouble with their seeds not growing last year. We did not, and I see no reason why our leading seeds ,as corn and such things, should not grow this year. But of course there may be conditions of soil and weather that we can't calculate against. We got an old pan and brought some nice warm earth from the lower woods, and planted a few kernels of corn of different varieties in it. These we will keep near the stove till the seeds begin to sprout.

I do not believe it pays to plant seeds much older than two years. There will always be more or less loss in vigor of sprouts after that, and even with seeds one year old there may be failures at times. Pumpkins, squashes and melons will sprout when several years old, and are even then more fruitful of crops. Nobody knows how old corn and wheat may be when it fails to sprout. Much depends on how the seed has been kept. Of course the more vitality there is in the seed we plant the stronger will our plants be. What we need to buy we can not be too careful whom we patronize. There is just as much difference in seedsmen as in any other class of people. Some I would not buy a single thing of. There is a class of seedsmen who have thought out the scheme of sending a lot of seeds right along, order or no order, and a bill with the goods. If that is not cheeky I don't know what is. I have had some such lots of seeds myself, but I just stuff them back into the package and ship them to the man who tries to impose on me in that way. When I buy such things I want the privilege of using my own judgment as to the man I shall patronize. The seeds from the government seed shop meet the same fate at my hands.

We have kept busy every day on the timber lot which was damaged by the wind. A fine run of sleighing helped us out with that. Everything that would make a stick of lumber we turned into the mill. Wonderful how fast trees count up nowadays. We had five oaks and the same number of cherries that brought us one hundred and fifty dollars in clean cash. They were not large at that—rather small. We are planning to set out some trees in the place of those that were blown down. This is a new idea with us, but I believe it would turn out first rate. What might not be the case if we took some pains with our work?

But I see the clock says it is bedtime, Mr. Everitt. So I must say good night. Yours truly,

DAVID DOBETTER.

SOME FACTS ABOUT FARM CREAM SEPARATION

What the BEATRICE CREAMERY COMPANY, of Lincoln, Neb., the biggest, greatest and most successful creamery concern in the world, has to say of the De Laval Cream Separators and Farm Separation:

"The De Laval Hand Separator will make the farmer double the money over the old way of handling milk and will prove twice as durable as the so-called 'just as good' hand separator.

"We have sold over 15,000 De Laval separators since we inaugurated the Hand Separator system in the West, and we expect to add 5,000 more to this number during 1905.

"We are now operating over 600 separator cream receiving stations with an agent at each point pleased to call on the farmer and explain how quickly he can pay for a De Laval Separator from what he is losing by dairying in the old way.

"We have paid as high as 25 and 30 cents per pound for butter fat each winter since 1900, and the future looks brighter for dairying than ever before.

"We have 20,000 satisfied patrons receiving our cream checks regularly, and at a low estimate wi l pay out over Three Million Dollars for cream during the year of 1905."

What the Beatrice Company is doing, more than 2,000 other creamery concerns are doing on a comparatively smaller scale, everyone with satisfaction and success. Scarcely a successful creamery concern anywhere is today attempting the use or sale of other than De Laval machines. Nearly all who have tried other machines have either changed to the DE LAVAL or abandoned the handling of separators.

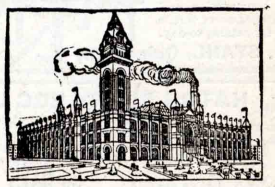
Makes Brood Sows Give More Milk and Raise Better Pigs

LONDON, OHIO

INTERNATIONAL STOCK FOOD CO.,
Minneapolis, Minn.

GENTLEMEN:—I have fed "International Stock Food" to pigs that have had a bad cough and it cured them and since that time they have made an extraordinary growth. I think there is nothing better for brood sows, as it makes the pigs strong, vigorous and the sows give more milk.

JOHN M. GARRETT.



We Have Thousands of Similar Testimonials. We Will Pay You $1000 If They Are Not the True Experience of Practical Feeders. Beware of Cheap and Inferior Imitations and Substitutes. "International Stock Food" is Fed Every Day to Our World Famous Stallions, Dan Patch 1:56, Directum 2:05¼, Arion 2:07¾, Roy Wilkes 2:06½, and to Our One Hundred Brood Mares and Their Colts.

Largest Stock Food Factory in the World. Covers Over a City Block. Contains 18 Acres of Floor Space. Also Large Factory at Toronto, Can., Containing 50,000 Feet of Space. Capital Paid in $2,000,000.00.

DAN PATCH 1:56, CHAMPION HARNESS HORSE of the WORLD. VALUED AT $150,000.

BEEWARE.

The right sort of Beeware is just as important in successful Bee Culture as are the bees themselves. Without proper Beeware you cannot hope to get the big returns that this pleasant and profitable work promises you. If you want the right sort of Beeware

GET IT FROM LEWIS.

The undisputed authority on Bee Culture, identified with the trade in America for many years, has every device necessary or known in modern Bee Culture. The great Lewis factory at Watertown, Wis., greatest in point of quality in its output, has just been enlarged, giving more room for production and better facilities for ready shipment. Among those who know, Bee Keeping is recognized as a

PAYING PLEASURE.

The bees do the work. All these little honey-gatherers and money-makers demand of you is to provide a home for them.

The new Lewis Catalogue G, handsomely illustrated and just published, contains information on Bee Keeping--- how to buy the bees, what sort to buy, where to locate their homes, how to care for them in all seasons, how to prepare the honey for market and countless other phases of this work. Write to-day for the new catalogue. Get your information from headquarters.

G. B. Lewis Co., Watertown, Wis., U.S.A.

When writing mention this paper.

Money Can't Buy

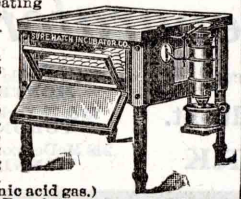
A Better Incubator than the OLD RELIABLE

SURE HATCH

Read the Reasons—Here are Some

The **Sure Hatch** is built of straight grained California Redwood, the best material known for incubators. California Redwood will not shrink or swell, warp or crack—other woods will.

The **Sure Hatch** Water Heater has 138 square inches of heating surface—others from 15 to 30 sq. in. Abundant heating surface is absolutely essential to economy of operation.



The **Sure Hatch** Ventilator keeps pure, warm air in circulation among the eggs all the time. Other "ventilators" skim off the air from top of egg chamber, leaving eggs surrounded with foul air (carbonic acid gas.)

The **Sure Hatch** Regulators are automatic and keep the temperature at the proper degree. You don't have to "stand guard" over the regulator to be sure it regulates. **Sure Hatch** Egg Chambers are asbestos lined.

Tens of thousands of **Sure Hatch** Incubators are hatching more chicks to the 100 eggs that live and grow than any other Incubator made. Think of this before you buy.

The **Sure Hatch** terms are exceptionally liberal—60 days trial, freight prepaid east of Rocky Mountains, and money back if not satisfactory.

The **Sure Hatch** $100,000 Guarantee, good for five years from date of purchase, is our own pledge of good faith.

The **Sure Hatch** Catalogue of 1905 is now ready and will be sent free on request. Write at once. Address office nearest you.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

THE RESULT

A worthless and deserted shell,
A fluffy little ball,
An anxious cluck from mother hen,
A "peep," and that is all.
—*J. P. S.*

May we remind you that this is a good time to clean out the poultry house?

Give the broody hens a brand new nest, and set them. Early pullets. That's what you want.

If the ducks did "the proper thing" they began laying in February, or early March, and they should be "doing a good business" now. To get all the eggs it is necessary to pen them at night, and to keep them up until 8 or 9 o'clock each morning. For this purpose a movable pen is necessary. It is wicked to shut up a flock of ducks in a wet, nasty pen for an entire season, or any great portion of it.

It is very natural that the larger breeds of fowls require longer time to mature than the smaller ones and that they consume more food. But of course when one is matured it dresses more meat. It is conceded, though, that the smaller breeds produce more eggs.

Poultry that is penned must have green feed. A head of cabbage suspended in reach of the fowls is a good feed and an ideal way to feed it. This is an excellent treatment for fowls in winter. Fowls that have the free run of the farms in summer will provide themselves with green feed.

When the hens begin to lay the price begins to recede. Then also the trusts and speculators get busy throughout the land to reap the harvest of cheap eggs. They place them in storage until the hens quit laying, when they come out at three times the original cost. It will always be so until the producers of eggs get together in the A. S. of E. and have their own storehouses, or store eggs on their own account. Then eggs may bring the producers a profitable price the year around and consumers will be saved from the extortions that have been practiced on them in recent years.

An excess of corn is not the best feed for laying hens either winter or summer, but specially not in summer. Corn is a great heat producing feed, and a more cooling feed is better in warm weather. Wheat screanings are excellent.

Even in summer time it is good to feed the poultry their grain ration in clean, dry litter, so that they will scratch and hunt for it. It compels exercise, and fowls seem to relish the feed better that they get in that way.

"Charity covers a multitude of sins." Of equal force is "keep the poultry quarters dry and clean." Follow that and it will cover a multitude of other shortcomings in the poultry management.

A good rule in feeding any animal, especially fowls, is to never feed more than is promptly eaten. This is very important in feeding soft feeds. This character of feed spoils very quickly after it has been partly eaten and trampled in by the fowls. Keep the feeding and watering troughs clean. It is easier to prevent disease than to cure it.

A few things are quite necessary in the poultry yard—gravel or grit, lime, crushed or ground bone, and crushed shell. Of course many of the articles we have named in purpose are duplicates of each other, but it is no harm to have them all scattered about the yard.

What do you think of a flock of guineas on the farm? Many object to them on account of their noisy habits, others fear the old roosters may be troublesome among the young chickens. Some times they are, but not very often, and the noise to which some object is admired by others. It is often useful in keeping hawks away, and in making known the presence of strange dogs and cats, or other intruders in the poultry yard. The guinea is a great layer in her season, and her meat, though dark, has a gamey flavor that makes it very attractive to most people.

BEGINNING WITH TURKEYS.

The following clipped from the Woman's Magazine, is very good instruction for persons who wish to begin to raise turkeys, though we think two weeks longer than necessary to keep the young turkeys confined in the first place, though much depends upon the weather. Their pen or coop must be kept clean, and there must be an untiring watch for lice:

The best and easiest way to make a start in the raising of turkeys is to buy a couple of settings of eggs from a reliable poultryman or dealer as early in the spring as possible, and place them under common hens which are known to be good setters. When the eggs are hatched the mother hen should be confined in a close and rather well-sheltered pen, which will allow the young turkeys free ingress and egress. After they are a couple of weeks old the hen may be allowed to take her brood on the run on warm days, and after the turks are a month old they may be given perfect freedom if the weather is favorable. They may be given cracked wheat in addition to their other food, and will need but little further attention. Turkeys thrive much better if allowed to roost in the open and expensive poultry houses are not necessary. April and May are the best months for hatching turkeys.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

ANTICIPATION

On branch and twig the purple glow
Of bursting bud gives promise true
Of what the future has in store,
On tree and shrub, for me and you.
—J. P. S.

The March winds have caused many a small apple tree to stand at an undesirable angle. Straighten them while the ground is still soft. To lean slightly to the southwest is not objectionable; the boughs better protect the trunks from the scorching two o'clock summer suns.

A good authority declares that not yet has been developed a better all-round grape than the old Concord. There are a great many good grapes, but for universal dependence the Concord never disappoints.

Did you know that even in the north date palms may be grown from those hard, bony seeds, and that pineapples may be grown from the crowns of the fruit? But only for a season's novelty and ornament. They will not survive even the mildest breath of Jack Frost.

Haven't you yet set the strawberry bed? I'm afraid you are going to neglect that. Next strawberry season, when the editor comes your way, he'll be disappointed if you can't give him a dish of strawberries and cream.

There are many small fruits we would rather have than currants and gooseberries, but there is no reason why every home garden should not have a supply even of these. They are easily grown, and a row or two in the garden may furnish a supply. Gooseberries may make the dullest sharp.

We have been eating some Jonathan apples this month (March). It is a waste of time to hunt for a better apple.

Haven't succeeded well with currants? Perhaps not, and perhaps it is your fault. You let them grow up in a thick bunch, do you not? Try cutting out everything but a single stalk, and train it to grow up like a small tree. You'll think you have a different variety.

I expect you have still neglected to cut back the grape vines. If you are to have grapes to amount to anything you must do it yet. They will "bleed" badly now, but that does not seem to seriously injure them. Cut them back close.

Last year's crop of apples was very large—too large for the present method of distribution. Prices have ruled rather low, although growers got better prices, all because many held their crops. Uncertainty of price and markets for fruit will prevail until the growers are organized and working on the plan of the A. S. of E. This contemplates representatives on all the leading markets. Reports from all producing sections and farmers clearing houses. Also storage houses to control the supply. In operation: A price will be agreed upon. The demand will be supplied as it appears, but not before. If there is a surplus it will be held back pro rata with the producers, but by superior distribution and equitable prices to consumers a demand greatly in excess of anything ever realized before can be made.

The Dewberry

The Dewberry is a fruit too much neglected. It is undoubtedly superior to the blackberry, the fruit being larger and of better flavor, and the trailing habit of the plant makes it less liable to winter killing. Through the winter it should be permitted to lie very close to the ground, and it may still lie so through the fruiting season. If, however, a stake that will stand two or three feet high be driven in the ground near each hill, and the vines brought up to it and wired or tied with twine in an oval shape, just before the leaves begin to show, when in bloom you will have a beautiful white bouquet at each hill, and when the fruit is ripe you will have something a little prettier than you ever had in a berry patch. We risk saying the Lucretia is the very best variety.

The Apple Orchard and the Mulch

Mr. Hitchings is the best known advocate of a heavy set of grass in the orchard, and of the use of the entire crop as a mulch for the trees, because his orchards have been most written about, and his fruit has been shown most extensively and thus has secured greatest publicity.

But Mr. F. P. Vergon, of Ohio, is called by the Rural New Yorker the father of the system, and we give from that paper a condensation of Mr. Vergon's account of his method.

Anything that grows out of the ground, says Mr. Vergon, if sufficiently decomposed, answers a good purpose as a mulch. The grass mulch means that the orchard is not to be cultivated after a stand of grass is secured. Timothy is not the best for this purpose, the finer grasses, bluegrass and red top, being preferred. The orchard should be mowed twice a year, the grass raked and dropped near the trees, whence it may be easily forked under them, spreading it thick fully to or beyond the drip of the branches, even eight or ten inches thick. Some prefer that it shall not quite reach the trunk of the trees, at least that it shall not be banked up around them. This mulch performs several important offices, all beneficial to the trees. It shades the ground and prevents its baking; prevents the escape of moisture and the volatile elements of plant food, keeping the place where the roots feed cool and moist. Then it is constantly decaying next the ground, and permitting plant food to filter down to the feeding roots. It is a great convenience in harvesting. Apples may be shaken upon it, without any danger of bruising, except as they may strike limbs in falling. In winter it prevents the freezing of the ground, and yet it is kept mellow by being hidden all the time from the baking sunshine.

To insure safety from mice Mr. Vergon uses fine coal cinders, which he banks up around the trees, using a bushel to a bushl and a half to the tree. Nothing will grow up through it, and it keeps everything clean and nice at the foot of the tree.

As to results, we will let Mr. Vergon tell it in his own words:

Apples that drop are clean and usually not bruised; even the leaves are caught up in the mulch in the fall and are where they will do the most good. It is quite generally conceded now that apples color better and keep better if this be the case. They are of better quality also, and I verily believe the trees are longer lived.

A LESSON FROM THE FOREST

I became familiar with this system from my pioneer days, clearing up the primitive forest. The leaves, bark, rotten branches, etc., were eight to 12 inches deep, and are added to each year, as decomposition is going on underneath; a better mulch could not be provided for the timber by any artificial means. Here nature has done her own plowing for thousands of years. I have never forgotten how hard it was to walk on this mulch in the winter, being heaved up by the little needles of ice and fine earth, honeycombed fashion, underneath. The ground was always moist and rich uder this mulch. It seemed to me, this would be an ideal condition to have under my trees. I am very sure with this system it is possible for the trees to ripen annual crops, and form fruit buds for the next year. Under other conditions the trees frequently suffer so severely from droughts that the crop is not well matured, and fruit buds are not formed for the following season.

THE TEST OF RESULTS

Last fall we harvested our eleventh or twelfth consecutive paying crop annually since 1893 or 1894. I can not recall the season our crops were frozen in June as hard as rocks, when as large as big marbles. No human skill can overcome a calamity of this kind. This section of the orchard that is in question was 16 years old last spring, all handled in crates of one and a half bushels (a tree can easily be measured), hauled in every day and stacked up in our cold storage. Some trees in the section of the old orchard, 45 years old, of my own planting, have harvested 40 bushels and over per tree. These old friends do not bear such uniform crops any more. They can afford in their declining years to take a little more rest, as I am obliged to do myself. Yet they are still doing very good work. Younger trees are not always equally loaded with a crop. Trees that excessively overbear and are not thinned out, as they should be, are not likely to overbear the following year, and some varieties are not such abundant bearers; this accounts for the variation of 10 to 20 bushels on the sixteen-year-old trees.

If your parents and teachers have neglected your education, "better late than never"; learn to know thyself by getting the plainest self-instructor, Dr. Foote's new Home Cyclopedia (1200 pages, 80 color plates), from 129 E. 28th St., New York.

UP-TO-DATE Gardening and Flowers

HOW TO GET BEST RESULTS AND BEAUTY

THE FIRST GARDEN

"And the Lord God planted a garden eastward in Eden; and there He put the man whom He had found. And out of the ground made the Lord God to grow every tree that is pleasant to the sight, and good for food."—Bible.

And still the garden grows what is pleasant to the sight and good for food.

Manure for the garden should be well rotted and free from seeds of grass or weeds.

The garden should be a plat of ground that drains well.

Beets require the land to be deeply pulverized, hence it is not out of place to plant them in ridges.

The winter winds are the weed seed sowers; so if weeds were left in or around the garden the seeds are already sown.

Give the onion rows a good treatment of hen manure, working it well into the soil before setting or planting the onions.

A good sprinkle of wood ashes along the lettuce rows will hasten that choice vegetable and make it very crisp.

Well rotted chip manure worked into the raddish rows will bring radishes to the table early.

Don't neglect to give the rhubarb a dressing of well rotted barn manure, but be careful that it is free from grass seed. Rhubarb is medicinal, and it makes a pie or a sauce that most persons may eat with benefit.

Small seeds should not be covered deeply, and the ground in which they are placed should be thoroughly pulverized. A depth of five times the diameter of the seed is the rule for planting.

Plant several rows of sweet corn, and plant at different times so as to have a rotation. A good supply of sweet corn comes early and handy.

In last issue we spoke of the new hardy Russian cabbage, Volga. The seeds are higher priced than those of ordinary cabbage, but the first cost of seeds is but a small item at most, and the Volga will well repay a trial. By the way, it enters into the premium seed collection, and a trial of it may thus be had entirely free.

Why do not farmers raise more cauliflower? It is as easily raised as cabbage, and will grow wherever cabbage will, and it is a very desirable vegetable on the table. The Gardener's Favorite is a very desirable variety.

We believe sincerely the finest premium ever offered with a 50-cent publication is that jubilee collection of roses so beautifully illustrated on the first cover page of March 1 Up-to-Date Farming. We do not believe any lover of the beautiful in flowers can see those pictures without wanting the roses. And the idea that they can be had free! Up-to-Date is well worth what it costs, hence the roses in connection with it cost nothing. Yes, we know some of our very best people have already renewed, but this does not shut them off from getting the roses; they may renew for a year still further on, or they may obtain a new subscriber, in which case they would get the premium instead of the subscribe. Or they can get four subscribers, and then each of the new subscribers will get a set of the roses, and so will the getter up of the club, and may have his or her subscription extended a year besides.

What do you think of that beautiful picture on last cover page of March 1 Up-to-Date? That is a possibility for every home in the land, city or country. The cinnamon vine grows as perfectly on the common, plain country home as it does on the city palace, and it is just as soon ornamental and fragrant. That is another premium offer that defies any other publication to meet it.

Try the Japanese Climbing cucumber. It is a real climber, and goes up poles or covers a trillis well. Hence, it is a very attractive garden novelty, besides it is an early and prolific bearer, beginning early and continuing throughout the entire season. As it does not creep over the ground like other cucumbers, if furnished something to climb, the hills may be much closer together and a greater yield secured from a smaller space of ground.

Frequently gardeners and truckers find the markets glutted when their stuff reaches it. A small percentage over the legitimate demand sets a ruinously low price on all. Many times a few hundred or thousands of crates of vegetables or fruit have destroyed the profit on all the shipments to a market; hence, how important that marketing be controlled.

Farmers' Interest Corn

A WHITE DENT VARIETY

THE BEST IN THE COUNTRY

The Standby with Thousands of Farmers. Many thought they had the best CORN before, but FARMERS' INTEREST almost invariably proves that they were in Error.

We have sold this grand Corn 8 years Our customers reside in all parts of the country, from Michigan to Georgia from New Jersey to Colorado, and no variety of Corn could more completely fill the requirements for a profitable sort. It is early enough to mature in the latitude of Southern Michigan and large enough to be profitable to grow in the South, where it comes weeks ahead of their late sorts and outyields them, making it an ideal Corn for Kentucky, Tennessee, Georgia, Virginia, Missouri, Arkansas, etc Tens of thousands of corn-growers would plant largely of this Corn this year if they just realized the true merit and would increase their crop from 10 to 50 bushels per acre.

This corn has won more prizes than any other variety in the country. It won Gold and Silver Medal at Paris World's Fair in 1900. First Prize at St. Louis in 1904. State and County prizes almost beyond number.

READ A FEW REPORTS.

Thousands could be printed. The publishers of FARM JOURNAL know these are genuine, but we cannot advertise our customers' corn by giving full address.

KENTUCKY — I planted a field of your **Farmers' Interest Corn** last spring and the result was a revelation to me and my neighbors, when we found we could send to Indiana and get seed corn that excelled our native varieties. We thought we grew good Corn, but your **Farmers' Interest** is yielding 110 to 120 bushels per acre, and surpasses the best of other Corn by 25 to 30 bushels per acre.
C. W. W., Breckenridge Co., Ky.

INDIANA — Farmers' Interest Corn is yielding 95 to 100 bushels per acre. Four of my neighbors, who are also growing it, are all getting over 100 bushels per acre. These are not exaggerated reports, but actual facts. C. A. B., Indiana.

Farmers' Interest Corn is yielding 100 to 120 bushels per acre all over my fields. Nothing like it ever seen in this section before. L. B. C., Indiana.

I grew 50 acres of **Farmers' Interest Corn,** and the yield over the whole field was 90 to 105 bushels per acre, a total of 4,948 bushels on the field. It matured very early, ears mammoth size. It surpassed all others. C. A. HELM, Indiana.

ILLINOIS—I planted a field of your **Farmers' Interest Corn** last spring and it has astonished us farmers all through the season, in rapid, strong growth. I topped it when ripe and such a field of mammoth corn ears I never saw before. It is good for over 100 bushels per acre. I don't think there can be a better.
W. P. R., St. Clair Co., Ill.

KANSAS—In a visit to my brother in Kansas, he showed me a field of your **Farmers' Interest Corn.** I must say I never saw its equal in Indiana, nor on the way to Kansas and return. The ears were arms of giants. He wrote me the yield was 114 bushels per acre. I would have guessed it at more, if it was possible for more corn to grow on an acre.
A. M. T., Knox Co., Ind.

IOWA—Twenty-eight acres of **Farmers' Interest Corn** yielded 2,430 bushels of the finest White Corn grown in this section. C. F. PEARSON,—Co., Ia.

MARYLAND — Farmers' Interest Corn has taken our section by storm. It is the greatest ever seen here. S. B. O., Prince George Co., Md.

TENNESSEE — Farmers' Interest Corn is the largest, heaviest and best White Corn I ever grew. On a test 50 ears made a bushel. The cobs weighed 12 pounds. J. W., Maury Co., Tenn.

MISSOURI — Having seen a crop of **Farmers' Interest Corn** grown from one ear, I write you early to save me four bushels of it for seed, and quote your price. It is the greatest corn I ever saw. A. R., Miller Co., Mo.

OHIO—A heavy cropper on medium soil. Best I ever raised. WM. LANCEY, Preble Co., O.

Farmers' Interest Grows in Popularity Every Year.

EVERY FARMER knows that it pays to plant good seed. **Every Farmer** should know that there is **a great difference in seed** If by changing seed to a better variety you can increase the yield **10 bushels per acre,** it means the payment of the rental of the land over and above your regular crop. An increase of **15 to 50 bushels per acre** is not at all impossible. The plowing, preparing, fertilizing, planting and cultivating are practically the same whether you raise 30 bushels or 100 bushels per acre. You can not raise the maximum crops unless you have the right seed.

Farmers' Interest White Dent is

one of the most valuable varieties of corn in the country. A strong growing variety, sending its roots out in all directions in search of food. Withstands drought well; stalks are strong, close-jointed and leafy. A fine grower. Produces mammoth ears, of which the illustration on this page is a fair representation. Grains are very deep, ranging ½ to ¾ of an inch in length in middle of the ear. Color, white; firm and good texture; cob, medium size. The ears frequently shell one pound of corn to the ear, and cobs from one bushel of ears weigh from eight to ten pounds. Ears 18 to 20 rows. Rows straight, and ears of this variety are well filled out at the ends.

As the introducers of this fine Corn we desire to appeal directly to the good, sound sense of corn growers. **The Corn will speak for itself from the time you receive the seed we will ship you until it is finally stored in the bursting cribs** We want the better class of intelligent, **up-to-date farmers** and those who are seeking for improvements in their crops, as our customers, and count on an order from every **pushing son of the soil** who wants to plant wisely and reap abundantly

Study This Illustration

The average weight of corn ears is no more than eight ounces. If an increase of two ounces to the ear can be secured, there would be added to the yield per acre one-fourth. And if there be four ounces added to the weight of ears, then the yield will be increased one-half. Illinois plants each year about 8,000,000 acres of corn. If an increase of 10 bushels per acre can be obtained by planting better seed, the total increase will be 80,000,000 bushels. Corn-growers should keep these things in mind and start with the very best seed possible and that is the

Farmers Interest Corn

Farmers

If You Grow Corn We Urge You to Plant a Field or More of Farmers' Interest. There is a Great Difference in Varieties of Corn. This Variety Will Show the Difference and Surprise You.

PRICE. By mail, pkt., 10c.; large sample ear, 30c.; 1 qt., 40c.; 3 qts., $1. By freight or express, ¼ bu., 60c.; 1 bu. $2; 2½ bu. in 1 Bag, $4; 5 bus. or more, $1.50 per bu.

The Cost to plant an acre is about 25 cents and your own seed is saved. The gain per acre will be many times as much. **Remember, Farmers' Interest Corn** has stood the test of time. You cannot afford to risk your crop on an untried variety.

Have You Our Beautiful 160-Page Catalogue of O. K. Seeds? It is Free.

We want to sell to every FARM JOURNAL Reader.

Very Special. To each person who orders 1 bu. or more of corn from this advertisement we will send free a 320-page cloth-bound book that will teach you how to get profitable prices for every crop you grow. This book is worth everything to any farmer. Should be read by all—farmer, wife, son and daughter.

Address, **J. A. EVERITT,** Seedsman, **Box 4, Indianapolis, Ind.**

FARMERS - GARDENERS - TRUCKERS

Do not miss this Opportunity to buy seed early from the introducers of the famous

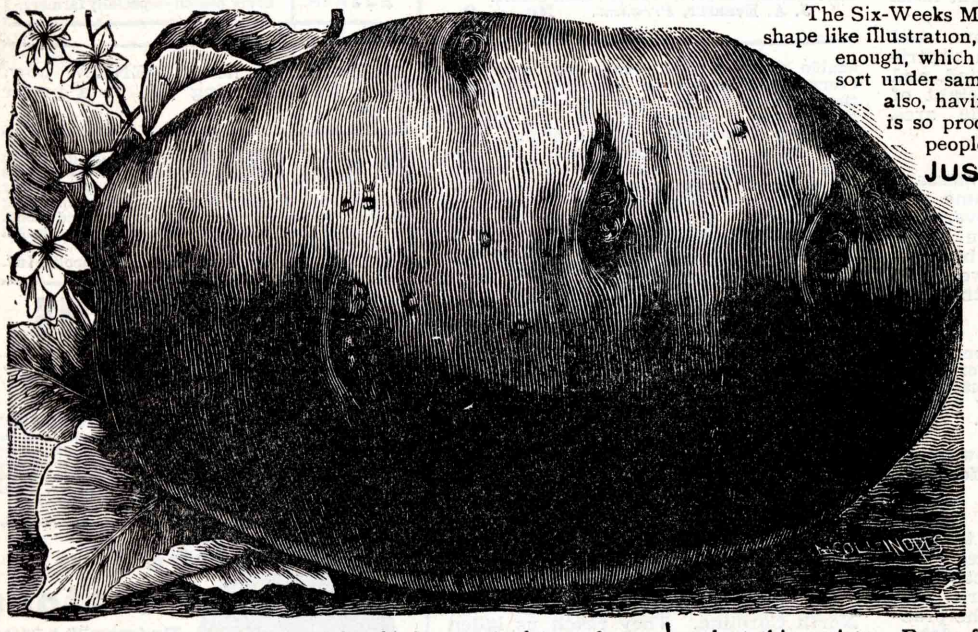
Improved Early Six-Weeks Market Potato

Not one season in all our experience have we had enough of this famous potato to supply the enormous demand. Also by waiting for late shipping they frequently arrive late and defeat your plans for early table potatoes or markets.

You can be sure of getting them to plant early by ordering now. Also the price is less than it may be later.

If you want to beat all your neighbors with new potatoes to eat or market, plant the **Six-Weeks Market.** If a market gardener you cannot plant anything that will make you more money than this potato.

This potato does beat all other kinds and produces fine tubers in 6 weeks from planting, with favorable weather. If you know this to be a fact would you not want some of them Read the testimonials.



The Six-Weeks Market potato is nearly white—(a little pink), shape like illustration, grow fine size, cooks mealy as soon as large enough, which is two weeks or more ahead of any other sort under same conditions. It is wonderfully productive also, having yielded 400 bu. and 600 bu. per acre. It is so productive and such a good keeper that many people grow them for early and main crop.

JUST THINK of one variety of potatoes combining such extreme earliness, good table qualities, good keeping qualities, fine size and shape, and great productiveness. This is the IMPROVED EARLY SIX-WEEKS MARKET POTATO.

From the time you receive the seed we send you until the crop comes on the table or goes to market you will be surprised, delighted and profited by your investment in this potato.

The most remarkable potato since the Early Rose was introduced

We named and introduced the Early Six-Weeks Market Potato several years ago. We have sold them to thousands of customers but there are tens of thousands of people who have not got them. Every family that grows potatoes for their own use should plant this variety. Every farmer, gardener or trucker who grows for market loses money every season he does without them. There is no other variety that can take their place.

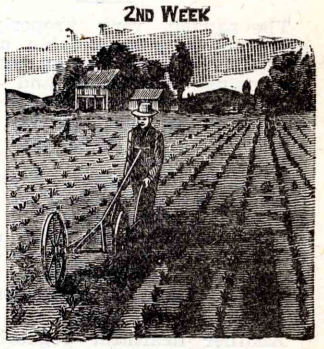
This season we are proud to be able to offer the

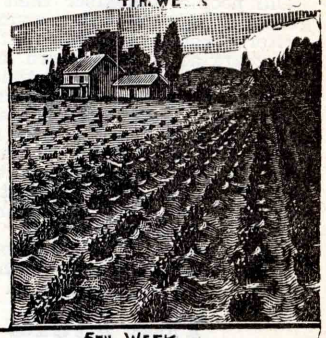
Improved Six-Weeks Market Potato

raised from seed obtained from Mr. De Vore, the originator of the variety. Mr. De Vore has been carefully growing the potato and improving it from the time we bought his original stock. He has cared for it as carefully and guarded it as jealously as a dear child. He has yields as follows: One year 420 bu. per acre, next year 380 bu. per acre, and two years after 600 bu. per acre. **The Improved Early Six-Weeks Market** that we now offer is better than the original. Therefore all our old customers should get new seed, and every person who takes pleasure in seeing what good crops, what large yields and how early they can grow potatoes should get seed. They will admit that they never saw, raised, eat or marketed finer or better potatoes than the **Improved Early Six-Weeks.**

CAUTION Since we introduced our renowned Early Six-Weeks Market Potatoes some other paties has offered Potatoes under various names, "Early Market," "Five-Weeks Potatoes," "45 Day Potato," etc., or attached their name to it. Some of them use our description of Early Six-Weeks, others claim their potato is as good as our "Six-Weeks." We wish it distinctly understood that we named and introduced this unequaled variety, and are headquarters for the genuine seed.

SHIPPING We can ship any month in the winter to southern points as we load in warmed cars. We advise early orders however.





PRICE

—OF—

Improved Early Six-Weeks Market Potato

Small Lots By Mail Postpaid

1 lb	25c
4 lbs	75c

Large lots by freight or express

¼ bu	50c
1 bu	$1.75
1 bbl. (2¾ bu.)	$4.50
5 bbls.	@ $4.25
10 barrels or more at the rate of	each $4.00

We have 7,000 bushels of these potatoes now in stock or contracted and growers will consult their interest by embracing this opportunity to secure them at the favorable prices here quoted.

Agents and Dealers wanted to sell this great Potato

Nothing like them anywhere. If you doubt, send 25 or 50 cents for a liberal sample by express, with Catalogues and beautiful colored hangers. Farmers, gardeners and truckers can make splendid profits selling them

Read extracts from testimonials We have received tens of thousands of reports like these.

I have grown them of size for table in six weeks and matured in 72 days. I consider them the earliest potato in the world, the finest table variety and a cropper. J. W. SHANKS, Athens, Co., O.

I raised at the rate of 365 bu. per acre of the nicest potatoes I ever saw. They are ready to use in six weeks and mature in 72 days. They come so soon the bugs have no chance.
ELIZABETH WASHBURN, Athens Co., O.

From I pound I raised 147 lbs. They are fine, sound, smooth. Ripened in 75 days and were marketable size in 6 weeks. They are the most valuable potato ever introduced.
R. TAYLOR, Ashland Co., Wis.

First class in every respect.
E. Hartman, Sutton Co., W. Va.

They did fine. I could sell a carload for seed if I had them.
John B. Cochran, Jefferson Co., O.

You have got it this time. I mean the earliest and best early potato in existence. We had them for table use in six weeks from planting. They also outyield all others.
August Broehner, Allegan Co., Mich.

Ten dollars per bu. would not buy my six weeks market potatoes if I could not replace them. They are the earliest of all and very heavy yielders. They should be universally grown by market gardeners. Jac. R. Stilson, Onondaga Co., N.Y.

Are as early as represented. Sound, smooth, best quality, heavy yielder. They are very valuable.
C. E. Ward, Sullivan Co., Ind.

Best yielder and earliest potato I ever had. N. Nyedan, Marion Co., Ind.

Planted May 3rd, we dug new potatoes from them and used June 20th. They are the earliest we ever saw.
Daniel Donovan, Carroll Co., Tenn.

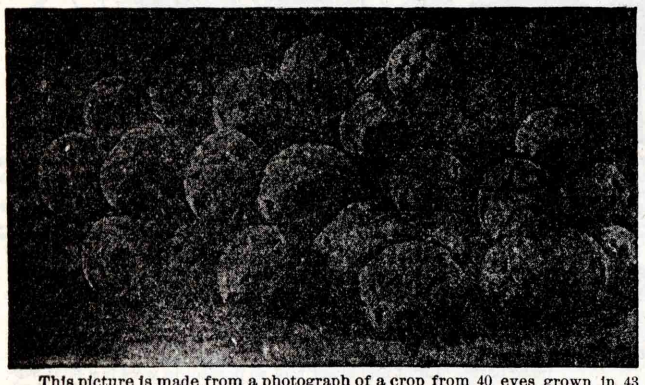
They are the earliest to make market size and earliest to mature that I ever saw. My crop could not be bought for any price. John Gilbert, Meek Co., Va.

Twenty hills of six weeks potatoes yielded a heaped bushel. They bear out your claims for earliness, quality and productiveness. Emil Laurance,
Worcester Co., Mass.

The early six weeks potato can be put on the market two weeks ahead of any other sort which means hundreds of dollars profit to a large grower.
W. H. Morris, Cuyahoga, Co., O.

It is now six weeks and five days since I planted the six weeks market potatos. They did not sprout very quickly but they have nice large tubers on them. They are the earliest potato for this climate I ever saw.
C. L. Ricel, Armtrong, Co. Pa

The best table potato and yield abundantly. Benj. Gemberling,
Licking Co., O.



This picture is made from a photograph of a crop from 40 eyes grown in 43 days. The letter accompanying the Photograph is as follows:

Mr. J. A, Everitt. Dear sir—I send you to-day by freight the product of forty eyes of Six-Weeks Potatoes. They were dug last night and this morning and grew in forty-three days. They were grown from one-eye seed. I have just begun farming on my own land, and am not fixed yet for pushing a crop of early potatoes. They were covered with a breaking plow and given very ordinary treatment. Think I can beat it next season. Several people who saw them were astonished. I expect to exhibit at our county fair.
JOHN L. SAUM, Paulding Co., O.

The only scientific way to handle the gardeners' and truckers' produce is to have their own representatives on the market centers to rport by telephone the demand; the producers report by telephone their supply and time when ready to ship. Then when supply and demand are known at the producers's own headquarters allotments to the various markets may be made in a scientific way and directions given for shipments that will insure the widest and largest distribution without impairment of prices. If a surplus is reported for any day each producer will be cut prorata and that portion of his stuff kept at home, to spoil if necessary, rather than it should go on the market and ruin the price of the legitimate supply. This is the plan of the A. S. of E. It will insure a profitable place for all produce marketed regardless of the size of the crop.

The squash very properly has a place on every farm table, and it has held its place through all the years of advancing civilization and improved dishes. But have you ever tried the new Delicious? Just as well have the best while it is going, and the Delicious is the best.

Rhubarb. Pie plant. The one kind of pie that is pleasant to the taste and health producing to the eater. A piece of rhubarb pie every day helps to keep the system in good condition. If you have not already an abundant supply, arrange for it this spring.

Another healthful vegetable is the tomato, but not much need be said about it, for it will have a place in every garden any way. But there is difference even in tomatoes—a great difference. Spark's Earliana is the earliest tomato in the world, and it is of large size and splendid quality. Plant Earliana first and Early Diamond second, and you are just about fixed for tomatoes, provided you have enough of them. Don't let a day pass in their season without tomatoes on the table, and prolong the season by planting early and late.

Old people remember their mothers' great sugar trough gourds. The writer's mother had one that she used for years as a soap gourd, and, looking back, it seems to us that it must have held as much as a barrel. Those great gourds may still be raised. Try a few hills just to see how large you can get them to grow. There are so many artificial vessels now that their usefulness has departed, but to our grandmothers they were very useful, almost necessities, as were also the dipper gourds. Who does not remember the gourd that hung at the spring?

The Field

With Our Up-to-Date Writers

It is a pleasure to open the mail for a brief talk with up-to-date people who are faithfully filling the mission God has called them to all over this great country. For instance, like this from Arlington, Texas:

Dear Sir and Friend:

I address you as friend because I consider you a friend to every honest hand of toil. I have been reading The Third Power. It is beyond question the most concise, truthful and logical work ever put forth in favor of the toiler. I am making arrangements to assist in this work of awakening the people to the great truth that is now breaking upon them, for I would rather be an assistant in this work than to be president. Excuse my enthusiasm, but I mean it.—J. D. Henry, Arlington, Texas.

No one need apologize for enthusiasm in any good cause, for it takes energy and enthusiasm to push any good movement through the obstacles of evil that obstruct the stream of human progress to-day.

The following letter is from a man who, a few years ago, on account of a memorable contest in the Illinois State Legislature, occupied a place in the public eye, not of his own State alone, but of the whole country, that seldom falls to the lot of man:

Editor Up-to-Date Farming:

Allow me, as a farmer who is not yet a member of the A. S. of E., to endorse Up-to-Date Farming as the only farm paper of which I have any knowledge (and I get lots of them) that is worth the paper on which it is printed. Up-to-Date has the right name; the others are all out of date.

The A. S. of E. is one farmers' organization that is bound to win, because there is no secrecy, no passwords, signs or countersigns, no mystery. Its objects, aims and intentions are open, public and above board; nothing whatever to conceal from anybody. It stands on its rights and asks no favors or special privileges. It claims for the farmer the same rights, and no more, that are enjoyed by the manufacturer—the right to set the price on the fruits of their own toil. It don't ask the government to tax anybody for the farmers' benefit. Manufacturers are enjoying that favor to-day. It neither asks nor proposes to do a solitary thing, nor to have the farmers by the power of organization do a thing for their special benefit as a class, that can, by the widest stretch of the imagination, be considered injurious to others or even unfair, except by the class of professional robbers that never draw an honest breath.

Go on, Bro. Everitt, in the good work. Let the suckers and lackeys and plutocrat hirelings howl "farmer trust," if it gives a bit of variety to their dull and useless lives, for it does neither you nor your cause any harm. It is only by the means of the organization you are building that the farmers can hope to *even up* with the beef trust, and the implement trust, and the money trust, and other trusts too numerous to mention, that are robbing the farmer on everything he buys and everything he sells, and yet you don't fight them. —James Cockrell, Kinmundy, Ill.

Words of truth and of wisdom, and coming from a source of such experience, they are doubly appreciated, and must carry with them the weight of conviction throughout the wide area of our subscription list.

The following is a private message of congratulation but the name attached to it is one that is reverently spoken in many a progressive home, and because it is held in such high esteem in these headquarters we take the liberty to introduce it in this talk with our writers:

Editor Up-to-Date Farming:

I congratulate you on the attractive appearance of Up-to-Date Farming for March 1. It commends itself to its thousands of subscribers. Great success is my wish in your splendid work.—Thos. S. Pettit, Owensboro, Ky.

When those who so well know speak thus encouragingly toil and effort lose every element of fatigue.
